DOE has included a provision at § 835.3(e) that will allow a 30 day automatic extension in the required time interval to accommodate operational and scheduling constraints. The extension is considered to be automatic in that there is no requirement to obtain DOE or other approval for the extension. This provision addresses the requirements of §§ 835.102, 835.901, and 835.1202 for internal audits, radiation safety training, and sealed radioactive source inventories and leak tests, respectively. Because of the varying lengths of the calendar months, DOE has not provided a definition of the term "month." DOE expects that those entities responsible for ensuring compliance with 10 CFR part 835 will undertake those measures necessary to perform the required activities within the prescribed time frame (i.e., if a sealed radioactive source is leak tested on January 15, DOE would expect the subsequent leak test to be performed on or before July 15 of the same year). When operational or scheduling considerations preclude adherence to that schedule, then one may consider utilization of the 30 day extension (i.e., the leak test could be performed no later than August 14 of the same year).

7. Radiological Units

Proposed Amendment

DOE proposed to delete the § 835.4 prohibition on use of the international (SI) radiological units. The international system of radiological units is commonly used for calculational and reference purposes. As proposed, § 835.4 would continue to require the use of the special radiological units in required records. Consistent with its historical endorsement of the special units and in recognition of the capabilities of many commercially-available instruments in use throughout the DOE complex, DOE also proposed to specifically allow for use of subunits and multiples of the unit "roentgen."

Summary of Public Comments and Disposition

Although some comments indicated that DOE should proceed toward use of the SI units for required records, DOE believes that considerations of consistency with records required by the NRC and its agreement states override the impetus toward use of SI units.

Final Rule

As proposed, § 835.4 of the final rule allows the use of the international system of units for calculations or reference purposes. Records required by 10 CFR part 835 will continue to be maintained using the special radiological units of curie, rad, roentgen, and rem.

B. Management and Administrative Requirements, Subpart B

1. Documented Radiation Protection Programs

Proposed Rule

Paragraph 835.101(g) of the original rule requires that those entities subject to the requirements of 10 CFR part 835 submit an update of the documented radiation protection program (RPP) within 180 days of the effective date of any regulatory modifications. DOE proposed to establish provisions at § 835.101(f) requiring compliance with amendments to 10 CFR part 835 no later than 180 days following approval of the updated RPP, except for the provisions of § 835.402(d) for radiobioassay program accreditation. Because of the extent of the joint DOE/DOE contractor effort necessary to complete the radiobioassay program accreditations, DOE proposed a compliance date of January 1, 2000 for this provision. DOE also proposed to delete outdated provisions codified at § 835.101 (f) and (g).

Summary of Public Comments and Disposition

Several commenters indicated that DOE's proposed compliance date of January 1, 2000 for radiobioassay program accreditation may be inappropriate due to the lack of experience in implementing the accreditation program. Other comments indicated that DOE delays in implementing the program might result in a state of non-compliance for DOE-contractors. DOE agrees that more time may be necessary to complete the required program accreditations.

Final Rule

DOE has codified the proposed 180 day period for achieving compliance with the amendments to 10 CFR part 835, except for the radiobioassay program accreditation requirements of § 835.402(d). DOE has extended the date for compliance with the radiobioassay program accreditation requirements until January 1, 2002 to accommodate the planned schedule to complete program accreditations throughout the DOE complex. DOE expects this extension to provide ample time for completion of the program accreditations. Should significant delays occur in performing the program accreditations, DOE could exercise appropriate enforcement discretion. These changes will not affect the compliance status of personnel dosimetry programs currently accredited, or excepted from accreditation, under the existing Department of Energy Laboratory Accreditation Program (DOELAP) standards.

DOE has deleted the outdated provisions of § 835.101 (f) and (g) as proposed.

2. Education and Training of Cognizant Individuals

Proposed Amendment

To address a number of shortcomings in its provisions for training radiological control technicians identified during its systematic analysis, DOE proposed to codify a definition of "radiological control technician" at § 835.2(a). DOE also solicited comments on four alternative approaches that were discussed in the preamble of the Notice of Proposed Rulemaking.

Summary of Public Comments and Disposition

Public comments indicated that DOE's proposed definition of the term "radiological control technician" did not adequately describe the roles and responsibilities of individuals filling this position. DOE received comments endorsing each of the proposed alternative approaches, with the majority of the comments endorsing Alternative Approach 4 as discussed in the preamble of DOE's Notice of Proposed Rulemaking.

Final Rule

To satisfy its programmatic objectives for occupational radiation protection programs, DOE has codified an approach consistent with that discussed as Alternative Approach 4 in its Notice of Proposed Rulemaking. Under this approach, DOE has eliminated the specific requirements for radiological control technician training from subpart J of 10 CFR part 835 and added at § 835.103 a requirement for all individuals responsible for ensuring compliance with the rule to have the appropriate education, training, and skills. This approach provides the flexibility necessary to address the wide range of individuals involved in developing and implementing measures necessary for ensuring compliance with 10 CFR part 835, including cognizant managers, supervisors, auditors, engineers, clerks, and technicians.

3. Written Procedures

Proposed Rule

In its Notice of Proposed Rulemaking, DOE noted that the existing rule did not establish requirements for written procedures that consistently addressed the hazards associated with the specified activity. DOE believes that, due to the wide variation of radiological activities and their associated hazards conducted at DOE facilities, requiring written procedures for specific types of activities may divert resources from active management of higher-hazard activities to administrative control of lower-hazard activities. DOE discussed two alternative approaches in its Notice of Proposed Rulemaking. Alternative Approach 1 would eliminate most or all of the requirements for written procedures and leave the determination of the need for written procedures to the cognizant DOE Program Office. Alternative Approach 2 would eliminate most or all of the existing requirements for written procedures in favor of a general requirement that written procedures be developed and implemented commensurate with the radiological hazards created by the activity and consistent with the education, training, and skills of the affected individuals.

Summary of Public Comments and Disposition

Public comments overwhelmingly favored Alternative Approach 2. Commenters indicated that this approach would provide for an appropriate level of radiological safety while providing the flexibility needed to address the wide range of DOE activities. DOE agrees with the public comments.

Final Rule

DOE has established a requirement at § 835.104 consistent with that described as Alternative Approach 2 in its Notice of Proposed Rulemaking. As a result of this change, DOE has deleted specific requirements for written procedures from §§ 835.501(d), 835.1001(a), 835.1001(b), 835.1003(a), 835.1101(c), and 835.1102(c)(3) (formerly 835.404(d)). In addition, proposed requirements for written procedures at §§ 835.405(f) and 835.1201(a) were omitted from the final rule.

DOE's adoption of this approach is not intended to imply a global requirement that written procedures be developed and implemented to address all of the requirements of 10 CFR part 835. In evaluating the need for written procedures addressing any particular provision of 10 CFR part 835, consideration must be given to the nature and extent of the radiological hazards, the complexity of the measures necessary to achieve compliance, and the education, training and skills of the individuals who must implement those measures. Under such a regimen, a low hazard activity employing a stable staff of highly educated and skilled workers having an advanced knowledge of radiation protection principles and practices could have fewer and less detailed procedures than a higher hazard activity employing a transient force of workers with less knowledge of radiation protection principles and practices. The adequacy of the written procedures is ultimately determined by the appropriate implementation of the necessary compliance measures by the affected individuals.

Because the scope of subpart B of 10 CFR part 835 has been expanded, DOE has changed the title of this subpart to "Management and Administrative Requirements."

C. Limitation of Individual Doses, Subpart C

1. Summing of Internal and External Doses

Proposed Amendment

DOE proposed to revise § 835.203(a) to provide flexibility in requirements for summing of individual internal and external dose equivalents to determine the total effective dose equivalent. As proposed, § 835.203(a) would require summing only when the individual was monitored in accordance with § 835.402 (that is, when the individual's dose was likely to exceed the mandatory individual monitoring thresholds) or when the individual's dose exceeded the mandatory monitoring thresholds, regardless of a priori expectations.

DOE also proposed to delete § 835.203(c) because this provision is redundant with provisions included in the § 835.2(b) definition of the term "weighting factor."

Summary of Public Comments and Disposition

DOE received comments indicating that all monitored individual internal and external doses should be summed to determine the total effective dose equivalent. Commenters noted that these data were available and could be important in future dose reconstruction or litigation efforts. DOE agrees with these comments. Although DOE is concerned about the administrative burden associated with the need to sum trivial internal and external doses, DOE has provided ample flexibility for ameliorating such burdens through codification of the individual monitoring thresholds provided at § 835.402.

Final Rule

DOE has omitted the proposed change from § 835.203(a), but deleted the second sentence of § 835.203(a) because this sentence is redundant with provisions included in the definition of the term "effective dose equivalent" at § 835.2(b). DOE has deleted § 835.203(c), as proposed.

2. Planned Special Exposures

Proposed Amendment

DOE proposed changes to the 10 CFR part 835 requirements for conducting planned special exposures in excess of the dose limits established at § 835.202. The proposed changes included:

a. Changing the § 835.204(a)(1) reference from § 835.202(a)(1) to § 835.202(a) to indicate that all of the § 835.202 dose limits apply.

b. Revising § 835.204(c) to indicate that doses resulting from planned special exposures may exceed the numerical values established at § 835.202(a) without actually exceeding the occupational dose limits.

c. Clarifying documentation requirements for planned special exposures at § 835.204(d).

DOE also solicited comments on the possibility of deleting the provisions for planned special exposures because these provisions have not been used to date.

Summary of Public Comments and Disposition

Commenters generally supported the proposed changes to the provisions for planned special exposures. Many commenters indicated that the provisions for planned special exposures should be retained to provide the maximum practical degree of flexibility.

Final Rule

Consistent with the comments received, DOE has retained the provisions for planned special exposures, with the proposed revisions, in the final rule.

3. Radiation Dose Limits

Proposed Amendment

DOE proposed editorial changes to § 835.207 and the heading of that section to clarify that the dose limits for minors apply to doses resulting from occupational exposure only. DOE also proposed to add deterministic dose limits for minors consistent with the Federal Guidance. Non-occupational exposure of minors is subject to the dose limits established at § 835.208 for members of the public entering a controlled area. DOE also proposed changes to § 835.208 to clarify that the member of the public dose limit applies to members of the public in the controlled area only. DOE proposed to revise the definition of "member of the public" at § 835.2(a) to clearly distinguish members of the public from temporary or transient workers or visiting scientists who could receive occupational doses.

DOE proposed to revise the definition of "cumulative total effective dose equivalent" (CTEDE) at § 835.2(b) to include all total effective dose equivalent (TEDE) values, where available, from January 1, 1989, whether or not the dose was received at that DOE site or facility.

Summary of Public Comments and Disposition

Several commenters questioned DOE's proposed approach to controlling doses to minors, pointing out that a minor could possibly receive 0.1 rem in a year occupational dose and 0.1 rem in a year as a member of the public. Although this scenario is possible, the resulting maximum dose is well below the most recent recommendations of scientific bodies for exposures that do not occur repeatedly.

DOE did not receive any substantive comments on the proposed change to the definition of the term "cumulative total effective dose equivalent."

Final Rule

DOE has adopted the changes, essentially as proposed. DOE has also made editorial changes to §§ 835.207 and 835.208 for clarity. These changes include omitting, in § 835.207, the proposed occupational dose limit for minors of 10% of the § 835.202(a)(2) limit. This limit is redundant because the 0.1 rem total effective dose equivalent limit for minors is always more restrictive.

4. Exposures to Airborne Radionuclides

Proposed Amendment

DOE proposed to delete § 835.209(b) because of redundancy with other rule requirements for inhalation exposures and external exposures from airborne radionuclides.

Summary of Public Comments and Disposition

DOE did not receive any substantive comments on the proposed deletion.

Final Rule

DOE has deleted § 835.209(b) and redesignated § 835.209(c) as § 835.209(b). In addition, DOE has initiated an editorial change by deleting the word "representative" from § 835.209(c)(3) (redesignated as § 835.209(b)(3)). This word was redundant with the remaining requirement that the internal dose estimate based upon air concentration values must be as or more accurate than that based upon bioassay results.

D. Monitoring of Individuals and Areas, Subpart E

1. General Requirements for Area and Individual Monitoring

Proposed Amendment

In reviewing the requirements of 10 CFR part 835, DOE noted that the terms "monitoring" and "survey" were not used consistent with the definitions provided at § 835.2(a). DOE proposed changes to the definition of the term "monitoring" at § 835.2(a) to clearly establish that "monitoring" involves measurement of radiological conditions and the subsequent use of the results of these measurements to evaluate potential and actual exposures to ionizing radiation. As proposed, the term "survey," would be more directly related to the assessment of workplace or material radiological conditions through direct measurement, assessment, or calculation for the purposes of hazards assessment. DOE proposed changes throughout the rule to ensure consistent application of these terms.

DOE proposed to clarify the requirements of §§ 835.401(c) and 835.703(d) by making the calibration requirements apply to both "instruments" and "equipment." This clarification is consistent with current field practice with regard to equipment, such as an air sampler, that, although incorporated into or associated with instrumentation systems, does not have any instrumentation.

Summary of Public Comments and Disposition

DOE received a number of comments supporting its attempt to clarify the "monitoring" and "surveying" terminology. However, comments indicated that the usage of these terms remained inconsistent.

With regard to the proposed § 835.401(c) requirements for calibration and maintenance of instruments and equipment, DOE received a number of comments indicating that the required one year calibration frequency was overly stringent given the reliability of many modern instruments, particularly certain fixed monitors. Other commenters indicated that the term "equipment" could conceivably be extended to include vehicles, calculators, and other equipment routinely used in the course of area monitoring.

Commenters indicated that the use of the undefined term "workplace" in this subpart could result in confusion regarding the scope of the requirements. Commenters also indicated that the use of the term "area monitoring" at § 835.401(b) seemed to imply that stationary area monitors were required under certain conditions.

Final Rule

DOE has determined that, for regulatory purposes as established in 10 CFR part 835, there is no substantive difference between the uses of the terms "monitoring" and "survey." Therefore, in the final rule DOE has revised the definition of the term "monitoring" and deleted the term "survey," replacing this term with "monitoring" (as modified) throughout the rule. DOE has also deleted the undefined terms "sampling" and "measurements" in favor of the defined term "monitoring."

DOE has deleted the term "workplace" from subpart E of 10 CFR part 835, instead adopting a performance-oriented approach of "monitoring of individuals and areas." In a related editorial change, DOE has deleted the term "area monitoring" from proposed § 835.401(b) and redesignated the remaining text as § 835.401(a)(6) to eliminate any connotation regarding requirements for stationary radiation monitors. DOE has also substituted the defined term "individual" for the undefined term "personnel" in this provision.

In response to comments on DOE's requirements for calibration and maintenance of instruments and equipment, DOE has revised these requirements (at redesignated § 835.401(b)(1)) such that calibration and maintenance will be required "periodically" on an "established frequency." This change is consistent with NRC requirements at 10 CFR 20.1501 and provides flexibility for acceptance of recommendations provided in various consensus standards accepted by the instrument calibration community and used within the DOE complex. DOE will provide guidance regarding measures for establishing appropriate maintenance and calibration frequencies and proper application of these requirements to "equipment" used for monitoring.

As used in 10 CFR part 835, instruments and equipment used for monitoring includes devices used for both area monitoring (e.g., portable and installed radiation, contamination, and airborne radioactivity sampling and monitoring devices) and individual monitoring devices (e.g., thermoluminescent dosimeters, pocket ion chambers, track etch dosimeters, and electronic dosimeters). Note that the calibration of personnel dosimeters that are required under § 835.402 is addressed by the DOELAP for personnel dosimetry.

2. Individual Monitoring and Dose Determination

Proposed Amendment

DOE proposed several changes to the existing requirements for monitoring individual radiation doses. The proposed changes included:

a. Clarifying the requirements for external and internal dose monitoring programs at § 835.402(b) and (d) by providing that such programs must be capable of demonstrating compliance with all of the individual dose equivalent limits in subpart C. This approach is consistent with DOE's previously established requirements for records required under § 835.701(a).

b. Revising the monitoring requirements for minors at § 835.402(a)(3) and (c)(3) to expressly state that these requirements apply to occupationally exposed minors only.

Minors who are not occupationally exposed are subject to the member of the public monitoring requirements found at § 835.402(a)(4) and (c)(4).

c. Deleting from § 835.402(c)(1) the monitoring threshold based on organ and tissue committed dose equivalent. The monitoring threshold based upon committed effective dose equivalent obviates the need for this threshold because, through application of the weighting factors defined at § 835.2(b), the committed effective dose equivalent always provides a more restrictive basis for individual monitoring.

d. Changing § 835.402(a)(1)(i) to require individual monitoring on the basis of deep dose equivalent rather than effective dose equivalent because deep dose equivalent is the parameter actually monitored by existing dosimetry programs.

e. Removing provisions at § 835.402(a)(1)(iv) for measuring deep dose equivalent from external sources to any organ or tissue other than the lens of the eye because any doses meeting this condition are adequately addressed by § 835.402(a)(1)(i).

f. Clarifying § 835.402(a)(4) and (c)(4) to indicate that these provisions apply to members of the public inside the controlled area only.

Summary of Public Comments and Disposition

Commenters indicated that the proposed § 835.402(a)(1)(i) requirement for monitoring of deep dose equivalent, as worded, would challenge the capabilities of modern dosimetry systems. While the technical basis for the comments was not clear, reflection on these comments revealed that the wording in the proposed rule could suggest the basis for initiating monitoring was the highest dose received by any portion of the whole body. Furthermore, although deep dose equivalent is the quantity most commonly measured, effective dose equivalent is the appropriate criterion upon which the mandatory individual monitoring threshold should be based because the corresponding occupational dose limits are stated in terms of effective dose equivalent.

Final Rule

DOE agrees with the public comments regarding the proposed change to § 835.402(a)(1)(i). The language in the original version of 10 CFR part 835 has been retained. DOE has included the other proposed changes in the final rule.

3. Program Accreditation

Proposed Amendment

DOE proposed a number of enhancements and additions to the existing requirements for the DOELAP. These proposed changes included:

a. Amending § 835.402(b) to indicate that, except as discussed below, personnel dosimetry programs must be either accredited under the DOELAP or excepted from accreditation under that program.

b. Amending § 835.402(d) to require radiobioassay program accreditation or exception through the recently developed DOELAP for Radiobioassay. This proposed change was intended to ensure the integrity of radiobioassay programs and prevent recurrence of recent adverse events.

c. Revising § 835.402(b) and (d) to limit the scope of the DOELAP requirements to personnel dosimetry and radiobioassay programs implemented to ensure compliance with § 835.402 (i.e., monitoring when individual doses are likely to exceed the stated thresholds). In a related change, because § 835.401(b) addresses calibration of instruments and equipment used for monitoring and DOELAP for Personnel Dosimetry provides appropriate dosimetry system performance criteria, DOE proposed to delete the dosimeter calibration requirement from § 835.402(b).

d. Adding § 835.402(e) to require that external dosimetry and bioassay programs conform to the most recent revisions of the DOELAP technical standards or be subject to review and approval of the Secretarial Officer responsible for environment, safety, and health matters (currently the Assistant Secretary for Environment, Safety and Health). For those programs that are not accredited or excepted from the accreditation program, this provision would also allow this same officer to provide approval if the programs demonstrate performance equivalent to those accredited under the DOELAP. This provision would ensure that, to the extent practical, DOE radiation protection programs will reflect the latest advances in the sciences of external and internal dosimetry. To prevent the automatic loss of accreditation status as a result of changes to the DOELAP technical standards, the DOELAP technical standards provide that changes in the standards become effective only during the ensuing accreditation cycle.

Summary of Public Comments and Disposition

Several commenters suggested that all individual dose measurements be performed under an accredited dosimetry program in order to maintain credibility of all monitoring data. However, DOE does not believe that is appropriate to impose regulatory accreditation requirements on monitoring programs that are not required by regulation. Existing regulatory provisions at § 835.402(a) and (c) require individual monitoring for all individuals likely to receive a dose equivalent exceeding the specified thresholds. As part of a comprehensive radiation protection program, measures used to identify these individuals should include comprehensive, documented area monitoring and could include, if management so chooses, individual monitoring. Section 835.401 establishes minimum requirements for performing such monitoring, including requirements for calibration and maintenance of instruments and equipment used to perform the monitoring. As required by §§ 835.701(a) and 835.703, the monitoring results must be documented.

Several commenters recommended that DOE revise the rule to permit DOE facilities to procure the services of dosimetry processors who are accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) administered through the National Institute of Standards and Technology, as an alternative to accreditation under the DOELAP for personnel dosimetry. These comments noted the NRC's regulations require licensees to use dosimetry processors with NVLAP accreditation. They argued that permitting NVLAP accreditation in lieu of DOELAP accreditation, would maximize private sector competition for DOE contracts. DOE has not accepted the commenters' recommendations because NVLAP accreditation does not meet DOE's requirement for an external dose monitoring program. DOELAP accreditation covers both the facility's and the processor's quality assurance program, whereas NVLAP only deals with the dosimetry processor. The commenter's reference to the NRC's use of NVLAP accreditation for dosimetry processors ignores the fact that NRC has the resources to perform frequent on-site inspections of a facility's dosimetry program. In the absence of such resources at DOE facilities, DOE relies upon the DOELAP accreditation to ensure that a facility's personnel dosimetry program provides accurate results.

DOE received comments on its proposal to require DOELAP accreditation, exception from accreditation under DOELAP, or DOELAP equivalency, for radiobioassay programs that would satisfy the internal dose monitoring program requirement in the rule. The commenters argued that it would be premature to impose this requirement because DOE has not completed the process for developing accreditation standards for radiobioassay programs. As discussed in connection with § 835.101, concerning the effective date of the rule, DOE has responded to these concerns by extending the deadline for complying with this provision to January 1, 2002. In any event, § 835.402(d) provides for Secretarial Officer approval of radiobioassay programs that are not accredited under DOELAP.

Several commenters objected to proposed § 835.402(e), which would have required Secretarial Officer approval of personnel dosimetry and radiobioassay programs that do not comply with the latest edition of DOE's technical standards governing program accreditation. They argued that incorporation by reference of the technical standards was inappropriate because the requirements in the technical standards had not been proposed for public comment in a rulemaking. In light of these comments, DOE has deleted the reference to DOE's technical standards for accreditation in the regulatory text of the final rule. DOE does not intend to codify the accreditation standards through this rulemaking. DOE technical standards are guidance documents to assist contractors in implementing regulatory requirements. As a matter of policy (DOE P 450.2A, May 15, 1996), DOE routinely seeks public comments on guidance documents issued to implement environment, safety and health requirements at DOE sites. On April 24, 1997, DOE published a notice of availability of draft guides and technical standards for the Occupational Radiation Protection Program (62 FR 19940). At that time, DOE invited public comment on draft technical standard, "Department of Energy Laboratory Accreditation Program Administration," which includes requirements for personnel dosimetry and radiobioassay program accreditation. The revised regulatory provisions will accomplish DOE's purpose of providing that programs which DOE accredits, or excepts from accreditation, under DOELAP will satisfy the requirements in this rule for programs that are implemented to demonstrate compliance with § 835.402(a) and (c). Accreditation under DOELAP will obviate the need for contractors to secure approval of the Assistant Secretary for Environment, Safety and Health.

Final Rule

In the final rule DOE has revised § 835.402(b) and (d) to provide that contractors may demonstrate the adequacy of external and internal dose monitoring programs, respectively, by submitting their programs to the Secretarial Officer responsible for environment, safety and health for approval in lieu of accreditation or exception from accreditation under the DOELAP. Alternative programs will be approved if their performance is demonstrated to be substantially equivalent to that of accredited programs. This change makes unnecessary, and DOE has deleted, proposed § 835.402(e), which would have required Secretarial Officer approval of programs not complying with the latest edition of the technical standards for DOELAP accreditation.

DOE has adopted the other changes as proposed, with minor editorial corrections.

4. Air Monitoring

Proposed Amendment

DOE proposed to revise the § 835.403(a)(1) air sampling requirement to be based on potential individual exposures in derived air concentration (DAC)-hours in a year rather than a percentage of the annual limit on intake (ALI) because the values provided in appendices A and C of 10 CFR part 835 are listed as DACs. DOE proposed to add § 835.403(a)(2) to require that air sampling be performed when respiratory protective devices are prescribed to protect individuals from exposure to airborne radionuclides. DOE also proposed an editorial change to delete § 835.403(b), eliminating redundancy with § 835.401(b).

To enhance air monitoring programs, DOE proposed to provide more practical and technically accurate criteria at § 835.403 for the use of real-time air monitors based on potential releases that would exceed a defined threshold exposure levels of 40 DAC-hours in a week. In a related change, DOE proposed to replace the term "continuous air monitor" with the term "real-time air monitor" with supporting changes to the definitions provided at § 835.2(a). DOE also proposed to add a definition of the term "week" at § 835.2(a).

Summary of Public Comments and Disposition

DOE received a number of comments indicating that the proposed revision of the requirements for real-time air monitoring was unclear and did not acknowledge the actual capabilities of available monitors. Other commenters indicated that the proposed definition of the term "week," based upon a period beginning on Monday, might cause unnecessary changes in existing schedules for real-time air monitor filter changes. Several commenters indicated that the proposed provisions for air sampling when respiratory protective devices are prescribed could be construed to mean that an air sample must be taken each time an individual enters an area wearing a respiratory protective device.

DOE received comments indicating that the existing criterion based upon the percentage of an ALI was more appropriate for prospective establishment of air monitoring programs. DAC-hours are related to the fraction of an ALI in a consistent and fixed manner; therefore, potential exposures in units of DAC-hours are an appropriate basis for prospectively determining the need for air sampling.

Final Rule

As suggested through public comments, DOE clarified the mandatory airborne radioactivity monitoring criteria in the final rule. Section 835.403(a) of the final rule requires the implementation of air sampling programs in areas in which an individual is expected to be exposed in excess of 40 DAC-hours in a year. The final rule clarifies that airborne radioactivity monitoring during use of respiratory protective equipment is required "as necessary" to characterize the hazard. This provision is consistent with requirements imposed by both the NRC and the Occupational Safety and Health Administration (OSHA) (see 10 CFR 20.1703(a)(3), "Use of individual respiratory protection equipment," and 29 CFR part 1910, "Occupational Safety and Health Standards," § 1910.134(d)(1)(iii), respectively).

The § 835.403(b) criterion for real-time air monitoring is based upon the need to alert potentially exposed individuals of the need for action to reduce or terminate exposures to airborne radioactive material. This approach provides more flexibility for implementation on a site-and facility-specific basis, taking into account realistic event scenarios, source terms, and instrument capabilities. This requirement acknowledges the wide

variety of configurations and hazards associated with DOE activities and the limitations of currently available real-time air monitoring equipment. DOE's implementing guidance provides an acceptable approach for achieving compliance with this provision. The restructuring of the requirements for real-time air monitoring rendered proposed § 835.403(c) redundant; DOE has therefore deleted this provision.

In support of the revised provisions, § 835.2(a) provides definitions for the terms "derived air concentration-hour (DAC-hour)," "real-time air monitoring," "respiratory protective device," and "week" which are used at § 835.403. In consideration of public comments, DOE has revised the proposed definition of the term "week" to omit a mandatory starting day. In addition, DOE has deleted the definitions of "ambient air" and "continuous air monitor" because these terms are no longer used in 10 CFR part 835.

5. Contamination Monitoring

In consideration of public comments received, DOE has revised the § 835.404 requirements for contamination monitoring and control and moved these requirements to § 835.1102. The proposed changes, public comments, and final rule provisions are discussed in full in Section II.J of this Notice of Final Rulemaking.

6. Receipt of Packages of Radioactive Material

Proposed Amendment

DOE proposed to add requirements at § 835.405 for surveys of packages of radioactive material received from radioactive material transportation to ensure adequate protection is provided to individuals, including warehouse and office workers, who may be exposed to these materials. The proposed provisions included requirements for taking possession of radioactive material packages from transport and performing surveys of these packages. At 835.405(d), DOE proposed to establish requirements for completion of the necessary surveys within three hours of receipt of the package (if received during working hours) or within three hours of the beginning of the following working day (if received after working hours). The proposed requirements are similar to NRC requirements at 10 CFR 20.1906.

Summary of Public Comments and Disposition

Several commenters suggested that the time provision included in the proposed amendment was unnecessarily stringent. During evaluation and resolution of these comments, DOE determined that the nature of many of its sites and facilities and the stringency of the requirements for radioactive material transportation indicate that this observation is accurate.

Final Rule

In deference to the comments received and in recognition of the variety of sites and facilities subject to 10 CFR part 835, DOE has extended the time required for monitoring packages received from radioactive material transportation to 8 hours after the beginning of the working day following the receipt of the package. In practice, the actual interval may also be constrained by the requirements for individual monitoring and radiation safety training at §§ 835.402 and 835.901 respectively, and by the ALARA requirements at § 835.101.

As used in § 835.405, a "working day" is considered to be the interval of time within each 24 hour period during which the building or area in which the received package is stored is routinely occupied or available for operations other than emergency activities. For example, if the received package is stored in a warehouse awaiting the required monitoring and that warehouse is occupied or accessible to shipping and receiving personnel, then the working day is that period of time within each 24 hour period during which the shipping and receiving personnel are scheduled to be working or to have ready access to the warehouse. The working day does not include periods during which shipping and receiving personnel would have to return to work on a non-scheduled basis to address emergent issues requiring their attendance.

E. Entry Control Program, Subpart F

Proposed Amendment

DOE proposed more detailed provisions for written work authorizations at § 835.501(e) to address operational occurrences throughout the DOE complex. DOE also proposed to revise § 835.502 to add measures for control of access to high radiation areas. The proposed control measures were consistent with those previously established in the Manual and included requirements for use of a supplemental dosimetry device and appropriate area surveys.

Summary of Public Comments and Disposition

Commenters expressed concern that the proposed § 835.501(e) entry control requirements were inappropriate for relatively minor hazards present in areas such as radiation areas. With regard to the proposed high radiation area access control requirements, commenters also indicated that devices capable of rendering an immediate indication of an individual's integrated dose resulting from neutron radiation are not commercially available. Several commenters also indicated that the proposed § 835.502(c) requirements for control of access to very high radiation areas could be taken to mean that the required controls must be impenetrable. DOE agrees that these issues require clarification.

Final Rule

Regarding low-hazard radiological areas, the final rule provides significant flexibility for implementation of access controls on a facility-and hazard-specific basis. The written authorizations required by 835.501(d) must specify radiation protection measures consistent with existing and potential hazards. DOE does not intend for this provision to establish a global requirement for the development and implementation of radiological work permits to address all entries into radiological areas. The written authorization may take the form of generally applicable procedures, as appropriate. Guidance on the use of written authorizations will be published in DOE's Radiological Control Standard. As a result of the deletion of specific requirements for written procedures (discussed in Section II.B.3 of this Notice of Final Rulemaking), DOE has redesignated proposed § 835.501(e) as § 835.501(d) in the final rule.

To address the unavailability of devices capable of providing an immediate indication of an individual's dose resulting from exposure to neutron radiation in a high radiation area, § 835.502(a)(2) allows for supplemental dosimeters or other means of immediately estimating or measuring the individuals' integrated doses during the area entry. The other means may include knowledge of the area exposure rates combined with tracking of individual access times. Consistent with the existing definition of the terms "high radiation area" and "very high radiation area," DOE has revised the proposed requirements to indicate that the required devices and measures must be capable of estimating the affected individual's deep dose equivalent, rather than the dose equivalent. DOE also provided an editorial correction at § 835.502(b)(2), substituting the defined term "individuals" for the undefined term "personnel."

In response to public comments, DOE has clarified § 835.502(c) to indicate that the additional controls required for very high radiation areas need to be sufficient to prevent "unauthorized or inadvertent" entries rather than to prohibit entry into the area.

F. Posting and Labeling, Subpart G

1. Controlled Area and Radiological Area Posting Requirements

Proposed Amendment

DOE proposed several changes to clarify and simplify requirements for area hazard posting and to provide additional flexibility in implementing these requirements. In acknowledgment of the differing hazards and controls associated with removable and fixed radioactive contamination, DOE proposed to revise the § 835.2(a) definitions of "contamination area" and "high contamination area" to be based upon removable surface contamination levels only and to clearly establish these areas based on accessibility rather than the general reference to "working areas" which appeared at § 835.601(a). DOE proposed a similar change to the § 835.2(a) definition of the term "airborne radioactivity area." DOE also proposed to move the controlled area maximum dose expectation from the § 835.2(a) "controlled area" definition to the § 835.602(a) controlled area posting provision.

Because radiological area terms are defined at § 835.2(a), DOE proposed to remove redundant definitions imbedded in the posting provisions at § 835.603. DOE also proposed to delete the requirement for DOE approval of warning signs from § 835.601(b) because acceptable signs are described in DOE's implementing guidance and DOE did not intend to establish a formal process for approval of radiological postings and labels. In addition, DOE proposed to expand its provision at § 835.601(e) (redesignated as § 835.601(d) in the proposed amendment) allowing modification of postings and labels to accommodate special considerations of DOE activities involving private residences to also include private businesses.

Consistent with NRC requirements published at 10 CFR 20.1902, DOE proposed to amend § 835.603(b), (d), and (f) to allow use of the words "Caution" or "Danger" on postings for high radiation, high contamination, and airborne radioactivity areas, respectively. This proposed change would accommodate the wide range of radiological conditions that may be present in these areas to provide some degree of flexibility in their posting.

Proposed § 835.604(a) would create an exception from posting requirements for periods of less than 8 continuous hours as long as the radiological area is placed under continuous observation and control of a person able to implement the required access and exposure control measures. This exception would cover temporary conditions or activities such as maintenance, repair or cleanup activities so long as the absence of posting is kept to within the prescribed time and the prescribed control measures are implemented.

DOE also proposed to add § 835.604(b) and (c) delineating specific exceptions from the radiological area posting requirements of § 835.603, recognizing that compensatory measures may be implemented that would obviate the need for area posting. The proposed exceptions are similar to those established by the NRC at 10 CFR 20.1903.

Summary of Public Comments and Disposition

DOE received several comments indicating that the proposed definition of the term "airborne radioactivity area" should include an exposure-based criterion (i.e., based upon potential individual exposures in term of dose, percentage of an ALI, or DAC-hours) instead of, or in addition to, the existing criterion based upon the absolute airborne radioactivity concentration. DOE agrees that this issue requires clarification.

Some commenters expressed support for the current 10 CFR part 835 posting provisions based upon the identification of "working areas." However, the term "working areas" is not defined and DOE does not believe that posting of only "working areas" provides adequate protection of individuals approaching or entering radiological areas in which there is no work in progress. The commenters did not provide any evidence that such a practice would provide for adequate protection.

DOE received a number of comments on the proposed allowance for the use of "Caution" or "Danger" on certain radiological hazard warning signs. Commenters indicated that the terms "Caution" and "Danger" are not interchangeable and that the term "Danger" generally carries a connotation of greater hazard than "Caution." While DOE agrees with these observations, DOE believes that, in the continuum of possible radiological conditions associated with DOE activities, the threshold at which "Danger" becomes more appropriate than "Caution" most likely lies somewhere within those conditions described in the § 835.2(a) definitions of "airborne radioactivity area," "high radiation area," and "high contamination area." Furthermore, individual protective actions required for entry into these areas are dependent upon the radiological area title, not the "Caution" or "Danger" heading. DOE believes that the demarcation between those conditions requiring "Caution" and "Danger" headings is best left to the discretion of those responsible for individual DOE activities to ensure that activity-specific conditions are addressed. Therefore, DOE believes that it is appropriate to allow flexibility in the use of the "Caution" and "Danger" headings for posting of high radiation, high contamination, and airborne radioactivity areas.

Some commenters indicated that provisions for alternative measures for DOE activities conducted at private residences and businesses should be extended to DOE activities conducted on state- and Federally-owned lands. However, DOE does not believe that considerations of individual property rights and property value impacts extend to DOE activities conducted on state and Federal lands. Furthermore, the great majority of DOE activities are conducted at state-and Federally-owned sites. Such an exception would negate the specific posting requirements for essentially all DOE activities.

Commenters generally supported DOE's proposed exceptions to the radiological posting requirements. However, comments indicated that the proposed § 835.604(c) exception for packages received from radioactive material transportation should not apply to damaged packages. DOE agrees that this issue requires specific attention.

Final Rule

DOE has revised the § 835.2(a) definition of the term "airborne radioactivity area" such that posting and control of these areas will be required when the airborne radioactivity concentration exceeds the DAC values provided in appendix A or C of 10 CFR part 835 or when an individual present in the area without a respiratory protective device could be exposed to airborne radioactive material in excess of 12 DAC-hours in a week. This definition is similar to that provided by the NRC at 10 CFR 20.1003.

DOE has codified the changes to the radiological hazard posting requirements as proposed. In the final rule, DOE has deleted § 835.601(a) to eliminate redundancy. As a result, § 835.601(b)—(d) have been redesignated as § 835.601(a)—(c), respectively. The § 835.604 radiological

area posting exceptions do not apply to the radiological area entry control requirements established at §§ 835.501 and 835.502 or to the radiation safety training requirements at § 835.901. In response to public comments, DOE has restricted the scope of the posting exception for packages received from radioactive material transportation to those packages received in a non-degraded condition.

2. Radioactive Material Area Posting

Proposed Amendment

To ensure that individuals entering controlled areas but not entering radiological areas are adequately protected, DOE proposed requirements for posting of radioactive material areas similar to the existing requirements of DOE N 441.1 (extended by DOE N 441.2 and DOE N 441.3). The proposed posting requirements were based on quantities of radioactive materials that exceeded 10 times the threshold values proposed in appendix E of 10 CFR part 835 and were similar to NRC requirements at 10 CFR 20.1902. DOE proposed to define "radioactive material area" and include this term in the definition of "radiological area" at § 835.2(a) and establish requirements for posting radioactive material areas at § 835.603(g). DOE also proposed exceptions to the radioactive material area posting requirements at § 835.604(b).

Summary of Public Comments and Disposition

DOE received numerous comments on these proposed requirements. The major issues included: (1) The threshold values (based on ten times the activity levels provided in proposed appendix E of 10 CFR part 835) which would require posting of radioactive material areas were overly restrictive; (2) the hazards present in a radioactive material area, as defined, did not warrant the imposition of specific entry controls and radiation safety training programs required for radiological areas; (3) posting of radioactive material areas should not be required when the radioactive material consists solely of activated structures or installed components; and (4) there is no apparent difference between the hazards in a controlled area and a radioactive material area, as defined at § 835.2(a).

DOE agrees that: (1) The proposed appendix E values, as a basis for defining a radioactive materials area, were somewhat restrictive; (2) posting of radioactive material areas should not be required when the material solely consists of structures or installed components which have been activated; and (3) the hazards present in a radioactive material area, as defined, are not always significantly different than the hazards in a controlled area and would not always warrant imposition of the entry controls required for the defined radiological areas.

Final Rule

DOE recognizes the fact that the radiological conditions expected in radioactive material areas, as proposed, are less hazardous than those present in radiological areas as defined in the original rule. Accordingly, a less restrictive approach to radiological protection is warranted. In the final rule, DOE has omitted the term "radioactive material area" from the § 835.2(a) definition of "radiological area." Therefore, radioactive material areas will not be subject to the specific entry control provisions of § 835.501. As a result of the codification of hazard-based radiation safety training requirements at § 835.901 (discussed in Section II.H. of this Notice of Final Rulemaking), applicability of the radiation safety training requirements for entry into radioactive material areas will be subject to an evaluation of the activities to be performed in the area and the degree of actual or potential exposure to radiological hazards.

Section 835.603(g) of the final rule requires posting of radioactive material areas at the entry points to accessible areas where there exist items or containers of radioactive material in excess of the revised appendix E values as published, rather than ten times the appendix E values, as proposed. The basis for the revised appendix E values is discussed in detail in Section II.K of this Notice of Final Rulemaking. Because of the minimal hazards present in radioactive material areas, DOE has omitted the allowance for the use of the "Danger" heading from the § 835.603(g) requirement for posting of radioactive material areas.

DOE has included proposed exceptions to the radioactive material area posting requirement at § 835.604. In response to the comments received, DOE has included another posting exception for areas in which the radioactive material consists solely of structures or installed components which have been activated, such as activation by exposure to neutron radiation or radiation incident to operation of a particle accelerator. DOE expects that this exception will most commonly be applied to building and shielding structures associated with nuclear reactors and particle accelerators. Note that these structures and components are not excepted from the radiological area posting requirements.

Because the term "radioactive material area" has been deleted from the § 835.2(a) definition of the term "radiological area," DOE has revised the heading of § 835.603 and the provisions of § 835.602(a) to reflect the inclusion of the radioactive material area posting requirements in subpart G of 10 CFR part 835.

3. Radioactive Material Labeling

Proposed Amendment

To augment and clarify existing requirements, DOE proposed to add requirements for labeling items and containers of radioactive materials at § 835.605, with appropriate exceptions being proposed at § 835.606. These proposed provisions are similar to those in the Manual and consistent with requirements imposed by the NRC at 10 CFR 20.1904 and 20.1905.

Summary of Public Comments and Disposition

DOE received comments indicating that, because the proposed labeling provisions were based upon the proposed appendix E total activity values, they were not adequate to ensure proper labeling of items having removable contamination exceeding the 10 CFR part 835 appendix D surface radioactivity values. However, even though labeling of contaminated items is not explicitly required by the rule, adequate controls are established under §§ 835.1101 and 835.1102 which will require that either labeling or equivalent measures be implemented to inform individuals of the contamination hazard.

DOE also received comments on the proposed exceptions from the labeling requirements. Commenters indicated that exceptions should also be provided for nuclear weapons and their components, for inaccessible radioactive material, and for activated building components. DOE agrees with these comments.

Final Rule

DOE has codified the proposed requirements for labeling with minor editorial changes. Section 835.605 requires labeling of radioactive items and containers of radioactive materials. Section 835.606 provides an exception from the labeling requirements for items and containers having a total activity of less than 1/10 of the appendix E values rather than at the proposed appendix E values because DOE has reevaluated the appendix E values to address concerns regarding the stringency of the proposed requirements for accountable sealed radioactive sources (see discussion in Section II.K. of this Notice of Final Rulemaking). Because §§ 835.1101 and 835.1102 establish appropriate requirements for control of contaminated material and equipment, DOE has not included specific requirements for labeling of contaminated items in this subpart.

In response to the comments received, DOE has revised the radioactive material labeling exceptions proposed at § 835.606 to include nuclear weapons and their components and inaccessible radioactive material. In addition, the exception from the § 835.601 design and color specifications for labels applied to sealed radioactive sources, proposed at § 835.1201(b), has been codified at § 835.606(b).

G. Records and Reports, Subparts H and I

Proposed Amendment

DOE proposed a number of changes to its requirements for records demonstrating compliance with 10 CFR part 835. The proposed changes included:

1. Revising §§ 835.203(a) and 835.702(b) to provide that, when monitoring is performed, but not required by § 835.402, internal and external doses must be summed and records must be maintained only if the doses determined by the non-mandatory monitoring exceed the thresholds of § 835.402. This proposed change was intended to reduce the burden of recordkeeping consistent with the recommendations in the Guidance to Federal Agencies.

2. Deleting the words "caused by contamination on the skin" from § 835.702(b) to ensure consistency with the referenced requirements at § 835.205.

3. Revising § 835.702(c)(1) to provide that records must be sufficient to demonstrate compliance with all of the subpart C dose limits. This provision is consistent with § 835.701(a).

4. Deleting the requirement at § 835.702(c)(4)(iii) to record the estimated intake associated with internal dose assessments. This change was necessary because determination of the individual dose equivalent resulting from intakes of certain radionuclides, such as tritium, does not require determination of the estimated intake.

5. Revising § 835.702(d) and (e) such that acceptance of written estimates of an individual's prior occupational dose is based upon an inability to obtain formal records, rather than the absence of those records. DOE also proposed to revise § 835.702(d) consistent with the previously discussed clarification of the components of occupational dose and to reference DOE Orders for authorizing emergency exposures. DOE further proposed to revise § 835.702(e) to indicate that efforts to obtain records of prior years doses were necessary only for those individuals monitored in accordance with § 835.402.

6. Technical and editorial changes to clarify the recordkeeping provisions and to ensure consistency with other changes included in subparts J and M. DOE also proposed to revise § 835.704(d) to require documentation of revocations of declarations of pregnancy.

7. Because some individuals may not have social security numbers, DOE proposed to revise § 835.801(a) to allow for use of another unique identification number in reports associated with such individuals.

Summary of Public Comments and Disposition

DOE received a number of comments indicating that the results of all individual monitoring that is performed should be recorded. DOE agrees that this approach has merit. Furthermore, DOE has provided adequate flexibility under the individual monitoring requirements of § 835.402 to eliminate any onerous administrative burdens resulting from records of trivial doses.

DOE received comments indicating that the term "accident" was not clearly defined, resulting in uncertainty about the proper application of the individual monitoring records requirement of § 835.702(a).

DOE received comments suggesting that the proposed change to § 835.702(e) was not needed because, in the absence of a cumulative dose limit, written estimates would not serve any substantive purpose. DOE agrees with this observation.

Final Rule

DOE has revised § 835.702(a) to delete reference to accidents and to specify that records be maintained to document unplanned doses exceeding the monitoring thresholds of § 835.402.

In consideration of the comments received, DOE has not included the proposed changes to § 835.702(b) in the final rule.

Consistent with the changes to § 835.1302 discussed in Section II.L of this Notice of Final Rulemaking, DOE has revised § 835.702(d) to reference the emergency exposure authorization measures included in that section.

DOE has also not included in the final rule the proposed change to § 835.702(e) allowing written estimates of prior years doses. DOE has included the remaining changes with minor editorial corrections to enhance clarity.

DOE's review of 10 CFR part 835 revealed the fact that § 835.702(c)(2) inappropriately invoked the requirements of certain DOE Orders. The applicability of these Orders is established through DOE contractual processes. DOE has revised the text to delete this invocation of DOE Orders.

Consistent with changes discussed elsewhere in this Notice of Final Rulemaking, DOE has revised the heading of § 835.703 and language at § 835.703(a) and (e) to eliminate the use of the term "workplace" and to reference those subparts of the rule (subparts E and L) that establish monitoring requirements.

Because individuals generally do not record the results of contamination monitoring upon exiting contamination and high contamination areas and there is little perceived value in maintaining such records, DOE has clarified § 835.703(a) to permit such a practice. In consideration of comments on the specificity of the proposed § 835.703(c) recordkeeping provisions, DOE has not included the second portion of proposed § 835.703(c) regarding informational content of these records in the final rule. DOE has revised the recordkeeping requirements of § 835.703(d) consistent with the changes made to § 835.401.

In recognition of the need to record the estimated date of conception for a declared pregnant worker (in order to determine compliance with the applicable dose limit for the embryo/fetus), DOE has clearly stated this as a requirement at § 835.704(d). Also, consistent with the changes made at § 835.401, DOE has deleted the term "workplace" from § 835.704(e).

H. Radiation Safety Training, Subpart J

1. Training Course Content and Administration

Proposed Amendment

When 10 CFR part 835 was originally developed, the detailed radiation safety training requirements provided in the Manual obviated the need to specify minimum training course content in the rule. Because the Manual is no longer mandatory, DOE proposed to specify minimum training course content at § 835.901(b). Also at § 835.901(b), DOE proposed requirements that would allow more liberal acceptance of an individual's previous radiation safety training.

DOE proposed to further consolidate and simplify its requirements for

radiation safety training. Under the proposed amendment, the level of training required would be based upon the areas entered by the individual unescorted, the activities performed, and the likely doses, rather than the individual's classification as a member of the public, general employee, or radiological worker. Implementation of this hierarchical approach to training would result in the appropriate level of radiation safety training for general employees, with a higher level of training required for radiological workers. This approach is consistent with field experience and feedback from DOE operating contractors and is similar to the approach previously taken by DOE in DOE Order 5480.11 and currently taken by the NRC in 10 CFR part 19, "Notices, Instructions and Reports to Workers: Inspection and Investigations." DOE proposed to eliminate the examination requirement for individuals who are not permitted unescorted access to radiological areas and who do not perform unescorted assignments as a radiological worker. DOE also proposed to provide specific requirements at § 835.901(f) for individuals who may act as escorts of individuals who have not completed required training.

Summary of Public Comments and Disposition

Public comments generally endorsed DOE's proposed hierarchical approach to radiation safety training. However, some commenters were concerned that the proposed approach, which would require an individual to complete radiation safety training prior to being occupationally exposed to radiation, would needlessly penalize those facilities that conduct training inside the controlled area or in other areas in which trivial occupational exposures may occur. However, as proposed, § 835.901(c) (§ 835.901(b) in the proposed rule) requires training to the extent appropriate to the individual's degree of exposure to potential radiological hazards. Under the circumstances described, the "extent appropriate" may be minimal (perhaps a briefing on appropriate alarm responses).

Comments indicated that the proposed § 835.901(b)(3) requirement to provide training on "measures implemented at the facility to minimize exposures" was inappropriate, as there is no requirement to "minimize exposures." Other comments indicated that it was unnecessary for the required training to be appropriate to "anticipated and actual" work assignments; training appropriate to the individual's work assignments should be sufficient. DOE agrees with these observations.

DOE received comments indicating that the existing § 835.2(a) definition of the term "radiological worker" was overly restrictive and unclear due to its inclusion of individuals who operate radiation producing devices. Commenters indicated that this inclusion could require extensive training and testing of individuals who operate devices emitting nominal amounts of radiation or those who operate devices such as televisions and computer monitors. However, consumer devices that emit nominal amounts of radiation are clearly excluded from the scope of 10 CFR part 835 under the provisions of 835.1(b)(6) and the related § 835.2(a) definition of "background." Although the proposed provisions of § 835.901(d) (see § 835.901(b) in the final rule) would require training and testing of individuals who operate other radiation producing devices, the provisions of § 835.901(c) (see § 835.901(b) in the proposed rule) would only require that such training be appropriate to the extent of the individual's potential exposure to radiological hazards.

Although many commenters favored DOE's proposed relaxation of the examination requirements, other commenters indicated that an examination should be required for all forms of training to ensure that the student has an understanding of the material presented. DOE agrees that examinations are useful tools for assessing the retention of information by the student. However, as stated in DOE's Notice of Proposed Rulemaking, the radiological hazards present in those portions of controlled areas which are outside of radiological areas are so minimal that the information needed prior to entry does not warrant a regulatory requirement for an examination. However, the absence of this regulatory requirement does not preclude DOE's operating entities from administering an examination.

Several commenters indicated that DOE's proposed requirements for use of escorts in lieu of training were unclear because of the use of the phrase "where an escort is required." These commenters correctly pointed out that the proposed § 835.901(c) and (d) would permit, but would not explicitly require, the use of escorts.

Other commenters were concerned that the retraining requirements of proposed § 835.901(g) might require individuals to complete the full introductory radiation safety training course every 24 months. DOE agrees that this issue requires clarification.

Final Rule

As proposed, DOE has reformatted subpart J into one section in the final rule, codifying an approach similar to that previously published in the Manual and eliminating redundancy. DOE has omitted proposed § 835.901(a) from the final rule because that paragraph would not establish any substantive requirements. DOE has also eliminated the examination requirement for individuals who are not permitted unescorted access to radiological areas and who do not perform unescorted assignments as a radiological worker, as proposed. Although not a regulatory requirement, DOE contractors may still choose to administer examinations or to undertake other means of assessing individual understanding, such as interactive classroom discussions.

DOE has included at § 835.901(c) (§ 835.901(b) in the proposed amendment) a requirement for training to be provided to the extent appropriate to the individual's work assignment. DOE has also included at § 835.901(c)(3) (proposed § 835.901(b)(3)) a requirement that the training address measures used to "manage doses and maintain doses ALARA," rather than "minimize" doses. This modification makes clear the distinction between maintaining doses well below the dose limits using the ALARA process and maintaining doses well below the dose limits by minimizing doses regardless of other considerations.

DOE has established requirements applicable to instances in which escorts are used, rather than required, in lieu of training at revised § 835.901(d) (§ 835.901(f) in the proposed amendment).

With regard to the requirements for biennial retraining, DOE has eliminated the use of the undefined term "retraining." Section 835.901(e) of the final rule requires affected individuals to complete the required training at least every 24 months. Like the initial training, this follow-on training is for individuals subject to the requirements of § 835.901(a) and (b), and is subject to the provisions of § 835.901(c). Thus, the content and scheduling (prior to the end of the two year time interval) of such training needs to incorporate considerations of the individual's prior training, work assignments, and degree of exposure to radiological hazards, as well as significant changes to radiation protection policies and procedures that affect the individual.

2. Radiological Control Technician Training [§ 835.903]

DOE also proposed changes to the 10 CFR part 835 requirements for training of radiological control technicians. These changes are discussed in detail in Section II.B.3. of this Notice of Final Rulemaking.

I. Design and Control, Subpart K

Proposed Amendment

Experience in implementing programs to ensure compliance with 10 CFR part 835 revealed that the design objectives currently included at § 835.1002(b) and (c) may not be practical in developing certain modifications to existing facilities. Therefore, DOE proposed to delete § 835.1002(b) and (c). DOE also proposed to move the remaining requirements in paragraphs (a) and (d) of § 835.1002 to § 835.1001.

The design criteria established at § 835.1003(a) did not include all of the occupational dose limits of § 835.202, e.g. the lens of the eye dose limit established at § 835.202(a)(3). This omission implied that the design of new facilities or modification of existing facilities could include design features that would result in doses exceeding the lens of the eye dose equivalent limit of 15 rem established at § 835.202. DOE proposed to correct this omission by including all applicable occupational dose limits established at § 835.202 in this section.

Summary of Public Comments and Disposition

Comments indicated that the phrase "as low as is reasonably achievable" at § 835.1001(a) could be construed to have a meaning that differed from "ALARA" as defined at § 835.2(a).

Many commenters stated that DOE should retain the numerical design objectives provided at § 835.1002. Although achievement of the numerical design objectives may not be practical in some cases (particularly for minor modifications of existing facilities), the design objectives are important components of the ALARA process. Public comments suggested that elimination of the numerical design objectives could result in confusion over when to apply quantitative design objectives and the appropriate magnitude of those objectives. Comments also indicated that § 835.1003(b) did not establish any substantive requirements beyond those established in subpart E of 10 CFR part 835.

DOE agrees with these observations.

Final Rule

At § 835.1001(a), DOE has substituted "ALARA" for "as low as is reasonably achievable."

Because procedural requirements are a type of administrative control, DOE has deleted the term "procedural requirements" from § 835.1001 and deleted the term "procedures" from § 835.1003 to eliminate redundancy. For consistency, DOE has revised the heading of § 835.1003 to read "Workplace Controls."

Because the use of quantitative design objectives plays a significant role in the ALARA process as it applies to facility design, DOE has chosen to defer this critical change until more experience is gained through implementation of these regulatory provisions. DOE has accepted the public comments and has retained the numerical design objectives of § 835.1002; however, DOE has retained the proposed editorial change at § 835.1002 (proposed § 835.1001(c)) substituting the term "existing facilities" for the term "old facilities." DOE will address its concerns with the application of these requirements through enhanced guidance for achieving compliance. DOE has included in the final rule the proposed change related to the lens of the eye dose limit. In consideration of public comments, DOE has also deleted § 835.1003(b) from the final rule.

J. Radioactive Contamination Control, Subpart L

Proposed Amendment

Consistent with the changes to the § 835.2(a) definitions of the terms "contamination area" and "high contamination area," DOE proposed changes to the § 835.404 requirements for areas having only fixed contamination exceeding the appendix D total surface radioactivity values.

DOE proposed several changes to appendix D of 10 CFR part 835, which provides mandatory surface radioactivity values for contamination control. DOE proposed to add the word "alpha" after the values for uranium isotopes in appendix D to clarify the applicability of these values. DOE also proposed to add to appendix D of 10 CFR part 835 a contamination control value of 10,000 disintegrations per minute per 100 square centimeters for surfaces contaminated with tritium and Footnote 6 to explain the use of this value. The surface contamination value would be used to determine the applicability of the § 835.603 contamination hazard posting provisions and the §§ 835.404 and 835.1101 contamination control provisions. DOE has prepared an Environmental Assessment, available at DOE's Freedom of Information Reading Room at the address provided above, that addresses this change in detail.

DOE also proposed to move the existing requirements of § 835.1101(d) to § 835.703(c) to consolidate recordkeeping requirements and to add a new requirement for removal of radioactive material labels from released materials and equipment at § 835.1101(d).

Summary of Public Comments and Disposition

Public comments were generally supportive of DOE's proposed changes to the requirements for control of radioactive contamination. Public comments also indicated that the recordkeeping requirements of proposed § 835.703(c) were overly prescriptive in comparison to related requirements of the rule. Public comments also indicated that a literal reading of § 835.404(f) would indicate that the performance of individual contamination monitoring by someone other than the individual exiting a contamination or high contamination area (i.e., individual frisking by radiological control technicians) would be contrary to 10 CFR part 835. DOE agrees with these observations.

Comments indicated that the related requirements of §§ 835.404 and 835.1101 were confusing and possibly contradicting. The existing provisions of § 835.404 establish requirements for control of areas contaminated by radioactive material; the provisions of § 835.1101 establish similar requirements for materials and equipment contaminated by radioactive materials. Upon reexamination of these requirements in light of the comments received, DOE believes that there is opportunity for simplification and clarification of the rule.

Final Rule

DOE has combined and simplified the requirements of §§ 835.404 and 835.1101 in the final rule as follows:

a. Although the provisions of § 835.404 were specifically related to controlling the spread of contamination, they were located in subpart E, which was entitled "Monitoring in the Workplace." Therefore, DOE has moved these requirements, with revisions discussed below, to subpart L.

b. Although the title of subpart L indicates that the subject matter is related to "Releases of Materials and Equipment from Radiological Areas," the requirements are more specifically related to retention and control of

contaminated materials in radiological areas. Therefore, DOE has retitled subpart L, "Radioactive Contamination Control."

c. DOE has clarified and simplified the structure of § 835.1101(a).

d. DOE has retained paragraphs 835.1101(b) and (c) with minor editorial clarifications. Consistent with the discussion in Section II.B.3 of this Notice of Final Rulemaking regarding written procedures, DOE has omitted the requirement for written procedures (formerly § 835.1101(c)(3)).

e. Because the existing requirements of § 835.404(a) established no substantive requirements, DOE has omitted this paragraph from the final rule.

f. DOE has redesignated paragraph 835.404(b) as § 835.1102(a) in the final rule.

g. DOE has edited paragraph 835.404(c) and redesignated it as § 835.1102(b) in the final rule. DOE has omitted the provision related to posting of contamination hazards (formerly § 835.404(c)(1)) because this provision is redundant with § 835.603(e) and (f).

h. DOE has edited paragraph 835.404(d) and redesignated it as § 835.1102(c) in the final rule. Consistent with the discussion in Section II.B.3 of this Notice of Final Rulemaking regarding written procedures, DOE has omitted the requirement for written procedures (formerly § 835.404(d)(5)).

i. Because of the changes to the § 835.2(a) definitions of "contamination area" and "high contamination area" discussed above, the areas discussed at § 835.404(d) (i.e., those having fixed contamination at levels exceeding the appendix D total contamination values, but removable contamination levels below the appendix D removable contamination values) would no longer be considered radiological areas. This renders the provisions of § 835.404(e) redundant; therefore, DOE has omitted these requirements from the final rule.

j. DOE has clarified § 835.404(f) and redesignated it as § 835.1102(d).

k. DOE has revised the language at § 835.404(g) for clarity and redesignated it as § 835.1102(e).

DOE has reconsidered its proposal to add § 835.1101(d) establishing requirements for removal of radioactive material labels from released materials and equipment. Although DOE considers materials and equipment meeting the requirements of § 835.1101(a) to be appropriate for release from radiological areas, such materials and equipment are not necessarily "non-radioactive" and conditions may arise under which retention of the radioactive material labels is appropriate. DOE has therefore omitted this provision from the final rule.

As before, the requirements of § 835.1101 address release of materials and equipment from radiological areas to controlled areas. DOE requirements for release of materials and equipment from its control are addressed in DOE environmental protection standards.

K. Control of Sealed Radioactive Sources, Subpart M

Proposed Amendment

DOE proposed to add subpart M to 10 CFR part 835 to establish requirements for control of sealed radioactive sources. These requirements would supersede similar requirements established in DOE Notice 5400.9, "Sealed Radioactive Source Accountability" (extended through DOE Notice 5400.13 and superseded by DOE N 441.1 through DOE N 441.3). DOE proposed to add the terms "accountable sealed radioactive source," "sealed radioactive source," and "source leak test" at § 835.2(a) and to add recordkeeping requirements at § 835.704(f). DOE also proposed to add appendix E to 10 CFR part 835 to establish threshold values for sealed radioactive source accountability, radioactive material labeling, and radioactive material area posting.

Summary of Public Comments and Disposition

Although many commenters supported DOE's efforts to codify requirements for sealed radioactive source control, several commenters indicated that the accountability threshold values proposed for inclusion in appendix E of 10 CFR part 835 were overly restrictive. Commenters also indicated that the definition of "sealed radioactive source" was too broad to allow for exclusion of certain items, such as reactor fuel elements, that are not commonly produced or used as sealed radioactive sources. In addition, several commenters indicated that DOE's proposed minimum activity requiring performance of periodic leak tests (0.005 microcuries) was overly restrictive.

Commenters indicated that inaccessible sources should be excepted from the requirements for leak testing and inventory. Such a measure would obviate the need to disassemble facility components and instruments for the purpose of performing the inventories and leak tests. Commenters also indicated that common contamination control measures are capable of minimizing, but perhaps not preventing, the spread of contamination as would be required by proposed § 835.1202(e).

DOE agrees with these observations.

Final Rule

In response to public comments, DOE has revised the § 835.2(a) definition of the term "sealed radioactive source" to exclude reactor fuel elements, nuclear explosive devices, and radioisotope thermoelectric generators. DOE has included the definitions of "accountable sealed radioactive source" and "source leak test" at § 835.2(a) as proposed. DOE has revised § 835.1202(d) to provide an exception from leak testing and inventory for sealed radioactive sources that are inaccessible. DOE has also revised § 835.1202(e) to indicate that the required contamination control measures must "minimize" the spread of contamination.

DOE has revised the proposed appendix E values. DOE determined the appendix E values in the final rule as follows: For each radionuclide, DOE considered two scenarios: (1) the activity quantity resulting in a deep dose equivalent from external radiation of 0.1 rem (0.001 sievert) assuming an individual was irradiated for a period of 12 hours per day at a distance of 1 meter from the source for 365 days; and (2) the activity quantity resulting in a committed effective dose equivalent of 0.1 rem (0.001 sievert) assuming an instantaneous intake of 0.001% of the material by an individual. DOE compared the activity quantities for the deep dose equivalent and the committed effective dose equivalent and selected the more restrictive value as the basis for the accountability threshold value. DOE selected the value of 0.1 rem as the basis for the revised appendix E values for consistency with DOE's mandatory threshold for monitoring of general employee dose (see § 835.402) and dose limit for members of the public in controlled areas (see § 835.208). DOE also assumed more realistic values for the exposure time and intake factor and eliminated the arbitrary 300 microcurie activity cap. The basis for the appendix E values is discussed in more detail in a technical basis document available in DOE's Freedom of Information Reading Room at the address provided above.

Because all of the revised appendix E values are greater than 0.005 microcuries, DOE has deleted this threshold from the requirements for sealed radioactive source leak tests (proposed § 835.1202(b)). DOE has also omitted the proposed requirement for written procedures from the final rule. For details on this omission, see Section II.B.3 of this Notice of Final Rulemaking. Finally, because DOE's

reevaluation of the appendix E values resulted in significant increases in all of the accountability threshold values, DOE has codified a general requirement at § 835.1201 for all radioactive sources (both accountable and non-accountable) to be used, handled, and stored in a manner commensurate with the radiological hazards created by the operation involving the sources. DOE will provide implementing guidance to discuss acceptable methods for achieving compliance with this provision.

The basis for the control of sealed radioactive sources is a hierarchy of increasing radiological controls based upon the maximum credible dose consequence resulting from the loss of a source. The maximum credible dose consequence should not be considered to be a release criterion. Under the requirements of 10 CFR part 835, some degree of radiological control is required for all sealed radioactive sources, regardless of their activity. This hierarchy of controls reduces the likelihood of losing a sealed radioactive source. Thus the approach to sealed radioactive source control is analogous to that taken in nuclear safety. As the potential consequences of a credible incident increase, additional controls are imposed to reduce the probability that the incident will occur and mitigate the consequences of that incident.

For the lowest activity sealed radioactive sources, a minimal level of radiological control is required based upon the hazards associated with the operations involving the sources. More specific actions are not considered necessary and are therefore not specified.

For sealed radioactive sources whose loss could result in a maximum credible dose consequence of 0.1 rem or more in a year, additional controls are imposed. The requirement for semi-annual inventories reduces the possibility of losing the source and, by triggering investigative action, mitigates the consequences of a lost source. The requirement for semi-annual leak testing provides a means of monitoring the integrity of the source and likewise triggers action to mitigate the consequences of a leaking source.

L. Accident and Emergency Exposures, Subpart N

Proposed Amendment

DOE proposed to correct § 835.1301(a), (b), and (d) by deleting references to § 835.205, which provides no dose limits. Consistent with changes to § 835.204, DOE proposed to revise § 835.1301(a) to indicate that doses resulting from accident and emergency exposures may exceed the numerical values established at § 835.202(a) without violating the occupational dose limits. Both accident and emergency doses are considered occupational doses and are included in a general employee's occupational dose record, but emergency doses are explicitly excluded from consideration in determining compliance with the occupational dose limits at § 835.202(a).

DOE proposed to delete § 835.1302(d) because these provisions are adequately addressed in related DOE Orders and emergency management guides.

DOE clarified § 835.1304 by substituting the defined term "individual" for the term "personnel" which eliminates any confusion regarding the coverage of the personal nuclear accident dosimetry provisions. DOE also proposed to remove the reference to "all personnel" to provide flexibility in implementing the personal nuclear accident dosimetry provisions.

Summary of Public Comments and Disposition

Regarding accident and emergency exposures, public comments indicated that DOE had failed to clearly define the terms "accident" and "emergency," resulting in uncertainty about the proper application of these provisions.

Comments regarding the proposed approach basing personal nuclear accident dosimetry requirements on the need for nuclear criticality alarms indicated that this approach would be impractical due to the vagueness of the referenced requirements for these alarms.

DOE agrees with these observations.

Final Rule

DOE has included the proposed changes into the final rule.

Consistent with the clarification of the requirements for accounting for occupational doses, including doses resulting from authorized planned special exposures and emergency exposures, DOE has deleted the term "accident" from § 835.1301(a). This deletion results from DOE's recognition that, except for doses resulting from planned special exposures and authorized emergency exposures, all doses in excess of the regulatory limits may be considered to be "accidents." Under such circumstances, DOE believes that provisions allowing affected individuals to return to work without further detailed review subverts the intent of the § 835.202 occupational dose limits. DOE believes that it is most appropriate for this section to address doses resulting from authorized emergency exposures. Despite this change, DOE recognizes the fact that issues of individual work rights and DOE liability may arise as a result of "accidental" exposures exceeding the regulatory dose limits. Mechanisms for addressing doses resulting from accidents, and authorizations to return affected individuals to work, exist within the exemption process established in 10 CFR part 820.

In response to public comments, DOE revised the text in § 835.1301(c) and (d) to eliminate the terms "emergency" and "accident" and specify that the notification and resumption provisions apply when doses were received in excess of the limits of § 835.202, except those doses received in accordance with § 835.204.

As discussed above with regard to § 835.702(c)(2), DOE found that § 835.1301(e) inappropriately invoked the requirements of DOE Orders. The applicability of these Orders is established through DOE contractual processes. Therefore, DOE has deleted this provision.

To resolve issues related to requirements for personal nuclear accident dosimetry, DOE has revised the requirement to simply indicate that the nuclear accident dosimetry system must include personal nuclear accident dosimeters. This approach will allow for flexible implementation on a site-and facility-specific basis.

M. Use of Appendices

Proposed Amendment

DOE proposed to clarify the application of the data presented in the appendices of 10 CFR part 835 by adding introductory text to each appendix referencing those sections of the rule requiring use of the appendix. DOE also proposed to delete the absorption factor (f1) values and the related footnote (footnote 5) from appendix A of 10 CFR part 835 because absorption factors and alternative absorption factors are neither used nor referenced in the rule. DOE determined that 10 CFR part 835 established no substantive requirements for use of the data presented in appendix B, and therefore proposed to delete appendix B.

DOE's review of exemption requests concerning occupational exposure to 220Rn and 222Rn and their daughter products revealed that DAC values for these radioisotopes are inappropriately referenced in both appendices A and C. Exposure to these radionuclides results in a lung dose and therefore, the air immersion DACs in appendix C are inappropriate. Accordingly, DOE

proposed to delete the air immersion DAC values for 220Rn and 222Rn from appendix C.

Experience in implementing programs that ensure compliance with 10 CFR part 835 has proven that the exposure conditions used to determine the appendix C DAC values (immersion in a semi-infinite cloud) often differ from those at DOE facilities (i.e., exposure in relatively small enclosures). Use of the appendix C DAC values under these conditions can result in the overestimation of individual doses. Therefore, DOE proposed to revise appendix C, note b., to allow modification of the DAC values to compensate for immersion in a cloud of finite dimensions and to provide instructions for determining the DAC of a mixture of radionuclides.

Summary of Public Comments and Disposition

Although several commenters suggested that the data in appendix B were useful and should be retained, the correlation of chemical form to lung retention class is available directly from Table 3 of Federal Guidance Report Number 11, "Limiting Values of Radionuclide Intake and Air Concentration and Dose Conversion Factors for Inhalation, Submersion, and Ingestion."

Commenters favored DOE's proposal to allow for modification of the appendix C values. However, contrary to the information provided in appendix C, note b., these values were calculated based upon an exposure of 2000 hours per year, and not based upon a continuous exposure.

Final Rule

DOE has included the proposed changes in the final rule with minor editorial corrections. For consistency with the existing provisions associated with appendix C of 10 CFR part 835, DOE has included a note with appendix A of 10 CFR part 835 that will allow use of the sum of the fractions rule when there exists a mixture of radionuclides in the area of interest. DOE has also revised appendix C, note b., to reflect the 2000 hour per year exposure basis of the values.

Consistent with terminology used throughout the rule and in DOE's guidance documents, DOE has also retitled the table in appendix D of 10 CFR part 835 "Surface Contamination Values."

N. Corrections and Clarifications

Proposed Amendment

DOE proposed numerous editorial corrections and technical clarifications that do not change the requirements of the rule or the measures necessary to ensure regulatory compliance. The proposed changes included:

1. Correction of the definitions of "airborne radioactive material", and "year" (§ 835.2(a)) and "external dose or exposure," and "quality factor" (§ 835.2(b));

2. Clarification of the application of the mean quality factors for neutrons provided at § 835.2(b);

3. Deletion of § 835.2(d) because the convention stated in that paragraph for the use of singular, plural, masculine, and feminine terms is not used in part 835;

4. Revision of the requirements of § 835.102 for clarity;

5. Change of the heading of § 835.202 to "Occupational dose limits for general employees" to accurately reflect the content of that section;

6. Deletion from § 835.203(a) and the § 835.2(b) definition of "total effective dose equivalent" the provision related to substitution of deep dose equivalent for effective dose equivalent from external exposure. This provision is redundant with the revised definition of "effective dose equivalent" proposed at § 835.2(b).

Summary of Public Comments and Disposition

DOE received no substantive comments on these changes.

Final Rule

DOE has included the proposed changes in the final rule.

III. Review Under the National Environmental Policy Act

DOE has reviewed the promulgation of this amendment to 10 CFR part 835 under the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*) and the Council on Environmental Quality regulations for implementing NEPA (40 CFR parts 1500–1508). DOE has completed an Environmental Assessment and on the basis of that information has issued a Finding of No Significant Impact (FONSI) for this amendment. The FONSI and the Environmental Assessment update the FONSI and Environmental Assessment issued when the proposed amendment was published for public comment and reflect changes in the final rule made in response to public comments. The Environmental Assessment and FONSI are available for inspection at the DOE Freedom of Information Reading Room, 1E–190, 1000 Independence Ave. SW, Washington, DC 20585, between the hours of 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

IV. Review Under Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601–612, requires that an agency prepare an initial regulatory flexibility analysis and publish it at the time of publication of general notice of rulemaking for the rule. This requirement does not apply if the agency certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities. 5 U.S.C. 605(b).

Today's action amends DOE's regulations governing programs established at DOE facilities to protect individuals from ionizing radiation resulting from DOE activities. The contractors who manage and operate DOE facilities are responsible for implementing the occupational radiation protection program. DOE has considered whether management and operating (M&O) contractors are "small businesses," as that term is defined by the Regulatory Flexibility Act (5 U.S.C. 601(3)). The Regulatory Flexibility Act's definition incorporates the definition of "small business concern" in the Small Business Act, which the Small Business Administration (SBA) has developed through size standards in 13 CFR part 121. Small businesses are business concerns which, together with their affiliates, have no more than 500 to 1500 employees, varying by SIC category, and annual receipts of between $0.5 million to $25 million, again varying by SIC category—Title 13 CFR part 121. DOE's M&O contractors exceed the SBA's size standards for small businesses. In addition, it is noted that M&O contractors are reimbursed through their contracts with DOE for the costs of complying with DOE occupational radiation protection requirements. They will not, therefore, be adversely impacted by the requirements in the rule. For these reasons, DOE certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

V. Review Under Executive Order 12866

Today's regulatory action has been determined not to be a "significant regulatory action" under Executive Order 12866, "Regulatory Planning and Review," (58 FR 51735, October 4, 1993). Accordingly, today's action was not subject to review under the Executive Order by the Office of Information and Regulatory Affairs within the Office of Management and Budget.

VI. Review Under Executive Order 12612

Executive Order 12612, 52 FR 41685 (October 30, 1987) requires that regulations, rules, legislation, and any other policy actions be reviewed for any substantial direct effects on States, on the relationship between the National Government and the States, or in the distribution of power and responsibilities among various levels of government. If there are sufficient substantial direct effects, then the Executive Order requires preparation of a federalism assessment to be used in all decisions involved in promulgating and implementing a policy action.

This final rule would not have a substantial direct effect on the institutional interests or traditional functions of States.

VII. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," 61 FR 4729 (February 7, 1996), imposes on Executive agencies the general duty to adhere to the following requirements:

(1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for affected conduct rather than a general standard and promote simplification and burden reduction. With regard to the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that the amendments to 10 CFR part 835 meet the relevant standards of Executive Order 12988.

VIII. Review Under Paperwork Reduction Act

DOE submitted the proposed collections of information in this rule to the Office of Management and Budget for review under section 3507(d) of the Paperwork Reduction Act of 1995 (42 U.S.C. 3507(d)), and, by separate notice on May 26, 1998, invited public comment on DOE's statement of need and estimates of the burden of the collection of information in 10 CFR part 835 (63 FR 28495). The information that DOE management and operating contractors are required to produce, maintain and report is necessary to permit the Department and its contractors to manage and oversee health and safety programs that control worker exposure to radiation. DOE estimates that the total annual burden of the collection of information requirements to be 50,000 hours for the approximately 50 contractors subject to the rule.

The Office of Management and Budget has approved the collections of information in 10 CFR part 835 and assigned to the part OMB Number 1910–5105. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number (5 CFR 1320.5(b)).

IX. Review Under the Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (the Act), Pub.L. 104–4 on March 22, 1995, codified at 2 U.S.C. 1501–1571, requires each Federal agency, to the extent permitted by law, to prepare a written assessment of the effects of any Federal mandate in a proposed or final agency rule that may result in the expenditure by State, local, and tribal governments, in the aggregate or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. Section 204(a) of the Act, codified at 2 U.S.C. 1534(a), requires the Federal agency to develop an effective process to permit timely input by elected officers (or their designees) of State, local, and tribal governments on proposals containing "significant Federal intergovernmental mandates." Section 203(a) of the Act, codified at 2 U.S.C. 1533(a), provides that before establishing any regulatory requirements that might significantly or uniquely affect small governments, the agency shall have developed a plan that, among other things, provides for notice to potentially affected small governments, if any, and enables officials of affected small governments to provide meaningful and timely input in the development of regulatory proposals containing significant intergovernmental Federal mandates.

The final rule published today does not contain any Federal mandate that would result in any expenditure by State, local or tribal government. The provisions of 10 CFR part 835 apply only to activities conducted by or for DOE. Therefore, the requirements of Title II of the Unfunded Mandates Reform Act of 1995 do not apply.

X. Review Under Small Business Regulatory Enforcement Fairness Act of 1996

As required by 5 U.S.C. 801, DOE will report to Congress promulgation of this rule prior to its effective date. The report will state that it has been determined that the rule is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 10 CFR Part 835

Emergency radiation exposures, Nuclear material, Occupational safety and health, Radiation exposures, Radiation protection, Radioactive material, Reporting and recordkeeping requirements, Safety during emergencies, Training.

Issued in Washington, DC, on October 29, 1998.

Peter N. Brush,

Acting Assistant Secretary, Environment, Safety and Health.

For the reasons set forth in the preamble, Title 10, Code of Federal Regulations, part 835 is amended as set forth below:

PART 835—OCCUPATIONAL RADIATION PROTECTION

1. The authority citation for part 835 continues to read as follows:

Authority: 42 U.S.C. 2201; 7191.

Subpart A—General Provisions

2. Section 835.1 is amended by revising the introductory text of paragraph (b) and paragraph (b)(3), redesignating paragraph (b)(4) as (b)(6), and by adding paragraphs (b)(4), (b)(5), and (c) as follows:

§ 835.1 Scope.

* * * * *

(b) *Exclusion.* Except as discussed in paragraph (c) of this section, the requirements in this part do not apply to:

* * * * *

(3) Activities conducted under the Nuclear Explosives and Weapons Surety Program relating to the prevention of accidental or unauthorized nuclear detonations;

(4) Radioactive material transportation as defined in this part;

(5) DOE activities conducted outside the United States on territory under the jurisdiction of a foreign government to the extent governed by occupational radiation protection requirements agreed to between the United States and the cognizant government; or

(6) Background radiation, radiation doses received as a patient for the purposes of medical diagnosis or therapy, or radiation doses received from participation as a subject in medical research programs.

(c) Occupational doses received as a result of excluded activities and radioactive material transportation, as listed in paragraphs (b)(1) through (b)(5) of this section, shall be considered when determining compliance with the occupational dose limits at §§ 835.202 and 835.207, and with the limits for the embryo/fetus at § 835.206. Occupational doses resulting from authorized emergency exposures and planned special exposures shall not be considered when determining compliance with the dose limits at §§ 835.202 and 835.207.

3. At § 835.2, paragraph (a) is amended by removing definitions of the terms "ambient air", "continuous air monitor", "DOE activities", "occupational exposure", "representative", and "survey"; by adding in alphabetical order, definitions for the terms "accountable sealed radioactive source", "derived air concentration-hour", "DOE activity", "occupational dose", "radioactive material area", "radioactive material transportation", "real-time air monitoring", "respiratory protective device", "sealed radioactive source", "source leak test", and "week"; and revising the definitions of the terms "airborne radioactive material or airborne radioactivity", "airborne radioactivity area", "contamination area", "controlled area", "declared pregnant worker", "general employee", "high contamination area", "member of the public", "monitoring", "radiological area", and "year" to read as follows. At § 835.2, paragraph (b), the definition of "collective dose" is removed, the definition of "dose" is added, and the definitions of the terms "cumulative total effective dose equivalent", "effective dose equivalent", "external dose or exposure", "quality factor", "total effective dose equivalent", and "weighting factor" are revised as follows. Paragraph (d) of § 835.2 is removed.

§ 835.2 Definitions.

(a) As used in this part:

Accountable sealed radioactive source means a sealed radioactive source having a half-life equal to or greater than 30 days and an isotopic activity equal to or greater than the corresponding value provided in appendix E of this part.

Airborne radioactive material or airborne radioactivity means radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.

Airborne radioactivity area means any area, accessible to individuals, where:

(1) The concentration of airborne radioactivity, above natural background, exceeds or is likely to exceed the derived air concentration (DAC) values listed in appendix A or appendix C of this part; or

(2) An individual present in the area without respiratory protection could receive an intake exceeding 12 DAC-hours in a week.

* * * * *

Contamination area means any area, accessible to individuals, where removable surface contamination levels exceed or are likely to exceed the removable surface contamination values specified in appendix D of this part, but do not exceed 100 times those values.

* * * * *

Controlled area means any area to which access is managed by or for DOE to protect individuals from exposure to radiation and/or radioactive material.

Declared pregnant worker means a woman who has voluntarily declared to her employer, in writing, her pregnancy for the purpose of being subject to the occupational dose limits to the embryo/fetus as provided at § 835.206. This declaration may be revoked, in writing, at any time by the declared pregnant worker.

* * * * *

Derived air concentration-hour (DAC-hour) means the product of the concentration of radioactive material in air (expressed as a fraction or multiple of the DAC for each radionuclide) and the time of exposure to that radionuclide, in hours.

DOE activity means an activity taken for or by DOE in a DOE operation or facility that has the potential to result in the occupational exposure of an individual to radiation or radioactive material. The activity may be, but is not limited to, design, construction, operation, or decommissioning. To the extent appropriate, the activity may involve a single DOE facility or operation or a combination of facilities and operations, possibly including an entire site or multiple DOE sites.

* * * * *

General employee means an individual who is either a DOE or DOE contractor employee; an employee of a subcontractor to a DOE contractor; or an individual who performs work for or in conjunction with DOE or utilizes DOE facilities.

High contamination area means any area, accessible to individuals, where removable surface contamination levels exceed or are likely to exceed 100 times the removable surface contamination values specified in appendix D of this part.

* * * * *

Member of the public means an individual who is not a general employee. An individual is not a "member of the public" during any period in which the individual receives an occupational dose.

* * * * *

Monitoring means the measurement of radiation levels, airborne radioactivity concentrations, radioactive contamination levels, quantities of radioactive material, or individual doses and the use of the results of these measurements to evaluate radiological hazards or potential and actual doses resulting from exposures to ionizing radiation.

* * * * *

Occupational dose means an individual's ionizing radiation dose (external and internal) as a result of that individual's work assignment. Occupational dose does not include doses received as a medical patient or doses resulting from background radiation or participation as a subject in medical research programs.

* * * * *

Radioactive material area means any area within a controlled area, accessible to individuals, in which items or containers of radioactive material exist and the total activity of radioactive material exceeds the applicable values provided in appendix E of this part.

Radioactive material transportation means the movement of radioactive material by aircraft, rail, vessel, or highway vehicle when such movement is subject to Department of Transportation regulations or DOE Orders that govern such movements. Radioactive material transportation does not include preparation of material or packagings for transportation, monitoring required by this part, storage of material awaiting transportation, or application of markings and labels required for transportation.

Radiological area means any area within a controlled area defined in this section as a "radiation area," "high radiation area," "very high radiation area," "contamination area," "high contamination area," or "airborne radioactivity area."

* * * * *

Real-time air monitoring means measurement of the concentrations or quantities of airborne radioactive materials on a continuous basis.

* * * * *

Respiratory protective device means an apparatus, such as a respirator, worn by an individual for the purpose of reducing the individual's intake of airborne radioactive materials.

Sealed radioactive source means a radioactive source manufactured, obtained, or retained for the purpose of utilizing the emitted radiation. The sealed radioactive source consists of a known or estimated quantity of radioactive material contained within a sealed capsule, sealed between layer(s) of non-radioactive material, or firmly fixed to a non-radioactive surface by electroplating or other means intended to prevent leakage or escape of the radioactive material. Sealed radioactive sources do not include reactor fuel elements, nuclear explosive devices, and radioisotope thermoelectric generators.

Source leak test means a test to determine if a sealed radioactive source is leaking radioactive material.

* * * * *

Week means a period of seven consecutive days.

Year means the period of time beginning on or near January 1 and ending on or near December 31 of that same year used to determine compliance with the provisions of this part. The starting and ending date of the year used to determine compliance may be changed provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

(b) * * *

Cumulative total effective dose equivalent means the sum of all total effective dose equivalent values recorded for an individual, where available, for each year occupational dose was received, beginning January 1, 1989.

* * * * *

Dose is a general term for absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, or total effective dose equivalent as defined in this part.

* * * * *

Effective dose equivalent (H_E) means the summation of the products of the dose equivalent received by specified tissues of the body (H_T) and the appropriate weighting factor (w_T)—that is, $H_E = \Sigma w_T H_T$. It includes the dose from radiation sources internal and/or external to the body. For purposes of compliance with this part, deep dose equivalent to the whole body may be used as effective dose equivalent for external exposures. The effective dose equivalent is expressed in units of rem (or sievert).

External dose or exposure means that portion of the dose equivalent received from radiation sources outside the body (i.e., "external sources").

* * * * *

Quality factor (Q) means the modifying factor used to calculate the dose equivalent from the absorbed dose; the absorbed dose (expressed in rad or gray) is multiplied by the appropriate quality factor.

(i) The quality factors to be used for determining dose equivalent in rem are as follow:

QUALITY FACTORS

Radiation type	Quality factor
X-rays, gamma rays, positrons, electrons (including tritium beta particles)	1
Neutrons, ≤10 keV	3
Neutrons, >10 keV	10
Protons and singly-charged particles of unknown energy with rest mass greater than one atomic mass unit	10
Alpha particles and multiple-charged particles (and particles of unknown charge) of unknown energy	20

When spectral data are insufficient to identify the energy of the neutrons, a quality factor of 10 shall be used.

(ii) When spectral data are sufficient to identify the energy of the neutrons, the following mean quality factor values may be used:

QUALITY FACTORS FOR NEUTRONS

[Mean quality factors, $\bar{Q}$ (maximum value in a 30-cm dosimetry phantom), and values of neutron flux density that deliver in 40 hours, a maximum dose equivalent of 0.1 rem (0.001 sievert). Where neutron energy falls between listed values, the more restrictive mean quality factor shall be used.]

Neutron energy (MeV)	Mean quality factor	Neutron flux density ($cm^{-2}s^{-1}$)
2.5×10^{-8} thermal	2	680
1×10^{-7}	2	680
1×10^{-6}	2	560
1×10^{-5}	2	560
1×10^{-4}	2	580
1×10^{-3}	2	680
1×10^{-2}	2.5	700
1×10^{-1}	7.5	115
5×10^{-1}	11	27
1	11	19
2.5	9	20
5	8	16
7	7	17
10	6.5	17
14	7.5	12
20	8	11
40	7	10
60	5.5	11
1×10^{2}	4	14
2×10^{2}	3.5	13
3×10^{2}	3.5	11
4×10^{2}	3.5	10

* * * * *

Total effective dose equivalent (TEDE) means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

Weighting factor (w_T) means the fraction of the overall health risk, resulting from uniform, whole body irradiation, attributable to specific tissue (T). The dose equivalent to tissue (H_T) is multiplied by the appropriate weighting factor to obtain the effective dose equivalent contribution from that tissue. The weighting factors are as follows:

WEIGHTING FACTORS FOR VARIOUS ORGANS AND TISSUES

Organs or tissues, T	Weighting factor, w_T
Gonads	0.25
Breasts	0.15
Red bone marrow	0.12
Lungs	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder[1]	0.30
Whole body[2]	1.00

[1] "Remainder" means the five other organs or tissues, excluding the skin and lens of the eye, with the highest dose (e.g., liver, kidney, spleen, thymus, adrenal, pancreas, stomach, small intestine, and upper large intestine). The weighting factor for each remaining organ or tissue is 0.06.

[2] For the case of uniform external irradiation of the whole body, a weighting factor (w_T) equal to 1 may be used in determination of the effective dose equivalent.

(c) * * *

4. Section 835.3 is amended by adding paragraph (e) as follows:

§ 835.3 General Rule

* * * * *

(e) For those activities that are required by §§ 835.102, 835.901(e), 835.1202 (a), and 835.1202(b), the time interval to conduct these activities may be extended by a period not to exceed 30 days to accommodate scheduling needs.

§ 835.4 [Amended]

5. Section 835.4 is amended by adding "roentgen," after "rad," in the first sentence and removing the last sentence.

Subpart B—Management and Administrative Requirements

6. The heading of subpart B is revised to read as set forth above.

6a. Section 835.101 is amended by revising paragraph (f) to read as follows, removing paragraph (g), and redesignating paragraphs (h), (i), and (j) as (g), (h), and (i) respectively; in paragraph (d), the reference to "§ 835.101(i)" is changed to "§ 835.101(h)".

§ 835.101 Radiation protection programs.

* * * * *

(f) The RPP shall include plans, schedules, and other measures for achieving compliance with regulations of this part. Unless otherwise specified in this part, compliance with amendments to this part shall be achieved no later than 180 days following approval of the revised RPP by DOE. Compliance with the requirements of § 835.402(d) for radiobioassay program accreditation shall be achieved no later than January 1, 2002.

* * * * *

7. Section 835.102 is revised to read as follows:

§ 835.102 Internal audits.

Internal audits of the radiation protection program, including examination of program content and implementation, shall be conducted through a process that ensures that all functional elements are reviewed no less frequently than every 36 months.

8. Section 835.103 is added as follows:

§ 835.103 Education, training and skills.

Individuals responsible for developing and implementing measures necessary for ensuring compliance with the requirements of this part shall have the appropriate education, training, and skills to discharge these responsibilities.

9. Section 835.104 is added as follows:

§ 835.104 Written procedures.

Written procedures shall be developed and implemented as necessary to ensure compliance with this part, commensurate with the radiological hazards created by the activity and consistent with the education, training, and skills of the individuals exposed to those hazards.

10. Section 835.202 is amended by revising the section heading, revising the introductory text of paragraph (a), and revising paragraphs (b) and (c) to read as follows:

§ 835.202 Occupational dose limits for general employees.

(a) Except for planned special exposures conducted consistent with § 835.204 and emergency exposures authorized in accordance with § 835.1302, the occupational dose received by general employees shall be controlled such that the following limits are not exceeded in a year:

* * * * *

(b) All occupational doses received during the current year, except doses resulting from planned special exposures conducted in compliance with § 835.204 and emergency exposures authorized in accordance with § 835.1302, shall be included when demonstrating compliance with §§ 835.202(a) and 835.207.

(c) Doses from background, therapeutic and diagnostic medical radiation, and participation as a subject in medical research programs shall not be included in dose records or in the assessment of compliance with the occupational dose limits.

11. Section 835.203 is amended by revising the section heading and paragraph (a) to read as follows and by removing paragraph (c):

§ 835.203 Combining internal and external dose equivalents.

(a) The total effective dose equivalent during a year shall be determined by summing the effective dose equivalent from external exposures and the committed effective dose equivalent from intakes during the year.

* * * * *

12. Section 835.204 is amended by revising paragraphs (a)(1), (a)(3), (c)(1), (c)(2) and (d) to read as follows:

§ 835.204 Planned special exposures.

(a) * * *

(1) The planned special exposure is considered only in an exceptional situation when alternatives that might prevent a radiological worker from exceeding the limits in § 835.202(a) are unavailable or impractical;

* * * * *

(3) Joint written approval is received from the appropriate DOE Headquarters program office and the Secretarial Officer responsible for environment, safety and health matters.

* * * * *

(c) * * *

(1) In a year, the numerical values of the dose limits established at § 835.202(a); and

(2) Over the individual's lifetime, five times the numerical values of the dose limits established at § 835.202(a).

(d) Prior to a planned special exposure, written consent shall be obtained from each individual involved. Each such written consent shall include:

(1) The purpose of the planned operations and procedures to be used;

(2) The estimated doses and associated potential risks and specific radiological conditions and other hazards which might be involved in performing the task; and

(3) Instructions on the measures to be taken to keep the dose ALARA considering other risks that may be present.

* * * * *

13. Section 835.207 is revised to read as follows:

§ 835.207 Occupational dose limits for minors.

The dose equivalent limits for minors occupationally exposed to radiation and/or radioactive materials at a DOE activity are 0.1 rem (0.001 sievert) total effective dose equivalent in a year and 10% of the occupational dose limits specified at § 835.202(a)(3) and (a)(4).

14. Section 835.208 is revised to read as follows:

§ 835.208 Limits for members of the public entering a controlled area.

The total effective dose equivalent limit for members of the public exposed to radiation and/or radioactive material during access to a controlled area is 0.1 rem (0.001 sievert) in a year.

§ 835.209 [Amended]

15. Section 835.209 is amended by changing the first "to" to "of" in paragraph (a), removing paragraph (b), redesignating paragraph (c) as (b), and removing the word "representative" from (b)(3).

Subpart E—Monitoring of Individuals and Areas

16. The heading of Subpart E is revised to read as set forth above.

16a. Section 835.401 is amended by removing paragraph (b), redesignating paragraph (c) as (b), revising paragraphs (a), introductory text, (a)(2), (a)(4), (a)(5), (a)(6), and revising in newly redesignated paragraph (b), the introductory text, and (b)(1) to read as follows:

§ 835.401 General requirements.

(a) Monitoring of individuals and areas shall be performed to:

(1) * * *

(2) Document radiological conditions;

(3) * * *

(4) Detect the gradual buildup of radioactive material;

(5) Verify the effectiveness of engineering and process controls in containing radioactive material and reducing radiation exposure; and

(6) Identify and control potential sources of individual exposure to radiation and/or radioactive material.

(b) Instruments and equipment used for monitoring shall be:

(1) Periodically maintained and calibrated on an established frequency;

* * * * *

17. Section 835.402 is revised to read as follows:

§ 835.402 Individual monitoring.

(a) For the purpose of monitoring individual exposures to external radiation, personnel dosimeters shall be provided to and used by:

(1) Radiological workers who, under typical conditions, are likely to receive one or more of the following:

(i) An effective dose equivalent to the whole body of 0.1 rem (0.001 sievert) or more in a year;

(ii) A shallow dose equivalent to the skin or to any extremity of 5 rems (0.05 sievert) or more in a year;

(iii) A lens of the eye dose equivalent of 1.5 rems (0.015 sievert) or more in a year;

(2) Declared pregnant workers who are likely to receive from external sources a dose equivalent to the embryo/fetus in excess of 10 percent of the limit at § 835.206(a);

(3) Occupationally exposed minors likely to receive a dose in excess of 50 percent of the applicable limits at § 835.207 in a year from external sources;

(4) Members of the public entering a controlled area likely to receive a dose in excess of 50 percent of the limit at § 835.208 in a year from external sources; and

(5) Individuals entering a high or very high radiation area.

(b) External dose monitoring programs implemented to demonstrate compliance with § 835.402(a) shall be adequate to demonstrate compliance with the dose limits established in subpart C of this part and shall be:

(1) Accredited, or excepted from accreditation, in accordance with the DOE Laboratory Accreditation Program for Personnel Dosimetry; or

(2) Determined by the Secretarial Officer responsible for environment, safety and health matters to have performance substantially equivalent to that of programs accredited under the DOE Laboratory Accreditation Program for Personnel Dosimetry.

(c) For the purpose of monitoring individual exposures to internal radiation, internal dosimetry programs (including routine bioassay programs) shall be conducted for:

(1) Radiological workers who, under typical conditions, are likely to receive a committed effective dose equivalent of 0.1 rem (0.001 sievert) or more from all occupational radionuclide intakes in a year;

(2) Declared pregnant workers likely to receive an intake or intakes resulting in a dose equivalent to the embryo/fetus in excess of 10 percent of the limit stated at § 835.206(a);

(3) Occupationally exposed minors who are likely to receive a dose in excess of 50 percent of the applicable limit stated at § 835.207 from all radionuclide intakes in a year; or

(4) Members of the public entering a controlled area likely to receive a dose in excess of 50 percent of the limit stated at § 835.208 from all radionuclide intakes in a year.

(d) Internal dose monitoring programs implemented to demonstrate compliance with § 835.402(c) shall be adequate to demonstrate compliance with the dose limits established in subpart C of this part and shall be:

(1) Accredited, or excepted from accreditation, in accordance with the DOE Laboratory Accreditation Program for Radiobioassay; or,

(2) Determined by the Secretarial Officer responsible for environment, safety and health matters to have performance substantially equivalent to that of programs accredited under the DOE Laboratory Accreditation Program for Radiobioassy.

18. Section 835.403 is revised to read as follows:

§ 835.403 Air monitoring.

(a) Monitoring of airborne radioactivity shall be performed:

(1) Where an individual is likely to receive an exposure of 40 or more DAC-hours in a year; or

(2) As necessary to characterize the airborne radioactivity hazard where respiratory protective devices for protection against airborne radionuclides have been prescribed.

(b) Real-time air monitoring shall be performed as necessary to detect and provide warning of airborne radioactivity concentrations that warrant immediate action to terminate inhalation of airborne radioactive material.

§ 835.404 [Reserved]

19. Section 835.404 is removed and reserved.

20. Section 835.405 is added to subpart E to read as follows:

§ 835.405 Receipt of packages containing radioactive material.

(a) If packages containing quantities of radioactive material in excess of a Type A quantity (as defined at 10 CFR 71.4) are expected to be received from radioactive material transportation, arrangements shall be made to either:

(1) Take possession of the package when the carrier offers it for delivery; or

(2) Receive notification as soon as practicable after arrival of the package at the carrier's terminal and to take possession of the package expeditiously after receiving such notification.

(b) Upon receipt from radioactive material transportation, external surfaces of packages known to contain radioactive material shall be monitored if the package:

(1) Is labeled with a Radioactive White I, Yellow II, or Yellow III label (as specified at 49 CFR 172.403 and 172.436–440); or

(2) Has been transported as low specific activity material (as defined at 10 CFR 71.4) on an exclusive use vehicle (as defined at 10 CFR 71.4); or

(3) Has evidence of degradation, such as packages that are crushed, wet, or damaged.

(c) The monitoring required by paragraph (b) of this section shall include:

(1) Measurements of removable contamination levels, unless the package contains only special form (as defined at 10 CFR 71.4) or gaseous radioactive material; and

(2) Measurements of the radiation levels, unless the package contains less than a Type A quantity (as defined at 10 CFR 71.4) of radioactive material.

(d) The monitoring required by paragraph (b) of this section shall be completed as soon as practicable following receipt of the package, but not later than 8 hours after the beginning of the working day following receipt of the package.

Subpart F—Entry Control Program

21. Section 835.501 is amended by revising paragraph (d) as follows:

§ 835.501 Radiological areas.

* * * * *

(d) Written authorizations shall be required to control entry into and perform work within radiological areas. These authorizations shall specify radiation protection measures commensurate with the existing and potential hazards.

22. At § 835.502, paragraphs (a), (b), and (c) are redesignated as paragraphs (b), (c), and (d) respectively; the paragraph heading of redesignated paragraph (b) is revised; a new paragraph (a) is added and redesignated paragraphs (b)(2) and (c) are revised as follows:

§ 835.502 High and very high radiation areas.

(a) The following measures shall be implemented for each entry into a high radiation area:

(1) The area shall be monitored as necessary during access to determine the exposure rates to which the individuals are exposed; and

(2) Each individual shall be monitored by a supplemental dosimetry device or other means capable of providing an immediate estimate of the individual's integrated deep dose equivalent during the entry.

(b) *Physical controls.* * * *

(1) * * *

(2) A device that functions automatically to prevent use or operation of the radiation source or field while individuals are in the area;

* * * * *

(c) *Very high radiation areas.* In addition to the above requirements, additional measures shall be implemented to ensure individuals are not able to gain unauthorized or inadvertent access to very high radiation areas.

Subpart G—Posting and Labeling

23. Section 835.601 is revised to read as follows:

§ 835.601 General requirements.

(a) Except as otherwise provided in this subpart, postings and labels required by this subpart shall include the standard radiation warning trefoil in black or magenta imposed upon a yellow background.

(b) Signs required by this subpart shall be clearly and conspicuously posted and may include radiological protection instructions.

(c) The posting and labeling requirements in this subpart may be modified to reflect the special considerations of DOE activities conducted at private residences or businesses. Such modifications shall provide the same level of protection to individuals as the existing provisions in this subpart.

24. Section 835.602 is amended by revising paragraph (a) to read as follows:

§ 835.602 Controlled areas.

(a) Each access point to a controlled area (as defined at § 835.2) shall be posted whenever radiological areas or radioactive material areas exist in the area. Individuals who enter only controlled areas without entering radiological areas or radioactive material areas are not expected to receive a total effective dose equivalent of more than 0.1 rem (0.001 sievert) in a year.

* * * * *

25. Section 835.603 is revised to read as follows:

§ 835.603 Radiological areas and radioactive material areas.

Each access point to radiological areas and radioactive material areas (as defined at § 835.2) shall be posted with conspicuous signs bearing the wording provided in this section.

(a) *Radiation area.* The words "Caution, Radiation Area" shall be posted at each radiation area.

(b) *High radiation area.* The words "Caution, High Radiation Area" or "Danger, High Radiation Area" shall be posted at each high radiation area.

(c) *Very high radiation area.* The words "Grave Danger, Very High Radiation Area" shall be posted at each very high radiation area.

(d) *Airborne radioactivity area.* The words "Caution, Airborne Radioactivity Area" or "Danger, Airborne Radioactivity Area" shall be posted at each airborne radioactivity area.

(e) *Contamination area.* The words "Caution, Contamination Area" shall be posted at each contamination area.

(f) *High contamination area.* The words "Caution, High Contamination Area" or "Danger, High Contamination Area" shall be posted at each high contamination area.

(g) *Radioactive material area.* The words "Caution, Radioactive Material(s)" shall be posted at each radioactive material area.

26. Section 835.604 is added to subpart G to read as follows:

§ 835.604 Exceptions to posting requirements.

(a) Areas may be excepted from the posting requirements of § 835.603 for periods of less than 8 continuous hours when placed under continuous observation and control of an individual knowledgeable of, and empowered to implement, required access and exposure control measures.

(b) Areas may be excepted from the radioactive material area posting requirements of § 835.603(g) when:

(1) Posted in accordance with §§ 835.603(a) through (f); or

(2) Each item or container of radioactive material is labeled in accordance with this subpart such that individuals entering the area are made aware of the hazard; or

(3) The radioactive material of concern consists solely of structures or installed components which have been activated (i.e., such as by being exposed to neutron radiation or particles produced by an accelerator).

(c) Areas containing only packages received from radioactive material transportation labeled and in non-degraded condition need not be posted in accordance with § 835.603 until the packages are monitored in accordance with § 835.405.

27. Section 835.605 is added to subpart G to read as follows:

§ 835.605 Labeling items and containers.

Except as provided at § 835.606, each item or container of radioactive material shall bear a durable, clearly visible label bearing the standard radiation warning trefoil and the words "Caution, Radioactive Material" or "Danger, Radioactive Material." The label shall also provide sufficient information to permit individuals handling, using, or working in the vicinity of the items or containers to take precautions to avoid or control exposures.

28. Section 835.606 is added to subpart G to read as follows:

§ 835.606 Exceptions to labeling requirements.

(a) Items and containers may be excepted from the radioactive material labeling requirements of § 835.605 when:

(1) Used, handled, or stored in areas posted and controlled in accordance with this subpart and sufficient information is provided to permit individuals to take precautions to avoid or control exposures; or

(2) The quantity of radioactive material is less than one tenth of the values specified in appendix E of this part; or

(3) Packaged, labeled, and marked in accordance with the regulations of the Department of Transportation or DOE Orders governing radioactive material transportation; or

(4) Inaccessible, or accessible only to individuals authorized to handle or use them, or to work in the vicinity; or

(5) Installed in manufacturing, process, or other equipment, such as reactor components, piping, and tanks; or

(6) The radioactive material consists solely of nuclear weapons or their components.

(b) Radioactive material labels applied to sealed radioactive sources may be excepted from the color specifications of § 835.601(a).

Subpart H—Records

29. In § 835.702, paragraphs (a), (b), (c), (d), and (e) are revised to read as follows:

§ 835.702 Individual monitoring records.

(a) Records shall be maintained to document doses received by all individuals for whom monitoring was required pursuant to § 835.402 and to document doses received during planned special exposures, unplanned doses exceeding the monitoring thresholds of § 835.402, and authorized emergency exposures.

(b) The results of individual external and internal dose monitoring that is performed, but not required by § 835.402, shall be recorded. Recording of non-uniform shallow dose equivalent to the skin is not required if the dose is less than 2 percent of the limit specified for the skin at § 835.202(a)(4).

(c) The records required by this section shall:

(1) Be sufficient to evaluate compliance with subpart C of this part;

(2) Be sufficient to provide dose information necessary to complete reports required by subpart I of this part;

(3) Include the following quantities for external dose received during the year:

(i) The effective dose equivalent from external sources of radiation (deep dose equivalent may be used as effective dose equivalent for external exposure);

(ii) The lens of the eye dose equivalent;

(iii) The shallow dose equivalent to the skin; and

(iv) The shallow dose equivalent to the extremities.

(4) Include the following information for internal dose resulting from intakes received during the year:

(i) Committed effective dose equivalent;

(ii) Committed dose equivalent to any organ or tissue of concern; and

(iii) Identity of radionuclides.

(5) Include the following quantities for the summation of the external and internal dose:

(i) Total effective dose equivalent in a year;

(ii) For any organ or tissue assigned an internal dose during the year, the sum of the deep dose equivalent from external exposures and the committed dose equivalent to that organ or tissue; and

(iii) Cumulative total effective dose equivalent.

(6) Include the dose equivalent to the embryo/fetus of a declared pregnant worker.

(d) Documentation of all occupational doses received during the current year, except for doses resulting from planned special exposures conducted in compliance with § 835.204 and emergency exposures authorized in accordance with § 835.1302(d), shall be obtained to demonstrate compliance with § 835.202(a). If complete records documenting previous occupational dose during the year cannot be obtained, a written estimate signed by the individual may be accepted to demonstrate compliance.

(e) For radiological workers whose occupational dose is monitored in accordance with § 835.402, reasonable efforts shall be made to obtain complete records of prior years occupational internal and external doses.

* * * * *

30. In § 835.703, paragraphs (a), (b), (c), and (d) are revised to read as follows:

§ 835.703 Other monitoring records.

* * * * *

(a) Results of monitoring for radiation and radioactive material as required by subparts E and L of this part, except for monitoring required by § 835.1102(d);

(b) Results of monitoring used to determine individual occupational dose from external and internal sources;

(c) Results of monitoring for the release and control of material and equipment as required by § 835.1101; and

(d) Results of maintenance and calibration performed on instruments and equipment as required by § 835.401(b).

31. Section 835.704, paragraph (a) is amended by removing the reference to ", 835.902, and 835.903"; paragraphs (d) and (e) are revised and a new paragraph (f) is added as follows:

§ 835.704 Administrative records.

* * * * *

(d) Written declarations of pregnancy, including the estimated date of conception, and revocations of declarations of pregnancy shall be maintained.

(e) Changes in equipment, techniques, and procedures used for monitoring shall be documented.

(f) Records shall be maintained as necessary to demonstrate compliance with the requirements of §§ 835.1201 and 835.1202 for sealed radioactive source control, inventory, and source leak tests.

Subpart I—Reports to Individuals

32. Section 835.801, paragraph (a) is revised to read as follows:

§ 835.801 Reports to individuals.

(a) Radiation exposure data for individuals monitored in accordance with § 835.402 shall be reported as specified in this section. The information shall include the data required under § 835.702(c). Each notification and report shall be in writing and include: the DOE site or facility name, the name of the individual, and the individual's social security number, employee number, or other unique identification number.

* * * * *

Subpart J—Radiation Safety Training

33. In subpart J, § 835.901 is revised to read as follows:

§ 835.901 Radiation safety training.

(a) Each individual shall complete radiation safety training on the topics established at § 835.901(c) commensurate with the hazards in the area and the required controls:

(1) Before being permitted unescorted access to controlled areas; and

(2) Before receiving occupational dose during access to controlled areas at a DOE site or facility.

(b) Each individual shall demonstrate knowledge of the radiation safety training topics established at § 835.901(c), commensurate with the hazards in the area and required controls, by successful completion of an examination and performance demonstrations:

(1) Before being permitted unescorted access to radiological areas; and

(2) Before performing unescorted assignments as a radiological worker.

(c) Radiation safety training shall include the following topics, to the extent appropriate to each individual's prior training, work assignments, and degree of exposure to potential radiological hazards:

(1) Risks of exposure to radiation and radioactive materials, including prenatal radiation exposure;

(2) Basic radiological fundamentals and radiation protection concepts;

(3) Physical design features, administrative controls, limits, policies, procedures, alarms, and other measures implemented at the facility to manage doses and maintain doses ALARA, including both routine and emergency actions;

(4) Individual rights and responsibilities as related to

implementation of the facility radiation protection program;

(5) Individual responsibilities for implementing ALARA measures required by § 835.101; and

(6) Individual exposure reports that may be requested in accordance with § 835.801.

(d) When an escort is used in lieu of training in accordance with paragraph (a) or (b) of this section, the escort shall:

(1) Have completed radiation safety training, examinations, and performance demonstrations required for entry to the area and performance of the work; and

(2) Ensure that all escorted individuals comply with the documented radiation protection program.

(e) Radiation safety training shall be provided to individuals when there is a significant change to radiation protection policies and procedures that may affect the individual and at intervals not to exceed 24 months. Such training provided for individuals subject to the requirements of § 835.901(b)(1) and (b)(2) shall include successful completion of an examination.

§§ 835.902 and 835.903 [Removed and Reserved]

34. Sections 835.902 and 835.903 of subpart J are removed and reserved.

Subpart K—Design and Control

35. In Subpart K, section 835.1002 is amended by changing the word "old" to "existing", and section 835.1001 is revised to read as follows:

§ 835.1001 Design and control.

(a) Measures shall be taken to maintain radiation exposure in controlled areas ALARA through physical design features and administrative control. The primary methods used shall be physical design features (e.g., confinement, ventilation, remote handling, and shielding). Administrative controls shall be employed only as supplemental methods to control radiation exposure.

(b) For specific activities where use of physical design features is demonstrated to be impractical, administrative controls shall be used to maintain radiation exposures ALARA.

36. Section 835.1003 is revised to read as follows:

§ 835.1003 Workplace controls.

During routine operations, the combination of physical design features and administrative controls shall provide that:

(a) The anticipated occupational dose to general employees shall not exceed the limits established at § 835.202; and

(b) The ALARA process is utilized for personnel exposures to ionizing radiation.

Subpart L—Radioactive Contamination Control

37. The heading of subpart L is revised to read as set forth above.

37a. Section 835.1101 is revised and § 835.1102 is added to read as follows:

§ 835.1101 Control of material and equipment.

(a) Except as provided in paragraphs (b) and (c) of this section, material and equipment in contamination areas, high contamination areas, and airborne radioactivity areas shall not be released to a controlled area if:

(1) Removable surface contamination levels on accessible surfaces exceed the removable surface contamination values specified in appendix D of this part; or

(2) Prior use suggests that the removable surface contamination levels on inaccessible surfaces are likely to exceed the removable surface contamination values specified in appendix D of this part.

(b) Material and equipment exceeding the removable surface contamination values specified in appendix D of this part may be conditionally released for movement on-site from one radiological area for immediate placement in another radiological area only if appropriate monitoring is performed and appropriate controls for the movement are established and exercised.

(c) Material and equipment with fixed contamination levels that exceed the total contamination values specified in appendix D of this part may be released for use in controlled areas outside of radiological areas only under the following conditions:

(1) Removable surface contamination levels are below the removable surface contamination values specified in appendix D of this part; and

(2) The material or equipment is routinely monitored and clearly marked or labeled to alert personnel of the contaminated status.

§ 835.1102 Control of areas.

(a) Appropriate controls shall be maintained and verified which prevent the inadvertent transfer of removable contamination to locations outside of radiological areas under normal operating conditions.

(b) Any area in which contamination levels exceed the values specified in appendix D of this part shall be controlled in a manner commensurate with the physical and chemical characteristics of the contaminant, the radionuclides present, and the fixed and removable surface contamination levels.

(c) Areas accessible to individuals where the measured total surface contamination levels exceed, but the removable surface contamination levels are less than, corresponding surface contamination values specified in appendix D of this part, shall be controlled as follows when located outside of radiological areas:

(1) The area shall be routinely monitored to ensure the removable surface contamination level remains below the removable surface contamination values specified in appendix D of this part; and

(2) The area shall be conspicuously marked to warn individuals of the contaminated status.

(d) Individuals exiting contamination, high contamination, or airborne radioactivity areas shall be monitored, as appropriate, for the presence of surface contamination.

(e) Protective clothing shall be required for entry to areas in which removable contamination exists at levels exceeding the removable surface contamination values specified in appendix D of this part.

38. Subpart M is added, consisting of §§ 835.1201 and 835.1202, to read as follows:

Subpart M—Sealed Radioactive Source Control

§ 835.1201 Sealed radioactive source control.

Sealed radioactive sources shall be used, handled, and stored in a manner commensurate with the hazards associated with operations involving the sources.

§ 835.1202 Accountable sealed radioactive sources.

(a) Each accountable sealed radioactive source shall be inventoried at intervals not to exceed six months. This inventory shall:

(1) Establish the physical location of each accountable sealed radioactive source;

(2) Verify the presence and adequacy of associated postings and labels; and

(3) Establish the adequacy of storage locations, containers, and devices.

(b) Except for sealed radioactive sources consisting solely of gaseous radioactive material or tritium, each accountable sealed radioactive source shall be subject to a source leak test upon receipt, when damage is suspected, and at intervals not to exceed six months. Source leak tests shall be capable of detecting radioactive material leakage equal to or exceeding 0.005 microcurie.

(c) Notwithstanding the requirements of paragraph (b) of this section, an accountable sealed radioactive source is not subject to periodic source leak testing if that source has been removed from service. Such sources shall be stored in a controlled location, subject to periodic inventory as required by paragraph (a) of this section, and subject to source leak testing prior to being returned to service.

(d) Notwithstanding the requirements of paragraphs (a) and (b) of this section, an accountable sealed radioactive source is not subject to periodic inventory and source leak testing if that source is located in an area that is unsafe for human entry or otherwise inaccessible.

(e) An accountable sealed radioactive source found to be leaking radioactive material shall be controlled in a manner that minimizes the spread of radioactive contamination.

Subpart N—Emergency Exposure Situations

39. In § 835.1301, paragraphs (a), introductory text, (b), (c), and (d) are revised to read as follows:

§ 835.1301 General provisions.

(a) A general employee whose occupational dose has exceeded the numerical value of any of the limits specified in § 835.202 as a result of an authorized emergency exposure may be permitted to return to work in radiological areas during the current year providing that all of the following conditions are met:

* * * * *

(b) All doses exceeding the limits specified in § 835.202 shall be recorded in the affected individual's occupational dose record.

(c) When the conditions under which a dose was received in excess of the limits specified in § 835.202, except those received in accordance with § 835.204, have been eliminated, operating management shall notify the Head of the responsible DOE field organization.

(d) Operations after a dose was received in excess of the limits specified in § 835.202, except those received in accordance with § 835.204, may be resumed only with the approval of DOE.

40. Section 835.1302 is revised in paragraphs (b), (c), and (d) as follows:

§ 835.1302 Emergency exposure situations.

* * * * *

(b) Operating management shall weigh actual and potential risks against the benefits to be gained.

(c) No individual shall be required to perform a rescue action that might involve substantial personal risk.

(d) Each individual authorized to perform emergency actions likely to result in occupational doses exceeding the values of the limits provided at § 835.202(a) shall be trained in accordance with § 835.901(b) and briefed beforehand on the known or anticipated hazards to which the individual will be subjected.

* * * * *

41. At § 835.1304, paragraphs (a) and (b)(1), the word "personnel" is revised to read "individuals" and paragraph (b)(4) is revised as follows:

§ 835.1304 Nuclear accident dosimetry.

* * * * *

(b) * * *

(4) Personal nuclear accident dosimeters.

42. Appendix A of Part 835 is amended by removing footnote 5 from the Footnotes for Appendix A and, adding the following two paragraphs at the beginning of the introductory text:

Appendix A to Part 835—Derived Air Concentrations (DAC) for Controlling Radiation Exposure to Workers at DOE Facilities

The data presented in appendix A are to be used for controlling individual internal doses in accordance with § 835.209, identifying the need for air monitoring in accordance with § 835.403, and identifying the need for posting of airborne radioactivity areas in accordance with § 835.603(d).

The DAC values are given for individual radionuclides. For known mixtures of radionuclides, determine the sum of the ratio of the observed concentration of a particular radionuclide and its corresponding DAC for all radionuclides in the mixture. If this sum exceeds unity (1), then the DAC has been exceeded. For unknown radionuclides, the most restrictive DAC (lowest value) for those isotopes not known to be absent shall be used.

* * * * *

Appendix B—[Removed and Reserved]

43. Appendix B to Part 835 is removed and reserved.

44. Appendix C to Part 835 is amended by removing the entries for the radionuclides Rn-220 and Rn-222 and their corresponding half-lives and air immersion DACs from the table and revising the introductory text preceding the table as follows:

Appendix C to Part 835—Derived Air Concentration (DAC) for Workers From External Exposure During Immersion in a Contaminated Atmospheric Cloud

* * * * *

a. The data presented in appendix C are to be used for controlling occupational exposures in accordance with § 835.209, identifying the need for air monitoring in accordance with § 835.403, and identifying the need for posting of airborne radioactivity areas in accordance with § 835.603(d).

b. The air immersion DAC values shown in this appendix are based on a stochastic dose limit of 5 rems (0.05 Sv) per year or a nonstochastic (organ) dose limit of 50 rems (0.5 Sv) per year. Four columns of information are presented: (1) Radionuclide; (2) half-life in units of seconds (s), minutes (min), hours (h), days (d), or years (yr); (3) air immersion DAC in units of μCi/ml; and (4) air immersion DAC in units of Bq/m³. The data are listed by radionuclide in order of increasing atomic mass. The air immersion DACs were calculated for a continuous, nonshielded exposure via immersion in a semi-infinite atmospheric cloud. The DACs listed in this appendix may be modified to allow for submersion in a cloud of finite dimensions.

c. The DAC value for air immersion listed for a given radionuclide is determined either by a yearly limit on effective dose equivalent, which provides a limit on stochastic radiation effects, or by a limit on yearly dose equivalent to any organ, which provides a limit on nonstochastic radiation effects. For most of the radionuclides listed, the DAC value is determined by the yearly limit on effective dose equivalent. Thus, the few cases where the DAC value is determined by the yearly limit on shallow dose equivalent to the skin are indicated in the table by an appropriate footnote. Again, the DACs listed in this appendix account only for immersion in a semi-infinite cloud and do not account for inhalation or ingestion exposures.

d. Three classes of radionuclides are included in the air immersion DACs as described below.

(1) *Class 1.* The first class of radionuclides includes selected noble gases and short-lived activation products that occur in gaseous form. For these radionuclides, inhalation doses are negligible compared to the external dose from immersion in an atmospheric cloud.

(2) *Class 2.* The second class of radionuclides includes those for which a DAC value for inhalation has been calculated, but for which the DAC value for external exposure to a contaminated atmospheric cloud is more restrictive (i.e., results in a lower DAC value). These radionuclides generally have half-lives of a few hours or less, or are eliminated from the body following inhalation sufficiently rapidly to limit the inhalation dose.

(3) *Class 3.* The third class of radionuclides includes selected isotopes with relatively short half-lives. These radionuclides typically have half-lives that are less than 10 minutes, they do not occur as a decay product of a longer lived radionuclide, or they lack sufficient decay data to permit internal dose calculations. These radionuclides are also typified by a radioactive emission of highly intense, high-energy photons and rapid removal from the body following inhalation.

e. The DAC values are given for individual radionuclides. For known mixtures of radionuclides, determine the sum of the ratio of the observed concentration of a particular

radionuclide and its corresponding DAC for all radionuclides in the mixture. If this sum exceeds unity (1), then the DAC has been exceeded. For unknown radionuclides, the most restrictive DAC (lowest value) for those isotopes not known to be absent shall be used.

* * * * *

45. Appendix D to part 835 is revised as follows:

Appendix D to Part 835—Surface Contamination Values

The data presented in appendix D are to be used in identifying the need for posting of contamination and high contamination areas in accordance with § 835.603(e) and (f) and identifying the need for surface contamination monitoring and control in accordance with §§ 835.1101 and 835.1102.

SURFACE CONTAMINATION VALUES [1] IN DPM/100 CM [2]

Radionuclide	Removable [2, 4]	Total (Fixed + Removable) [2, 3]
U-nat, U-235, U-238, and associated decay products	[7] 1,000	[7] 5,000
Transuranics, Ra-226, Ra-228, Th-230, Th-228, Pa-231, Ac-227, I-125, I-129	20	500
Th-nat, Th-232, Sr-90, Ra-223, Ra-224, U-232, I-126, I-131, I-133	200	1,000
Beta-gamma emitters (nuclides with decay modes other than alpha emission or spontaneous fission) except Sr-90 and others noted above [5]	1,000	5,000
Tritium and tritiated compounds [6]	10,000	N/A

[1] The values in this appendix, with the exception noted in footnote 5, apply to radioactive contamination deposited on, but not incorporated into the interior or matrix of, the contaminated item. Where surface contamination by both alpha-and beta-gamma-emitting nuclides exists, the limits established for alpha-and beta-gamma-emitting nuclides apply independently.

[2] As used in this table, dpm (disintegrations per minute) means the rate of emission by radioactive material as determined by correcting the counts per minute observed by an appropriate detector for background, efficiency, and geometric factors associated with the instrumentation.

[3] The levels may be averaged over one square meter provided the maximum surface activity in any area of 100 cm^2 is less than three times the value specified. For purposes of averaging, any square meter of surface shall be considered to be above the surface contamination value if: (1) From measurements of a representative number of sections it is determined that the average contamination level exceeds the applicable value; or (2) it is determined that the sum of the activity of all isolated spots or particles in any 100 cm^2 area exceeds three times the applicable value.

[4] The amount of removable radioactive material per 100 cm^2 of surface area should be determined by swiping the area with dry filter or soft absorbent paper, applying moderate pressure, and then assessing the amount of radioactive material on the swipe with an appropriate instrument of known efficiency. (Note—The use of dry material may not be appropriate for tritium.) When removable contamination on objects of surface area less than 100 cm^2 is determined, the activity per unit area shall be based on the actual area and the entire surface shall be wiped. It is not necessary to use swiping techniques to measure removable contamination levels if direct scan surveys indicate that the total residual surface contamination levels are within the limits for removable contamination.

[5] This category of radionuclides includes mixed fission products, including the Sr-90 which is present in them. It does not apply to Sr-90 which has been separated from the other fission products or mixtures where the Sr-90 has been enriched.

[6] Tritium contamination may diffuse into the volume or matrix of materials. Evaluation of surface contamination shall consider the extent to which such contamination may migrate to the surface in order to ensure the surface contamination value provided in this appendix is not exceeded. Once this contamination migrates to the surface, it may be removable, not fixed; therefore, a "Total" value does not apply.

[7] (alpha)

46. Appendix E to Part 835 is added as follows:

Appendix E to Part 835—Values for Establishing Sealed Radioactive Source Accountability and Radioactive Material Posting and Labeling Requirements

The data presented in this appendix E are to be used for identifying accountable sealed radioactive sources as defined at § 835.2(a), establishing the need for radioactive material area posting in accordance with § 835.603(g), and establishing the need for radioactive material labeling in accordance with § 835.605.

Note: The data are listed in alphabetical order by nuclide.

Nuclide	Activity (μCi)	Nuclide	Activity (μCi)	Nuclide	Activity (μCi)
Ac-227	1.5E+00	H-3	1.6E+08	Re-184m	1.5E+02

Gd-153	2.1E+02	Re-183	5.4E+02		
Ge-68	5.7E+02	Re-184	2.6E+02		

Any alpha emitting radionuclide not listed above and mixtures of alpha emitters of unknown composition have a value of 10 microcuries.

Any radionuclide other than alpha emitting radionuclides not listed above and mixtures of beta emitters of unknown composition have a value of 100 microcuries.

Note: Where there is involved a combination of radionuclides in known amounts, derive the value for the combination as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the value otherwise established for the specific radionuclide when not in combination. If the sum of such ratios for all radionuclides in the combination exceeds unity (1), then the accountability criterion has been exceeded.

REMINDERS
The items in this list were editorially compiled as an aid to Federal Register users. Inclusion or exclusion from this list has no legal significance.

RULES GOING INTO EFFECT NOVEMBER 4, 1998

AGRICULTURE DEPARTMENT
Rural Utilities Service
Electric loans:
- Long-range financial forecasts; published 10-5-98

ENVIRONMENTAL PROTECTION AGENCY
Air quality implementation plans; approval and promulgation; various States:
- Texas; correction; published 11-4-98

Hazardous waste:
- Identification and listing—
  - Organobromine production wastes; published 5-4-98

FEDERAL COMMUNICATIONS COMMISSION
Radio services, special:
- Maritime services—
  - New Orleans vessel traffic services; published 10-5-98

FEDERAL MARITIME COMMISSION
Freedom of Information Act; implementation; published 10-5-98

PERSONNEL MANAGEMENT OFFICE
Performance ratings finality; retroactive, assumed, and carry-over ratings of record prohibited; published 10-5-98

TRANSPORTATION DEPARTMENT
Organization, functions, and authority delegations:
- Commandant, U.S. Coast Guard; published 11-4-98

TRANSPORTATION DEPARTMENT
Federal Aviation Administration
Airworthiness directives:
- Boeing; published 9-30-98
- Pilatus Aircraft Ltd.; published 9-24-98
- Raytheon; published 9-29-98

TRANSPORTATION DEPARTMENT
Research and Special Programs Administration
Pipeline safety:
- Hazardous liquid transportation—
  - Older hazardous liquid and carbon dioxide pipelines; risk-based alternative to pressure testing; published 11-4-98

COMMENTS DUE NEXT WEEK

AGRICULTURE DEPARTMENT
Agricultural Marketing Service
Milk marketing orders:
- Nebraska-Western Iowa; comments due by 11-9-98; published 10-9-98

AGRICULTURE DEPARTMENT
Food and Nutrition Service
Child nutrition programs:
- School breakfast program and national school lunch program—
  - Menu planning alternatives; republication; comments due by 11-12-98; published 5-15-98

COMMERCE DEPARTMENT
Export Administration Bureau
Export administration regulations:
- Foreign policy-based export controls; effects; comments due by 11-12-98; published 10-13-98

COMMERCE DEPARTMENT
National Oceanic and Atmospheric Administration
Fishery conservation and management:
- Caribbean, Gulf, and South Atlantic fisheries—
  - South Atlantic snapper-grouper; comments due by 11-9-98; published 9-8-98

Marine mammals:
- Commercial fishing operations—
  - Commercial fisheries authorization; list of fisheries categorized according to frequency of incidental takes; comments due by 11-9-98; published 8-11-98

DEFENSE DEPARTMENT
Acquisition regulations:
- Contract financing; flexible progress payments; comments due by 11-9-98; published 9-8-98

Federal Acquisition Regulation (FAR):
- Competition under multiple award task and delivery order contracts; comments due by 11-9-98; published 9-9-98

ENERGY DEPARTMENT
Federal Energy Regulatory Commission
Natural Gas Policy Act:
- Interstate natural gas pipelines—
  - Transportation services regulation; comments due by 11-9-98; published 8-11-98

ENVIRONMENTAL PROTECTION AGENCY
Air pollutants, hazardous; national emission standards:
- Petroleum refineries
  - Catalytic cracking (fluid and other) units, catalytic reforming units, and sulfur plant units; comments due by 11-10-98; published 9-11-98

Air quality implementation plans; approval and promulgation; various States:
- Alabama; comments due by 11-9-98; published 10-8-98
- California; comments due by 11-13-98; published 10-23-98
- Minnesota; comments due by 11-12-98; published 10-13-98
- Pennsylvania; comments due by 11-9-98; published 10-8-98
- Tennessee; comments due by 11-9-98; published 10-8-98

Hazardous waste:
- Land disposal restrictions—
  - Alternate treatment standards; intent to grant site-specific treatment variance to Chemical Waste Management, Inc.; comments due by 11-13-98; published 10-23-98

Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:
- Bacillus sphaericus; comments due by 11-10-98; published 9-11-98
- Cypermethrin; comments due by 11-10-98; published 9-11-98
- Esfenvalerate; comments due by 11-10-98; published 9-11-98
- Metolachlor; comments due by 11-10-98; published 9-11-98
- Sulfosate; comments due by 11-10-98; published 9-11-98

Toxic substances:
- Significant new uses—
  - Phenol, 2,4-dimethyl-6-(1-methylpentadecyl), etc.,; comments due by 11-9-98; published 10-26-98

FEDERAL COMMUNICATIONS COMMISSION
Common carrier services:
- Truth-in-billing and billing format; comments due by 11-13-98; published 10-14-98

GENERAL SERVICES ADMINISTRATION
Federal Acquisition Regulation (FAR):
- Competition under multiple award task and delivery order contracts; comments due by 11-9-98; published 9-9-98

HEALTH AND HUMAN SERVICES DEPARTMENT
Health Care Financing Administration
Medicare:
- Ambulatory surgical centers; ratesetting methodology, payment rates and policies, and covered surgical procedures list; comments due by 11-9-98; published 10-1-98

HOUSING AND URBAN DEVELOPMENT DEPARTMENT
Lead-based paint hazards in federally owned residential property and housing receiving Federal assistance; notification, evaluation, and reduction; comments due by 11-9-98; published 10-9-98

Public and Indian housing:
- Indian housing loan guarantees; direct guarantee processing; comments due by 11-10-98; published 9-11-98

INTERIOR DEPARTMENT
Fish and Wildlife Service
Endangered and threatened species:
- Devils River minnow; comments due by 11-12-98; published 10-13-98

INTERIOR DEPARTMENT
Surface Mining Reclamation and Enforcement Office
Permanent program and abandoned mine land reclamation plan submissions:
- Iowa; comments due by 11-13-98; published 10-14-98

JUSTICE DEPARTMENT
Executive Office for Immigration Review:
Immigration Appeals Board; streamlined appellate review procedure; comments due by 11-13-98; published 9-14-98
Grants:
Juvenile accountability incentive block grants program; comments due by 11-13-98; published 10-14-98

LABOR DEPARTMENT
Occupational Safety and Health Administration
Construction safety and health standards:
Steel erection; comments due by 11-12-98; published 8-13-98

LABOR DEPARTMENT
Pension and Welfare Benefits Administration
Employee Retirement Income Security Act:

Attention: Federal Agencies

Plain Language Tools Are Now Available

The Office of the Federal Register offers Plain Language Tools on its Website to help you comply with the President's Memorandum of June 1, 1998—Plain Language in Government Writing (63 FR 31883, June 10, 1998). Our address is: http://www.nara.gov/fedreg

For more in-depth guidance on the elements of plain language, read "Writing User-Friendly Documents" on the National Partnership for Reinventing Government (NPR) Website at: http://www.plainlanguage.gov

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

Printed on recycled paper.

Rules and Regulations

Federal Register
Vol. 63, No. 214
Thursday, November 5, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

7 CFR Part 17

RIN 0551–AA54

Regulations Governing the Financing of Commercial Sales of Agricultural Commodities

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: This rule revises the regulations applicable to the financing of the sale and exportation of agricultural commodities pursuant to title I of the Agricultural Trade Development and Assistance Act of 1954, as amended (Pub. L. 480). The rule would permit a waiver of the present requirement that only private entities with a business office or agent in the United States are eligible to enter into title I, Pub. L. 480 agreements when the General Sales Manager determines that there is adequate assurance of repayment to CCC. This change would allow additional foreign private entities to participate in title I, and thereby increase exports of U.S. agricultural commodities.

DATES: This rule is effective November 5, 1998.

ADDRESSES: Comments should be sent to Grant Pettrie, Acting Director, Program Development Division, Foreign Agricultural Service, U.S. Department of Agriculture, Room 4506, South Building, Stop 1034, Washington, DC 20250–1034.

FOR FURTHER INFORMATION CONTACT: Acting Director, Program Development Division, Foreign Agricultural Service, U.S. Department of Agriculture, Room 4506, South Building, Stop 1034, Washington, DC 20250–1034; telephone: (202) 720–4221; Facsimile: (202) 690–0251.

SUPPLEMENTARY INFORMATION: This rule is issued in conformance with Executive Order 12866. Based on information compiled by the Department, it has been determined that this rule:

(1) Would have an annual effect on the economy of less than $100 million;

(2) Would not adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(3) Would not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(4) Would not alter the budgetary impact of entitlements, grants, user fees, or loan programs or rights and obligations of recipients thereof; and

(5) Would not raise novel legal or policy issues arising out of legal mandates, the President's priorities, or principles set forth in Executive Order 12866.

Regulatory Flexibility Act

This rule has been reviewed with regard to the requirements of the Regulatory Flexibility Act. The Vice President, CCC, who is the General Sales Manager, has certified that this rule will not have a significant economic impact on a substantial number of small entities. Under title I, Pub. L. 480 CCC enters into agreements with foreign governments or private entities to finance their purchase and importation of U.S. agricultural commodities. The rule would allow a waiver of an existing program requirement that restricts the eligibility of businesses in foreign countries to enter into these agreements with CCC. A copy of this rule has been submitted to the General Counsel, Small Business Administration.

Executive Order 12372

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with state and local officials. See the Notice related to 7 CFR Part 3015, Subpart V, published at 48 FR 29115 (June 24, 1983).

Paperwork Reduction Act

The information collection requirements imposed by this rule have been previously submitted to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35). OMB has assigned control number 0551–0005 for this information collection. This rule would not require the collection of additional information.

Executive Order 12988

This rule has been reviewed under Executive order 12988, Civil Justice Reform. The rule would have preemptive effect with respect to any state or local laws, regulations, or policies which conflict with such provisions or which otherwise impede their full implementation. The final rule does not have a retroactive effect. The rule does not require that administrative remedies be exhausted before suit may be filed.

Background

Title I of the Agricultural Trade Development and Assistance Act of 1954, as amended (Pub. L. 480) authorizes CCC to finance the sale and exportation of agricultural commodities on concessional credit terms, 7 U.S.C. 1701 *et seq.* CCC may enter into title I, Pub. L. 480 agreements with private entities. Current regulations provide that, in order to be eligible for a title I, Pub. L. 480 agreement, a private entity must maintain a bona fide business office in the United States and have a person, principal, or agent on whom service of judicial process may be had in the United States.

On August 7, 1998, CCC published a proposed rule (63 FR 42283) that would allow the General Sales Manager to waive this requirement if the foreign private entity provides adequate assurances of repayment to CCC for the financing extended to it under the Pub. L. 480 agreement.

The purpose of the proposed rule was to allow CCC more flexibility in programming in order to take advantage of viable export opportunities. CCC did not receive any comments on the proposed rule and is adopting it as a final rule without change.

List of Subjects in 7 CFR Part 17

Agricultural commodities, Exports, Finance, Maritime carriers.

Accordingly, this rule amends part 17 of 7 CFR As follows:

Part 17—Sales of Agricultural Commodities Made Available Under Title I of the Agricultural Trade Development and Assistance Act of 1954, as Amended

1. The authority citation for part 17 continues to read as follows:

Authority: 7 U.S.C. 1701–1704, 1731–1736b, 1736f, 5676,; E.O. 12220, 45 FR 44245.

2. Section 17.1(b)(3) is revised to read as follows:

§ 17.1 General.

* * * * *

(b) * * *

(3) A private entity must maintain a bona fide business office in the United States and have a person, principal, or agent on whom service of judicial process may be had in the United States unless the General Sales Manager determines that there are adequate assurances of repayment to CCC for the financing extended by CCC.

* * * * *

Signed at Washington, DC, on October 14, 1998.

Lon Hatamiya,

Administrator, Foreign Agricultural Service and Vice President, Commodity Credit Corporation.

[FR Doc. 98–29588 Filed 11–4–98; 8:45 am]

BILLING CODE 3410–10–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. NM148; Special Conditions No. 25–141–SC]

Special Conditions: Boeing Model 777 Series Airplanes; Seats With Articulating Seat Backs

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions.

SUMMARY: These special conditions are issued for Boeing Model 777 series airplanes with articulating seat backs. The applicable regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that provided by the existing airworthiness standards.

EFFECTIVE DATE: December 7, 1998.

FOR FURTHER INFORMATION CONTACT: Jeff Gardlin, Propulsion, Mechanical Systems, and Crashworthiness Branch, ANM–112, Transport Airplane Directorate, Aircraft Certification Service, FAA, 1601 Lind Avenue SW., Renton, Washington 98055–4056; telephone (206) 227–2136; facsimile (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Background

On April 15, 1998, the Boeing Company applied for a change to Type Certificate No. T00001SE to include Model 777 series airplanes equipped with seats with articulating seat backs (seats that have a portion of the seat back that moves under inertia loads). Sicma Aero Seat, a Boeing supplier, has designed a seat for installation on a Boeing 777–300 airplane with an articulating seat back that is designed to rotate forward under a prescribed inertial load. The prescribed inertial load is slightly below the 16g test condition of § 25.562. The inertial load causes the seat back mounted video monitor and headrest assembly to partially separate from the seat back and pivot forward. The goal of the design is to reduce the mass of the upper seat back subject to impact, thereby reducing the Head Injury Criteria (HIC) measurement and enhancing passenger safety.

Section 25.562 specifies the dynamic test criteria for each seat type installed in the airplane. The pass/fail criteria for these seats include structural as well as human tolerance criteria. In particular, the regulations require that persons not suffer serious head injury under the conditions specified in the tests, and that a HIC measurement of not more than 1000 units be recorded, should contact with the cabin interior occur. While the test conditions described in this section are specific, it is the intent of the requirement that an adequate level of head injury protection be provided for crash severities up to and including that specified.

The FAA has established guidance, known as "simplified HIC certification," described in a February 1996 Transport Airplane Directorate memorandum, which provides a simplified procedure for demonstrating compliance with the HIC requirements of § 25.562(c)(5). This procedure provides test conditions that meet the intent of the requirements, without causing excessive testing to be performed. The typical seat back has three areas that are considered head strike zones within the +/− 10-degree yaw range of impact orientation. The procedure describes two different tests that address these three head strike zones for the majority of cases.

Because § 25.562 and FAA guidance do not adequately address seats with articulating seat backs, the FAA recognizes that appropriate pass/fail criteria need to be developed that do fully address the safety concerns specific to occupants of these seats.

Type Certification Basis

Under the provisions of 14 CFR 21.101, Boeing must show that Model 777 airplanes equipped with seats with articulating seat backs comply with the regulations in the U.S. type certification basis established for the Model 777 airplane. The U.S. type certification basis for the Model 777 is established in accordance with 14 CFR 21.29 and 21.17 and the type certification application date. The U.S. type certification basis is listed in Type Certificate Data Sheet No. T00001SE.

If the Administrator finds that the applicable airworthiness regulations (i.e., 14 CFR Part 25 as amended) do not contain adequate or appropriate safety standards for Boeing Model 777 series airplanes because of a novel or unusual design feature, special conditions are prescribed under the provisions of 14 CFR 21.16 to establish a level of safety equivalent to that established in the regulations.

In addition to the applicable airworthiness regulations and special conditions, the Boeing Model 777 must comply with the fuel vent and exhaust emission requirements of 14 CFR Part 34 and the noise certification requirements of 14 CFR Part 36.

Special conditions, as appropriate, are issued in accordance with 14 CFR 11.49 after public notice, as required by 14 CFR 11.28 and 11.29(b), and become part of the type certification basis in accordance with 14 CFR 21.101(b)(2). Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, or should any other model already included on the same type certificate be modified to incorporate the same novel or unusual design feature, the special conditions would also apply to the other model under the provisions of § 21.101(a)(1).

Novel or Unusual Design Features

The Boeing Company has proposed installing seats with articulating seat backs on a Boeing Model 777–300 airplane. The articulating seat back is designed to rotate forward under a prescribed inertial load. The prescribed inertial load is slightly below the 16g test condition specified in § 25.562. The inertial load causes the seat back mounted video monitor and headrest assembly to partially separate from the seat back and pivot forward. The goal of the design is to reduce the mass of the upper seat back subject to impact, thereby reducing the HIC and enhancing passenger safety.

The Federal Aviation Regulations (FAR) state the performance criteria for head injury protection in objective terms. Additionally, as discussed earlier in this document, the FAA has established further guidance to address head injury protection for the majority of cases. However, none of these criteria are adequate to address the specific issues raised concerning seats with articulating seat backs. The FAA has therefore determined that, in addition to the requirements of 14 CFR part 25, special conditions are needed to address requirements particular to installation of seats with articulating seat backs.

Accordingly, in addition to the passenger injury criteria specified in 14 CFR 25.562 and 25.785, Boeing must also comply with these special conditions for Model 777 series airplanes equipped with seats with articulating seat backs. Note that HIC, which is addressed in this special condition, does not address occupant injury due to contact with sharp edges or protrusions. Damage to the anthropomorphic test device (ATD) may be used as part of the evaluation of protrusions and sharp edges in demonstrating compliance with § 25.785(b). Other conditions may be developed, as needed, based on further FAA review and discussions with the manufacturer and civil aviation authorities.

Discussion

The seat with the articulating seat back is a new and complex design that warrants additional requirements to ensure an equivalent level of safety to that provided by the regulations. This seat reduces the effective mass that an occupant contacts during a high inertial load, thereby increasing the amount of head injury protection. However, additional considerations are necessary to ensure that the articulating seat back design does not introduce other hazards to occupants. If the articulating seat back fails to break away at the designed inertial load, the seat back may remain rigid, resulting in a significantly higher head injury than allowed for in the regulations. To ensure that the occupant does not contact a rigid seat back, the seat back must break away each time the designed break away inertial load is encountered.

In addition, it is important to evaluate the articulating seat back at lower values than the designed break away inertial load. During a lower inertial load, the occupant may also contact the seat. Since the seat will not break away prior to the occupant contacting the seat during this lower inertial load, the occupant may receive a more severe head injury than during an event occurring at the designed break away inertial load. The intent of the regulations is that the occupant is protected from head injury for crash severities up to and including that specified.

When the articulating seat back breaks away, the video monitor pivots and moves forward, leaving a rectangular opening in the seat back. This opening could pose an entrapment hazard to the person seated behind the seat. During any testing for certification, the head must not become entrapped. In addition, the head must not become entrapped in any other foreseeable operating conditions for the range of occupants.

The articulating seat back may have protrusions and/or recessed areas (i.e., bottom lip of the seat back opening) that pose a head injury hazard to the occupant during emergency conditions. As stated in § 25.562(c)(5), the head impact for a seat occupant cannot exceed a HIC of 1,000 units. The "simplified HIC certification" procedure is commonly used to demonstrate compliance with § 25.562(c)(5). Due to the non-standard articulating seat back configuration, the "simplified HIC certification" procedure alone may not be sufficient for demonstrating compliance with § 25.562(c)(5). The ATD must come in contact with these protrusions or recessed areas of the seat back opening during testing. If the ATD does not contact these areas using the "simplified HIC certification" procedure, additional testing will be required to demonstrate compliance with § 25.562(c)(5).

Discussion of Comments

Notice of Proposed Special Conditions No. 25–98–03–SC for Model 777 series airplanes equipped with articulating seat backs was published in the **Federal Register** on June 4, 1998 (63 FR 30423). Six commenters responded.

One commenter had no objection to the special conditions. Two of the commenters generally agreed with the need for special conditions, but requested clarifications regarding certain of the specific conditions. The remaining three commenters did not agree that special conditions were warranted.

Several commenters requested a more specific definition regarding the level of reliability intended by the special conditions. Commenters contend that, while a reliable system is desirable, the level of reliability should be made clear. The FAA agrees that the term "reliable" is open to interpretation and should be clarified. In this context, the FAA intends that the system be demonstrated to perform as reliably as other means of head injury protection. This will require testing to establish that the design results in repeatable performance. The FAA considers that 18 successful tests, without failure, would constitute acceptable performance. The FAA notes that this will require only three dynamic tests, since 6 seatbacks can be tested at once.

Other commenters discuss the requirement that the HIC be shown to be less than 1000 for other impact conditions, where the seatback does not break away. Some commenters believe that the wording of the special conditions implies multiple tests at various conditions. The intent of this condition is to ensure that the articulating feature will activate at the minimum impact level that could produce 1000 HIC. Therefore, a test at the maximum impact at which the seatback does not deploy that results in a HIC of less than 1000 would be sufficient. The FAA agrees that the wording of this requirement is not entirely clear, and it has been changed accordingly.

Another comment concerned the discussion in the preamble regarding lacerations and damage to the ATD. The commenters do not agree that the ATD is an acceptable vehicle for making such assessments, and question whether lacerations qualify as "serious" injuries. This discussion is not part of the special conditions themselves, but rather an informational aside concerning the utility of the HIC measurement. The FAA is aware that the ATD will not behave in the same manner as a human being with respect to laceration and will take this into account. In this regard, this seat is not considered particularly different than other seats, and therefore no special condition on this matter is proposed. The issue has been adequately addressed on other designs up to now.

The issue of head entrapment was also the subject of several comments, especially concerning the language "under any other foreseeable operating or crash conditions." The intent of this requirement is to ensure that the opening created in the seatback does not have the potential to entrap an occupant's head, even if the entrapment does not happen to occur during the specific dynamic tests conducted to demonstrate compliance with other

requirements. That is, just because the head of the ATD might not become entrapped does not necessarily indicate that entrapment is not an issue. Nonetheless, the FAA agrees that considering the phrase "any other foreseeable crash condition" literally would require an excessive amount of tests. The severity of the impact is considered limited by the requirements of § 25.562. It is the potential for entrapment that might be variable, depending on occupant size, or precise angle of impact. The FAA has determined that these variables can be assessed using the dynamic tests that are conducted as a source of baseline data.

Another commenter requested quantification of the term "entrapment," and correlation between the energy needed to entrap the head of the ATD, versus what would be required to entrap the head of a person. In this regard, the FAA considers that entrapment of the ATD's head is sufficient to indicate that a person's head would also be entrapped. The remaining conditions, where the ATD's head is not entrapped, but a person's head would be, are difficult to quantify. The FAA does not have quantitative criteria available to make this assessment in advance, but will review the data that are generated. Considering that smaller occupants will not impact the seatback as high as would larger occupants, it may be that the test with the ATD impacting the opening will be sufficient to show compliance. The wording of the special conditions has been modified to reflect the discussion above.

One commenter notes that the HIC evaluation of a precise impact target (the lip or edge of the opening) specified in the special conditions will be difficult to achieve, due to the variability in such tests. The FAA recognizes that there is difficulty in testing with a precise target, but this should be a test objective. The FAA will consider the results of the tests in conjunction with other data supplied by the applicant to determine compliance with this requirement if a direct assessment proves impractical.

Three commenters generally disagree with the special conditions and contend that either the conditions are not justified, or that the existing rules already address them.

One commenter believes that reliability should not be a requirement of the special condition and is not contained within the dynamic test performance standard. Other commenters agree that reliability is an issue, but contend that the existing regulations already require it by virtue of § 25.601, which prohibits use of features that have been shown to be unreliable. The FAA agrees that the dynamic performance standards do not explicitly address reliability. Section 25.601 has not been applied in this manner, and since the features employed here are novel, the feature's reliability has not been demonstrated or determined. Typically in type certification, the assumption is that the type design is represented during certification testing and that all such articles incorporating that type design will perform identically. In this case, the dynamic performance of a feature intended to provide injury protection might be demonstrated only one time. In making this provision a part of the special conditions, the FAA has determined that a single certification test is not adequate to show compliance.

These commenters also question the need to address HIC when the seatback does not break away. They contend that the conditions as described are too numerous to address, or that the potential for injury in this case is too low to consider. Regarding the former issue, the special condition has been clarified as noted above. Regarding the latter issue, the FAA would be willing to consider the question of whether the potential for HIC greater than 1000 was negligible when the seatback does not break away, if there are credible data to support that conclusion. Nonetheless, the issue needs to be addressed, whether or not additional tests result.

These commenters also questioned the issue of entrapment of the head as already addressed by the regulations. Owing to the particular design, the issue of entrapment is not considered to the extent necessary by the current regulations. As discussed above, the performance of the ATD in a particular test may not be indicative of the situation in general. In this case, the design tends to create a potential area for head entrapment as part of its intended operation. This must be addressed explicitly.

Commenters question whether the issue of HIC on the seatback opening is a requirement at all. These commenters contend that if no contact with the opening occurs during a certification test, then it is not required to be substantiated directly. The commenters cite previous FAA guidance concerning establishment of head strike envelopes and simplified test methods. The FAA notes that the methods cited are dependent on more or less homogeneous contact surfaces that are not sensitive to minor variation in head path. The articulating seatback creates a discontinuity in the impact surface that can only be addressed directly. That is, if the discontinuous area is within the headstrike envelope it does not fall under the guidance previously issued. As noted above, the FAA recognizes the difficulty in trying to assess a specific target, but this must be the objective.

Comments related to the consideration of sharp edges parallel those discussed earlier, and again, are not part of the special conditions themselves.

Many commenters also noted that proposed Special Condition 5 is essentially a restatement of § 25.562(c)(8). After further consideration, the FAA agrees that this special condition is redundant, and it is therefore withdrawn.

Except as noted above, the special conditions for the Model 777 series airplanes equipped with articulating seat backs are adopted as proposed.

Applicability

As discussed above, these special conditions are applicable to the Model 777 series airplanes. Should Boeing apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, the special conditions would apply to that model as well under the provisions of 14 CFR 21.101(a)(1).

Conclusion

This action affects only certain novel or unusual design features on the Boeing Model 777 series airplanes. It is not a rule of general applicability, and it affects only the manufacturer who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 25

Air transportation, Aircraft, Aviation safety, Safety.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for Boeing Model 777 series airplanes equipped with seats with articulating seat backs:

1. The articulating seat back must reliably break away at the designed inertial load.

2. The HIC value must not exceed 1,000 units under the maximum inertia loading conditions under which the articulating seat back will not break away.

3. The head must not become entrapped in the seat back opening created by the articulating seat back, during any testing conducted to demonstrate compliance with §§ 25.562 and 25.785(b), and these special conditions. The head must also not become entrapped in the seat back opening during any other foreseeable operating conditions.

4. The HIC must not exceed 1,000 units for any obvious protrusions or recessed areas of the seat back opening (i.e., bottom lip of the seat back opening). The anthropomorphic test device (ATD) must come in contact with these protrusions or recessed areas of the seat back opening.

Issued in Renton, Washington, on October 23, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–SW–36–AD; Amendment 39–10868; AD 98–23–04]

RIN 2120–AA64

Airworthiness Directives; Eurocopter France Model AS 332C, L, and L1 Helicopters

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Eurocopter France Model AS 332C, L, and L1 helicopters that requires replacing main rotor blades with modified main rotor blades. This amendment is prompted by reports of an investigation that found broken braids on main rotor blade de-icers. The actions specified by this AD are intended to prevent loss of deicing capabilities of the main rotor blades, adverse performance during flight in icing conditions, and subsequent loss of control of the helicopter.

DATES: Effective December 10, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 10, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from American Eurocopter Corporation, 2701 Forum Drive, Grand Prairie, Texas 75053–4005. This information may be examined at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Robert McCallister, Aerospace Engineer, FAA, Rotorcraft Directorate, Rotorcraft Standards Staff, 2601 Meacham Blvd., Fort Worth, Texas 76137, telephone (817) 222–5121, fax (817) 222–5961.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to Eurocopter France Model AS 332C, L, and L1 helicopters was published in the **Federal Register** on May 7, 1998 (63 FR 25182). That action proposed to require replacing main rotor blades with modified main rotor blades.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposal or the FAA's determination of the cost to the public. The FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for a change in the Technical Instructions referenced from number 230b to 230c. This change was made because the new Technical Instructions add a clarifying note and figure useful in accomplishing the requirements of this AD. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

The FAA estimates that 3 helicopters of U.S. registry will be affected by this AD, that it will take approximately 20 work hours per helicopter to accomplish the required actions, and that the average labor rate is $60 per work hour. Required parts will be provided at no cost by the manufacturer. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $3600 per helicopter.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive to read as follows:

AD 98–23–04 Eurocopter France: Amendment 39–10868. Docket No. 97–SW–36–AD.

Applicability: Model AS 332C, L, and L1 helicopters, with main rotor blades, part number (P/N) 332A11–030–03 or 332A11–030–04, installed, certificated in any category.

Note 1: This AD applies to each helicopter identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For helicopters that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must use the authority provided in paragraph (c) to request approval from the FAA. This approval may address either no action, if the current configuration eliminates the unsafe condition, or different actions necessary to address the unsafe condition described in this AD. Such a request should include an assessment of the effect of the changed configuration on the unsafe condition addressed by this AD. In no case does the presence of any modification, alteration, or repair remove any helicopter from the applicability of this AD.

Compliance: Required as indicated, unless accomplished previously.

To prevent loss of the de-icing capabilities of the main rotor blades, adverse performance during flight in icing conditions, and subsequent loss of control of the helicopter, accomplish the following:

(a) From available helicopter records, within the next 10 calendar days, determine the time-in-service (TIS) on each main rotor blade.

(b) Replace each main rotor blade with a main rotor blade that has been modified and reidentified in accordance with Eurocopter Technical Instruction Number 230c, approved May 17, 1995, in accordance with the following schedule:

(1) If the TIS is equal to or greater than 2,000 hours, replace within the next 50 hours TIS.

(2) If the TIS is equal to or greater than 1,850 hours and less than 2,000 hours, replace on or before attaining 2,050 hours TIS.

(3) If the TIS is equal to or greater than 1,500 hours and less than 1,850 hours, replace within the next 200 hours TIS.

(4) If the TIS is equal to or greater than 1,400 hours and less than 1,500 hours, replace on or before attaining 1,700 hours TIS.

(5) If the TIS is greater than 700 hours and less than 1,400 hours, replace within the next 300 hours TIS.

(6) If the TIS is equal to or less than 700 hours, replace within the next 1,000 hours TIS.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Rotorcraft Standards Staff, FAA, Rotorcraft Directorate. Operators shall submit their requests through an FAA Principal Maintenance Inspector, who may concur or comment and then send it to the Manager, Rotorcraft Standards Staff.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Rotorcraft Standards Staff.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the helicopter to a location where the requirements of this AD can be accomplished.

(e) The main rotor blade replacements shall be done in accordance with Eurocopter Technical Instruction Number 230 c approved May 17, 1995. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from American Eurocopter Corporation, 2701 Forum Drive, Grand Prairie, Texas 75053–4005, telephone (972) 641–3460, fax (972) 641–3527. Copies may be inspected at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(f) This amendment becomes effective on December 10, 1998.

Note 3: The subject of this AD is addressed Direction Generale De L'Aviation Civile (France) AD 95–029–054(B), dated February 1, 1995.

issued in Fort Worth, Texas, on October 27, 1998.

Eric Bries,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service.

[FR Doc. 98–29377 Filed 11–4–98; 8:45 am]

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. 97–SW–43–AD; Amendment 39–10867; AD 98–23–03]

RIN 2120–AA64

Airworthiness Directives; Eurocopter France Model SA 330F, G, and J Helicopters

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to Eurocopter France Model SA 330F, G, and J helicopters, that requires removing and replacing each tail rotor electrical bonding braid (bonding braid). This amendment is prompted by an in-service report of the failure of a bonding braid. The actions specified by this AD are intended to prevent failure of a bonding braid due to fatigue, resulting impact with the tail rotor blades, and subsequent loss of control of the helicopter.

DATES: Effective December 10, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 10, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from American Eurocopter Corporation, 2701 Forum Drive, Grand Prairie, Texas 75053–4005, telephone (972) 641–3460, fax (972) 641–3527. This information may be examined at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Robert McCallister, Aerospace Engineer, FAA, Rotorcraft Directorate, Rotorcraft Standards Staff, 2601 Meacham Blvd., Fort Worth, Texas 76137, telephone (817) 222–5121, fax (817) 222–5961.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to Eurocopter France Model SA 330F, G, and J helicopters, was published in the **Federal Register** on May 7, 1998 (63 FR 25180). That action proposed to require removal and replacement of each tail rotor electrical bonding braid.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposal or the FAA's determination of the cost to the public. The FAA has determined that air safety and the public interest required the adoption of the rule as proposed, except for non-substantive editorial changes. Additionally, the part number as published in the Applicability section of the NPRM contained an extra "0". This has been corrected in this final rule. The FAA has determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

The FAA estimates that 2 helicopters of U.S. registry will be affected by this AD, that it will take approximately 2 work hours per helicopter to accomplish the required actions, and that the average labor rate is $60 per work hour. Required parts will cost approximately $250 per helicopter. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $740.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

AD 98–23–03 Eurocopter France: Amendment 39–10867. Docket No. 97–SW–43–AD.

Applicability: Model SA 330F, G, and J helicopters, with tail rotor electrical bonding braids (bonding braids), part number (P/N) 332A031.1276.00, installed, certificated in any category, that have not been modified in accordance with AMS 332A07–66–003 or AMS 33207–66–072.

Note 1: This AD applies to each helicopter identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For helicopters that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must use the authority provided in paragraph (b) to request approval from the FAA. This approval may address either no action, if the current configuration eliminates the unsafe condition, or different actions necessary to address the unsafe condition described in this AD. Such a request should include an assessment of the effect of the changed configuration on the unsafe condition addressed by this AD. In no case does the presence of any modification, alteration, or repair remove any helicopter from the applicability of this AD.

Compliance: Required within the next 60 calendar days, unless accomplished previously.

To prevent failure of a bonding braid due to fatigue, resulting impact with the tail rotor blades, and subsequent loss of control of the helicopter, accomplish the following:

(a) Remove the bonding braids, P/N 332A31.1276.00, and replace them with airworthy bonding braids, P/N 332A31.1276.01, in accordance with paragraphs B and C of the Operating Procedure of Eurocopter France Service Bulletin SA 330 No. 65.73 R3, dated June 22, 1995.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Rotorcraft Standards Staff, Rotorcraft Directorate, FAA. Operators shall submit their requests through an FAA Principal Maintenance Inspector, who may concur or comment and then send it to the Manager, Rotorcraft Standards Staff.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Rotorcraft Standards Staff.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the helicopter to a location where the requirements of this AD can be accomplished.

(d) The replacement shall be done in accordance with Eurocopter France Service Bulletin SA 330 No. 65.73 R3, dated June 22, 1995. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from American Eurocopter Corporation, 2701 Forum Drive, Grand Prairie, Texas 75053–4005, telephone (972) 641–3460, fax (972) 641–3527. Copies may be inspected at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(e) This amendment becomes effective on December 10, 1998.

Note 3: The subject of this AD is addressed in Direction Generale L' Aviation Civile (France) AD 95–153–072(B), dated July 19, 1995.

Issued in Forth Worth, Texas, on October 27, 1998.

Eric Bries,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Boeing Model 767 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to certain Boeing Model 767 series airplanes, that currently requires an inspection to detect damage of the wire bundles in the left side of the flight compartment in the vicinity of the stowage box for the captain's oxygen mask, and repair, if necessary; a continuity check on repaired wires; installation of sleeving over the wire bundles; and rerouting of the wire bundles. This amendment requires modifications of the captain's and first officer's consoles in the flight compartment to ensure adequate clearance between oxygen equipment and adjacent wire bundles. This amendment is prompted by reports indicating that chafed wiring and wire insulation wear occurred in the vicinity of the stowage box for the captain's oxygen mask due to interference between oxygen line fittings and adjacent wire bundles. The actions specified by this AD are intended to prevent such chafing and inadequate clearance, which could result in electrical arcing and consequent oxygen leakage in the vicinity of the stowage box; these conditions, if not corrected, could result in a fire in the flight compartment.

DATES: Effective December 10, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of December 10, 1998.

The incorporation by reference of Boeing Alert Service Bulletin 767–35A0028, dated September 7, 1995, as listed in the regulations, was approved previously by the Director of the Federal Register as of October 26, 1995 (60 FR 52844, October 11, 1995).

ADDRESSES: The service information referenced in this AD may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Susan Letcher, Aerospace Engineer, Systems and Equipment Branch, ANM–130S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington; telephone (425) 227–2670; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 95–21–05, amendment 39–9390 (60 FR 52844, October 11, 1995), which is applicable to certain Boeing Model 767 series

airplanes, was published in the **Federal Register** on July 2, 1997 (62 FR 35711). The action proposed to require an inspectison to detect damage of the wire bundles in the left side of the flight compartment in the vicinity of the stowage box for the captain's oxygen mask, and repair, if necessary; a continuity check on repaired wires; installation of sleeving over the wire bundles; and rerouting of the wire bundles. The action also proposed to require modifications of the captain's and first officer's consoles in the flight compartment to ensure adequate clearance between oxygen equipment and adjacent wire bundles.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Four commenters support the proposed rule.

Request To Extend the Compliance Time

One commenter requests that the compliance time for the wiring modification be extended to 24 months instead of the 18 months specified by the proposed AD. The commenter states that it intends to accomplish the wiring modifications during heavy maintenance visits. However, the commenter advises that modification of the flight compartment requires the electrical power to be turned off and creates congestion in the cockpit area, which causes disruption to the work flow during the maintenance check. For these reasons, the commenter suggests extending the compliance time to allow modification during "C–4" heavy maintenance checks that have extended downtimes.

Another commenter advises that, although it has commenced the modification program required in the proposed AD, it anticipates completion in approximately 20 months. In addition, this commenter advises that the completion date for the modification will depend on whether the modification kits can be provided readily by the manufacturer. The FAA infers that the commenter requests an extension to the compliance time to provide additional time for delivery of parts.

The FAA does not concur with the commenters' requests to extend the compliance time. No justification of a possible delay in the availability of the required parts was offered, and the manufacturer has not advised the FAA of an impending delay in the delivery of adequate parts. Additionally, chafed wiring and wire insulation wear in the vicinity of the stowage box for the captain's oxygen mask due to interference between oxygen line fittings and adjacent wire bundles is a significant safety issue. The FAA considered not only those safety issues in developing an appropriate compliance time for this action, but the recommendations of the manufacturer, and the practical aspect of accomplishing the required modification within an interval of time that parallels normal scheduled maintenance for the majority of affected operators. In light of these factors, the FAA has determined that 18 months is an appropriate compliance time for the accomplishment of the required modification. No change is required to the final rule.

Comment Regarding Cost Estimates

One commenter advises that the FAA's cost estimate for labor and parts in the proposed AD is too low and has estimated the cost to be $2,010 per airplane. The FAA does not concur. The FAA based its cost estimate on the parts and labor estimates specified in Boeing Alert Service Bulletin 767–35A0029, dated January 30, 1997. Those estimates for the modification were $479 for parts, and 11 work hours at the labor rate of $60 per hour, for a total of $1,139 per airplane for parts and labor. In addition, the commenter did not provide sufficient data to validate the higher cost estimate of $2,010 per airplane. Therefore, the FAA has determined that the cost estimate specified in the final rule is reasonable, and no change to the final rule is required.

Concerns About Current Standards for Wire Bundle Routing

The National Transportation Safety Board (NTSB) states that it supports the proposal. However, the NTSB is concerned that current design and manufacturing for wire bundle routing may not provide necessary protection for other makes and models of airplanes to ensure that electrical wiring will not chafe against adjacent components. The NTSB indicates that it may institute further studies and may consider additional safety recommendations on this subject.

The FAA acknowledges the NTSB's comments. However, in the case of this particular identified unsafe condition, the FAA considers that the actions required by this AD are adequate to ensure the continued safety of the affected fleet. No change to this final rule is necessary.

Actions Since Issuance of Proposed Rule

Since the issuance of the proposed rule, the FAA has reviewed and approved Boeing Alert Service Bulletin 767–35A0029, Revision 1, dated June 25, 1998, which includes the same procedures specified in the original issue of the service bulletin for the modification of Captain's console and revises the procedure to modify the new First Officer's console. The revised procedure specifies replacing the existing electrical connector on the dimmer module with an electrical connector with a 90-degree backshell.

This alert service bulletin revision has been added to the final rule as an additional source of service information to accomplish the modification.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

There are approximately 568 Model 767 series airplanes of the affected design in the worldwide fleet. The FAA estimates that 185 airplanes of U.S. registry will be affected by this AD.

The actions that are currently required by AD 95–21–05 take approximately 3 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts cost approximately $50 per airplane. Based on these figures, the cost impact of the currently required actions on U.S. operators is estimated to be $42,550, or $230 per airplane.

The new actions that are required by this new AD will take approximately 11 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts will cost approximately $479 per airplane. Based on these figures, the cost impact of the new requirements of this AD on U.S. operators is estimated to be $210,715, or $1,139 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–9390 (60 FR 52844, October 11, 1995), and by adding a new airworthiness directive (AD), amendment 39–10869, to read as follows:

98–23–05 Boeing: Amendment 39–10869. Docket 97–NM–39–AD. Supersedes AD 95–21–05, Amendment 39–9390.

Applicability: Model 767 series airplanes, as listed in Boeing Alert Service Bulletin 767–35A0029, dated January 30, 1997; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent wire chafing and subsequent electrical arcing in the vicinity of the stowage box for the captain's oxygen mask, which could result in a fire in the flight compartment, accomplish the following:

Restatement of Requirements of AD 95–21–05

(a) For Model 767 series airplanes having line positions 2 through 589 inclusive except VA801 through VA810 inclusive, VN684 through VN691 inclusive, and VW701: Within 45 days after October 26, 1995 (the effective date of AD 95–21–05, amendment 39–9390), inspect to detect damage of the wire bundles in the left side of the flight compartment in the vicinity of the stowage box for the captain's oxygen mask, in accordance with Boeing Alert Service Bulletin 767–35A0028, dated September 7, 1995.

(1) If no damage is detected, prior to further flight, install protective sleeving on the wiring, and reroute the wire bundles, in accordance with the alert service bulletin.

(2) If any damage is detected, prior to further flight, accomplish the requirements of paragraphs (a)(2)(i) and (a)(2)(ii) of this AD.

(i) Repair the wiring and perform a continuity check on each repaired wire, in accordance with the alert service bulletin. And

(ii) Install protective sleeving on the wiring and reroute the wire bundles, in accordance with the alert service bulletin.

New Requirements of This AD

(b) For all airplanes: Within 18 months after the effective date of this AD, modify the airplane wiring in the vicinity of the captain's and first officer's consoles, in accordance with Boeing Alert Service Bulletin 767–35A0029, dated January 30, 1997, or Revision 1, dated June 25, 1998. Accomplishment of this modification constitutes terminating action for the inspection requirements of this AD.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(e) The actions shall be done in accordance with Boeing Alert Service Bulletin 767–35A0028, dated September 7, 1995; or Boeing Alert Service Bulletin 767–35A0029, dated January 30, 1997; or Boeing Alert Service Bulletin 767–35A0029, Revision 1, dated June 25, 1998.

(1) The incorporation by reference of Boeing Alert Service Bulletin 767–35A0028, dated September 7, 1995, was approved previously by the Director of the Federal Register, as of October 26, 1995 (60 FR 52844, October 11, 1995).

(2) The incorporation by reference of Boeing Alert Service Bulletin 767–35A0029, dated January 30, 1997, and Boeing Alert Service Bulletin 767–35A0029, Revision 1, dated June 25, 1998, is approved by the Director of the Federal Register, in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

(3) Copies may be obtained from Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(f) This amendment becomes effective on December 10, 1998.

Issued in Renton, Washington, on October 29, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 98–ANE–60–AD; Amendment 39–10870; AD 98–23–06]

RIN 2120–AA64

Airworthiness Directives; General Electric Aircraft Engines CJ610 Turbojet and CF700 Series Turbofan Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that is applicable to General Electric Aircraft Engines (GEAE) CJ610 series turbojet and CF700 series turbofan engines. This action requires operators to remove and replace with serviceable parts unapproved combustion liner assemblies prior to further flight. This amendment is prompted by findings that unapproved combustion liner assemblies are installed on the affected engines. The actions specified in this AD are intended to prevent combustor

liner cracking at multiple locations, progressing to liner fragmenting and combustor casing burnthrough, which could result in an engine fire.

DATES: Effective November 20, 1998.

Comments for inclusion in the Rules Docket must be received on or before January 4, 1999.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), New England Region, Office of the Regional Counsel, Attention: Rules Docket No. 98–ANE–60–AD, 12 New England Executive Park, Burlington, MA 01803–5299. Comments may also be sent via the Internet using the following address: "9-ad-engineprop@faa.dot.gov". Comments sent via the Internet must contain the docket number in the subject line.

FOR FURTHER INFORMATION CONTACT: Eugene Triozzi, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803–5299; telephone (781) 238–7148, fax (781) 238–7199.

SUPPLEMENTARY INFORMATION: The Federal Aviation Administration has received reports of premature cracking of unapproved combustor liner assemblies, part number (P/N) 6008T94G03, installed on General Electric Aircraft Engines (GEAE) CJ610 series turbojet and CF700 series turbofan engines. The investigation revealed that combustor liners were repaired using unapproved inner and outer shells manufactured using a substituted material, and with cooling slots, dilution holes, and other geometric features that do not conform to approved drawing requirements, resulting in increased stress levels at these features. The substituted material or the increased stress levels or both can result in reduced combustor life. In addition, because the potential crack origin sites occur at multiple locations surrounding the combustor, including liner cooling slots and dilution holes, adjacent cracks may combine, resulting in liner holes and hot gas discharge from the combustor. Analyses supported by inspections of parts have revealed that unapproved liners will have an unknown service life that could be significantly lower than the inspection interval requirements for approved combustor liners. The FAA has identified 38 combustor liners, identified by serial number (S/N), known to have been repaired using inner or outer shells manufactured by an unknown manufacturer using unknown processes and materials. The FAA has also identified additional combustor liners, with unknown S/N markings, that were repaired in the same way, by a particular certificated repair station. This condition, if not corrected, could result in combustor liner cracking at multiple locations, progressing to liner fragmenting and combustor casing burnthrough, which could result in an engine fire.

Since an unsafe condition has been identified that is likely to exist or develop on other engines of the same type design, this AD is being issued to prevent combustor liner failure. This AD requires removal and replacement of unapproved combustion liner assemblies with serviceable parts prior to further flight.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for prior public comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES.** All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of thisAD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–ANE–60–AD." The postcard will be date stamped and returned to the commenter.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

The FAA has determined that this regulation is an emergency regulation that must be issued immediately to correct an unsafe condition in aircraft, and is not a "significant regulatory action" under Executive Order 12866. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket. A copy of it, if filed, may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–23–06 General Electric Aircraft Engines: Amendment 39–10870. Docket 98–ANE–60–AD.

Applicability: General Electric Aircraft Engines (GEAE) CJ610 series turbojet and CF700 series turbofan engines, with combustor liner assemblies, part number (P/N) 6008T94G03, identified by serial number (S/N) or otherwise specified in Appendix 1 of this AD, installed. These engines are installed on but not limited to the following aircraft: Dassault-Aviation Fan Jet Falcon 20 series, Sabreliner NA265 series, Learjet 20 series, Israel Aircraft Industries Westwind series, Hansa Jet, Aero Commander Jet Commander.

APPENDIX 1.—SERIAL NUMBER COMBUSTION LINERS (SORTED ALPHANUMERICALLY)

1763	GGM82
181	GGM830
1939	GGMB7019
318–1	GGMH2135
318–2	GGMM1218
35	GKAPL77
497	OG2250
564	ST000891
900206	ST00247
910205	ST00276
GGM00028	ST00303
GGM00518	ST00391
GGM00536	ST00488
GGM00585	ST00623
GGM00893	ST00808
GGM59515	ST00840
GGM59675	ST00896
GGM59801	ST01042
GGM60028	ST01142

Additional Liners, With Serial Number Markings Unknown

Any other serial number combustion liner, part number 6008T94G03, following repair or overhaul which included installation of inner shell, P/N 5016T30G02, or installation of outer shell, P/N 6008T95G01, during the period from May 16, 1997, through February 13, 1998, and if approved for return to service by: The Jet Engine Shop (also known as 3d Industries, or 3DI, or identified by Certificate Number CRS J3DR866N), 4553 Keller Springs Road, Dallas, Texas 75248.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent combustor liner cracking at multiple locations, progressing to liner fragmenting and combustor casing burnthrough, which could result in an engine fire, accomplish the following:

(a) Prior to further flight, for any combustor liner identified by serial number (S/N), or otherwise identified in Appendix 1 of this AD, remove from service and replace with a serviceable part.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Engine Certification Office. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Engine Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the aircraft to a location where the record search requirements of this AD can be accomplished.

(d) This amendment becomes effective on November 20, 1998.

Issued in Burlington, Massachusetts, on October 30, 1998.

David A. Downey,

Assistant Manager, Engine and Propeller Directorate, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 98–AAL–11]

Revision of Class E Airspace; King Salmon, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule modifies Class E airspace at King Salmon, AK. The establishment of Global Positioning System (GPS) instrument approaches to runway (RWY) 11 and RWY 29 at King Salmon, AK, made this action necessary. The intended effect of this action is to provide adequate controlled airspace for Instrument Flight Rules (IFR) operations at King Salmon, AK.

EFFECTIVE DATE: 0901 UTC, December 3, 1998.

FOR FURTHER INFORMATION CONTACT: Robert van Haastert, Operations Branch, AAL–538, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587; telephone number (907) 271–5863; fax: (907) 271–2850; email: Robert.van.Haastert@faa.dot.gov. Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On June 12, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at King Salmon, AK, was published in the **Federal Register** (63 FR 32156). The proposal was necessary due to the establishment of GPS instrument approaches to RWY 11 and RWY 29.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at King Salmon, AK, due to the establishment of GPS instrument approaches to RWY 11 and RWY 29. The intended effect of this action is to provide adequate controlled airspace for IFR operations at King Salmon, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore —(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AAL AK E5 King Salmon, AK [Revised]

King Salmon Airport, AK
(Lat. 58°40'36" N., long. 156°38'57" W.)
King Salmon VORTAC
(Lat. 58°43'29" N., long. 156°45'08" W.)

That airspace extending upward from 700 feet above the surface within a 6.7-mile radius of the King Salmon Airport and within 4 miles northeast and 8 miles southwest of the King Salmon VORTAC 312° radial extending from the VORTAC to 21 miles northwest of the VORTAC and within 14 miles of the VORTAC 259° radial clockwise to the 004° radial and that airspace within 3.3 miles either side of the 132° radial of the VORTAC extending from the VORTAC to 17 miles southeast of the VORTAC; and that airspace extending upward from 1,200 feet above the surface within a 39-mile radius of the King Salmon Airport.

14 CFR Part 71

[Airspace Docket No. 98–AAL–10]

Revision of Class E Airspace; Unalakleet, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule modifies Class E airspace at Unalakleet, AK. The establishment of Global Positioning System (GPS) instrument approach to runway (RWY) 14 at Unalakleet, AK, made this action necessary. The intended effect of this action is to provide adequate controlled airspace for Instrument Flight Rules (IFR) operations at Unalakleet, AK.

EFFECTIVE DATE: 0901 UTC, December 3, 1998.

FOR FURTHER INFORMATION CONTACT: Robert van Haastert, Operations Branch, AAL–538, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587; telephone number (907) 271–5863; fax: (907) 271–2850; email: Robert.van.Haastert@faa.dot.gov. Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On June 12, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Unalakleet, AK, was published in the **Federal Register** (63 FR 32158). The proposal was necessary due to the establishment of GPS instrument approaches to RWY 14.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Unalakleet, AK, due to the establishment of GPS instrument approaches to RWY 14. The intended effect of this action is to provide adequate controlled airspace for IFR operations at Unalakleet, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71— DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 98–AAL–17]

Revision of Class E Airspace; Yakutat, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule modifies Class E airspace at Yakutat, AK. The establishment of Global Positioning System (GPS) instrument approaches to runway (RWY) 02, RWY 11, and RWY 29 at Yakutat, AK, made this action necessary. The intended effect of this action is to provide adequate controlled airspace for Instrument Flight Rules (IFR) operations at Yakutat, AK.

EFFECTIVE DATE: 0901 UTC, December 3, 1998.

FOR FURTHER INFORMATION CONTACT: Robert van Haastert, Operations Branch, AAL–538, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587; telephone number (907) 271–5863; fax: (907) 271–2850; email: Robert.van.Haastert@faa.dot.gov. Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On August 5, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Yakutat, AK, was published in the **Federal Register** (63 FR 41749). The proposal was necessary due to the establishment of GPS instrument approaches to RWY 02, RWY 11, and RWY 29.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Yakutat, AK, due to the establishment of GPS instrument approaches to RWY 02, RWY 11, and RWY 29. The intended effect of this action is to provide adequate controlled airspace for IFR operations at Yakutat, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AAL AK E5 Yakutat, AK [Revised]

Yakutat Airport, AK
(Lat. 59°30'12" N., long. 139°39'38" W.)
Yakutat VORTAC
(Lat. 59°30'39" N., long. 139°38'53" W.)
Ocean Cape NDB
(Lat. 59°32'37" N., long. 139°43'41" W.)

That airspace extending upward from 700 feet above the surface within a 7-mile radius of the Yakutat Airport and within 4 miles northeast and 8 miles southwest of the 314° bearing from the Ocean Cape NDB extending from the NDB to 16 miles west of NDB and within 4 miles northeast and 8 miles southwest of the Yakutat VORTAC 148° radial extending from the VORTAC to 16 miles southeast of the VORTAC and within 8 miles south of the Yakutat VORTAC 299° radial extending from the VORTAC to 16 miles west of the VORTAC and within 4 miles east and 8 miles west of the Yakutat VORTAC 230° radial extending from 6 miles southwest of the VORTAC to 21 miles southwest of the VORTAC and within 3.4 miles north of the Yakutat Localizer back course extending from the 7-mile radius to 13.2 miles southeast of the airport; and that airspace extending upward from 1,200 feet above the surface within 12.6 miles southwest and 8 miles northeast of the Yakutat VORTAC 138° and 318° radials extending from the VORTAC to 23.5 miles northwest and southeast of the VORTAC and within 5 miles each side of the 119° radial of the Yakutat VORTAC to 65 miles east of the VORTAC; and within 41 miles of the

Yakutat VORTAC between the 118° radial clockwise to the 298° radial; excluding Control 1487L and the Gulf of Alaska Low Class E airspace areas.

Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On August 5, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Atka, AK, was published in the **Federal Register** (63 FR 41750). The proposal was necessary due to the establishment of a GPS instrument approach at Atka, AK.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. Two letters in support of the proposal from Peninsula Airways, Inc. (Penn Air) were received. No negative comments to the proposal were received, however, new coordinates for the Atka Airport have been derived via a recent GPS survey. The new coordinates are lat. 52°13'13" N., long. 174°12'23" W. The FAA has determined that this change is editorial in nature and will not increase the scope of this rule. Except for the non-substantive change just discussed, the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points,* dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Atka, AK, due to the establishment of a GPS instrument approach at Atka, AK. The Atka Airport status is upgraded from VFR to IFR. The intended effect of this action is to provide adequate controlled airspace for IFR operations at Atka, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9F, *Airspace Designations and Reporting Points,* dated September 10, 1998, and effective September 16, 1998, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On June 12, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Nome, AK, was published in the **Federal Register** (63 FR 32157). The proposal was necessary due to the establishment of GPS instrument approaches to RWY 2, RWY 9, and RWY 27.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points,* dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Nome, AK, due to the establishment of GPS instrument approaches to RWY 11 and RWY 29. The intended effect of this action is to provide adequate controlled airspace for IFR operations at Nome, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Internet address: http://162.58.28.41/at or at address http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On August 5, 1998, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Anaktuvuk Pass, AK, was published in the **Federal Register** (63 FR 41751). The proposal was necessary due to the establishment of GPS and NDB instrument approaches at Anaktuvuk Pass, AK.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, however, the airspace description incorrectly listed the Anaktuvuk Pass NDB as the VORTAC

which has been reworded to read NDB. The FAA has determined that this change is editorial in nature and will not increase the scope of this rule. Except for the non-substantive change just discussed, the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 of FAA Order 7400.9F, *Airspace Designations and Reporting Points*, dated September 10, 1998, and effective September 16, 1998, which is incorporated by reference in 14 CFR 71.1 (63 FR 50139; September 21, 1998). The Class E airspace designations listed in this document will be revised and published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Anaktuvuk Pass, AK, due to the establishment of a GPS instrument approach at Anaktuvuk Pass, AK. The Anaktuvuk Pass Airport status is upgraded from VFR to IFR. The intended effect of this action is to provide adequate controlled airspace for IFR operations at Anaktuvuk Pass, AK.

The FAA has determined that these proposed regulations only involve an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore —(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 175

[Docket No. 97F–0428]

Indirect Food Additives: Adhesives and Components of Coatings

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of dimethyl-2,6-naphthalenedicarboxylate and 2,6-naphthalenedicarboxylic acid as polybasic acids intended for use as components of resinous and polymeric coatings that contact food. This action is in response to a petition filed by Amoco Corp.

DATES: The regulation is effective November 5, 1998; written objections and requests for a hearing by December 7, 1998.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Mark A. Hepp, Center for Food Safety and Applied Nutrition (HFS–215), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3098.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of November 20, 1997 (62 FR 62062), FDA announced that a food additive petition (FAP 7B4555) had been filed by Amoco Corp., One Prudential Plaza, 130 East Randolph St., Chicago, IL 60601–6207. The petition proposed to amend the food additive regulations in § 175.300 *Resinous and polymeric coatings* (21 CFR 175.300) to include dimethyl-2,6-naphthalenedicarboxylate and 2,6-naphthalenedicarboxylic acid as polybasic acids intended for use as components of resinous and polymeric coatings that contact food.

FDA has evaluated data in the petition and other relevant material. The agency concludes that the proposed use of the additives as components of resinous and polymeric coatings that contact food is safe, that the additives will have their intended technical effect, and therefore, that the regulation in § 175.300 should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has carefully considered the potential environmental effects of this rule as announced in the notice of filing for FAP 7B4555 (62 FR 62062, November 20, 1997). No new information or comments have been received that would affect the agency's previous determination that there is no significant impact on the human environment and that an environmental impact statement is not required.

This final rule contains no collections of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

Any person who will be adversely affected by this regulation may at any time on or before December 7, 1998, file with the Dockets Management Branch (address above) written objection thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 176

[Docket No. 98F–0054]

Indirect Food Additives: Paper and Paperboard Components

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of octadecanoic acid, reaction products with 2-[(2-aminoethyl)amino]ethanol and urea, and the acetate salts thereof, which may be emulsified with ethoxylated tallow alkyl amines, for use in the manufacture of paper and paperboard intended for use in contact with dry food. This action is in response to a petition filed by Sequa Chemicals, Inc.

DATES: The regulation is effective November 5, 1998; submit written objections and requests for a hearing by December 7, 1998.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Vir D. Anand, Center for Food Safety and Applied Nutrition (HFS–215), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3081.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of February 9, 1998 (63 FR 6571), FDA announced that a food additive petition (FAP 8B4576) had been filed by Sequa Chemicals, Inc., c/o Keller and Heckman, 1001 G St. NW., suite 500 West, Washington, DC 20001). The petition proposed to amend the food additive regulations in § 176.180 *Components of paper and paperboard in contact with dry food* (21 CFR 176.180) to provide for the safe use of octadecanoic acid, reaction products with 2-[(2-aminoethyl)amino]ethanol and urea, and the acetate salts thereof, which may be emulsified with ethoxylated tallow alkyl amines, will result in exposure to no greater than 50 parts per billion (ppb) and urea, and the acetate salts thereof, which may be emulsified with ethoxylated tallow alkyl amines, for increasing opacity and thickness, employed prior to the sheet forming operation in the manufacture of paper and paperboard intended for use in contact with dry food.

In its evaluation of the safety of this additive, FDA has reviewed the safety of the additive itself and the chemical impurities that may be present in the additive resulting from its manufacturing process. Although the additive itself has not been shown to cause cancer, it has been found to contain minute amounts of ethylene oxide, a carcinogenic impurity resulting from the manufacture of the additive. Residual amounts of reactants and manufacturing aids, such as ethylene oxide, are commonly found as contaminants in chemical products, including food additives.

I. Determination of Safety

Under the so-called "general safety clause" of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 348(c)(3)(A)), a food additive cannot be approved for a particular use unless a fair evaluation of the data available to FDA establishes that the additive is safe for that use. FDA's food additive regulations (21 CFR 170.3(i)) define safe as "a reasonable certainty in the minds of competent scientists that the substance is not harmful under the intended conditions of use."

The food additive anticancer, or Delaney, clause of the act (21 U.S.C. 348(c)(3)(A)) provides that no food additive shall be deemed safe if it is found to induce cancer when ingested by man or animal. Importantly, however, the Delaney clause applies to the additive itself and not to impurities in the additive. That is, where an additive itself has not been shown to cause cancer, but contains a carcinogenic impurity, the additive is properly evaluated under the general safety standard using risk assessment procedures to determine whether there is a reasonable certainty that no harm will result from the intended use of the additive (*Scott* v. *FDA*, 728 F.2d 322 (6th Cir. 1984)).

II. Safety of Petitioned Use of the Additive

FDA estimates that the petitioned use of the additive, octadecanoic acid, reaction products with 2-[(2-aminoethyl)amino]ethanol and urea, and the acetate salts thereof, which may be emulsified with ethoxylated tallow alkyl amines, will result in exposure to no greater than 50 parts per billion (ppb)

of the additive in the daily diet (3 kilogram (kg)), or an estimated daily intake (EDI) of 0.15 milligram per person per day (mg/p/d) (Ref. 1).

FDA does not ordinarily consider chronic toxicological studies to be necessary to determine the safety of an additive whose use will result in such low exposure levels (Ref. 2), and the agency has not required such testing here. However, the agency has reviewed the available toxicological data on the additive and concludes that the estimated small dietary exposure resulting from the proposed use of this additive is safe.

FDA has evaluated the safety of this additive under the general safety standard, considering all available data and using risk assessment procedures to estimate the upper-bound limit of lifetime human risk presented by ethylene oxide, the carcinogenic chemical that may be present as an impurity in the additive. The risk evaluation of ethylene oxide has two aspects: (1) Assessment of exposure to the impurity from the proposed use of the additive; and (2) extrapolation of the risk observed in the animal bioassay to the conditions of exposure to humans.

A. Ethylene Oxide

FDA has estimated the exposure to ethylene oxide from the petitioned use of the additive in the manufacture of paper and paperboard to be no more than 6.9 parts per trillion (ppt) in the daily diet (3 kg), or 6.3 nanograms (ng)/p/d (Ref. 1). The agency used data from a carcinogenesis bioassay on ethylene oxide conducted by the Institute of Hygiene, University of Mainz, Germany (Ref. 3), to estimate the upper-bound limit of lifetime human risk from exposure to ethylene oxide resulting from the proposed use of the additive. The results of the bioassay on ethylene oxide demonstrated that ethylene oxide was carcinogenic for female rats under the conditions of the study. The test material caused significantly increased incidence of squamous cell carcinomas of the forestomach and carcinomas in situ of the glandular stomach.

Based on the estimated exposure to ethylene oxide of 6.3 ng/p/d, FDA estimates that the upper-bound limit of lifetime human risk from the proposed use of the subject additive is 1.1×10^{-8}, or 1.1 in 100 million (Ref. 4). Because of the numerous conservative assumptions used in calculating the exposure estimate, the actual lifetime-averaged individual exposure to ethylene oxide is likely to be substantially less than the estimated exposure, and therefore, the probable lifetime human risk would be less than the upper-bound limit of lifetime human risk. Thus, the agency concludes that there is reasonable certainty that no harm from exposure to ethylene oxide would result from the proposed use of the additive.

B. Need for Specifications

The agency has also considered whether specifications are necessary to control the amount of ethylene oxide present as an impurity in the additive. The agency finds that specifications are not necessary for the following reasons: (1) Because of the low level at which ethylene oxide may be expected to remain as an impurity following production of the additive, the agency would not expect the impurity to become a component of food at other than extremely low levels; and (2) the upper-bound limit of lifetime human risk from exposure to the impurity is very low, less than 1.1 in 100 million.

III. Conclusion

FDA has evaluated the data in the petition and other relevant material. Based on this information, the agency concludes that the proposed use of the additive in the manufacture of paper and paperboard intended for use in contact with dry food is safe, and that the additive will achieve its intended technical effect. Therefore, the agency concludes that the regulations in § 176.180 should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

IV. Environmental Impact

The agency has previously considered the environmental effects of this rule as announced in the notice of filing for FAP 8B4576 (63 FR 6571, February 9, 1998). No new information or comments have been received that would affect the agency's previous determination that there is no significant impact on the human environment and that an environmental impact statement is not required.

V. Paperwork Reduction Act of 1995

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

VI. Objections

Any person who will be adversely affected by this regulation may at any time on or before December 7, 1998, file with the Dockets Management Branch (address above) written objection thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objection received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

VII. References

The following references have been placed on display in the Dockets Management Branch (address above) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday.

1. Memorandum dated May 8, 1998, from the Chemist, Special Project Team (HFS–246), to the file, concerning FAP 8B4576: dietary concentrations of the additive and the impurity (ethylene oxide).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 178

[Docket No. 98F–0432]

Indirect Food Additives: Adjuvants, Production Aids, and Sanitizers

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of chromium oxide green, Cr_2O_3 (C.I. Pigment Green 17) as a colorant for polymers intended for use in contact with food. This action is in response to a petition filed by Ticona.

DATES: The regulation is effective November 5, 1998; written objections and requests for a hearing by December 7, 1998.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Vir D. Anand, Center for Food Safety and Applied Nutrition (HFS–215), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3081.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of June 22, 1998 (63 FR 33935), FDA announced that a food additive petition (FAP 8B4603) had been filed by Ticona, c/o Keller and Heckman, 1001 G St. NW., suite 500 West, Washington, DC 20001. The petition proposed to amend the food additive regulations in § 178.3297 *Colorants for polymers* (21 CFR 178.3297) to provide for the safe use of chromium oxide green, Cr_2O_3 (C.I. Pigment Green 17) as a colorant for polymers intended for use in contact with food.

FDA has evaluated data in the petition and other relevant material. Based on this information, the agency concludes that the proposed use of the additive is safe, that the additive will achieve its intended technical effect, and therefore, that the regulations in § 178.3297 should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has previously considered the environmental effects of this rule as announced in the notice of filing for FAP 8B4603 (63 FR 33935). No new information or comments have been received that would affect the agency's previous determination that there is no significant impact on the human environment and that an environmental impact statement is not required.

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

Any person who will be adversely affected by this regulation may at any time on or before December 7, 1998, file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents

shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 178

Food additives, Food packaging.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR part 178 is amended as follows:

PART 178—INDIRECT FOOD ADDITIVES: ADJUVANTS, PRODUCTION AIDS, AND SANITIZERS

1. The authority citation for 21 CFR part 178 continues to read as follows:

Authority: 21 U.S.C. 321, 342, 348, 379e.

2. Section 178.3297 is amended in the table in paragraph (e) by revising the entry for "Chromium oxide green" under the headings "Substances" and "Limitations" to read as follows:

§ 178.3297 Colorants for polymers.

* * * * *

(e) * * *

Substances	Limitations
* * *	* * * *
Chromium oxide green, Cr_2O_3 (C.I. Pigment Green 17, C.I. No. 77288).	For use only: 1. In polymers used in contact with food at a level not to exceed 5 percent by weight of the polymer, except as specified below. 2. In olefin polymers complying with § 177.1520 of this chapter. 3. In repeat-use rubber articles complying with § 177.2600 of this chapter; total use is not to exceed 10 percent by weight of rubber articles.

21 CFR Part 314

[Docket No. 85N–0214]

Effective Date of Approval of an Abbreviated New Drug Application

AGENCY: Food and Drug Administration, HHS.

ACTION: Interim rule; opportunity for public comment.

SUMMARY: The Food and Drug Administration (FDA) is issuing an interim rule to amend its regulations establishing the effective date of approval of abbreviated new drug applications (ANDA's). The interim rule eliminates the requirement that an ANDA applicant successfully defend a patent infringement suit to be eligible for 180 days of marketing exclusivity.

DATES: The interim rule is effective November 10, 1998. Submit written comments by February 3, 1999.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Virginia G. Beakes or Wayne H. Mitchell, Center for Drug Evaluation and Research (HFD–7), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–594–2041.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98–417) (the Hatch-Waxman Amendments) amended the Federal Food, Drug, and Cosmetic Act (the act). The Hatch-Waxman Amendments created section 505(j) of the act (21 U.S.C. 355(j)). Section 505(j) created the current ANDA approval process, which allows lower-priced generic versions of previously approved innovator drugs to be approved and brought on the market.

Innovator drug applicants must include in their new drug application (NDA) information about patents that claim the drug product that is the subject of the NDA. FDA publishes this patent information as part of the "Approved Drug Products With Therapeutic Equivalence Evaluations," which is generally known as the "Orange Book."

An ANDA applicant must include in the ANDA a patent certification described in section 505(j)(2)(A)(vii) of the act. The certification must make one of the following statements: (1) That no patent information on the drug product that is the subject of the ANDA has been submitted to FDA; (2) that such patent has expired; (3) the date on which such patent expires; or (4) that such patent is invalid or will not be infringed by the manufacture, use, or sale of the new drug for which the ANDA is submitted. This last certification is known as a "paragraph IV certification." A notice of the paragraph IV certification must be provided to each owner of the patent which is the subject of the certification and to the holder of the approved NDA to which the ANDA refers. The submission of an ANDA for a drug product that is claimed in a patent is an infringing act, if that drug product is intended to be marketed before the expiration of the patent, and may be the basis for patent litigation.

Section 505(j)(5)(B)(iv)[1] of the act provides an incentive for generic manufacturers to challenge patents that may be invalid or unenforceable by filing paragraph IV certifications, thereby inviting a patent action against them by the patent owner. Section 505(j)(5)(B)(iv) of the act states that:

If the [ANDA] contains a [paragraph IV certification] and is for a drug for which a previous application has been submitted under this subsection continuing [sic] such a certification, the application shall be made effective not earlier than one hundred and eighty days after—

(I) the date the Secretary receives notice from the applicant under the previous [ANDA] of the first commercial marketing of the drug under the previous [ANDA] or

(II) the date of a decision of a court[2] in [a patent infringement action] holding the patent which is the subject of the certification to be invalid or not infringed, whichever is earlier.

This means that an ANDA applicant whose application contains a paragraph IV certification is protected from competition from subsequent generic versions of the same drug product for 180 days after either the first commercial marketing of the first ANDA applicant's drug or a decision of a court holding the patent that is the subject of the paragraph IV certification to be invalid or not infringed. This marketing protection is commonly known as "180-day exclusivity" and was created as an incentive to generic manufacturers to challenge patents that may be invalid, not infringed, or unenforceable.

In the **Federal Register** of October 3, 1994 (59 FR 50338 at 50367), FDA published the final rule for implementing the patent and marketing exclusivity provisions of the Hatch-Waxman Amendments. Section 314.107(c)(1) (21 CFR 314.107(c)(1)), the regulation implementing section 505(j)(5)(B)(iv) of the act, provides:

If an abbreviated new drug application contains a certification that a relevant patent is invalid, unenforceable, or will not be infringed and the application is for a generic copy of the same listed drug for which one or more substantially complete abbreviated new drug applications were previously submitted containing a certification that the same patent was invalid, unenforceable, or would not be infringed *and the applicant submitting the first application has successfully defended against a suit for patent infringement brought within 45 days of the patent owner's receipt of notice submitted under § 314.95*, approval of the subsequent abbreviated new drug application will be made effective no sooner than 180 days from whichever of the following dates is earlier:

(i) The date the applicant submitting the first application first commences commercial marketing of its drug product; or

(ii) The date of a decision of the court holding the relevant patent invalid, unenforceable, or not infringed.

(Emphasis added)

The proposal containing § 314.107(c)(1), published in the **Federal Register** of July 10, 1989 (54 FR 28872 at 28929), proposing the requirement that the first ANDA applicant submitting a paragraph IV certification be sued for patent infringement in order to obtain the 180-day exclusivity. This interpretation was believed to be most consistent with the language of the Hatch-Waxman Amendments and furthered the congressional intent to encourage challenges to patents that may be invalid or unenforceable (54 FR 28872 at 28894). In response to a comment on the proposed rule, FDA added a requirement to the final rule that the first ANDA applicant submitting a paragraph IV certification successfully defend a patent infringement suit to be entitled 180-day exclusivity. The "successful defense" requirement was established to eliminate "an incentive for frivolous claims of patent invalidity or noninfringement because it would give ANDA applicants exclusivity even if the applicant was unsuccessful in defending against the patent owner's lawsuit" (59 FR 50338 at 50353).

FDA's requirements for 180-day exclusivity have been challenged in *Inwood Laboratories, Inc.* v. *Young*, 723 F. Supp. 1523 (D.D.C. 1989), *vacated as moot*, 43 Fed. 3d 712 (D.C. Cir. 1989); *Mova Pharmaceutical Corp.* v. *Shalala*, 955 F. Supp. 128 (D.D.C. 1997), and *Granutec, Inc. et al.* v. *Shalala et al.*, No. 5:97–CV–485–BO(1) (E.D.N.C. July 3, 1997). The district courts in both *Inwood* and *Mova* held that 180 days of marketing exclusivity should be granted to the first ANDA applicant who files a paragraph IV certification, regardless of whether the applicant is subsequently sued for patent infringement. Following the *Inwood* decision and the initial district court decision in *Mova*, FDA determined that it would be appropriate to acquiesce in the courts' decisions until the issue was resolved by the appellate courts.

The *Mova* decision was upheld in the U.S. Court of Appeals for the District of Columbia Circuit, *Mova Pharmaceutical Corp.* v. *Shalala* No. 97–5082, 1998 U.S. App. Lexis 7391 (D.C. Cir. Apr. 14, 1998). Following the circuit court decision, on June 1, 1998, the district court in *Mova* entered an order stating that the successful defense requirement of § 314.107(c)(1) is invalid and permanently enjoining FDA from enforcing it.

Subsequent to the district court decision in *Mova* and FDA's acquiesence, but prior to the Court of Appeals' decision, the U.S. District Court for the Eastern District of North Carolina addressed the validity of § 314.107(c)(1) in *Granutec* v. *Shalala* and, in a holding contrary to the earlier *Mova* district court decision, ordered FDA to follow its regulations in approving ANDA's for ranitidine hydrochloride. The *Granutec* decision was stayed and appealed to the U.S. Court of Appeals for the 4th Circuit, which reversed the district court's decision.

Both the U.S. Court of Appeals for the District of Columbia Circuit and the U.S. Court of Appeals for the 4th Circuit held that FDA's interpretation of section 505(j)(5)(B)(iv) as expressed in § 314.107(c)(1) is unsupported by the act. FDA has not appealed either decision. The effect of these decisions, together with the June 1, 1998, order of the district court in *Mova*, is that FDA will not enforce the "successful defense" provision of § 314.107(c)(1). Accordingly, FDA is instituting this rulemaking procedure to remove the "successful defense" provision from § 314.107(c)(1), and the related provision in § 314.107(c)(4).

Before either court of appeals' decision issued, in the **Federal Register** of November 28, 1997 (62 FR 63268), FDA published a clarification stating that FDA would apply § 314.107(c)(1) as written, including the "successful defense" provision. That clarification is hereby withdrawn.

In the near future, FDA will publish a proposed rule that will more extensively address the agency's interpretation of section 505(j)(5)(B)(iv) of the act in a manner consistent with the *Mova* and *Granutec* decisions. An opportunity for public comment will be provided when the document is published.

II. Environmental Impact

The agency has determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

III. Analysis of Impacts

FDA has examined the impacts of the interim rule under Executive Order 12866, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Executive Order 12866 classifies a rule as significant if it meets any one of a number of specified conditions, including having an annual effect on the economy of $100 million or adversely

[1] Prior to the enactment of the Food and Drug Administration Modernization Act (the Modernization Act) of 1997, 180-day exclusivity was described at section 505(j)(4)(B)(iv) of the act. The Modernization Act added new provisions to section 505(j) that resulted in a renumbering of the sections.

[2] The agency interprets the term "court" to refer to the court that enters final judgment from which no appeal can be or has been taken (§ 314.107(e)).

affecting in a material way a sector of the economy, competition, or jobs, or if it raises novel legal or policy issues. The agency believes that this interim rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, the interim rule is not a significant regulatory action as defined by the Executive Order and so is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires that if a rule has a significant economic impact on a substantial number of small entities, the agency must analyze regulatory options to minimize the economic impact on small entities. The agency certifies that this interim rule will not have a significant economic impact on a substantial number of small entities. Therefore, under the Regulatory Flexibility Act, no further analysis is required.

The Unfunded Mandates Reform Act requires an agency to prepare a budgetary impact statement before promulgating any rule likely to result in a Federal mandate that may result in expenditures by State, local, and tribal governments or the private sector of $100 million (adjusted annually for inflation) in any 1 year. The elimination of the "successful defense" provision of § 314.107(c)(1), and the related provision in § 314.107(c)(4), will not result in any significant increased expenditures by State, local, and tribal governments or the private sector. Because this interim rule will not result in an expenditure of $100 million or more on any governmental entity or the private sector, no budgetary impact statement is required.

This interim rule is intended to bring FDA's regulations into conformance with the *Granutec* and *Mova* court decisions. The agency believes that this interim rule is necessary and that it is consistent with the principles of Executive Order 12866; that it is not a significant regulatory action under that Order; that it will not have a significant economic impact on a substantial number of small entities; and that it is not likely to result in an annual expenditure in excess of $100 million.

IV. Paperwork Reduction Act of 1995

This interim rule contains no collections of information, therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

V. Effective Date

The agency is issuing these amendments as an interim rule effective November 10, 1998. This action is being issued to remove the "successful defense" provision of § 314.107(c)(1), and the related provision in § 314.107(c)(4). This action is necessary because both the *Granutec* and *Mova* courts have found the "successful defense" provision to be without support in the act. Indeed, the *Mova* court has ordered FDA not to enforce the "successful defense" provision of § 314.107(c)(1). These decisions have rendered the "successful defense" provision, and the related provision in § 314.107(c)(4), a nullity, and FDA can find no reason to retain the provisions in its regulations. For the foregoing reasons, FDA finds, for good cause, that notice and public procedure would be impracticable, unnecessary, and contrary to the public interest; therefore, a public comment period before the establishment of this interim rule may be dispensed with under 5 U.S.C. 553(b)(B) and § 10.40(e)(1) (21 CFR 10.40(e)(1)). In addition, the Commissioner of Food and Drugs finds good cause under 5 U.S.C. 553(d)(3) and § 10.40(c)(4)(ii) for making this interim rule effective in less than 30 days.

VI. Opportunity for Public Comment

Interested persons may, on or before February 3, 1999, submit to the Dockets Management Branch (address above) written comments regarding this interim rule. FDA will use any comments received to determine whether this interim rule should be modified or revoked. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 314

Administrative practice and procedure, Confidential business information, Drugs, Reporting and recordkeeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 314 is amended as follows:

PART 314—APPLICATIONS FOR FDA APPROVAL TO MARKET A NEW DRUG OR AN ANTIBIOTIC DRUG

1. The authority citation for 21 CFR part 314 is revised to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 371, 374, 379e.

§ 314.107 [Amended]

2. Section 314.107 *Effective date of approval of a 505(b)(2) application or abbreviated new drug application under section 505(j) of the act* is amended in paragraph (c)(1) by removing the phrase "and the applicant submitting the first application has successfully defended against a suit for patent infringement brought within 45 days of the patent owner's receipt of notice submitted under § 314.95" and in paragraph (c)(4) by removing the phrase "if sued for patent infringement".

Dated: October 30, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 520

Oral Dosage Form New Animal Drugs; Levamisole Hydrochloride Soluble Drench Powder

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of an abbreviated new animal drug application (ANADA) filed by Agri Laboratories, Ltd. The ANADA provides for use of levamisole hydrochloride soluble drench powder for use in water as an anthelmintic for cattle and sheep.

EFFECTIVE DATE: November 5, 1998.

FOR FURTHER INFORMATION CONTACT: Lonnie W. Luther, Center for Veterinary Medicine (HFV–102), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–827–0209.

SUPPLEMENTARY INFORMATION: Agri Laboratories, Ltd., P.O. Box 3103, St. Joseph, MO 64503–0103, filed ANADA 200–225 that provides for use of Prohibit™ (levamisole hydrochloride) soluble drench powder, in 46.8 and 544.5 gram packages, in water, as an anthelmintic for cattle and sheep. Levamisole cattle and sheep drench is used to treat infections of stomach worms (*Haemonchus, Trichostrongylus, Ostertagia*), intestinal worms (*Trichostrongylus, Cooperia, Nematodirus, Bunostomum, Oesophagostomum*) (*Chabertia*, sheep only), and lung worms (*Dictyocaulus*). Agri Laboratories, Ltd.'s ANADA 200–225 is approved as a generic copy of the Schering–Plough Corp.'s NADA 112–051 Levasole® (levamisole) soluble drench. ANADA 200–225 is approved as

of August 27, 1998, and § 520.1242a (21 CFR 520.1242a) is amended to reflect the approval. The basis for approval is discussed in the freedom of information summary.

In the regulations, § 520.1242a provides for use of levamisole hydrochloride soluble powder in a drench as an anthelmintic for cattle and sheep against stomach worms, intestinal worms, and lung worms, and in drinking water as an anthelmintic for swine against large roundworms, nodular worms, intestinal threadworms, and lungworms. The regulation states the drug's chemical name and assay, information that FDA has determined is better provided by other references. In addition, the rule fails to properly reflect the dosage. Thus, FDA is amending § 520.1242a to remove the chemical name and assay and to better reflect the package sizes and dosage. Finally, FDA also is redesignating the paragraphs to reflect current style format.

In accordance with the freedom of information provisions of 21 CFR part 20 and 514.11(e)(2)(ii), a summary of safety and effectiveness data and information submitted to support approval of this application may be seen in the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday.

The agency has determined under 21 CFR 25.33(a)(1) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

List of Subjects in 21 CFR Part 520

Animal drugs.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 520 is amended as follows:

PART 520—ORAL DOSAGE FORM NEW ANIMAL DRUGS

1. The authority citation for 21 CFR part 520 continues to read as follows:

Authority: 21 U.S.C. 360b.

2. Section 520.1242a is amended by removing paragraphs (a) and (d), by redesignating paragraphs (b), (c), (e), and (f) as paragraphs (a), (b), (c), and (d), respectively, by revising newly redesignated paragraphs (a), (b), (c), (d)(1)(i), (d)(1)(iii), (d)(2)(i), and by adding newly designated paragraph (d)(2)(iii) to read as follows:

§ 520.1242a Levamisole hydrochloride drench and drinking water.

(a) *Specifications.* Each package contains either 9.075, 11.7, 18.15, 46.8, or 544.5 grams of levamisole hydrochloride.

(b) *Sponsors.* Approval for sponsors in 21 CFR 510.600(c) for use as in paragraph (d) of this section as follows:

(1) See 043781 for use of 46.8 gram package as in paragraph (d)(1) of this section, for 11.7 and 46.8 gram packages as in paragraph (d)(2) of this section, and for 9.075 and 18.15 gram packages as in paragraph (d)(3) of this section.

(2) See 000061 for use of 46.8 and 544.5 gram packages as in paragraph (d)(1) of this section, for 11.7, 46.8, and 544.5 gram packages as in paragraph (d)(2) of this section, and for 18.15 gram package as in paragraph (d)(3) of this section.

(3) See 057561 for use of 46.8 and 544.5 gram packages as in paragraphs (d)(1) and (d)(2) of this section.

(c) *Related tolerances.* See § 556.350 of this chapter.

(d) *Conditions of use.* It is used as an anthelmintic at 0.365 gram per 100 pounds of body weight as follows:

(1) *Cattle*—(i) *Amount.* As a single oral dose drench using 46.8 or 544.5 gram packet.

* * * * *

(iii) *Limitations.* Conditions of constant helminth exposure may require retreatment within 2 to 4 weeks after the first treatment. Do not slaughter for food within 48 hours of treatment. Not for use in dairy animals of breeding age. Consult your veterinarian before using in severely debilitated animals. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism. Prepare solutions for use as follows:

(*a*) Dissolve contents of 11.7 gram package in 1 quart (32 ounces) of water and administer as a drench at 1 ounce per 100 pounds of body weight, or dissolve in 10.9 fluid ounces of water and administer as a drench at 1 milliliter per 10 pounds of body weight as a single oral dose.

(*b*) Dissolve contents of 46.8 gram package in 128 fluid ounces (1 gallon) of water and administer as a drench at 1 ounce per 100 pounds of body weight as a single oral dose.

(*c*) Dissolve contents of 544.5 gram package in 3 liters of water and administer as a drench at 2 milliliters per 100 pounds of body weight as a single oral dose.

* * * * *

(2) *Sheep*—(i) *Amount.* As a single oral dose drench using 11.7, 46.8, or 544.5 gram packet.

* * * * *

(iii) *Limitations.* Conditions of constant helminth exposure may require retreatment within 2 to 4 weeks after the first treatment. Do not slaughter for food within 72 hours of treatment. Consult your veterinarian before using in severely debilitated animals. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism. Prepare solutions for use as follows:

(*a*) Dissolve contents of 11.7 gram package in 1 quart (32 ounces) of water and administer as a drench at 1 ounce per 100 pounds of body weight, or dissolve in 10.9 fluid ounces of water and administer as a drench at 1 milliliter per 10 pounds of body weight as a single oral dose.

(*b*) Dissolve contents of 46.8 gram package in 128 fluid ounces (1 gallon) of water and administer as a drench at 1 ounce per 100 pounds of body weight as a single oral dose.

(*c*) Dissolve contents of 544.5 gram package in 3 liters of water and administer as a drench at 2 milliliters per 100 pounds of body weight as a single oral dose.

* * * * *

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 520

Oral Dosage Form New Animal Drugs; Sulfadimethoxine Soluble Powder and Oral Solution

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of two abbreviated new animal drug applications (ANADA's) filed by Med–Pharmex, Inc. One ANADA provides for the use of sulfadimethoxine soluble powder for use in drinking water or as a drench, and the second ANADA provides for the use of the oral solution in drinking water or as a drench, for the treatment of chickens,

turkeys, and dairy calves, dairy heifers, and beef cattle.

EFFECTIVE DATE: November 5, 1998.

FOR FURTHER INFORMATION CONTACT: Lonnie W. Luther, Center for Veterinary Medicine (HFV–102), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–827–0209.

SUPPLEMENTARY INFORMATION: Med–Pharmex, Inc., 2727 Thompson Creek Rd, Pomona, CA 91767–1861, has filed both ANADA 200–238 that provides for the use of Sulfasol® (sulfadimethoxine) soluble powder, and ANADA 200–251 that provides for use of Sulforal® (sulfadimethoxine) concentrated solution, both for use in drinking water or as a drench for the treatment of disease outbreaks as follows: Coccidiosis, fowl cholera, and infectious coryza in chickens; coccidiosis and fowl cholera in meat-producing turkeys; and shipping fever complex and bacterial pneumonia associated with *Pasteurella* spp. sensitive to sulfadimethoxine, and calf diphtheria and foot rot associated with *Sphaerophorus necrophorus* sensitive to sulfadimethoxine in dairy calves, dairy heifers, and beef cattle.

ANADA 200–238 is approved as a generic copy of Pfizer, Inc.'s NADA 46–285 for Albon® (sulfadimethoxine soluble powder). ANADA 200–238 is approved as of July 28, 1998.

ANADA 200–251 is approved as a generic copy of Pfizer, Inc.'s NADA 31–205 for Albon® (sulfadimethoxine 12.5% concentrated solution). ANADA 200–251 is approved as of August 3, 1998.

Currently the regulations in § 520.2220a (21 CFR 520.2220a) do not specify which sponsors have approval for the oral solution or the soluble powder. The section is amended to combine paragraphs (a) and (b) to specify the approvals, including the new approvals. The basis for approval is discussed in the freedom of information summaries.

In amending § 520.2220a paragraph (a) is revised, paragraph (b) is removed, and paragraphs (c) through (e) are redesignated as paragraphs (b) through (d), respectively.

In accordance with the freedom of information provisions of 21 CFR part 20 and 514.11(e)(2)(ii), a summary of safety and effectiveness data and information submitted to support approval of these applications may be seen in the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday.

The agency has determined under 21 CFR 25.33(a)(1) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

List of Subjects in 21 CFR Part 520

Animal drugs.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 520 is amended as follows:

PART 520—ORAL DOSAGE FORM NEW ANIMAL DRUGS

1. The authority citation for 21 CFR part 520 continues to read as follows:

Authority: 21 U.S.C. 360b.

2. Section 520.2220a is amended by revising paragraph (a), by removing paragraph (b), and by redesignating paragraphs (c) through (e) as paragraphs (b) through (d), respectively, to read as follows:

§ 520.2220a Sulfadimethoxine oral solution and soluble powder.

(a) *Approvals.* (1) For oral solution containing 12.5 percent (3.75 grams per ounce) sulfadimethoxine, see Nos. 000010, 000069, 051259, 057561, and 059130 in § 510.600(c).

(2) For soluble powder, each package containing the equivalent of 94.6 grams of sulfadimethoxine (as the sodium salt), see Nos. 000069, 051259, and 057561 in § 510.600(c).

* * * * *

Dated: October 22, 1998.

Stephen F. Sundlof,

Director, Center for Veterinary Medicine.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 522

Animal Drugs, Feeds, and Related Products; Change of Sponsor; Technical Amendment

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; technical amendment.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect the correct sponsor for an approved new animal drug application. The sponsor that is currently specified in the regulations is incorrect. This document amends the regulations to correct that error.

EFFECTIVE DATE: November 5, 1998.

FOR FURTHER INFORMATION CONTACT: LaJuana D. Caldwell, Office of Policy (HF–27), 5600 Fishers Lane, Rockville, MD 20857, 301–443–2994.

SUPPLEMENTARY INFORMATION: FDA has discovered that an error has become incorporated into the agency's regulations for animal drugs, feeds, and related products. An amendment published on June 30, 1997 (62 FR 35075), amended § 522.1044 (21 CFR 522.1044) in paragraph (b)(3) by removing "054273" and adding in its place "000010". However, § 522.1044(b)(3) was not added to the agency's regulations until August 26, 1997 (62 FR 45157). Because § 522.1044(b)(3) did not exist when the amendment was made, the regulations were not amended and therefore the regulations are incorrect. This document corrects that error.

List of Subjects in 21 CFR Part 522

Animal drugs.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR part 522 is amended as follows:

PART 522—IMPLANTATION OR INJECTABLE DOSAGE FORM NEW ANIMAL DRUGS

1. The authority citation for 21 CFR part 522 continues to read as follows:

Authority: 21 U.S.C. 360b.

§ 522.1044 [Amended]

2. Section 522.1044 *Gentamicin sulfate injection* is amended in paragraph (b)(3) by removing "054273" and adding in its place "000010".

Dated: October 22, 1998.

Stephen F. Sundlof,

Director, Center for Veterinary Medicine.

[FR Doc. 98–29611 Filed 11–4–98; 8:45 am]

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 524 and 556

Ophthalmic and Topical Dosage Form New Animal Drugs; Eprinomectin

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of a supplemental new animal drug application (NADA) filed by Merial Ltd. The supplemental NADA provides for topical use of eprinomectin on cattle for treatment and control of two additional gastrointestinal roundworms and to establish of an acceptable daily intake (ADI) and tolerance for eprinomecrin residues in cattle muscle.

EFFECTIVE DATE: November 5, 1998.

FOR FURTHER INFORMATION CONTACT: Estella Z. Jones, Center for Veterinary Medicine (HFV–135), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–594–1643.

SUPPLEMENTARY INFORMATION: Merial Ltd., 2100 Ronson Rd., Iselin, NJ 08830–3077, is sponsor of NADA 141–079 that provides for use of Ivomec® Eprinex™ Pour-On (5 milligrams per milliliter eprinomectin) on beef and dairy cattle for treatment and control of gastrointestinal roundworm, lungworm, cattle grub, lice, mange mite, and horn fly infections. The sponsor filed a supplemental NADA that provides for use of the product for treatment and control of *Strongyloides papillosus* (adults) and *Trichostrongylus longispicularis* (adults). The supplemental NADA is approved as of August 9, 1998, and 21 CFR 524.814(d)(2) is revised to reflect the approval. The basis of approval is discussed in the freedom of information summary.

A tolerance for residues of eprinomectin in the muscle of cattle has not previously been established. At this time, 21 CFR 556.227 is amended to establish a tolerance for eprinomectin residues in cattle muscle. Also, the regulation is amended to establish an ADI for safe daily human intake of residues of eprinomectin. The ADI is the amount of total drug residue that can be safely consumed by humans every day.

In accordance with the freedom of information provisions of 21 CFR part 20 and 514.11(e)(2)(ii), a summary of safety and effectiveness data and information submitted to support approval of this supplemental application may be seen in the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday.

Under 21 U.S.C. 360b(c)(2)(F)(iii), this supplemental approval for food-producing animals qualifies for 3 years of marketing exclusivity beginning August 9, 1998, because the supplement contains substantial evidence of the effectiveness of the drug involved, studies of animal safety or, in the case of food-producing animals, human food safety studies (other than bioequivalence or residue studies) required for approval of the supplement and conducted or sponsored by the applicant. The 3 years of marketing exclusivity applies only to use of the drug as approved in this supplemental NADA.

The agency has determined under 21 CFR 25.33(a)(1) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

List of Subjects

21 CFR Part 524

Animal drugs.

21 CFR Part 556

Animal drugs, Foods.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR parts 524 and 556 are amended as follows:

PART 524—OPHTHALMIC AND TOPICAL DOSAGE FORM NEW ANIMAL DRUGS

1. The authority citation for 21 CFR part 524 continues to read as follows:

Authority: 21 U.S.C. 360b.

2. Section 524.814 is amended by revising paragraph (d)(2) to read as follows:

§ 524.814 Eprinomectin.

* * * * *

(d) * * *

(2) *Indications for use.* The drug is used in beef and dairy cattle for treatment and control of gastrointestinal roundworms (*Haemonchus placei* (adult and L4), *Ostertagia ostertagi* (adult and L4, including inhibited L4), *Trichostrongylus axei* (adult and L4), *T. colubriformis* (adult and L4), *T. longispicularis* (adult), *Cooperia oncophora* (adult and L4), *C. punctata* (adult and L4), *C. surnabada* (adult and L4), *Nematodirus helvetianus* (adult and L4), *Bunostomum phlebotomum* (adult and L4), *Oesophagostomum radiatum* (adult and L4), *Strongyloides papillosus* (adults), *Trichuris* spp. (adults)); lungworms (*Dictyocaulus viviparus*, adult and L4); cattle grubs (all parasitic stages *Hypoderma lineatum*, *H. bovis*); lice (*Damalinia bovis*, *Linognathus vituli*, *Haematopinus eurysternus*, *Solenopotes capillatus*); mange mites (*Chorioptes bovis*, *Sarcoptes scabiei*); and horn flies (*Haematobia irritans*). Controls and protects from reinfection of *D. vivaparus* for 21 days after treatment and *H. irritans* for 7 days after treatment.

* * * * *

PART 556—TOLERANCES FOR RESIDUES OF NEW ANIMAL DRUGS IN FOOD

3. The authority citation for 21 CFR part 556 continues to read as follows:

Authority: 21 U.S.C. 342, 360b, 371.

4. Section 556.227 is revised to read as follows:

§ 556.227 Eprinomectin.

(a) *Acceptable daily intake (ADI).* The ADI for total residues of eprinomectin is 10 micrograms per kilogram of body weight per day.

(b) *Tolerances*—(1) *Cattle.* Tolerances are established for residues of eprinomectin B1a (marker residue) in milk of 12 parts per billion, in liver (target tissue) of 4.8 parts per million, and in muscle of 100 parts per billion.

(2) [Reserved]

Dated: September 20, 1998.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 872

[Docket No. 98P–0731]

Dental Devices; Classification of Sulfide Detection Device

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is classifying the sulfide detection device into class II (special controls). The special controls that will apply to the sulfide detection device are restriction to prescription use, conformance with recognized standards relating to biocompatibility, electrical safety and sterility, submission of performance data from analytical and clinical studies demonstrating device effectiveness and adherence to specific labeling requirements. The agency is taking this action in response to a petition submitted under the Federal Food, Drug, and Cosmetic Act (the act) as amended by the Medical Device Amendments of 1976, the Safe Medical Devices Act of 1990, and the Food and Drug Modernization Act of 1997. The agency is classifying sulfide detection devices into class II (special controls) in order to provide a reasonable assurance of safety and effectiveness of the device.

EFFECTIVE DATE: December 7, 1998.

FOR FURTHER INFORMATION CONTACT: Robert S. Betz, Center for Devices and Radiological Health (HFZ–480), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–827–5283.

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with section 513(f)(1) of the act (21 U.S.C. 360c(f)(1)), devices that were not in commercial distribution before May 28, 1976, the date of the enactment of the Medical Device Amendments 1976, generally referred to as postamendments devices are classified automatically by statute into class III without any rulemaking process. These devices remain in class III and require premarket approval, unless and until the device is classified or reclassified into class I or II or FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(i) of the act, to a predicate device that does not require premarket approval. The agency determines whether new devices are substantially equivalent to previously marketed devices by means of premarket notification procedures in section 510(k) of the act (21 U.S.C. 360(k)) and 21 CFR part 807 of the FDA regulations.

Section 513(f)(2) of the act provides that any person who submits a premarket notification under section 510(k) of the act for a device that has not previously been classified may, within 30 days after receiving an order classifying the device in class III under section 513(f)(1) of the act, request FDA to classify the device under the criteria set forth in section 513(a)(1). FDA shall, within 60 days of receiving such as request, classify the device by written order. This classification shall be the initial classification of the device. Within 30 days after the issuance of an order classifying the device, FDA must publish a notice in the **Federal Register** announcing such classification.

In accordance with section 513(f)(1) of the act, FDA issued an order on May 15, 1998, classifying sulfide detection devices in class III. On May 18, 1998, Diamond General Development Corp. submitted a petition requesting classification into class II of the Diamond Probe®/Perio 2000 System that is intended to measure periodontal pocket probing depths, evaluate the presence or absence of bleeding on probing, and to detect the presence of sulfides in periodontal pockets of adult patients. After reviewing the information submitted in the petition, its amendments, K980749, and medical literature, FDA concludes that this device, and substantially equivalent devices of this generic type, can be classified into class II with the establishment of special controls. In accordance with 513(f)(2) of the act, FDA reviewed the petition in order to classify the device under the criteria for classification set forth in 513(a)(1) of the act. Devices are to be classified into class II if general controls, by themselves, are insufficient to provide reasonable assurance of the safety and effectiveness of the device and there is sufficient information to develop special controls to provide such assurance. After reviewing the information submitted in the petition, FDA determined that sulfide detection devices can be classified into class II with the establishment of special controls. FDA believes that general controls and special controls will provide reasonable assurance of safety and effectiveness of the device.

FDA has identified the following risks to health associated with this type of device: (1) Risks associated with the inability to develop adequate directions for use; (2) risks associated with biocompatibility, electrical safety, and sterility; (3) risks related to inaccurate device performance; and (4) risks associated with improper device use.

FDA determined that the special controls described below address these risks and provide reasonable assurance of the safety and effectiveness of the device. Therefore on July 17, 1998, FDA issued an order to the petitioner classifying the sulfide detection device as described previously into class II subject to the special controls described below.

Additionally, FDA is codifying the classification of this device by adding § 872.1870 *Sulfide detection device.*

In addition to the general controls of the act, the sulfide detection device is subject to the following special controls which, combined with general controls, provide reasonable assurance of the safety and effectiveness of the device: (1) Restriction of the sale, distribution, and use of this device to prescription use in accordance with 21 CFR 801.109; (2) conformance with recognized standards for biocompatibility, electrical safety, and sterility; (3) clinical and analytical testing sufficient to demonstrate that the device accurately measures probing depths, detects the presence or absence of bleeding on probing, and accurately detects the presence of sulfides in periodontal pockets in adult patients; (4) labeling that includes proper instructions for device storage, use, and maintenance.

Section 510(m) of the act provides that FDA may exempt a class II device from the premarket notification requirements under section 510(k) of the act, if FDA determines that premarket notification is not necessary to provide reasonable assurance of the safety and efficacy of the device. FDA has determined premarket notification is necessary to provide reasonable assurance of the safety and effectiveness of the device, and therefore, the device is not exempt from the premarket notification requirements. Thus persons who intend to market this device must submit to FDA a premarket notification prior to marketing the device.

II. Environmental Impact

The agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

III. Analysis of Impacts

FDA has examined the impacts of this final rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612) (as amended by subtitle D of the Small Business Regulatory Flexibility Act (Pub. L. 104–121), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Order 12866 directs agencies to assess all costs of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this final rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, the final rule is not a significant regulatory action as defined by the Executive Order, and so it is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Classification of these devices in class II will relieve manufacturers of the device of the cost of complying with the premarket approval requirements of section 515 of the act (21 U.S.C. 360e), and may permit small potential competitors to enter the marketplace by lowering their costs. The agency therefore, certifies that the final rule will not have a significant impact on a substantial number of small entities. In addition, this final rule will not impose costs of $100 million or more on either the private sector or State, local, and tribal governments in the aggregate, and, therefore a summary statement of analysis under section 202(a) of the Unfunded Mandates Act is not required.

IV. Paperwork Reduction Act of 1995

This final rule contains no collections of information. Therefore, clearance by the Office of Management and Budget, under the Paperwork Reduction Act of 1995 is not required.

V. References

The following references have been placed on display in the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD, 20852, and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 872

Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 872 is amended as follows:

PART 872—DENTAL DEVICES

1. The authority citation for 21 CFR part 872 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

2. Section 872.1870 is added to subpart B to read as follows:

§ 872.1870 Sulfide detection device.

(a) *Identification.* A sulfide detection device is a device consisting of an AC-powered control unit, probe handle, probe tips, cables, and accessories. This device is intended to be used in vivo, to manually measure periodontal pocket probing depths, detect the presence or absence of bleeding on probing, and detect the presence of sulfides in periodontal pockets, as an adjunct in the diagnosis of periodontal diseases in adult patients.

(b) *Classification.* Class II (special controls) prescription use in accordance with § 801.109 of this chapter; conformance with recognized standards of biocompatibility, electrical safety, and sterility; clinical and analytical performance testing, and proper labeling.

Dated: August 25, 1998.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 880

[Docket No. 98N–0087]

General Hospital and Personal Use Devices: Classification of the Apgar Timer, Lice Removal Kit, and Infusion Stand

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is classifying the Apgar timer, the lice removal kit, and the infusion stand into class I (general controls) based on new information regarding these devices. FDA is also exempting the devices from the requirement of premarket notification and is exempting the Apgar timer from most of the requirements of the good manufacturing practice regulations. This action is taken under the Federal Food, Drug, and Cosmetic Act (the act), as amended by Medical Device Amendments of 1976 (the amendments), the Safe Medical Devices Act of 1990 (SMDA), and the Food and Drug Administration Modernization Act of 1997 (FDAMA).

EFFECTIVE DATE: December 7, 1998.

FOR FURTHER INFORMATION CONTACT: Patricia M. Cricenti, Center for Devices and Radiological Health (HFZ–480), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–443–8913.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of March 10, 1998 (63 FR 11632), FDA issued a proposed rule to classify the Apgar timer, the lice removal kit, and the infusion stand into class I (general controls) and to exempt them from premarket notification procedures based on new information regarding these devices. FDA also proposed to exempt the Apgar timer from the current good manufacturing practice requirements in part 820 (21 CFR part 820), with the exception of § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files.

Interested persons were given until June 8, 1998, to comment on the proposed rule. FDA did not receive any comments on the proposed rule.

II. FDA's Conclusion

FDA has concluded that the Apgar timer, the lice removal kit, and the infusion stand do not present unreasonable risks to the public health and that general controls would provide reasonable assurance of the safety and effectiveness of the devices. On November 21, 1997, the President signed FDAMA into law. Section 206 of FDAMA, in part, added a new section 510(l) to the act (21 U.S.C. 360(l)). Under section 501 of FDAMA, new section 510(l) became effective on February 19, 1998. New section 510(l) provides that a class I device is exempt from the premarket notification requirements under section 510(k) of the act, unless the device is intended for a use which is of substantial importance in preventing impairment of human health or it presents a potential unreasonable risk of illness or injury (hereinafter referred to as "reserved criteria"). FDA has determined that these devices do not meet the reserved criteria and, therefore, they are exempt from the premarket notification requirements. FDA is finalizing the classification of these devices, the exemptions from premarket notification

for all of the devices, and the exemption from the good manufacturing practices requirements for the Apgar timer.

III. Environmental Impact

The agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IV. Analysis of Impacts

FDA has examined the impacts of the final rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this final rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, the final rule is not a significant regulatory action as defined by the Executive Order and so is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. As noted previously, FDA may classify devices into one of three regulatory classes according to the degree of control needed to provide reasonable assurance of safety and effectiveness. For these three devices, FDA is classifying them into class I, the lowest level of control allowed. Therefore, the agency certifies that this final rule will not have a significant economic impact on a substantial number of small entities. Therefore, under the Regulatory Flexibility Act, no further analysis is required.

V. Paperwork Reduction Act of 1995

FDA concludes that this final rule contains no collections of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

List of Subjects in 21 CFR Part 880

Medical devices.

Therefore, under the Federal Food, Drug and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, part 880 is amended as follows:

PART 880—GENERAL HOSPITAL AND PERSONAL USE DEVICES

1. The authority citation for 21 CFR part 880 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

2. Section 880.2930 is added to subpart C to read as follows:

§ 880.2930 Apgar timer.

(a) *Identification.* The Apgar timer is a device intended to alert a health care provider to take the Apgar score of a newborn infant.

(b) *Classification.* Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in § 880.9. The device is also exempt from the current good manufacturing practice requirements in part 820 of this chapter, with the exception of § 820.180 of this chapter, with respect to general requirements concerning records, and § 820.198 of this chapter, with respect to complaint files.

3. Section 880.5960 is added to subpart F to read as follows:

§ 880.5960 Lice removal kit.

(a) *Identification.* The lice removal kit is a comb or comb-like device intended to remove and/or kill lice and nits from head and body hair. It may or may not be battery operated.

(b) *Classification.* Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in § 880.9.

4. Section 880.6990 is added to subpart G to read as follows:

§ 880.6990 Infusion stand.

(a) *Identification.* The infusion stand is a stationary or movable stand intended to hold infusion liquids, infusion accessories, and other medical devices.

(b) *Classification.* Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in § 880.9.

Dated: September 16, 1998.

D.B. Burlington,

Director, Center for Devices and Radiological Health.

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 311

OSD Privacy Program

AGENCY: Office of the Secretary, DOD.

ACTION: Final rule.

SUMMARY: The Office of the Secretary of Defense deleted an exempt system of records identified as DODDS 25, entitled DoDDS Internal Review Office Project File on June 12, 1998, 62 FR 32193. Therefore, the exemption rule is being removed.

EFFECTIVE DATE: June 12, 1998.

FOR FURTHER INFORMATION CONTACT: Mr. David Bosworth at (703) 695–0970.

SUPPLEMENTARY INFORMATION:

Executive Order 12866. It has been determined that this Privacy Act rule for the Department of Defense does not constitute 'significant regulatory action'. Analysis of the rule indicates that it does not have an annual effect on the economy of $100 million or more; does not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; does not materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; does not raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in Executive Order 12866.

Regulatory Flexibility Act. It has been determined that this Privacy Act rule for the Department of Defense does not have significant economic impact on a substantial number of small entities because it is concerned only with the administration of Privacy Act systems of records within the Department of Defense.

Paperwork Reduction Act. It has been determined that this Privacy Act rule for the Department of Defense imposes no information requirements beyond the Department of Defense and that the information collected within the Department of Defense is necessary and consistent with 5 U.S.C. 552a, known as the Privacy Act, and 44 U.S.C. Chapter 35.

List of Subjects in 32 CFR part 311

Privacy.

Accordingly, 32 CFR part 311 is amended as follows:

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 165

[CGD01–98–157]

RIN 2115–AA97

Safety Zone: Building Owners and Managers Fireworks, Hudson River, Manhattan, NY

AGENCY: Coast Guard, DOT.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for the Building Owners and Managers Fireworks program located on the Hudson River, Manhattan, New York. This action is necessary to provide for the safety of life on navigable waters during the event. This action is intended to restrict vessel traffic on a portion of the Hudson River.

DATES: This rule is effective from 10 p.m. until 11:30 p.m., on Friday, November 13, 1998. There is no rain date for this event.

ADDRESSES: Documents as indicated in this preamble are available for inspection or copying at Coast Guard Activities New York, 212 Coast Guard Drive, room 205, Staten Island, New York 10305, between 8 a.m. and 3 p.m., Monday through Friday, except Federal holidays. The telephone number is (718) 354–4195.

FOR FURTHER INFORMATION CONTACT: Lieutenant (Junior Grade) A. Kenneally, Waterways Oversight Branch, Coast Guard Activities New York, at (718) 354–4195.

SUPPLEMENTARY INFORMATION:

Regulatory History

Pursuant to 5 U.S.C. 553, a notice of proposed rulemaking (NPRM) was not published for this regulation. Good cause exists for not publishing an NPRM and for making this regulation effective less than 30 days after **Federal Register** publication. Due to the date the Application for Approval of Marine Event was received, there was insufficient time to draft and publish an NPRM. Any delay encountered in this regulation's effective date would be contrary to public interest since immediate action is needed to close a portion of the waterway and protect the maritime public from the hazards associated with this fireworks display.

Background and Purpose

On September 10, 1998, Bay Fireworks submitted an application to hold a fireworks program on the waters of the Hudson River. The fireworks program is being sponsored by Chelsea Piers, New York. This regulation establishes a safety zone in all waters of the Hudson River within a 360 yard radius of the fireworks barge located in approximate position 40°44′49″N 074°01′02″W (NAD 1983), approximately 500 yards west of Pier 60, Manhattan, New York. The safety zone is in effect from 10 p.m. until 11:30 p.m. on Friday, November 13, 1998. There is no rain date for this event. The safety zone prevents vessels from transiting a portion of the Hudson River and is needed to protect boaters from the hazards associated with fireworks launched from a barge in the area. Marine traffic will still be able to transit through the eastern 150 years of the 850-yard wide Hudson River during the event. The Captain of the Port does not anticipate any negative impact on commercial traffic due to this event. Additionally, vessels are not precluded from mooring at or getting underway from Piers 59–62 or from the Piers at Castle Point, New Jersey. Public notifications will be made prior to the event via the Local Notice of Mariners and marine information broadcasts.

Regulatory Evaluation

This final rule is not a significant regulatory action under section 3(f) of Executive Order 12866 and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. It has not been reviewed by the Office of Management and Budget under that Order. It is not significant under the regulatory policies and procedures of the Department of Transportation (DOT) (44 FR 11040; February 26, 1979). The Coast Guard expects the economic impact of this final rule to be so minimal that a full Regulatory Evaluation under paragraph 10e of the regulatory policies and procedures of DOT is unnecessary. This finding is based on the minimal time that vessels will be restricted from the area, that vessels are not precluded from getting underway, or mooring at, Piers 59–62 and the Piers at Castle Point, New Jersey, that vessels may safely transit to the east of the zone, and extensive advance notifications which will be made.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), the Coast Guard considered whether this rule will have a significant economic impact on a substantial number of small entities. "Small entities" include small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

For reasons discussed in the Regulatory Evaluation above, the Coast Guard certifies under section 605(b) of the Regulatory Flexibility Act (5 U.S.C. 601–612) that this final rule will not have a significant economic impact on a substantial number of small entities.

Collection of Information

This final rule does not provide for a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

The Coast Guard has analyzed this final rule under the principles and criteria contained in Executive Order 12612 and has determined that this final rule does not have sufficient implications for federalism to warrant the preparation of a Federal Assessment.

Unfunded Mandates

Under the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), the Coast Guard must consider whether this rule will result in an annual expenditure by state, local, and tribal governments, in the aggregate of $100 million (adjusted annually for inflation). If so, the Act requires that a reasonable number of regulatory alternatives be considered, and that from those alternatives, the least costly, most cost-effective, or least burdensome alternative that achieves the objective of the rule be selected. No state, local, or tribal government entities will be effected by this rule, so this rule will not result in annual or aggregate costs of $100 million or more. Therefore, the Coast Guard is exempt from any further regulatory requirements under the Unfunded Mandates Act.

Environment

The Coast Guard has considered the environmental impact of this final rule and concluded that under Figure 2–1, paragraph 34(g), of Commandant

Instruction M16475.1C, this final rule is categorically excluded from further environmental documentation. A "Categorical Exclusion Determination" is available in the docket for inspection or copying where indicated under ADDRESSES.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

Regulation

For the reason discussed in the preamble, the Coast Guard amends 33 CFR Part 165 as follows:

PART 165—[AMENDED]

1. The authority citation for Part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; 49 CFR 1.46.

2. Add temporary § 165.T01–157 to read as follows:

§ 165.T01–157 Safety Zone: Building Owners and Managers Fireworks, Hudson River, Manhattan, New York.

(a) *Location.* The following area is a safety zone: all waters of the Hudson River within a 360 yard radius of the fireworks barge located in approximate position 40°44'49"N 074°01'02"W (NAD 1983), approximately 500 yards west of Pier 60, Manhattan, New York.

(b) *Effective period.* This section is effective from 10 p.m. until 11:30 p.m. on Friday, November 13, 1998. There is no rain date for this event.

(c) *Regulations.*

(1) The general regulations contained in 33 CFR 165.23 apply.

(2) All persons and vessels shall comply with the instructions of the Coast Guard Captain of the Port or the designated on scene patrol personnel. U.S. Coast Guard patrol personnel include commissioned, warrant, and petty officers of the Coast Guard. Upon being hailed by a U.S. Coast Guard vessel via siren, radio, flashing light, or other means, the operator of a vessel shall proceed as directed.

Dated: October 20, 1998.

R.E. Bennis,

Captain, U.S. Coast Guard, Captain of the Port, New York.

40 CFR Part 52

[MD060–3032a; FRL–6183–9]

Approval and Promulgation of Air Quality Implementation Plans; Maryland; Approval of Revision to the VOC Rule Governing Automotive and Light-duty Truck Coating Operations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is approving a State Implementation Plan (SIP) revision submitted by the State of Maryland. This action revises the rule citation for the VOC provisions governing automotive and light-duty truck coating operations. The intended effect of this action is to provide consistency between Maryland's current regulatory numbering format and the Maryland SIP numbering format with regard to this rule. There are no substantive revisions. This action is being taken in accordance with the Clean Air Act.

DATES: This direct final rule is effective without further notice on January 4, 1999, unless EPA receives adverse written comment by December 7, 1998. Should EPA receive such comments, it will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Written comments should be mailed to Marcia L. Spink, Associate Director, Office of Air Programs, Mailcode 3AP20, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the documents relevant to this action are available for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103; the Air and Radiation Docket and Information Center, U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460; and the Maryland Department of the Environment, 2500 Broening Highway, Baltimore Maryland 21224.

FOR FURTHER INFORMATION CONTACT: Harold A. Frankford, (215) 814–2108, or by e-mail at frankford.harold@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

On February 6, 1998, the State of Maryland submitted a formal revision to its State Implementation Plan (SIP). The SIP revision, Number 98–01, consists of revised citation for the Federally-enforceable rules governing automotive and light-duty truck coating. The new SIP citation—COMAR 26.11.19.03—replaces the current SIP citation, which is COMAR 10.18.21.03. There are no revisions to the substantive provisions of this rule.

Except for the COMAR citation and associated administrative revisions, the provisions of COMAR 26.11.19.03 are identical to that which became State-enforceable at COMAR 10.18.21.03 effective July 18, 1983. Maryland had submitted the 1983 light-duty truck coating rule to EPA on August 22, 1983. EPA approved COMAR 10.18.21.03 in its entirely on September 10, 1984 (49 FR 35500), and incorporated by reference this rule into the Maryland SIP at 40 CFR 52.1070(c)(72).

Although Maryland had revised the State-enforceable rule effective August 10, 1987 and August 1, 1988, EPA had never revised the 1983 Maryland SIP rule. On August 18, 1997, Maryland repealed the 1987 revision (as amended in 1988), and adopted the version of COMAR 26.11.19.03 being approved by EPA in today's action.

EPA is approving this rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should adverse comments be filed. This rule will be effective January 4, 1999 without further notice unless the Agency receives adverse comments by December 7, 1998.

If EPA receives such comments, then EPA will publish a timely withdrawal of direct the final rule informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. EPA will not institute a second comment period on this rule. Parties interested in commenting should do so at this time. If no such comments are received, the public is advised that this rule will be effective on January 4, 1999 and no further action will be taken on the proposed rule.

II. Final Action

EPA is approving the revision to COMAR 26.11.19.03 as a revision to the Maryland SIP, and incorporating this provision by reference at 40 CFR section 52.1070(c)(140).

III. Administrative Requirements

A. Executive Orders 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from review under E.O. 12866, entitled "Regulatory Planning and Review."

B. Executive Order 12875

Under E.O. 12875, EPA may not issue a regulation that is not required by statute and that creates a mandate upon a state, local, or tribal government, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by those governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget a description of the extent of EPA's prior consultation with representatives of affected state, local, and tribal governments, the nature of their concerns, copies of written communications from the governments, and a statement supporting the need to issue the regulation. In addition, E.O. 12875 requires EPA to develop an effective process permitting elected officials and other representatives of state, local, and tribal governments "to provide meaningful and timely input in the development of regulatory proposals containing significant unfunded mandates." Today's rule does not create a mandate on state, local or tribal governments. The rule does not impose any enforceable duties on these entities. Accordingly, the requirements of section 1(a) of E.O. 12875 do not apply to this rule.

C. Executive Order 13045

Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997), applies to any rule that the EPA determines (1) is "economically significant," as defined under Executive Order 12866, and (2) the environmental health or safety risk addressed by the rule has a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency. This final rule is not subject to Executive Order 13045 because it is not an economically significant regulatory action as defined by Executive Order 12866, and it does not address an environmental health or safety risk that would have a disproportionate effect on children.

D. Executive Order 13084

Under E.O. 13084, EPA may not issue a regulation that is not required by statute, that significantly affects or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities." Today's rule does not significantly or uniquely affect the communities of Indian tribal governments. This action does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of section 3(b) of E.O. 13084 do not apply to this rule.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. This final rule will not have a significant impact on a substantial number of small entities because SIP approvals under section 110 and subchapter I, part D of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not create any new requirements, I certify that this action will not have a significant economic impact on a substantial number of small entities. Moreover, due to the nature of the Federal-State relationship under the Clean Air Act, preparation of a flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions concerning SIPs on such grounds. *Union Electric Co.* v. *U.S. EPA*, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

F. Unfunded Mandates

Under Section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated annual costs to State, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under Section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule. EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated annual costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

G. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

H. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the

appropriate circuit by January 4, 1999. Filing a petition for reconsideration by the Administrator of this final rule revising the SIP citation for Maryland's VOC provisions governing automotive and light-duty truck coating operations does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

Designation of Areas for Air Quality Planning Purposes: State of Idaho and the Fort Hall Indian Reservation

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: In this action, the Environmental Protection Agency (EPA) is revising the designation for particulate matter with an aerodynamic diameter of less than a nominal 10 microns (PM–10) for the Power-Bannock Counties PM–10 nonattainment area, located in Idaho, by creating two distinct nonattainment areas that together cover the identical geographic area as the original nonattainment area. The revised areas are divided at the boundary between State lands and the Fort Hall Indian Reservation, with one revised area consisting of State lands and the other revised area consisting of lands within the exterior boundaries of the Fort Hall Indian Reservation. The redesignation is based upon a request from the State of Idaho, which is supported by monitoring and modeling information. Both areas retain PM–10 nonattainment designation and classification as moderate PM–10 nonattainment areas as a result of this action.

EPA recently established a new standard for particulate matter with an aerodynamic diameter equal to or less than a nominal 2.5 microns and also revised the existing PM–10 standards. This rule, however, does not address these new and revised standards.

EFFECTIVE DATE: December 7, 1998.

ADDRESSES: Information supporting this action can be found in Public Docket No. [ID–21–7001, ID 22–7002]. The docket is located at EPA, Region 10, 1200 Sixth Avenue, Seattle WA 98101. The docket may be inspected from 9:00 a.m. to 4:30 p.m. on weekdays, except for legal holidays. A reasonable fee may be charged for copying.

FOR FURTHER INFORMATION CONTACT: Steven K. Body, EPA Region 10, Office of Air Quality (OAQ–107), EPA, Seattle, Washington, (206) 553–0782.

I. Background

A portion of Power and Bannock Counties in Idaho was designated nonattainment for PM–10 [1] and classified as moderate under sections 107(d)(4)(B) and 188(a) of the Clean Air Act upon enactment of the Clean Air Act Amendments of 1990 (Act or CAA). See 40 CFR 81.313 (PM–10 Initial Nonattainment Areas); see also 55 FR 45799 (October 31, 1990); 56 FR 11101 (March 15, 1991); 56 FR 37654 (August 8, 1991); 56 FR 56694 (November 6, 1991). For an extensive discussion of the history of the designation of the Power-Bannock Counties PM–10 nonattainment area, please refer to the discussion at 61 FR 29667, 29668–29670 (June 12, 1996).

The Power-Bannock Counties PM–10 nonattainment area covers approximately 266 square miles in south central Idaho and comprises both trust and fee lands within the exterior boundaries of the Fort Hall Indian Reservation and State lands in portions of Power and Bannock Counties. Approximately 75,000 people live in the nonattainment area, most of whom live in the cities of Pocatello and Chubbuck, which are located near the center of the nonattainment area on State lands. Approximately 15 miles northwest of downtown Pocatello is an area known as the "industrial complex," which includes the two major stationary sources of PM–10 in the nonattainment area. The boundary between the Fort Hall Indian Reservation and State lands runs through the industrial complex. One of the major stationary sources of PM–10, FMC Corporation (FMC), is located primarily on fee lands within the exterior boundaries of the Fort Hall Indian Reservation. The other major stationary source of PM–10 in the nonattainment area, J.R. Simplot Corporation (Simplot), is located on State lands immediately adjacent to the Reservation.

Pursuant to section 107(d)(3)(D) of the Act, the Governor of any State, on the Governor's own motion, is authorized to submit to the Administrator a revised designation of any area or portions thereof within the State. On April 16, 1998, the State of Idaho submitted to EPA a request to revise the designation of the Power-Bannock Counties PM–10 nonattainment area by splitting the nonattainment area into two separate nonattainment areas at the boundary between the Fort Hall Indian Reservation and State lands. In support of its request, the State of Idaho noted that the State has the primary PM–10 planning responsibility under the Clean Air Act for State lands within the nonattainment area, whereas EPA and the Shoshone-Bannock Tribes (Tribes) have the primary PM–10 planning responsibility for the Reservation lands [2] within the nonattainment area. The State also noted that it has largely completed the PM–10 planning and implementation of control measures for the PM–10 sources located on State lands within the nonattainment area whereas no controls have been proposed or imposed on sources located on Reservation lands within the nonattainment area.

The State also supported its request with monitoring data which show that State monitors have not recorded any PM–10 concentrations above the level of the 24-hour PM–10 NAAQS since January 1993 and that the State lands within the nonattainment area have attained the PM–10 NAAQS. In addition, the State provided an analysis of pollution concentrations recorded on Tribal monitors as a function of wind direction which shows that exceedences of the PM–10 NAAQS on the Tribal monitors are not the result of emissions from sources located on State lands. The State also provided modeling information to support its assertion that sources on State lands are not contributing to the violations of the PM–10 NAAQS that have been recorded at the Tribal monitors.

On June 19, 1998, EPA proposed to grant the State's request to split the Power-Bannock Counties PM–10 nonattainment area into two nonattainment areas at the State-Reservation boundary. 63 FR 33597. In a concurrent notice of proposed rulemaking, EPA proposed to make a finding that the proposed PM–10 nonattainment area within the exterior boundaries of the Fort Hall Indian Reservation failed to attain the NAAQS for PM–10 by the applicable attainment date. 63 FR 33605. Based on a request from a commenter, EPA extended the public comment period on both proposals for an additional 30 days. 63 FR 41221 (August 3, 1998).

EPA received comments from nine commenters on its proposals. Six of the commenters—the State of Idaho—Division of Environmental Quality (IDEQ), the City of Pocatello, Bannock Planning Organization, the Portneuf Environmental Council (PEC), J.R. Simplot Company, and a private citizen—supported EPA's proposal to split the Power-Bannock Counties PM–10 nonattainment area into two nonattainment areas at the State-Reservation boundary. The comments from PEC also suggest support for EPA's proposal to make a finding that the proposed PM–10 nonattainment area within the exterior boundaries of the Fort Hall Indian Reservation failed to attain the PM–10 NAAQS by the applicable attainment date.

Three commenters—the Shoshone-Bannock Tribes, FMC, and a private citizen—opposed EPA's proposal to split the existing PM–10 nonattainment area into two PM–10 nonattainment areas at the State-Reservation boundary. FMC also opposed EPA's proposal to make a finding that the proposed PM–10 nonattainment area within the exterior boundaries of the Fort Hall Indian Reservation failed to attain the PM–10 NAAQS by the applicable attainment date.

After carefully considering the public comments, EPA continues to believe it is appropriate to split the existing Power-Bannock Counties PM–10 nonattainment area into two nonattainment areas at the State-Reservation boundary, with the area comprised of State lands to be known as the "Portneuf Valley PM–10 nonattainment area" and with the area comprised of Reservation lands to be known as the "Fort Hall PM–10 nonattainment area." EPA intends to take final action on its proposal to find that the Fort Hall PM–10 nonattainment area failed to attain the PM–10 NAAQS by the applicable attainment date in a later rulemaking.

II. Response to Comments

A. Comments That EPA's Action is Contrary to EPA Policy and Inconsistent With Prior EPA Actions

All three adverse commenters state that an integrated planning effort is preferable and that splitting the area into two PM–10 nonattainment areas at the State-Reservation boundary could result in a less comprehensive approach to air quality planning in the area. The Tribes also assert that splitting the nonattainment area, in and of itself, does not advance any air quality improvements and that it would be a better use of resources to expedite efforts to promulgate rules and permits for Reservation lands within the nonattainment area.

EPA agrees with the Tribes that promulgating rules to control PM–10 emissions from sources contributing to the nonattainment problem reflected on the Tribal monitors is a high priority.[3] EPA assures the Tribes and the public that EPA is expending considerable resources in the development of a Federal Implementation Plan (FIP) for the Fort Hall PM–10 nonattainment area, which EPA intends to propose by January 31, 1999.

EPA also agrees that the "split" in and of itself does not improve air quality. No action to designate an area as attainment or nonattainment or to determine the appropriate boundaries of an attainment or nonattainment area under section 107 of the Clean Air Act improves air quality, in and of itself. Rather, it is the planning efforts that flow from an area's designation that improves air quality. Section 107(d)(3) of the Clean Air Act, which provides the authority for the State's request and EPA's action, includes criteria in addition to air quality that may be taken into consideration in the revision of the designation of an area, such as planning and control considerations. In general, EPA agrees that integrated planning in a nonattainment area is desirable. In this situation, however, the two nonattainment areas are at very different places in the planning process and the planning responsibilities for the two areas rest with different agencies. As stated in the proposal, the State has largely completed its planning obligations and monitors on State lands show attainment of the standard. 63 FR 33599–33601. EPA believes that splitting the nonattainment area into two nonattainment areas at the State-Reservation boundary will better enable EPA, the Tribes, and the State to focus planning efforts on the areas under their respective authorities, and will therefore, in the long run, advance efforts to improve air quality. EPA does not believe that splitting the nonattainment area will result in a less comprehensive approach to PM–10 planning for the existing Power-Bannock Counties PM–10 nonattainment area as a whole. EPA, the Tribes and the State have been working together on PM–10 planning for the Power-Bannock Counties PM–10 nonattainment area since the early

[1] There are two pre-existing PM–10 National Ambient Air Quality Standards (NAAQS), a 24-hour standard and an annual standard. See 40 CFR 50.6. EPA promulgated these NAAQS on July 1, 1987 (52 FR 24672), replacing standards for total suspended particulate with new standards applying only to particulate matter up to 10 microns in diameter (PM–10). The annual PM–10 standard is attained when the expected annual arithmetic average of the 24-hour samples for a period of one year does not exceed 50 micrograms per cubic meter (μg/m3). Attainment of the 24-hour PM–10 standard is determined by calculating the expected number of days in a year with PM–10 concentrations greater than 150 μg/m3. The 24-hour PM–10 standard is attained when the expected number of days with levels above the standard, averaged over a three-year period, is less than or equal to one. See 40 CFR 50.6 and 40 CFR part 50, appendix K.

[2] "Reservation lands" as used in this notice refers to all lands within the exterior boundaries of the Fort Hall Indian Reservation. EPA believes that this land is "Indian country" as defined under Federal law. *See* 18 U.S.C. § 1151.

[3] Once EPA received a request from the State of Idaho to split the nonattainment area, EPA became obligated under section 107(d)(3)(D) to act to approve or deny the State's request. EPA does not believe that denying the State's request requires any more resources than approving the State's request.

1990s. Dividing the area into two nonattainment areas in no way precludes EPA, the Tribes, and the State from continuing a coordinated planning effort. EPA fully intends to work closely with the Tribes and the State in the promulgation of a FIP and a Tribal Implementation Plan (TIP) for Reservation lands within the nonattainment area and in the revision and approval of the State's Implementation Plan (SIP). In the comments submitted by the State, the State indicated its intent to continue a coordinated planning effort with EPA and the Tribes notwithstanding the split of the area into two nonattainment areas.

On a related matter, the adverse comment received from the private citizen expresses concern that splitting the Power-Bannock Counties PM–10 nonattainment area could impair planning efforts for PM–2.5 or other pollutants. EPA emphasizes that a coordinated planning effort can be accomplished notwithstanding that there are two separate nonattainment areas. In addition, as EPA stated in the proposal, this action relates only to PM–10. If the City of Pocatello or the Fort Hall Indian Reservation is later identified as a nonattainment area for PM–2.5, EPA will consider at the time of such identification whether, based on air quality data, planning and control considerations, or other air quality-related considerations, the planning requirements for PM–2.5 are best carried out by having a single nonattainment area or having two nonattainment areas divided at the State-Reservation boundary or in some other way. 63 FR 33603. These same factors will be considered with respect to other pollutants.

Both the Tribes and FMC state that EPA's action to divide the Power-Bannock Counties PM–10 nonattainment area is inconsistent with EPA's longstanding practice and policy regarding the basis for establishing nonattainment designations (and for determining whether to redesignate nonattainment areas). The Tribes argue that, in the past, EPA has made it clear that the dimensions of a nonattainment area are not limited solely to those locations where violations have been recorded. FMC similarly claims that EPA's practice has been to "establish nonattainment areas based on the total contribution of various sources to ambient air pollution in an entire airshed and not simply on the presence or absence of exceedences at individual monitoring sites or the presence or absence of sources in a particular location." However, while these statements (and the litigation examples cited by FMC) appear to accurately reflect prior EPA practice and policy, the commenters' assumption that the proposal to split the Power/Bannock nonattainment area is inconsistent with that practice and policy is erroneous mainly because it ignores the ambient air data cited by EPA in support of its proposed action. EPA's proposal to split the existing nonattainment area is based on the conclusions it reached after analyzing the contributions of the various sources, evidence regarding PM–10 pollution impacts, and relevant ambient air quality data. Moreover, EPA's proposed action is entirely consistent with statutory requirements.

Section 107(d)(1)(A)(i) makes clear that an area can be designated nonattainment if the area does not meet the standard or if the area contributes to ambient air quality in a nearby area that does not meet the standard. Thus, an area could be designated as part of a nonattainment area even if the air quality in the area meets the applicable standard if sources in that area contribute to ambient air quality in a nearby area that does not meet the standard. However, that is not the case here. As demonstrated by the State's request, the State monitors show attainment of the standard on State lands and that sources on State lands are not contributing to the violations of the PM–10 standard that have been recorded on the Tribal portion of the nonattainment area. In addition, section 107(d)(3)(A), which sets forth criteria for EPA to consider when revising the designation of an area on its own motion, states that EPA may initiate such actions "on the basis of air quality data, planning and control considerations, or any other air quality-related considerations the Administrator deems appropriate." EPA believes it would be unreasonable for the Agency not to consider similar criteria in determining whether to approve or deny a designation revision request submitted by the Governor of a State under the provisions of subsection 107(d)(3)(D). That is precisely what the Agency has done with respect to the air quality data submitted by Idaho in support of its request to separate the Power-Bannock area into two distinct nonattainment areas.

To support its claim that EPA is acting contrary to EPA policy and practice by splitting the nonattainment area, FMC cites three specific cases in which EPA has rejected proposals to split existing nonattainment areas into separate areas: Lorain County, Ohio, for ozone; the San Francisco Bay area for ozone; and Spokane, Washington for carbon monoxide. The first 2 cases were the subjects of lawsuits: respectively, *State of Ohio* v. *Ruckelshaus*, 776 F.2d 1333 (6th Cir. 1985) and *Western Oil & Gas Ass'n* v. *U.S.E.P.A.*, 767 F.2d 603 (9th Cir. 1985). There are several important differences between the three cases cited by FMC and the case at hand. First, in the case of the Power-Bannock Counties PM–10 nonattainment area, ambient air quality data provided by the State specifically show that sources of pollution on State lands do not impact the violations that have been recorded on the monitors located on Tribal lands. No such showing was made in any of the three examples cited by FMC. In fact, in the case of Lorain County, Ohio, FMC acknowledges that the sources in Lorain County were found to contribute to the nonattainment problem in the greater Cleveland area even though the monitors in Lorain County showed attainment. The Ninth Circuit Court of Appeals found similar evidence with respect to the complaining sources in the case involving the San Francisco Bay area. In describing the areas where the petitioning sources were located, the Court stated: "[I]f treated separately, [these areas] would be 'attainment' areas. The reason is the prevailing winds, which blow from the west and north toward the south and east, thus carrying emissions from the parts of the Bay area in which [the plaintiffs] do business into the part of the area that is clearly 'nonattainment' and contributing to that condition." 767 F.2d at 605. And again, in the case of Spokane, in the documentation cited by FMC, EPA stated that it was not possible to divide the nonattainment area into two nonattainment areas under CAA section 107(d)(3)(A)(iv), which authorizes EPA to make revisions to boundaries, because the area sought to be eliminated from the nonattainment area in fact contributed to the nonattainment problem.[4]

Another important difference is that each of the three cases cited by FMC involved efforts to divide along county lines or along even smaller political boundaries areas that are all subject to the relevant State's jurisdiction. Ultimately, for example, Ohio was

[4] In the briefing paper cited by FMC, EPA stated: "CAA § 107(d)(4)(iv) allows boundary revisions under certain circumstances. However, it does not allow elimination of any part of a nonattainment area that would be considered part of the air shed of the nonattainment area *and that contributes to the nonattainment problem.*" Spokane CO Briefing Report (EPA Region 10), October 14, 1997 (emphasis added). FMC's comments neglected to mention this important qualification to EPA's position. A copy of the Spokane CO Briefing Report is in the docket.

responsible for the nonattainment planning requirements for Lorain County being fulfilled, as well as it was for those for the greater Cleveland area. Under section 110(a)(2)(E)(iii) of the Act, even where a State relies on a local or regional government or agency for the implementation of elements of the State implementation plan, the State has the ultimate responsibility for ensuring adequate implementation of that plan. In the case of the Power-Bannock Counties PM–10 nonattainment area, however, the State's jurisdiction and CAA planning responsibilities extend only to the portion of the nonattainment area on State lands, while the Tribes and EPA are authorized by the CAA to exercise planning responsibilities for the portion of the nonattainment area that falls within the exterior boundaries of the Fort Hall Indian Reservation. Although evidence regarding the lack of pollution contribution is the key consideration for purposes of this action, i.e., splitting or revising the existing nonattainment area designation under section 107(d)(3)(D), this jurisdictional factor, as it relates to the appropriate authority for air quality management and planning, is (along with the air quality considerations) an important consideration in EPA's decision to divide the Power-Bannock Counties PM–10 nonattainment area into two nonattainment areas along the State-Reservation boundary. In short, EPA does not agree with the Tribes and FMC that this action is inconsistent with previous EPA policy and practice.

The Tribes also claim that EPA's action to split the nonattainment area is inconsistent with EPA policy because there are several other PM–10 nonattainment areas that include both State lands and lands within the exterior boundaries of Indian Reservations that EPA has not considered splitting. Although this claim is certainly factually true, it has simply not been an issue because EPA has never received requests in these other cases from the relevant States or Tribes to divide these nonattainment areas at the State-Reservation boundary, nor has EPA been provided with the technical air quality information that would support splitting any other such PM–10 nonattainment area at the State-Reservation boundary, as is the case here.

In a similar vein, the Tribes assert that EPA did not split the Power-Bannock Counties PM–10 nonattainment area at the State-Reservation boundary in previous years when the State monitors were recording violations of the PM–10 NAAQS, but there were no recorded violations of the PM–10 NAAQS on the Reservation lands. Again, neither the Tribes nor the State had previously submitted a request to EPA to split the Power-Bannock Counties PM–10 nonattainment area. In addition, although there were no monitors located on Tribal lands in the late 1980s and early 1990s (and therefore no documented violations of the PM–10 NAAQS on Reservation lands), when violations were recorded on the State monitors, modeling conducted at that time predicted significant violations of the PM–10 NAAQS on Reservation lands in the vicinity of FMC. In fact, the Tribes' comments acknowledge that violations of the PM–10 NAAQS on the Reservation were predicted during the early planning stages for the Power-Bannock Counties PM–10 nonattainment area. Consequently, while there may not have been actual recorded violations of the PM–10 NAAQS on Reservation lands due to the absence of monitors when (and for some time after) the area was initially designated nonattainment for PM–10, there has always been evidence of pollution contribution from PM–10 sources on Tribal lands. Thus, it was appropriate under section 107(d)(4)(B) to include both State and Tribal lands in the area initially designated nonattainment for PM–10. In summary, EPA does not believe splitting the Power-Bannock Counties PM–10 nonattainment area at the State-Reservation boundary is inconsistent either with the CAA or previous EPA practice or policy. This is true both with respect to the treatment of the Power-Bannock Counties PM–10 nonattainment area prior to Idaho's recent request, and with respect to other PM–10 nonattainment areas, including those consisting of both State and Reservation lands.

The Tribes also express concern that EPA is treating the Tribes as if they were a subdivision of the State and lack any independent role with respect to this action. They further state that EPA has failed to follow EPA's own guidance for acting on matters significantly or uniquely affecting Indian Tribal governments by not adequately considering the Tribes' concerns. Although EPA is fully cognizant of, and believes it has respectfully considered, the Tribes' concerns, there exist a number of legal, statutory and policy limitations—which the Agency has shared on various occasions with Tribal representatives—that constrain approaches and flexibility the Tribes would have preferred the Agency to pursue. In addition, EPA believes that a review of the 20-year planning relationship shared by the Tribes, the State of Idaho and EPA, and cited favorably by the Tribes in its comments on this action, clearly evinces strong support from EPA with respect to assertions of sovereignty raised by the Shoshone-Bannock Tribes in actions related to this area under the Clean Air Act. For example, EPA has supported the Tribes' sovereignty on occasions when the State of Idaho has attempted to assert regulatory jurisdiction over sources located on fee lands within the exterior boundaries of the Fort Hall Indian Reservation. EPA is also actively working with the Tribes on a government-to-government basis in the regulation of sources within Reservation boundaries, including FMC. Indeed, the only major difference of opinion between the Tribes and EPA appears to be the designation revision decision, since the Tribes continue to assert, even in comments opposing this action, that they support and intend to work closely with the Agency's efforts to promulgate a Federal Implementation Plan addressing the sources located on Reservation lands. EPA relates to Indian tribes, as a matter of policy and practice, on a government-to-government basis, but in all actions required to be taken by the Agency under the CAA, whether those actions involve States or Tribes, EPA is subject to requirements and limitations imposed by that statute.

It is also a fact that the existing nonattainment area covers territory that is subject to two distinct jurisdictions and legal authorities. Although the Tribes claim that the State's designation revision request purports to assert authority over lands under Tribal control, the State is merely availing itself of a regulatory option provided by the CAA itself with respect to the lands under State jurisdiction, that is, requesting a revision of the nonattainment area boundaries under section 107(d)(3)(D). Under that section, EPA must act on such requests within a specified time, i.e., no later than 18 months after the request is submitted. The fact that EPA's action in approving the State's request has consequences that are not favored by the Tribes does not alter either the State's right to make the request nor EPA's obligation to take action on the request. EPA is approving the State's request because it meets specified CAA criteria. EPA understands that among the Tribes' concerns is that the split action, particularly, will result in unfair attributions regarding the unresolved nonattainment problems in the area that they, in fact, never had authority or responsibility to control. EPA would

suggest, however, that this designation revision action should more properly be regarded as simply one component of a combination of actions the Agency is undertaking in order to establish for the first time a comprehensive PM–10 planning and implementation program on the Tribal portion of the Power-Bannock nonattainment area. After careful consideration of the Tribes' objections to dividing the nonattainment area, both those expressed by the Tribes before the proposal and in response to the proposal, it remains EPA's continued belief that, in seeking to achieve the ultimate air quality goals of the Act, splitting the existing nonattainment area into two separate nonattainment areas is in the overall best interest of the area as a whole.

B. Comments That the State's Request and EPA's Action Are Procedurally Defective

The Tribes and FMC also raise several alleged procedural defects with the State's request and EPA's proposed action on the State's request. First, FMC asserts that, as an initial matter, the State's request to split the area is defective in that the State violated the requirements of Idaho law as well as Clean Air Act requirements for notice and public hearing. FMC raised these issues in a petition to the State under Idaho law and the Tribes also raised these concerns to EPA and the State prior to EPA's proposal. Because EPA received a copy of FMC's petition and a copy of a letter from the Tribes to the State raising the alleged deficiency of the State's request prior to EPA's proposal on the State's request, EPA responded to the issues raised in FMC's petition and the Tribes' letter on the validity of the State's request in the proposal. 63 FR 33602–33603. In FMC's formal comments on EPA's proposal to split the nonattainment area, FMC comments that EPA's "conclusory rejection in [the proposal] of the position of FMC and the Tribes is improper and contrary to the Administrative Procedures Act." FMC further asserts it is premature for EPA to take final action before FMC's concerns have been resolved in the State proceeding. EPA disagrees on all points.

As an initial matter, it was in no way improper or contrary to the Administrative Procedures Act for EPA to explain in the proposal to grant the State's request why EPA believed the issues raised by FMC and the Tribes to the State regarding the alleged deficiency of the State's request were without merit. EPA had before it issues relating to the legal sufficiency of the State's request on which EPA was proposing to take action. It was clearly appropriate for EPA to explain why EPA believed the State's request was not deficient. EPA made clear in the proposal that FMC and the Tribes would have an opportunity to again raise these issues, as well as any other issues, in response to the proposal, as required by the Administrative Procedures Act.

Neither FMC nor the Tribes have provided additional information in their comments on the proposal to show why they believe the State's request to EPA is deficient as a matter of State and Federal law. Based on EPA's review of FMC's petition, the State's letter to EPA responding to FMC's petition, and EPA's review of the State regulations at issue, EPA agrees with the State that the State was not required to provide public notice and opportunity to comment on the State's request to EPA as a matter of State law. EPA also agrees with the State that the State's request to EPA to split the nonattainment area into two nonattainment areas is not subject to IDAPA 16.01.01.578 because that section is entitled "Designation of Attainment, Unclassifiable and Nonattainment Areas" and the State's request to EPA was not a request to designate an area attainment, unclassifiable, or nonattainment. Finally, as stated in the proposal, EPA does not believe that the State's request to EPA was required to go through public notice and comment before submission to EPA under sections 110(a)(2) and 110(l) of the CAA because the State's request is not a SIP or SIP revision. In short, EPA believes that FMC's petition in the State proceeding is without merit. Under such circumstances, EPA does not believe it is appropriate to defer action on the State's request until FMC's petition under Idaho law has been resolved.[5]

Along with the claim that the State impermissibly invoked section 107(d)(3)(D) over lands subject to Tribal jurisdiction, which EPA addressed earlier in this notice, the Tribes raise another procedural defect in their comments, asserting that EPA has ignored section 164(c) of the Clean Air Act. That section provides that "Lands within the exterior boundaries of Federally recognized Indian Tribes may be redesignated only by the appropriate governing Indian body. . . ." In arguing against splitting the nonattainment area, the Tribes assert that EPA's action is contrary to section 164(c). Section 164, however, applies only to the redesignation of areas as Class I, Class II, or Class III for purposes of the Prevention of Significant Deterioration (PSD) program. The redesignation of an area as Class I, II, or III under section 164 determines the maximum permitted ambient impact of any new major source or modified major source constructed in an area designated as attainment or unclassifiable under section 107. It does not apply to the designation or redesignation of areas under section 107 of the Act. Moreover, EPA is not changing the designation of "lands within the exterior boundaries" of the Fort Hall Indian Reservation, but rather, separating an existing nonattainment area that includes both State and Tribal lands at the State-Reservation boundary.

FMC comments that EPA should take into consideration the redesignation requirements of section 107(d)(3)(E) in deciding whether to split the Power-Bannock Counties PM–10 nonattainment area into two separate nonattainment areas. As EPA stated in the proposal, section 107(d)(3)(E), by its terms, applies only to requests to redesignate an area from nonattainment to attainment. 63 FR 33603. The State has not requested that the Portneuf Valley PM–10 nonattainment area, as defined in this notice, be redesignated from nonattainment to attainment, and the area will retain its classification as a moderate PM–10 nonattainment area as a result of this action. EPA did state in the proposal, as FMC notes, that the State of Idaho is demonstrating attainment of the PM–10 standard on State lands. FMC does not show or even suggest that any portion of the Portneuf Valley PM–10 nonattainment area is currently violating the PM–10 standards. There are many areas in the country that are in the same position that the Portneuf Valley PM–10 nonattainment area will be in as a result of this action: many other areas have attained the standard—which is a factual determination based on air quality data—but have not yet been redesignated as "attainment" for PM–10 under section 107(d)(3)(E) because they have either not yet requested redesignation or not yet completed the planning requirements of section 107(d)(3)(E). EPA does not believe it is appropriate to hold the Portneuf Valley PM–10 nonattainment area to the requirements of section 107(d)(3)(E) when it is simply requesting that the current nonattainment area be split and is not requesting that the nonattainment area be redesignated as attainment for PM–10.

[5] FMC has advised Idaho that it intends to drop its challenge to Idaho's request at the State level once a final settlement of FMC's alleged violations of the Resource Conservation and Recovery Act (RCRA) has gone through public comment and been finally entered. A consent decree between FMC and EPA resolving alleged RCRA violations at the FMC facility was lodged in the United States District Court for the District of Idaho on October 16, 1998, and is currently undergoing a 30 day public comment period.

FMC also argues that because the split will result in different treatment for the two nonattainment areas under EPA's transition policy for PM–2.5, see 63 FR 33604, the State's request to split the nonattainment area is, in essence, a SIP, and, as FMC argued in its petition in the State proceeding, should have gone through notice and public comment under section 110(a)(2) and 110(l) of the Act. There is simply no basis to argue that the State's request to split the nonattainment area is a SIP or a SIP revision. The State's request does not contain and was not intended to impose any control measures and does not include any other elements of a SIP, such as an emission inventory or an attainment demonstration. The State submitted a PM–10 nonattainment SIP for the portion of the Power-Bannock Counties PM–10 nonattainment area on State lands in 1993, on which EPA has not yet taken action. The State's 1993 SIP went through public notice and comment at the State level. Idaho has advised EPA in its request to split the nonattainment area that it intends to submit a revision to the 1993 SIP this year. That SIP revision will also be required to meet the notice and public comment requirements of section 110(a)(2) and 110(l) of the Act.

C. Comments Relating to the Technical Basis for EPA's Action

The Tribes and the private citizen who submitted adverse comments contend that the existing Power-Bannock Counties PM–10 nonattainment area was delineated on the basis of natural topographical and meteorological characteristics of the air shed, and that there is no topographical or meteorological basis for splitting the nonattainment area. The individual commenter further states that the split is therefore not based on scientific considerations. As stated in the proposal and in earlier responses to comments, in determining whether to approve or deny a State's request for a revision to the designation of an area under section 107(d)(3)(D), EPA believes it is appropriate to consider the same factors Congress directed EPA to consider when EPA initiates a revision to a designation of an area on its own motion under section 107(d)(3)(A). 63 FR 33599. These factors include "air quality data, planning and control considerations, or any other air quality-related considerations the Administrator deems appropriate." Thus, although technical and scientific considerations are factors in determining the designation of an area, they are not the sole factors.

At the time the Power-Bannock Counties PM–10 nonattainment area was delineated, a State monitor at the sewage treatment plant (STP), located downwind of the industrial complex and near the Reservation boundary, recorded violations of the PM–10 standard. There was little other technical or scientific information upon which to base the boundary other than best professional judgement. Therefore, the topographical and general meteorological characteristics of the area were strong considerations in drawing the boundary. Although there were no monitors located on Reservation lands at the time the PM–10 nonattainment area was originally established, the Tribes and the State of Idaho provided comments to EPA requesting that the nonattainment area be established to include the major sources of particulate matter that were thought to contribute to the PM–10 exceedences, including FMC and Simplot at the industrial complex. 61 FR 29667, 29668 (June 12, 1996); 56 FR 37654, 37658 (August 8, 1991). In short, the boundary was determined based on considerations of where air quality did not meet or was not believed to meet the PM–10 standard and the location of sources thought to contribute to air quality that did not meet the standard or was not believed to meet the standard. Neither the State nor the Tribes requested at the time the Power-Bannock Counties PM–10 nonattainment area was first delineated that the nonattainment area be divided at the State-Reservation boundary. 61 FR 29668; 56 FR 37658. In fact, at the time the boundary deliberations were ongoing, the State was regulating FMC, which was located on fee lands within the Reservation, under a Memorandum of Agreement with the Tribes. Therefore, EPA did not consider then whether, apart from technical air quality considerations, jurisdictional considerations should play a role in establishing the boundary of the nonattainment area.

Several important factors have changed since that time. First, the State monitors now show attainment of the standard and the Tribal monitors, which were installed in 1995 and 1996 in areas where modeling had predicted maximum PM–10 concentrations, have recorded violations of the PM–10 standard. Second, the technical and scientific understanding of the sources and their contribution to PM–10 violations in the area has increased significantly. EPA has a better understanding of meteorology in the area and how it affects the continuing violations of the PM–10 standard that have been recorded on the Tribal monitors. Based on information available to EPA, it appears that, due to the predominant wind direction, PM–10 emissions from FMC, located on the Reservation, are the primary, if not sole, cause of the continuing violations that have been recorded. Finally, the State has largely completed the PM–10 planning and control process for the sources under its authority, whereas the planning and control process for the sources on Reservation lands is still under development. All these factors support EPA's decision to grant the State's request to split the nonattainment area into two nonattainment areas. Although EPA agrees that the decision to split the area is not based on topographical features of the area, EPA disagrees that the decision to split the area is not based on scientific or meteorological considerations. The air quality data recorded on the State and Tribal monitors as well as the pollution windroses showing that State sources do not cause the violations of the standard on the Tribal monitors constitute the scientific and meteorological considerations underlying EPA's action. Also relevant is the fact (which the State acknowledges) that the two areas are subject to differing jurisdictions, an important planning and control consideration that EPA believes is an appropriate factor to consider under the Act.

FMC asserts that the Tribal monitors do not document a violation of the 24-hour PM–10 NAAQS because the Tribal monitors had collected less than three years of data as of the attainment date of December 31, 1996, and because the existing data does not "unambiguously show nonattainment," a condition for reliance on less than three years of data. In support of its argument that the Tribal monitors do not "unambiguously show nonattainment" of the 24-hour PM–10 standard, FMC asserts that the placement of the Tribal monitors raises several technical and legal issues regarding the siting and reliability of the data relied on by EPA in the proposal. Although FMC provides few specifics to support this charge, the company argues that one of the Tribal monitors is on a highway right-of-way, and thus subject to undue influence from vehicle traffic, and that another Tribal monitor is located on FMC land which is subject to institutional restrictions on development and public use.

As an initial matter, EPA is not, in this notice, making a determination of

whether or not the Fort Hall PM–10 nonattainment area is in violation of the PM–10 NAAQS. For purposes of EPA's decision to split the nonattainment area, there is no legal requirement that the air quality data considered by EPA establish a violation of the PM–10 NAAQS. The difference in air quality between the Reservation and State lands was one factor considered by EPA, not the sole factor. EPA nonetheless disagrees with FMC's suggestion that the siting of the Tribal monitors is improper and that the data are unreliable. With respect to FMC's assertion that one Tribal monitor is located on a highway right-of-way and is subject to undue influence from vehicle traffic, it is important to note that FMC does not argue that the monitor does not meet the EPA siting criteria of 40 CFR part 58, appendix E. EPA disagrees that this monitor (referred to as the "Sho-Ban site") is unduly influenced by vehicle traffic. The magnitude of emissions from paved highways is a function of several factors including vehicle speed, vehicle weight, silt loading on the roadway, number of vehicles, and emissions from the vehicles themselves. This is not a major roadway, but rather a frontage road. Thus, there are relatively few vehicles passing along this section of roadway and vehicle speeds are low. EPA believes that vehicular emissions from this section of road are minimal and do not unduly influence ambient levels of PM–10. In addition, another Tribal monitor (referred to as the "primary site") that has recorded numerous exceedences of the PM–10 standard is located in a similar orientation vis-a-vis the frontage road as the Sho-Ban site (across the frontage road from FMC and near the road). If, as FMC asserts, the Sho-Ban monitor is unduly influenced by road dust, one would also expect to see exceedences on the same day and of similar magnitude at the primary site. This is not the case. On only a few occasions have exceedences been recorded at the primary site and the Sho-Ban site on the same days. Instead, exceedences on both of these monitors, as well as on the third Tribal monitor, are closely correlated with the wind direction blowing from FMC sources toward the monitors.

With respect to FMC's assertion that the primary site is located "on lands owned and controlled by FMC which are subject to specific restrictions on development and public use, although it is not clear from FMC's comment, FMC may be implying that the monitor does not measure ambient air. "Ambient air" for NAAQS purposes is defined as "that portion of the atmosphere, external to buildings, to which the general public has access." 40 CFR 50.1(e). EPA notes that, at the time the monitor was established and to this day, access to the vicinity of the monitor has been in no way restricted by a fence.[6] The primary site is located in an area external to buildings, to which the general public has access. That FMC has the legal right to restrict access to the location of the monitor is irrelevant. In short, there is no basis for FMC's suggestion that the monitors or data are invalid.

FMC argues that the attainment status of all or part of the Power-Bannock Counties PM–10 nonattainment area is moot because FMC intends to install additional controls on its facility. FMC notes that EPA and FMC are in the process of negotiating a settlement to resolve violations of the Resource Conservation and Recovery Act and that, as part of those discussions, FMC has committed to installing new emission controls and reconfiguring various processes to achieve significant PM–10 emission reductions at the facility. In fact, since FMC submitted its comments, a consent decree between FMC and EPA resolving alleged RCRA violations at the FMC facility was lodged in the United States District Court for the District of Idaho on October 16, 1998, and is currently undergoing a 30 day public review and comment period. The RCRA consent decree, once entered by the Court, will require FMC to pay a civil penalty of $11,864,800 million for the alleged RCRA violations and take measures to bring the FMC facility into compliance with RCRA. The RCRA consent decree also includes 13 "supplemental environmental projects" (referred to as SEPs) designed to reduce PM–10 emissions at the FMC facility.[7] FMC states in its comments on EPA's proposal to split the nonattainment area that the attainment status of the area is moot because FMC believes the Reservation will be able to attain the PM–10 standard once it has completed installation and implementation of the SEPs under the RCRA consent decree. EPA certainly supports any PM–10 emission reductions by FMC, whether voluntary or as part of an enforceable settlement agreement. That the area may attain the PM–10 NAAQS several years from now after FMC installs completes the SEPs, however, does not render the attainment status of the area at the present time a moot issue. In any event, the attainment status of the State monitors versus the Tribal monitors is only one of the many factors considered by EPA in deciding to split the nonattainment area.

FMC also contends that the State's technical analysis, where it looked at the "urban complex" (the Cities of Pocatello and Chubbuck and the surrounding urban areas) and the "industrial complex" (FMC and J.R. Simplot) is flawed. FMC asserts that the State's analysis might support splitting the nonattainment area between the urban complex and the industrial complex, but not splitting the area within the industrial complex. FMC misunderstands the two-step analysis conducted by the State. The State first presented information to demonstrate that these two separate areas have separate air quality impacts and sources. Specifically, the modeling information presented by the State shows that the urban complex and the industrial complex have different sources contributing to the high PM–10 levels that have been recorded in each area and that there is no evidence of significant mixing of emissions between the urban complex and the industrial complex. Had the State stopped here in its analysis, FMC would be correct in its assertion that there is no basis for splitting the existing nonattainment area at the State-Reservation boundary. The State went on to show, however, that sources on State lands within the industrial complex, namely, Simplot, are effectively controlled and do not contribute to violations of the PM–10 NAAQS on State or Tribal lands. EPA agrees with the State that this information supports splitting the existing nonattainment area at the State-Reservation boundary.

D. Comments Relating to the Location of the Boundary

In the State's April 16, 1997, request, the State requested that the Power-Bannock Counties PM–10 nonattainment area be divided at the boundary between State lands and the Fort Hall Indian Reservation. As discussed in the proposal, EPA learned after submission of the State's request that a small portion of the FMC facility is located on State lands. See 63 FR 3360. In the proposal, EPA considered the fact that the FMC sources located within the Power-Bannock Counties PM–10 nonattainment area but outside the exterior boundaries of the Fort Hall Indian Reservation on State lands

[6] Access to the monitor itself is, of course, restricted by a 15 by 10 foot chain-link fence to guard against vandalism and tampering.

[7] The RCRA consent decree also includes a SEP whereby FMC commits $1,650,000 to fund a study of the potential health effects on residents of the Fort Hall Indian Reservation that may have resulted from releases of hazardous substances at the FMC facility.

accounted for less than 1% of all of FMC's PM–10 emissions and did not appear to contribute to the violations that have been recorded on the Tribal monitors. EPA stated it believed it was appropriate to split the nonattainment area at the State-Reservation boundary despite this new information. EPA specifically requested comment, however, on whether it would be preferable to split the current Power-Bannock Counties PM–10 nonattainment area at the State-Reservation boundary, except to include in the Fort Hall PM–10 nonattainment area that portion of the FMC facility located on State lands.

Both the State and FMC commented on this issue. The State advised EPA it would be comfortable with either approach. FMC stated that it was equally unhappy with either approach. FMC went on to state that either approach would necessitate two implementation plans (i.e., a SIP and a FIP/TIP). EPA disagrees that splitting the nonattainment area, either along the State-Reservation boundary or including all of the FMC facility in the Fort Hall nonattainment area, will result in any more implementation plans than if the area remains as one nonattainment area. In all events, the State must submit a SIP revision to address the previous deficiencies in the State's 1993 PM–10 SIP covering State lands. The State's plan must address that portion of the FMC facility on State lands, regardless of whether that portion of the FMC facility is located in the Power-Bannock Counties PM–10 nonattainment area, the Fort Hall PM–10 nonattainment area, or the Portneuf Valley PM–10 nonattainment area. EPA and the Tribes will promulgate Federal Implementation Plans and Tribal Implementation Plans covering lands within the exterior boundaries of the Fort Hall Indian Reservation.

After considering the comments of the State and FMC on this issue, EPA continues to believe it is preferable to split the nonattainment area along the State-Reservation boundary. Apart from the technical air quality information, the fact that the existing Power-Bannock Counties PM–10 nonattainment area encompasses two regulatory jurisdictions is a major additional reason why EPA has decided to grant the State's request to split the nonattaiment area. EPA therefore believes it is more appropriate to split the nonattainment areas in a manner that respects this jurisdictional distinction.

III. Final Action

By this action, the existing Power-Bannock Counties PM–10 nonattainment area is divided into two nonattainment areas that together cover the identical geographic area of the existing nonattainment area. The revised areas will be divided at the boundary between State lands and the Fort Hall Indian Reservation, with one revised area, referred to as the "Portneuf Valley PM–10 nonattainment area," consisting of State lands, and the other revised area, referred to as the "Fort Hall PM–10 nonattainment area," consisting of lands within the exterior boundaries of the Fort Hall Indian Reservation. Both the Portneuf Valley PM–10 nonattainment area and the Fort Hall PM–10 nonattainment area will retain designations as PM–10 nonattainment areas and a classification of moderate as a result of this action.

IV. Administrative Requirements

A. Executive Order (E.O.) 12866

Under Executive Order 12866, 58 FR 51735 (October 4, 1993), the Agency must determine whether the regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order. The Order defines "significant regulatory action" as one that is likely to result in a rule that may: (1) have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

The OMB has exempted this action from review under E.O. 12866. In addition, the Agency has determined that an action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA results in none of the effects identified in E.O. 12866 as constituting a significant regulatory action. The revised designations together cover the same geographic area and the same sources as the original designation and the classification of the areas remains unchanged by this action.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA), 5 U.S.C. § 601 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities unless EPA certifies that the rule will not have a significant economic impact on substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000. A regulatory flexibility screening of this action revealed that it would not have a significant adverse economic impact on a substantial number of small entities. An action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA is an action affects only the boundary of the geographic area. The revised designations together cover the same geographic area and the same sources as the original designation and the classification of the areas remains unchanged by this action. Therefore, this action does not impose any new requirements on small entities. See Mid-Tex Electric Cooperative, Inc. v. FERC, 773 F.2d 327 (D.C. Cir. 1985) (agency's certification need only consider rule's impact on entities subject to the requirements of the rule). To the extent that a State, Tribe or EPA must adopt new regulations, based on an area's nonattainment status, EPA will review the effect those actions have on small entities at the time EPA takes action on those regulations. Therefore, pursuant to 5 U.S.C. 605(b), EPA certifies that today's action does not have a significant economic impact on a substantial number of small entities within the meaning of those terms for RFA purposes.

C. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Pub. L. 04–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments and the private sector. Under section 202 of UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, when EPA promulgates "any general notice of proposed rulemaking that is likely to result in promulgation of any rule that includes any Federal mandate that may result in the expenditures by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more" in any one year. A "Federal mandate" is defined, under section 101 of UMRA,

as a provision that "would impose an enforceable duty" upon the private sector or State, local, or Tribal governments," with certain exceptions not here relevant. Under section 203 of UMRA, EPA must develop a small government agency plan before EPA "establish[es] any regulatory requirements that might significantly or uniquely affect small governments." Under section 204 of UMRA, EPA is required to develop a process to facilitate input by elected officers of State, local, and Tribal governments for EPA's "regulatory proposals" that contain significant Federal intergovernmental mandates. Under section 205 of UMRA, before EPA promulgates "any rule for which a written statement is required under [UMRA section] 202," EPA must identify and consider a reasonable number of regulatory alternatives and either adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule, or explain why a different alternative was selected.

EPA has determined that this action does not include a Federal mandate that may result in the expenditures by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year. An action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA is an action affects only the boundary of the geographic area. The revised designations together cover the same geographic area and the same sources as the original designation and the classification of the areas remains unchanged by this action. Therefore, this action does not impose any new requirements on the State of Idaho, the Shoshone-Bannock Tribes, or the private sector. Accordingly, EPA has determined that this action does not include a Federal mandate that may result in estimated costs of $100 million or more to either State, local, or Tribal governments in the aggregate, or to the private sector. Consequently, sections 202, 204, and 205 of UMRA do not apply to today's action, and EPA is therefore not required to and has not taken any actions to meet the requirements of these sections of UMRA. With respect to section 203 of UMRA, EPA has concluded that this action includes no regulatory requirements that will significantly or uniquely affect small governments, because it imposes no requirements on them. Nevertheless, during the development of the proposal for this action, EPA held several meetings with representatives of the Shoshone-Bannock Tribes to discuss the requirements of, and receive input regarding, this action.

D. Submission to Congress and the General Accounting Office

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1966, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

E. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045, 62 FR 19885 (April 23, 1997) applies to any rule that (1) is determined to be "economically significant" as that term is defined in E.O. 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This final action is not subject to E.O. 13045 because it is not an economically significant rule as defined by E.O. 12866. In addition, it does not involve decisions based on environmental health or safety risks because these decisions were made at the time EPA promulgated the PM–10 NAAQS. Today's action does not change the health standard set by the NAAQS.

F. Executive Order 12875: Enhancing the Intergovernmental Partnership

Under Executive Order 12875, EPA may not issue a regulation that is not required by statute and that creates a mandate upon a State, local or tribal government, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by those governments, or EPA consults with those governments. If EPA complies by consulting, Executive Order 12875 requires EPA to provide to the Office of Management and Budget a description of the extent of EPA's prior consultation with representatives of affected State, local and tribal governments, the nature of their concerns, copies of any written communications from the governments, and a statement supporting the need to issue the regulation. In addition, Executive Order 12875 requires EPA to develop an effective process permitting elected officials and other representatives of State, local and tribal governments "to provide meaningful and timely input in the development of regulatory proposals containing significant unfunded mandates."

Today's action does not create a mandate on State, local or tribal governments and does not impose any enforceable duties on these entities. An action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA is an action affects only the boundary of the geographic area and does not impose any regulatory requirements. The revised designations together cover the same geographic area and the same sources as the original designation and the classification of the areas remains unchanged by this action. Accordingly, the requirements of section 1(a) of Executive Order 12875 do not apply to this rule.

G. Executive Order 13084: Consultation and Coordination With Indian Tribal Governments

Under Executive Order 13084, EPA may not issue a regulation that is not required by statute, that significantly or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments, or EPA consults with those governments. If EPA complies by consulting, Executive Order 13084 requires EPA to provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

Today's action does not impose substantial direct compliance costs on the communities of Indian tribal governments. An action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA is an action affects only the boundary of the geographic area and does not impose any regulatory requirements. The revised designations together cover the same geographic area and the same sources as the original designation and the classification of the areas remains unchanged by this action. Accordingly, the requirements of section 3(b) of Executive Order 13084 do not apply to this rule. In taking this action, EPA consulted with representatives of the Shoshone-Bannock Tribes to permit them to have meaningful and timely input into its development. Prior to issuing the proposal to split the Power-Bannock Counties PM–10 nonattainment area, EPA met on three occasions with representatives of the Shoshone-Bannock Tribes to discuss the basis for and consequences of splitting the nonattainment area and to hear the Tribe's concerns with splitting the nonattainment area. EPA also had several telephone conferences with representatives of the Shoshone-Bannock Tribes to learn of the Tribes' concerns prior to the proposal. In addition, EPA provided public notice and an opportunity for comment on EPA's proposal to split the Power-Bannock Counties PM–10 nonattainment area a 30 day prior to this action. The Tribes' concerns and EPA's response to those concerns are discussed in the proposal, 63 FR 33602–33603, and in Section II of this notice.

H. National Technology Transfer and Advancement Act of 1995 (NTTAA)

Section 12(d) of NTTAA, Pub. L. No. 104–113, Section 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary standards.

An action revising the designation of an area by creating two separate nonattainment areas under section 107(d)(3) of the CAA does not establish technical standards. Therefore, this action is not subject to the NTTAA.

I. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 4, 1999. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–98–4662]

RIN 2127–AC19

Federal Motor Vehicle Safety Standards; School Bus Body Joint Strength

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: Final rule.

SUMMARY: This rule amends Federal Motor Vehicle Safety Standard No. 221, *School Bus Body Joint Strength* (49 CFR 571.221), which requires school bus body panel joints to be capable of holding the body panel to the member to which it is joined when subjected to a force of 60 percent of the tensile strength of the weakest joined body panel. Currently, the standard applies only to school buses with a gross vehicle weight rating (GVWR) greater than 10,000 pounds. This rule extends the applicability of the standard to school buses with a GVWR of 10,000 pounds or less, narrows an exclusion of maintenance access panels from the requirements of the standard, and revises testing requirements.

This rule ensures that children are provided equivalent levels of protection against joint separation in small as well as large school buses. Since a larger proportion of small school buses than of large school buses are lift-equipped to transport mobility impaired students compared to large buses, this rule particularly enhances the safety of mobility impaired children.

DATES: This rule is effective May 5, 2000. Optional early compliance with the changes made in this final rule is permitted beginning November 5, 1998. Any petitions for reconsideration of this final rule must be received by NHTSA not later than December 21, 1998.

ADDRESSES: Petitions for reconsideration should refer to the docket number for this action and be submitted to: Administrator, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. Copies of the Final Regulatory Evaluation for this rule can be obtained from: Docket Management, Room PL–401, 400 Seventh Street, SW, Washington, DC, 20590, telephone: (202) 366–9324. Docket hours are 10 a.m. to 5 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Mr. Charles R. Hott, Office of Crashworthiness Standards, National Highway Traffic Safety Administration, 400 Seventh Street SW, Washington, DC 20590, (202) 366–0247.

I. Summary of the Final Rule

This rule is intended to enhance the applicability and objectivity of Standard No. 221's school bus joint strength requirements. The standard currently applies only to large school buses (GVWR greater than 10,000 pounds). The standard specifies strength requirements for each "body panel joint," which is currently defined as the area of contact or close proximity between the edges of a body panel and another body component, excluding spaces designed for ventilation or another functional purpose, and excluding doors, windows, and maintenance access panels (MAPs).

This rule extends the applicability of Standard No. 221 to small school buses (GVWR of 10,000 pounds or less) and narrows the present exclusion of MAPs from the joint strength requirements. Except as noted below, the rule requires panels to be attached at least at every 8 inches (203 millimeters (mm)), and requires body panel joints to withstand a tensile strength of 60 percent of the tensile strength of the weakest joined body panel. Excluded from these requirements are MAPs outside of the passenger area, and MAPs, smaller than a specified size, inside the passenger area. Joints from which a test sample cannot be obtained because of the joint's size or the curvature of the panels comprising the joint, are excluded from the tensile strength requirements.

Some of the definitions adopted by this rule differ from the NPRM. For example, the rule simplifies the definition of "maintenance access panel," and adopts a definition of "passenger compartment" based on the definition in Standard No. 217, *Bus Emergency Exits and Window Retention and Release* (49 CFR 571.217). The proposal for deleting the "hourglass" shape of the test specimen has not been adopted.

II. Background

NHTSA is authorized by 49 U.S.C. 30101, *et seq.*, to issue Federal motor vehicle safety standards for new motor vehicles, including school buses.[1] In 1974, Congress enacted the Motor Vehicle and Schoolbus Safety Amendments (Pub. L. 93–492), which directed NHTSA to issue Federal motor vehicle safety standards for various aspects of school bus safety, including interior protection for occupants, floor strength, and crashworthiness of body and frame. In response to that Congressional mandate, NHTSA issued Standard No. 221, *School Bus Body Joint Strength*.

Standard No. 221 requires the strengthening of school bus body panel joints to prevent these joints from separating during a crash and becoming cutting edges that could cause serious injuries or allowing passenger ejection through openings created by such panel separations. The standard currently provides that each school bus body panel joint must be capable of holding the body panel to the member to which it is joined when subjected to a force of 60 percent of the tensile strength of the weakest joined body panel. Excluded from this requirement are doors, windows, spaces designed for ventilation or another functional purpose, and MAPs. MAPs were excluded because they involve areas on the vehicle requiring frequent maintenance and need to have unrestricted accessibility. Although MAPs were not defined in the standard, it was NHTSA's intent that manufacturers would limit MAPs to panels providing access to areas requiring routine maintenance.

Maintenance access panels (MAPs). The exception of MAPs from Standard No. 221 has been an issue of concern to NHTSA, the National Transportation Safety Board (NTSB), and school bus manufacturers. Through information provided by manufacturers and inspection of buses being built in the years following the effective date of the standard in 1977, NHTSA learned that most manufacturers created MAPs that ranged from a few inches up to 12 inches wide above the window area and extending the entire length of the bus. In addition, nearly the entire rear wall of some buses was designated as a MAP.

In testing some of those MAPs after the effective date of the standard, the agency found the panels to be loosely attached and unable to withstand much force before detaching from the bus body or adjacent panels. For example, NHTSA's inspections of a variety of school bus makes and models disclosed that MAPs extending the length of the bus above the windows were not fastened down, but were held in place only by the window frames. On the other hand, NHTSA observed that in some buses which had been involved in crashes, panels that complied with the standard performed very well and rarely detached from the bus body and adjacent panels.

To correct the perceived MAP problem, NHTSA issued a notice of proposed rulemaking on November 27, 1981 (46 FR 57939) proposing to remove the exemption for all maintenance access panels except for a few that were considered critical for proper maintenance.

Over 200 comments were received in response to that notice, all but two of which opposed the proposed amendments. In addition, public meetings were held on these issues in March 1982, and again in January 1983. Commenters on the notice and representatives of interested parties at the meetings contended that NHTSA could show no safety problem or abuse of the standard and no injuries attributed to MAP failure, and that extra fasteners could delay proper maintenance because of difficulties in removing them. They also suggested that the additional cost of compliance might be $500 per bus with no greater safety benefits, and that the proposals could include other previously excluded joints unrelated to MAPs.

NHTSA conducted an internal review of the comments received and available crash data and concluded that the assertions of the commenters had substantial merit. The agency was not able to locate a documented case of personal injury resulting from MAP failure, and was unable to identify any specific instances of abuse of the MAP exclusion. The agency believed, however, that the potential for abuse existed and urged manufacturers to limit their use of MAPs to those areas where such panels were clearly necessary. The agency also agreed that requiring extra fasteners on MAPs might not enhance safety because an increase in fasteners or a decrease in MAPs could complicate the maintenance process, thus discouraging prompt maintenance. Finally, the agency concluded that increased compliance costs could be detrimental to safety by inducing owners of older buses to keep them longer than they normally would, without a safety benefit. In view of these considerations, NHTSA terminated the rulemaking on July 2, 1984 (49 FR 27181), but nevertheless urged bus manufacturers to minimize the number of MAPs.

Although NHTSA terminated the rulemaking, NHTSA continued to consider the matter in light of additional information received after the termination, such as documentation of MAP separations in actual crashes that caused injuries, and evidence that some previously-complying panels had been redesignated as MAPs. The NTSB, in several recommendations based on a number of serious school bus accidents occurring after the termination, proposed elimination of the exclusion for MAPs and recommended other improvements in school bus safety. The NTSB also indicated that joint separation had occurred in crashes involving small school buses.

In June 1987, NHTSA issued an advance notice of proposed rulemaking (ANPRM) (52 FR 23314; June 19, 1987) on school bus body joint strength issues. The ANPRM requested comments on possible proposals to specify minimum strength requirements for the floors of school buses with a GVWR over 10,000 pounds, narrow the MAP exclusion from the joint strength requirements of Standard No. 221, and revise the test procedures of the standard.

Thirty-seven comments were received in response to the ANPRM, including comments from school bus manufacturers, school bus operators, and Federal, state and local governmental agencies. After considering all comments and completing a series of dynamic tests of school bus floor joints, NHTSA published a notice of proposed rulemaking on March 15, 1991 (56 FR 11142) (hereinafter NPRM), proposing to: (1) Extend the applicability of Standard 221 to small school buses (GVWR 10,000 pounds or less); (2) narrow the existing exclusion of MAPs; and (3) expand testing requirements and clarify testing procedures for school bus body panel joints.

NHTSA received 18 comments to the NPRM. Commenters included seven school bus manufacturers, one equipment supplier, six state organizations, three trade and citizens' associations, and one private citizen. All comments were fully considered and the significant ones are addressed below.

III. Amendments

A. Applicability to Small School Buses

This rule extends the applicability of Standard No. 221 to small school buses (GVWR 10,000 pounds or less), as proposed.

Commenters were divided in their support of NHTSA's proposal to extend the standard to small school buses. The Maryland State Department of Education (MSDE), Maryland Motor Vehicle Administration (MMVA), Washington Superintendent of Public Instruction (SPI), Connecticut Department of Motor Vehicles (CDMV), California Department of Education (CDE), and the Blue Bird Body Company (Blue Bird) all expressed support for the proposal. In general, the state agencies believed that small school buses should offer the same passenger protection as large school buses. Blue Bird stated that although there does not appear to be sufficient safety need or cost benefit justification for extending the requirements of Standard No. 221 to small school buses, the company supports the proposal in the interest of providing uniform safety levels in all school buses and because use of small school buses is growing.

Commenters opposed to the extension of Standard No. 221 to small school buses were Collins Industries (Collins), National Truck Equipment Association on behalf of the Manufacturers Council of Small School Buses (MCSSB), General Motors Corporation (GM), Ford Motor Company (Ford), and Mid Bus Inc. (Mid Bus). Most of these commenters believed that the findings of the NTSB were insufficient to establish a safety need to extend the standard to small school buses.

The agency disagrees, and believes there is a safety need to extend the standard to small school buses. NTSB was concerned that small school buses experience higher crash forces in a crash than do large school buses, since size and mass are important factors in crash severity. The NTSB studies on the crashworthiness of large and small school buses found that 6 of 19 small school bus crashes resulted in body panel joint separation (32 percent of the cases studied). In contrast, joint separations in large school buses

[1] 49 U.S.C. 30125(a)(1) defines a *schoolbus* as a passenger motor vehicle designed to carry a driver and more than ten passengers that the Secretary of Transportation determines "is likely to be used significantly to transport preprimary, primary, and secondary school students to or from school or an event related to school." NHTSA further defines a school bus as a bus that is sold or introduced in interstate commerce for purposes that include carrying students to and from school and related events, but does not include a bus that is designed and sold for operation as a common carrier in urban transportation. 49 CFR 571.3.

occurred in MAPs and floor joints, while body panel joints maintained structural integrity very well, even in severe crash forces. These results indicate that the requirements of Standard 221 are very effective (see NTSB Safety Study: Crashworthiness of Small Poststandard School Buses, October 11, 1989). Further, these results lead NHTSA to conclude that the structural integrity of small buses would be enhanced by the joint strength requirement of Standard 221. NHTSA concludes that small school buses should at least be subject to the same joint strength requirements as large school buses. This will better ensure that all children are provided equivalent levels of protection against injuries from joint separation, regardless of the GVWR of the vehicle transporting them.

Small school buses are becoming an increasingly larger part of the school bus fleet. From 1988 to 1993, the percentage of total school bus sales for small school buses rose from about 13 percent to about 19 percent (an increase of almost 50 percent in market share). From 1994 to the present, the percentage of small school bus sales has been holding steady at about 16 percent. This rise of sales is of concern because it indicates that crashes, and resultant injuries, are likely to increase.

Moreover, the agency notes that a larger proportion of small school buses than of large buses are lift-equipped to transport mobility impaired students. The school bus industry describes Type A and Type B school buses as being for "disability/special purpose" use. Extending Standard No. 221's requirements to small school buses thus enhances the safety of mobility impaired children. In addition, these buses may frequently be used to carry pre-primary, Head Start program children.

GM stated that small school buses are already subject to standards not applicable to large school buses, such as Standard Nos. 204, 208, 209, 210, 212, 219, and 301. Therefore, GM argued, a vehicle built in compliance with those standards has inherent structural integrity and occupant protection. Collins and MCSSB stated that small school buses actually have a double approach to passenger protection and restraint in crashes since they are subject to the compartmentalization requirements of large school buses as well as the seat belt requirements of Standard No. 208, *Occupant Crash Protection*.

NHTSA is not persuaded by these comments. The standards cited by GM help ensure the crashworthiness of a small school bus, but those standards address safety systems that are not directly relevant to school bus body panel joint integrity. For example, Standard No. 204 limits the rearward displacement of the steering control into the passenger compartment; 208, 209 and 210 address the occupant belt systems; 212 and 219 pertain to retention and intrusion of the windshield; and 301 addresses the vehicle's fuel system integrity. Similarly, in response to Collins and MCSSB, the fact that small school buses must comply with seat belt requirements and most (but not all) of the compartmentalization requirements of Standard No. 222 is irrelevant to the issue of upgrading the integrity of the bus body. The seat belt and compartmentalization requirements for small school buses help ensure that the passenger is restrained safely. Standard No. 221 regulates the lap joint construction method used to manufacture school bus bodies. The joint strength requirements will help ensure that the environment in which the passenger is restrained does not lose structural integrity in a crash. NHTSA views the occupant restraint and compartmentalization requirements of Standards No. 208 and 222 as complementing the joint strength requirements of Standard No. 221, and not as requirements that obviate the need for them.

MCSSB argued that the cost to manufacturers of bringing small school buses into compliance with Standard No. 221 would be prohibitive, considering the need for complete joint analysis, testing and certification programs, and possible material and design changes. Mid Bus estimated that having to comply with Standard No. 221 requirements would increase the cost of a small school bus by $1,982 (1996 dollars).[2]

The agency disagrees that the cost impact of the rule on small school buses is unreasonable. Currently, 21 states and the District of Columbia already require small school buses to comply with the joint strength requirements of Standard No. 221 at an additional cost ranging from $91 to $1,087 per vehicle. NHTSA estimates that the sales-weighted average increase in the consumer cost of a small school bus to comply with both the joint strength and the MAP requirements would be $343 (for a more detailed discussion of costs, including the cost impacts of the rule on large school buses, see the discussion of NHTSA's Final Regulatory Evaluation in the section on *Rulemaking Analyses and Notices*, below). All small school bus manufacturers already produce, at the purchaser's option, small school buses with body panel joints that comply with Standard No. 221. NHTSA believes, therefore, that extending the requirements of the standard to all school buses would not create an undue burden or expense for small school bus manufacturers since they are already tooled up for producing complying small school buses.

MCSSB expressed concern that chassis manufacturers would refuse to certify their chassis, forcing small school bus manufacturers to certify the chassis themselves or go out of business. Ford and Mid Bus also alluded to the potential problem of chassis manufacturers refusing to certify their chassis.

NHTSA does not believe the impacts of this rule on final-stage manufacturers will be unduly burdensome. As noted above, many states currently require small school buses to meet the joint strength requirements of Standard No. 221. Any final-stage school bus manufacturer producing a vehicle for sale in one of these states is already taking the necessary steps toward fulfilling its contractual obligations to meet Standard No. 221. In addition, any final-stage manufacturer of school buses is also required to meet the compartmentalization requirements of Standard No. 222, the crashworthiness requirements of Standard Nos. 204, 208, 209, 210, 212, 219, and 301 (as mentioned by GM, above), as well as the comprehensive series of FMVSSs that apply to school buses (e.g., Standard No. 217 for emergency exits and No. 108 for school bus lights). The commenters did not provide any information to demonstrate that a final-stage manufacturer, who is capable of fulfilling its present obligation to certify its vehicles to the extensive school bus safety standards, would be unable to certify to Standard No. 221. Moreover, Standard No. 221 specifies a relatively simple static-pull test procedure that manufacturers who choose to perform the test would not find burdensome to conduct. In contrast, Standards No. 212, 219 and 301 specify dynamic crash tests, and Standard No. 222 call for force applications and the calculation of head injury criterion values. NHTSA believes that, given the present certification responsibilities of final-stage manufacturers of small school buses and the level of testing necessary to test to FMVSS No. 221, these manufacturers have the means necessary to certify their vehicles to Standard No. 221, even in the absence of assurances from the chassis manufacturer. This assumes that the chassis manufacturer would not provide such assurances. The agency believes that the provision in the rule that excludes joints that can not be physically accommodated in the tensile testing apparatus from the 60 percent joint strength requirement will make it easier for more chassis manufacturers to provide assurances to final-stage manufacturers that the joints on the incomplete vehicle meets Standard No. 221.

[2] All costs shown are in terms of 1996 dollars unless otherwise noted.

B. Maintenance Access Panels

NHTSA is defining "maintenance access panel" to limit a manufacturer's latitude to designate panels as MAPs and thus be excluded from the strength requirements of the standard. Under this rule, to be excluded from the requirements of Standard No. 221 as a "maintenance access panel," a panel must meet the definition of a MAP, and must also meet certain criteria.

Definition. The definitions pertaining to maintenance access panels are the same as those proposed in the NPRM. This rule defines "maintenance access panel" as "a body panel which must be moved or removed to provide access to one or more serviceable component(s)." This rule also defines "serviceable component" as a part of the bus which is identified by the body or chassis manufacturer in the owners' or service manuals as requiring routine maintenance at least once each year. The definition specifies that "serviceable component" includes pneumatic and hydraulic devices, wiring harnesses, and tubing only at their attachments.

Criteria to be Excluded. However, the rule differs from the NPRM in setting criteria that a MAP must meet to be excluded from the requirements of Standard No. 221. To be excluded, the MAP must either: (1) Be located forward of the passenger seating area (the MAP must not lie between a vertical transverse plane located 762 mm (30 inches) in front of the forwardmost passenger seating reference point and a vertical transverse plane tangent to the rear interior wall of the bus at the vehicle's centerline); or (2) be located within the passenger seating area but have an opening that does not exceed 305 mm (12 inches) when measured across any two points diametrically on opposite sides of the opening.

In the NPRM, NHTSA proposed that any MAP that exposes the bus interior to areas below the floor, to the engine compartment or to compartments adjoining the engine compartment, would not be excluded, regardless of where in the bus interior the MAP was located. NHTSA also proposed that MAPs, other than those exposing the interior to areas below the floor or to the engine compartment or to compartments adjoining the engine compartment, which were in the passenger seating area had to meet size limits to be excluded from the joint strength requirements, ensuring that the MAP is no larger than required to provide access to the serviceable components the MAP covered. The proposed size limits provided a two-inch access margin around the periphery of serviceable components or clusters of components for handling and tool clearance during installation, replacement, inspection and adjustment procedures. The average spacing between components within a cluster of components covered by a single MAP could not exceed four inches.

Five manufacturers, two associations, and two state organizations commented on the proposal to narrow the exclusion of MAPs. The SPI and the California Highway Patrol (CHP) concurred with the proposal to restrict the size and locations of MAPs. SPI asserted that the present exclusion compromises the safety and structural integrity of school buses and that the proposed changes reflect a realistic limitation on the use of access panels.

Commenting in opposition to the NPRM, Thomas and Mid Bus asserted that there was not sufficient need shown to restrict MAPs. NHTSA disagrees. After reviewing both NTSB studies as well as reviewing recent NTSB school bus crash investigation reports, the agency found 7 out of 80 crashes studied involved MAP separations, causing head laceration injuries in two of the cases. In 4 of the 20 crashes involving small school buses, body joint separations occurred, resulting in one occupant with multiple leg fractures. Further, NHTSA's own tests have shown that MAP joints are not strong and can and do separate easily.

Navistar International Transportation Corporation (Navistar), National School Transportation Association (NSTA), MCSSB, and Blue Bird expressed concern that restricting MAPs as proposed would make required maintenance too difficult and time-consuming. They argued that mechanics would not take the time to replace all the fasteners to restore body panel joints to the 60 percent joint strength, and that mechanics would experience more cuts and abrasions because of tighter working areas. Those conditions could result in improperly accomplished maintenance, delays in required maintenance, increased failure of improperly-maintained parts, increased maintenance costs, and increased injuries because of the smaller sizes of the panels. Thomas, Mid Bus, and NSTA argued that the size restriction is too stringent. Mid Bus suggested an alternative restriction, i.e., that the MAP should be no smaller than 92,903 square millimeters (mm^2) or 144 square inches (in^2).

NHTSA can not agree with commenters that the proposed MAP restrictions will necessarily result in maintenance personnel not replacing all the fasteners after opening or removal. NHTSA believes that manufacturers are capable of designing their MAPs in such a manner as to minimize potential problems. For example, school bus designers and engineers may be able to redesign their current MAPs to provide fewer fasteners for mechanics to replace. Nevertheless, NHTSA has decided that the proposed limitations on MAP size are too restrictive. Clearance of two inches on a side in servicing components does not appear to be sufficient. After considering other alternatives for MAP exclusions, NHTSA has decided to exclude from the joint strength requirements of Standard No. 221 those maintenance access openings that do not exceed 305 mm (12 inches) when measured across any two points diametrically on opposite sides of the opening. That measurement is independent of the serviceable component's perimeter and location. The adopted restriction will ensure that MAPs are no larger than needed to provide access to the serviceable components the MAP covered. The proposed 102 mm (4 inches) average maximum distance limitation between components has not been adopted since no such component clusters have been identified either by NHTSA or by the commenters.

Engine access panels. Thomas and Navistar asserted that because engines need sometimes daily maintenance, engine covers should be excluded wherever located. NHTSA believes that most front engine buses have engine covers that are located outside the defined passenger compartment area and that maintenance on rear engine buses is routinely accomplished from the outside. Nevertheless, the agency agrees that direct and often-recurring engine maintenance should be quickly and easily accomplished. This includes easy accessibility to the engine compartment by the driver who may not have an extensive array of tools available. Accordingly, NHTSA has decided that engine access panels will be excluded from the requirements of the standard.

MAP floor panels. MAPs that expose the bus interior to areas located below

the bus floor or within the engine compartment are excluded from Standard No. 221's requirements if the MAP meets the restrictions on either MAP location or size described above. The NPRM did not provide for conditions whereupon interior MAP floor panels or interior MAPs leading into the engine compartment could be excluded from Standard No. 221. This was because NHTSA believed these panels should be universally required to comply with the joint strength requirement since the panels serve to isolate the bus interior from areas where fire is most likely to occur, and are an integral part of the vehicle's barrier against passenger compartment fires. In commenting on the proposal, Blue Bird asserted that subjecting floor panels to the body panel strength requirements is an unjustified extension of the standard that would do little to provide fire protection for the passenger compartment. NSTA stated that the strength of a joint has little or no relation to its effectiveness as a firestop.

It was NHTSA's intent in making the proposal to protect passengers as much as possible from fire entering the passenger compartment through a separated floor panel, as well as to prevent passengers from being ejected through a separated floor panel. Even though compliance with the joint strength requirement may not render a floor panel fireproof, proper joint strength may prevent the panel from separating. This would, in turn, help confine a fire to the area outside the passenger compartment, thereby allowing passengers more time to evacuate the vehicle. However, NHTSA agrees that there is an insufficient fire-related reason at this time to require any MAP, regardless of its location outside the bus occupant space or insignificant size, to meet the joint strength requirement if it is on the floor. Thus, the rule excludes MAPs on the floor of the vehicle if the MAP is forward of the passenger compartment or is of a size small enough to qualify the MAP for the exclusion.

C. Other Issues Relating to Exclusions

Ventilation. Currently, spaces designed for ventilation are excluded from the body joint strength requirements, and this rule continues that exclusion. The NPRM proposed to end the exclusion because the agency believed that the exclusion is not being utilized and therefore serves no useful purpose. However, Blue Bird and Thomas informed NHTSA that that belief is not correct. Blue Bird stated that, contrary to NHTSA's impression, ventilation panels are used for heater housings, heater air diffusers, heater ducts, heater hose covers, and air conditioning ducts and diffusers. Blue Bird argued that all those components serve important functional purposes, that they enclose no occupant air space, and are typically supported by panels that are required to comply with the standard. Blue Bird further asserted that eliminating this exclusion is not justified from a safety need and would be overly burdensome in terms of cost and restricted access to those components by maintenance personnel. Thomas stated that this revision would result in increased costs from redesign and extra fastening as well as decreased serviceability for the end user of the vehicle.

After careful consideration of the comments of Thomas and Blue Bird, NHTSA is persuaded that the ventilated panel exclusion is being utilized and that ventilation panels do serve important functional purposes. Further, due to their size and location, ventilation panels are not as likely as first thought to cause occupant injuries in an accident. NHTSA believes that extending the joint strength requirements to these panels would result in increased costs for redesign and additional fasteners, as well as decreased serviceability for the end user, without a commensurate safety benefit. Therefore, ventilation panels will continue to be excluded from the joint strength requirements of Standard 221.

Perforated panels. Thomas stated that perforated metal sheets are widely used in the interior linings of school buses to reduce interior noise. Thomas stated that the perforations do not extend into the joint area, making the joints stronger than the perforated portions of the panels. Thomas asserted, therefore, that the perforated portions could tear before the joints fail. Thomas suggested that NHTSA evaluate the safety advantages and disadvantages of the use of perforated headlining material to determine whether "special considerations" should be given for such material.

NHTSA is aware that perforated material is often used in school bus ceilings for noise reduction. The agency is unaware of any problems with perforated panels, such as instances where perforations contributed to the failure of a joint or where panels separated due to torn perforations. Nevertheless, the agency will monitor the use of perforated panels and their performance in school buses to determine whether there is a safety need to limit or otherwise regulate their use.

Curved and small joints. This rule excludes from the joint tensile strength requirement joints from which a test sample cannot be obtained because of the size of the joint or the curvature of the panels comprising the joint.

The NPRM proposed a procedure for testing curved joints, such as those found in roof or ceiling joints. The procedure would have specified that the test specimen is prepared by selecting a joint segment where the radius of curvature is at least 508 mm (20 inches). Thomas suggested a method of testing a curved joint, but stated that in order to prevent distortion of the test results, the gripping devices must be able to grip the sample in the same radius as the sample curvature. To avoid such complex test procedures, Thomas strongly recommended that NHTSA approve the use of surrogate joints.

NHTSA recognizes that the curved shape of such joints poses difficulty in obtaining accurate test results. The application of force on a curved surface would cause the surface to flatten, thus misrepresenting the actual force loading on the panel. Although NHTSA believes that it is possible to design and fabricate test fixtures and procedures capable of testing curved joints, such fixtures would involve additional certification costs for manufacturers and additional cost for NHTSA in the agency's compliance testing. Since the agency is not aware of any data indicating that injuries have been caused disproportionately by curved joint separation, NHTSA believes that the potential costs and technical difficulty of testing curved joints more than outweigh any potential safety benefits. However, the agency will continue to monitor this issue and initiate rulemaking should curved joint separation become a safety problem.

Thomas and GM commented on NHTSA's proposals to test small and complex joints such as those taken from door, window, and other small or inaccessible body panel joints. GM stated that NHTSA's proposals regarding the testing of these joints did not fully clarify specimen preparation procedures for such joints found in passenger vans or van cutaways. The commenters contended that many of the joints in those vehicles cannot be tested under either current or proposed testing procedures. GM suggested that NHTSA further study such types of joints and either further clarify pertinent test procedures or exclude such joints from the requirements of Standard 221 as being nontestable. Thomas asserted that the testing of very short pieces of frame that would require fittings would violate ASTM test principles. Thomas further argued that tests need not be performed in this manner if NHTSA would approve the use of surrogate sampling.

NHTSA agrees that complex joints such as those found in body panels configured to join two or more panels in a single plane in any manner other than linear, as well as other small joints, cannot feasibly be tested under either current or proposed testing procedures. Accordingly, NHTSA has decided that test specimens from joints with discrete fasteners will be taken from 305 mm (12 inch) segments (203 mm (8 inches) at the neck) of only flat body panels. Small and complex joints, as well as trim, decorative parts, floor coverings, and molding strips will not be tested. The agency has no data indicating that any injuries have been caused by failure of those small and complex joints or components, and NHTSA believes that the potential cost of trying to test them would far outweigh any potential safety benefits.

While curved, small and complex joints are excluded from the tensile test requirement because they cannot be accommodated on the test apparatus, they are nevertheless subject to the requirement in S5.1.1 that no body panel, when joined to another body panel, shall have an unattached segment at the joint longer than 203 mm (8 inches). Presumably rivets or other fasteners will be used. This requirement helps ensure that the joints will maintain their integrity in a crash.

D. Test Procedures

This rule makes a number of revisions to Standard No. 221's test procedures, including adopting a provision that support members must remain attached to the specimen during testing; and that the term "approximately perpendicular" be deleted from S6.3.2 and replaced by a provision that the joint be in stress at 90 degrees plus or minus 3 degrees from the joint centerline. The parts of the NPRM proposing these changes did not engender opposition.

In contrast, the proposal that the existing "hourglass" shape of test specimens be eliminated in favor of straight sides was strongly opposed by Thomas and Blue Bird. The idea behind the proposal was that with a simple rectangular shape, more joints could potentially be tested. However, Thomas stated that a straight-sided test specimen was contrary to the shape principles set forth in the ASTM sample testing procedures. Those principles were designed to "even-out" the force distortions induced by the testing device. Blue Bird stated that the proposal to eliminate the hour glass shape was unacceptable, arguing that the test specimens need to be wider at the grips than at the joint section being tested. It said that this width is needed to allow for proper attachment of the specimen to the test grips and to ensure that adequate loading can be properly applied to the joint portion of the specimen.

NHTSA is persuaded by the comments of Thomas and Blue Bird and has decided to retain the hourglass shape of test specimens. The ASTM Standards call for the shape of the test specimen to be narrower at the sample's longitudinal centerline than at the ends of the specimen where the grips are attached. That shape concentrates the load exerted by the grips in the center of the specimen rather than at the edges as in the case of a straight-sided specimen.

Another proposal that generated opposition was the proposed discontinuance of the deduction of the total area of material removed for installation of fasteners (i.e., holes drilled for installation of rivets or screws) in calculating the tensile strength of each joined component. Thomas asserted that the proposal was not logical because the removal of material to make the fastener holes does in fact reduce the cross-sectional area being tested. Further, the commenter said that the change proposed by NHTSA would have the effect of increasing the joint strength required to meet the test. Blue Bird alluded to the NHTSA interpretation letter to that company dated November 28, 1978, which was the basis for the proposal. In that letter, NHTSA stated that subtracting the fastener holes was the proper procedure for calculating the correct area of the sample, but did not explain the basis for that conclusion. Blue Bird urged that subtracting the fastener holes is the correct method of calculating the area of the sample.

NHTSA has carefully considered this issue in light of the comments of Thomas and Blue Bird. It is easier for a sample joint to meet the standard's tensile strength requirement when the deduction is made for fastener holes. As previously discussed in this notice, the required strength of a given joint is based on the tensile strength of the weakest body panel attached at that joint. If the area for fastener holes were deducted from the total area of the test specimen when calculating the strength of the test specimen, the tensile strength of a sample joint could appear higher than the actual tensile strength of that joint. As a result, a given joint could meet the 60 percent tensile requirement of Standard 221 using fewer fasteners than those that would be necessary if the deduction were not made. In setting the 60 percent tensile requirement, the agency determined that minimum value met the need for motor vehicle safety. Since deducting for fastener holes can result in a joint being actually weaker than 60 percent of its weakest member, safety is better served if the deduction were not made. Accordingly, the letter of interpretation issued by this agency on November 28, 1978 that provided for the deduction is hereby rescinded.

E. Other Issues

Relative vs. Minimum Strength

Several comments on NHTSA's ANPRM of June 19, 1987 suggested that NHTSA replace the present relative body joint strength requirement (60 percent of the tensile strength of the weakest joined body panel) with an absolute minimum strength requirement. Specifically, Thomas suggested that the minimum required joint strength for interior body panels be established at 60 percent of the strength of 22 gauge steel, with a minimum tensile strength of 3,103 mPa (45,000 psi). For exterior body panels, Thomas suggested that the requirement be based on 20 gauge steel. The State of Connecticut suggested that a minimum strength requirement be based on materials currently used in school buses that performed favorably relative to those that performed poorly in similar crashes studied by the NTSB. The National Association of State Directors of Pupil Transportation suggested that minimum strength requirements be based on 60 percent of the tensile strength of 18 gauge steel for exterior panels and 20 gauge steel for interior panels, regardless of the materials used. Ford suggested that NHTSA include a minimum strength requirement as an optional alternative to the present relative strength requirement. NHTSA tentatively determined that the standard should be amended to establish a minimum strength standard, but requested comments in the NPRM on the issue.

NHTSA received comments on both sides of this issue. Those favoring establishment of a minimum strength requirement generally agreed that all school buses, regardless of size, should be subject to the same body panel joint strength requirements. Thomas disagreed with the proposal to base a minimum strength requirement on 18 and 20 gauge steel, contending that 20 and 22 gauge steel would suffice. Connecticut agreed with Thomas, but disagreed with Ford's suggestion to make an absolute strength standard optional. The West Virginia Department

of Education urged adoption of the recommendation of the National Standards Committee of the 11th National Conference on School Transportation which met in May 1990. That committee recommended that school bus body panels be constructed of prime commercial quality steel or other metal or material with strength at least equivalent to all-steel, as certified by the manufacturer. The Maryland Departments of Education and Motor Vehicles believed it appropriate to establish a minimum absolute joint strength standard which allows for equivalent strength materials. SPI and the CDE favored basing an absolute strength standard on 18 and 20 gauge steel for external and internal body panels respectively, while the CHP favored a standard governing the minimum strength for the weaker component of each joint, thus preventing the manufacturer from deliberately selecting body panel materials of low tensile strength.

Collins, Blue Bird and MCSSB opposed the proposal to set an absolute minimum strength standard. Collins asserted that the relative strength standard makes the most sense, insofar as the joint strength requirements must be consistent with the parent materials being joined, the expected loads, the probability of occurrence, and the location of the joint. Blue Bird argued that the proposal was neither practical nor objective and stated that some state specifications contain design and performance standards that require manufacturers to provide specific gauges and thicknesses of material for most body components. MCSSB asserted that the relative strength standard is preferable to the absolute standard in that the relative standard provides greater flexibility in material usage and methods which will increase strength. To set an absolute minimum requirement would restrict future developments.

NHTSA carefully considered the comments on this issue and was persuaded by the comments of Collins, Blue Bird, and MCSSB that body panel joint strength should be consistent with the bus manufacturers' choice of body panel materials. School bus manufacturers currently utilize many different thicknesses, or gauges, of steel in constructing their bus bodies, depending on the type and location of the joints. Thicknesses of panels and structural components range from 0.9 millimeters (0.034 inches) to 16 millimeters (.625 inches). Lastly, a minimum standard based on steel gauge would force manufacturers to overdesign their lightly loaded joints, requiring costly new tooling. Many school bus manufacturers are small business entities. Having to build to the heaviest loaded joint or the thickest gauge, somewhere between 18 and 22 gauge steel as suggested by commenters, would result in increases in vehicle weight, manufacturing costs, and operating costs with little or no corresponding increases in school bus safety benefits. Therefore, specifying a minimum absolute strength requirement by specifying a minimum steel gauge would be design restrictive and require significant changes in current industry design practices and procedures.

Some commenters expressed concern that under the relative strength approach, a manufacturer could deliberately select weak materials, thus lowering overall joint strength and reduce the number of fasteners needed for assembly. This has not happened under standard industry practices, however, and this agency has noted no degradation of safety attributable to the relative strength requirement. In its *Safety Study: Crashworthiness of Large Poststandard School Buses*, March 18, 1987, the NTSB found that large school buses with body panel joints that complied with the standard maintained structural integrity very well, even in severe crashes, thus providing effective protection to school bus occupants. Accordingly, NHTSA perceives no safety basis for changing the current relative strength standard in favor of an absolute minimum standard.

Effective Date

49 U.S.C. 30111(d) provides that a standard may not become effective before the 180th day or later than one year after the standard is prescribed, except upon a finding that a longer or shorter lead time is in the public interest. The NPRM proposed an effective date of 18 months after date of publication in the **Federal Register** for this final rule. None of the commenters addressed that issue.

As pointed out above, many if not all small school bus manufacturers currently offer, as an option, small school buses with body panel joints that comply with Standard No. 221 to accommodate those 21 states and the District of Columbia that require such compliance. The agency believes, therefore, that at least some of the tooling needed to comply with the changes mandated by this final rule is already in place. Nevertheless, some additional tooling may be required for all small school buses to be produced in compliance with Standard No. 221. In addition, MAPs in both large and small school buses may require redesign and testing in order to meet the new requirements. Accordingly, NHTSA believes that 18 months is sufficient lead time for manufacturers to accomplish any necessary redesign, retooling, testing, and marketing strategy to meet the requirements promulgated by this final rule, and that the 18 month lead time is therefore in the public interest.

IV. Rulemaking Analyses and Notices

A. Executive Order 12866, Regulatory Planning and Review, and DOT Regulatory Policies and Procedures

NHTSA has evaluated the impacts of this final rule and has determined that it is significant within the meaning of the Department of Transportation's regulatory policies and procedures. This rule was reviewed under E.O. 12866.

The agency has prepared a Final Regulatory Evaluation (FRE) for this rulemaking action and has placed a copy of that FRE in the public docket. A copy of the FRE may be obtained by contacting the Department's Docket at the address given at the beginning of this document.

As explained in the FRE, NHTSA estimates that the average consumer cost per vehicle affected by this final rule will be approximately $221 per large school bus and $343 per small school bus. Those retail price increases include variable costs, fixed factory overhead, tooling, and manufacturers' and dealers' profit margins. The difference in cost between large and small buses arises from the fact that large school buses, which already comply with the body panel joint strength standards of Standard 221, have only to bring their MAPs into compliance. Small school buses, on the other hand, which have heretofore been excluded from the joint strength requirements of Standard 221, must bring their body panel joints and their MAPs into compliance.

Information available to NHTSA indicates that the average combined total of annual sales of large and small school buses is approximately 35,000 units. Approximately 84 percent of those are large and 16 percent are small.

The estimated costs for small school buses were derived as follows. As discussed above, 21 states and the District of Columbia currently require small school buses to comply with the joint strength requirements of Standard No. 221. Sales within those jurisdictions represent 35 percent of small school bus sales. NHTSA estimates that the average cost of bringing body panel joints on 65 percent (@($414) joint strength upgrade) of the small school buses and MAPs on 100 percent (@($74) MAP redesign) of the small school buses into compliance with Standard No. 221 will be $343 per vehicle. (.65($414)+1.00($74)=$343.) The total annual consumer cost for implementing the terms of this final rule for small school buses, therefore, is estimated to be $1,920,800. ($343×16% of 35,000 school buses.) These costs are based on optional equipment costs and may be overstated when required on all vehicles.

As noted above, the agency estimates that the average cost per large school bus will be $222. Thus, the total annual consumer cost of limiting the MAP exclusion in large school buses would average approximately $6,526,800 ($222×84% of 35,000 school buses).

The total annual consumer cost to implement the amendments promulgated by this final rule for both large and small school buses is estimated to be $8,447,600.

NHTSA believes that this rule will reduce 6 to 46 minor to serious injuries (AIS 1–3) annually. It is estimated that 5 to 33 AIS 1–3 laceration-type injuries will be reduced on large school buses due to the narrowing of the MAPs requirements. It is also estimated that the injury reduction for small school buses will be 0 to 3 AIS 1–3 laceration-type injuries and 1 to 10 AIS–3 fracture-type injuries. The methodology used to obtain these benefits can be found in the Final Regulatory Evaluation available in the docket.

B. Regulatory Flexibility Act

NHTSA has also considered the impacts of this final rule under the Regulatory Flexibility Act. NHTSA's analysis appears in the FRE. Based on such evaluation, I certify that the amendments will not have a significant economic impact on a substantial number of small entities.

The Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires each agency to evaluate the potential effects of its rules on small businesses, small organizations, and small governmental jurisdictions. The small businesses and organizations most likely to be affected by this final rule are: (1) School bus manufacturers; (2) school bus dealers and distributors; and (3) public and private school bus transportation owners and operators.

The Small Business Administration (SBA) defines a bus manufacturer with less than 500 employees as a small business (13 CFR part 121). Using that definition, the agency believes that many of the school bus manufacturers qualify as small businesses. As discussed above, most bus manufacturers known by NHTSA to build small school buses currently offer small school buses with complying body panel joints as an option. The manufacturers produce these vehicles to accommodate the 21 states and the District of Columbia which require that all school buses comply with Standard No. 221. NHTSA believes, therefore, that no new manufacturing techniques or tooling will be required by school bus manufacturers in order to build school buses that comply with the requirements of Standard No. 221. Further, costs, as a percentage of the total school bus manufacturing cost, will not increase significantly. Thus, any impact on total school bus sales will be negligible. On balance, the agency anticipates little measurable impact on school bus manufacturers' revenue levels, profitability, or employment.

The SBA defines a motor vehicle retailer with less than $11,500,000 in annual receipts as a small business. There are approximately 465 school bus dealers and distributors in the United States. Over the past 6 years (1991–1996), an annual average of approximately 35,000 school buses were sold, representing an average of 75 buses per dealer. In order to reach the threshold of $11,500,000 in annual sales receipts, the average dealer would have to sell a much larger number (270) of large school buses annually, assuming a cost of $45,280 per unit. Thus, most school bus dealers are probably small businesses. Because of the negligible cost impact on manufacturers, the agency also anticipates little measurable impact on retailers' revenue levels, profitability, or employment.

School bus operators will probably be the group most affected by the amendments to Standard No. 221 set forth in this final rule because of increased school bus purchase prices as discussed above, and possibly increased maintenance costs. The modest increase in purchase prices is not expected to influence significantly the demand for new school bus products. The sales weighted average consumer cost increase of $222 for large school buses is 0.49 percent of the price of a new 66 passenger school bus with an approximate $45,280 retail purchase price. For small school buses, the estimated incremental consumer cost of $343 per affected vehicle represents 1.21 percent of the retail price of a new $28,300 small school bus.

It is difficult to predict what impact the projected retail price increases discussed above will have on school bus purchases by states and/or school districts. There is a strong and continuing demand for school buses to transport school children and no alternative to the purchase of those vehicles. On the one hand, for many states and school districts operating on tight budgets, a 1.21 percent rise in the prices of small school buses and a 0.49 percent increase in the prices of large school buses may result in a proportionate reduction in new school bus sales. On the other hand, school districts may offset price increases by purchasing school buses with less optional equipment, such as luggage racks, extra batteries, or upgraded interiors. Even assuming the "tight budget" scenario, the agency believes that new school bus sales revenues will remain relatively constant. Thus, the net impact on school bus production and sales should be negligible.

C. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), the agency notes that there are no collection of information requirements associated with this final rule.

D. National Environmental Policy Act

NHTSA has analyzed this final rule for the purposes of the National Environmental Policy Act. The agency has determined that implementation of this action will not have any significant impact on the quality of the human environment.

E. Executive Order 12612, Federalism

NHTSA has analyzed this final rule in accordance with the principles and criteria contained in Executive Order 12612, Federalism, and has determined that this final rule has borderline federalism implications. The agency's initial determination, however, is that such implications are not sufficient to warrant preparation of a Federalism Assessment.

F. Civil Justice Reform

This final rule does not have any retroactive effect. Under 49 U.S.C. 30103(b), whenever a Federal motor vehicle safety standard is in effect, a state or political subdivision may prescribe or continue in effect a standard applicable to the same aspect of performance of a motor vehicle only if the standard is identical to the Federal standard. However, the United States Government, a state or political subdivision of a state may prescribe a standard for a motor vehicle or motor vehicle equipment obtained for its own use that imposes a higher performance requirement than that required by the Federal standard. 49 U.S.C. 30161 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. A petition for reconsideration

or other administrative proceedings is not required before parties may file suit in court.

List of Subjects in 49 CFR Part 571

Motor vehicle safety, Reporting and recordkeeping requirements, Tires.

In consideration of the foregoing, 49 CFR 571.221 is amended as follows:

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

1. The authority citation for Part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117, and 30166; delegations of authority at 49 CFR 1.50.

2. Standard No. 221 is amended by revising S3; revising the definitions of "body panel joint" and "bus body" in S4; adding, in alphabetical order, the definitions of "maintenance access panel," "passenger compartment" and "serviceable component" to S4; and revising S5 and S6, to read as follows:

§ 571.221 Standard No. 221, School Bus Body Joint Strength.

* * * * *

S3. *Application.* This standard applies to school buses.

S4. *Definitions.*

* * * * *

Body panel joint means the area of contact or close proximity between the edges of a body panel and another body component, including but not limited to floor panels, and body panels made of composite materials such as plastic or plywood.

Bus body means that portion of a bus that encloses the bus occupant space, including the floor and firewall (the body panel separating the engine compartment from the occupant space), but excluding the bumpers and chassis frame and any structure forward of the forwardmost point of the windshield mounting.

* * * * *

Maintenance access panel means a body panel which must be moved or removed to provide access to one or more serviceable component(s).

Passenger compartment means space within the school bus interior that is between a vertical transverse plane located 762 mm in front of the forwardmost passenger seating reference point and including a vertical transverse plane tangent to the rear interior wall of the bus at the vehicle centerline.

Serviceable component means any part of the bus, of either a mechanical or electrical nature, which is explicitly identified by the bus chassis and/or body manufacturer in the owner's manual or factory service manual as requiring routine maintenance actions at intervals of one year or less. Tubing, wires and harnesses are considered to be serviceable components only at their attachments.

S5. *Requirements.*

S5.1 Except as provided in S5.2, each body panel joint shall meet S5.1.1 and S5.1.2.

S5.1.1 Body panels attached to each other shall have no unattached segment at the joint longer than 203 mm.

S5.1.2 When tested in accordance with the procedure of S6, each body panel joint shall hold each body panel to the component to which it is joined when subjected to a force that equates to 60 percent of the tensile strength of the weakest joined body panel, determined pursuant to S6.2.

S5.2 *Exclusions.*

S5.2.1 The requirements of S5.1.1 and S5.1.2 do not apply to—

(a) Any interior maintenance access panel which lies forward of the passenger compartment, or, which exceeds 305 mm when measured across any two points diametrically on opposite sides of the opening.

(b) Trim and decorative parts which do not contribute to the strength of the joint, support members such as rub rails which are entirely outside of body panels, doors and windows, ventilation panels, and engine access covers.

S5.2.2 The requirements of S5.1.2 do not apply to joints from which a test specimen of the dimensions specified in Figure 1 can not be obtained.

S6 *Procedure.*

S6.1 *Preparation of the test specimen.*

S6.1.1 If a body panel joint is 203 mm long or longer, cut a test specimen that consists of any 203 mm segment of the joint, together with a portion of the bus body whose dimensions are those specified in Figure 1, so that the specimen's centerline is perpendicular to the joint at the midpoint of the joint segment. Where the body panel joint is not fastened continuously, select the segment so that it does not bisect a spot weld or a discrete fastener. Support members which contribute to the strength of a body panel joint, such as rub rails on the outside of body panels or underlying structure attached to joint members, shall remain attached to the test specimen, except that material may be removed from the support members as necessary to clear the gripping areas of the joint members being tested.

S6.1.2 [Reserved]

S6.1.3 Prepare the test specimen in accordance with the preparation procedures specified in the 1989 edition of the Annual Book of American Society for Testing and Materials (ASTM) Standards.

S6.2 *Determination of minimum allowable strength.* For purposes of determining the minimum allowable joint strength, determine the tensile strengths of the joined body components as follows:

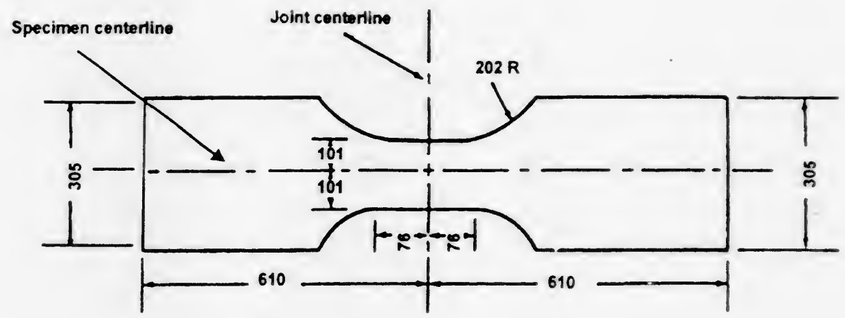
(a) If the mechanical properties of a joint component material are specified by the ASTM in the 1989 Annual Book of ASTM Standards, the lowest value of that material's tensile strength per unit of area shown in that source shall be used.

(b) If the mechanical properties of a material are not specified by the ASTM in the 1989 Annual Book of ASTM Standards, determine its tensile strength by cutting a sheet specimen from outside the joint region of the bus body in accordance with Figure 1 of E 8–89 Standard Test Methods of Tension Testing of Metallic Materials, in Volume 03.01 of the 1989 Annual Book of ASTM Standards, and by testing it in accordance with S6.3.

(c) The cross sectional area of material removed to facilitate the installation of fasteners shall be used in the determination of the tensile strength of the weakest joined body panel.

S6.3 *Strength test.*

S6.3.1 The joint specimen is gripped on opposite sides of the joint in a tension testing machine in accordance with the 1989 Annual Book of ASTM Standards.



S6.3.2 Adjust the testing machine grips so that the applied force on the joint is at 90 degrees plus or minus 3 degrees from the joint centerline, as shown in Figure 1.

S6.3.3 A tensile force is applied to the specimen by separating the heads of the testing machine at any uniform rate not less than 3 mm and not more than 10 mm per minute until the specimen separates.

3. Figure 1 is revised to read as follows:

Proposed Rules

Federal Register
Vol. 63, No. 214
Thursday, November 5, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Part 701

Organization and Operations of Federal Credit Unions

AGENCY: National Credit Union Administration (NCUA).

ACTION: Notice of proposed rulemaking.

SUMMARY: The NCUA Board proposes to amend its regulation dealing with newly chartered and troubled credit unions that requires prior notice of the appointment or employment of directors and senior officers. The proposed amendment clarifies when the notice period commences and when the new director or senior officer may begin service. This action is in accordance with section 914 of the Financial Institutions Reform, Recovery , and Enforcement Act (FIRREA) of 1989.

Additionally, the NCUA Board has adopted a new rating system for corporate credit unions, the Corporate Risk Information System (CRIS). The proposed amendment clarifies that the definition of a "troubled" corporate credit union will be based on CRIS, or on CAMEL for those state-chartered corporate credit unions in states that do not adopt CRIS. Clarification is also added to reflect that corporate credit unions should submit notices of changes in officials or senior management to the Director of the Office of Corporate Credit Unions.

DATES: Comments must be received on or before February 3, 1999.

ADDRESSES: Direct comments to Becky Baker, Secretary of the Board. Mail or hand-deliver comments to: National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428. Fax comments to (703) 518–6319. Please send comments by one method only.

FOR FURTHER INFORMATION CONTACT: Margaret E. McPartlin, Trial Attorney, Litigation Division, Office of General Counsel, at the above address or telephone: (703) 518–6566 or David A. Shetler, Corporate Program Specialist, Office of Corporate Credit Unions, at the above address or telephone: (703) 518–6646.

SUPPLEMENTARY INFORMATION:

Background

NCUA has a policy of periodically reviewing its regulations to "update, clarify and simplify existing regulations and eliminate redundant and unnecessary provisions."

IRPS 87–2, Developing and Reviewing Government Regulations. 52 FR 35231 (September 18, 1987). As part of its regulatory review program, NCUA reviewed § 701.14 of its regulation, 12 CFR 701.14, to determine whether the language of the regulation was clear and effective. Section 701.14 of NCUA's Regulations requires that federally insured credit unions which have been chartered less than two years or fall within the regulatory definition of a "troubled credit union," file a notice with NCUA prior to adding or replacing a member of the board of directors or a committee member, or employing or changing the responsibilities of an individual to a position as a senior executive officer. As a result of NCUA review and questions from credit unions, as well as our regional office staff, the Board proposes this amendment to clarify the language contained in § 701.14(d)(1).

There has been confusion as to when the Regional Director accepts the notice of a proposed change in an official or senior officer; how long the Regional Office has to process the notice; and when the official or senior officer may commence work. The proposed amendment clarifies the language in § 701.14(d)(1) to provide that the Regional Director will determine when the notice is complete. The proposal would provide the Regional Director with up to ten working days to make this determination. The Regional Director can ask for additional information if a notice is incomplete. Once the Regional Director has a complete notice, the credit union will receive written notification that the complete notice is ready for processing. The Regional Director then has up to 30 calendar days to issue a decision approving or disapproving the proposed official or senior officer. If after the expiration of the 30 days the Regional Director has not issued written notification of approval or disapproval, the official or senior officer is considered approved and service may begin.

The NCUA Board has adopted the new CRIS rating system for corporate credit unions. The proposed amendment clarifies that a CRIS rating of 4 or 5 will be one of the conditions that defines a "troubled" federal corporate credit union. As is the case for all federally insured state credit unions in the present rule, the rating assigned by the state supervisor is utilized in determining the definition of a "troubled" federally insured, state-chartered corporate credit union. Language is added to clarify that a 4 or 5 CAMEL composite rating by the state supervisor will be a condition that defines a "troubled" federally insured, state-chartered corporate credit union, unless that state has adopted the CRIS system. If the state has not adopted either system, NCUA will determine and apply a CRIS rating using the corporate credit union's core exam workpapers.

The existing language of § 701.14 does not indicate that corporate credit unions should submit notices of changes in officials or senior management to the Director of the Office of Corporate Credit Unions (OCCU). Language has been added to the proposed amendment to clarify that corporate credit unions will submit notices to the Director of OCCU and that the Director of OCCU will be the NCUA official that takes action on such notices.

Regulatory Procedures

Regulatory Flexibility Act

The Regulatory Flexibility Act requires NCUA to prepare an analysis to describe any significant economic impact any proposed regulation may have on a substantial number of small entities (primarily those under $1 million in assets). The NCUA Board has determined and certifies that the proposed rule, if adopted, will not have a significant economic impact on a substantial number of small credit unions. Accordingly, the Board has determined that a Regulatory Flexibility Analysis is not required.

Paperwork Reduction Act

NCUA has determined that the proposed rule does not increase paperwork requirements under the Paperwork Reduction Act of 1995 and regulations of the Office of Management and Budget.

Executive Order 12612

Executive Order 12612 requires NCUA to consider the effect of its actions on state interests. NCUA has determined that the proposed amendment does not constitute a significant regulatory action for the purposes of the Executive Order.

List of Subjects in 12 CFR Part 701

Credit unions, Senior executive officials.

By the National Credit Union Administration Board on October 26, 1998.

Becky Baker,

Secretary of the Board.

For the reasons set forth in the preamble, it is proposed that 12 CFR part 701 be amended as follows:

PART 701—ORGANIZATION AND OPERATION OF FEDERAL CREDIT UNIONS

1. The authority citation for part 701 continues to read as follows:

Authority: 12 U.S.C. 1752(5), 1755, 1756, 1757, 1759, 1761a, 1761b, 1766, 1767, 1782, 1784, 1787, and 1789. Section 701.6 is also authorized by 31 U.S.C. 3717. Section 701.31 is also authorized by 15 U.S.C. 1601 et seq., 42 U.S.C. 1861 and 42 U.S.C. 3601–3610. Section 701.35 is also authorized by 42 U.S.C. 4311–4312.

2. Section 701.14 is amended as follows:

a. Revise the introductory text of paragraph (b)(3) and add paragraph (b)(4).

b. Revise paragraph (c)(2).

c. Amend paragraph (d)(1) by adding two new sentences after the first sentence and by removing the last three sentences and adding five sentences.

The revisions and additions to § 701.14 read as follows:

§ 701.14 Change in official or senior executive officer in credit unions that are newly chartered or are in troubled condition.

* * * * *

(b) * * *

(3) Except as provided in paragraph (4) of this section for corporate credit unions, "troubled condition" means any insured credit union that has one or a combination of the following conditions:

* * * * *

(4) In the case of a corporate credit union, *troubled condition* means any insured corporate credit union that has one or a combination of the following conditions:

(i) Has been assigned:

(A) A 4 or 5 Corporate Risk Information System (CRIS) rating in either the Financial Risk or Risk Management composites by NCUA for a federal corporate credit union, or

(B) An equivalent 4 or 5 CAMEL composite rating by the state supervisor in the case of a federally insured, state-chartered corporate credit union, or an equivalent 4 or 5 CRIS rating in either the Financial Risk or Risk Management composites by the state supervisor in the case of a federally insured, state-chartered corporate credit union in those states that have adopted the CRIS system, or

(C) A 4 or 5 CRIS rating in either the Financial Risk or Risk Management composites by NCUA based on core workpapers received from the state supervisor in the case of a federally insured, state-chartered credit union in a state that does not use either the CAMEL or CRIS systems. In this case, the state supervisor will be notified in writing by the Director of the Office of Corporate Credit Unions that the corporate credit union has been designated by NCUA as a troubled institution;

* * * * *

(c) * * *

(2) The credit union meets the definition of troubled condition as set forth in paragraph (b) (3) or (4) of this section.

* * * * *

(d) *Procedures for notice of proposed change in official or senior executive officer.*—(1) *Filing and acceptance.* * * * In the case of a corporate credit union, notice shall be filed with the Director of the Office of Corporate Credit Unions. Additional references herein to Regional Director will, for corporate credit unions, mean the Director of the Office of Corporate Credit Unions. * * * Within ten business days the Regional Director will review the notice and determine whether the notice is complete. If the notice is not complete, the Regional Director can request additional information. The credit union will receive written notification of the date that the notice is deemed complete and ready for processing. Within 30 calendar days from the date a notice is deemed complete, the Regional Director will send a written notification to the individual and the credit union of disapproval or approval of the proposed official or employee. If the Regional Director fails to issue a written notification within 30 calendar days, the individual is considered approved and service may begin.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 98–ANE–66–AD]

RIN 2120–AA64

Airworthiness Directives; Pratt & Whitney PW4000 Series Turbofan Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This proposal would require revisions to the Time Limits Section (TLS) of the manufacturer's Engine Manuals (EMs) for Pratt & Whitney (PW) PW4000 series turbofan engines to include required enhanced inspection of selected critical life-limited parts at each piece-part exposure. This proposal would also require an air carrier's approved continuous airworthiness maintenance program to incorporate these inspection procedures. Air carriers with an approved continuous airworthiness maintenance program would be allowed to either maintain the records showing the current status of the inspections using the record keeping system specified in the air carrier's maintenance manual, or establish an acceptable alternate method of record keeping. This proposal is prompted by an FAA study of in-service events involving uncontained failures of critical rotating engine parts which indicated the need for improved inspections. The improved inspections are needed to identify those critical rotating parts with conditions, that if allowed to continue in service, could result in uncontained failures. The actions specified by this proposed AD are intended to prevent critical life-limited rotating engine part failure, which could result in an uncontained engine failure and damage to the airplane.

DATES: Comments must be received by February 3, 1999.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), New England Region, Office of the Regional Counsel, Attention: Rules Docket No. 98–ANE–66–AD, 12 New England Executive Park,

Burlington, MA 01803–5299. Comments may also be sent via the Internet using the following address: "9-ad-engineprop@faa.dot.gov". Comments sent via the Internet must contain the docket number in the subject line. Comments may be inspected at this location between 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Peter White, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803–5299; telephone (781) 238–7128, fax (781) 238–7199.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–ANE–66–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, New England Region, Office of the Regional Counsel, Attention: Rules Docket No. 98–ANE–66–AD, 12 New England Executive Park, Burlington, MA 01803–5299.

Discussion

A recent FAA study analyzing 15 years of accident data for transport category airplanes identified several failure mode root causes that can result in serious safety hazards to transport category airplanes. This study identified uncontained failure of critical life-limited rotating engine parts as the leading engine-related safety hazard to airplanes. Uncontained engine failures have resulted from undetected cracks in rotating parts that initiated and propagated to failure. Cracks can originate from causes such as unintended excessive stress from the original design, or they may initiate from stresses induced from material flaws, handling damage, or damage from machining operations. The failure of rotating parts can present a significant safety hazard to the airplanes by release of high energy fragments that could injure passengers or crew by penetration of the cabin, damage flight control surfaces, sever flammable fluid lines, or otherwise compromise the airworthiness of the airplane.

Accordingly, the FAA has developed an intervention strategy to significantly reduce uncontained engine failures. This intervention strategy was developed after consultation with industry and will be used as a model for future initiatives. This intervention strategy is to conduct enhanced, nondestructive inspections of fan disks which could most likely result in a safety hazard to the airplane in the event of a disk fracture. The need for additional rule making is also being considered by the FAA. Future ADs may be issued introducing additional intervention strategies to further reduce or eliminate uncontained engine failures.

Properly focused enhanced inspections require identification of the parts whose failure presents the highest safety hazard to the airplane, identifying the most critical features to inspect on these parts, and utilizing inspection procedures and techniques that improve crack detection. The FAA, with close cooperation of the engine manufacturers, has completed a detailed analysis that identifies the most safety significant parts and features, and the most appropriate inspection methods.

Critical life-limited high energy rotating parts are currently subject to some form of recommended crack inspection when exposed during engine maintenance or disassembly. As a result of this AD, the inspections currently recommended by the manufacturer will become mandatory for those parts listed in the compliance section. Furthermore, the FAA intends that additional mandatory enhanced inspections resulting from this AD serve as an adjunct to the existing inspections. The FAA has determined that the enhanced inspections will significantly improve the probability of crack detection while the parts are disassembled during maintenance. All mandatory inspections must be conducted in accordance with detailed inspection procedures prescribed in the manufacturer's Engine Cleaning, Inspection, and Repair (CIR) manuals.

Additionally, this AD allows for air carriers operating under the provisions of 14 CFR part 121 with an FAA-approved continuous airworthiness maintenance program, and entities with whom those air carriers make arrangements to perform this maintenance, to verify performance of the enhanced inspections by retaining the maintenance records that include the inspections resulting from this AD, provided that the records include the date and signature of the person performing the maintenance action. These records must be retained with the maintenance records of the part, engine module, or engine until the task is repeated. This will establish a method of record preservation and retrieval typical to those in existing continuous airworthiness maintenance programs. Instructions must be included in an air carrier's maintenance manual providing procedures on how this record preservation and retrieval system will be implemented and integrated into the air carrier's record keeping system.

For engines or engine modules that are approved for return to service by an authorized FAA-certificated entity and that are acquired by an operator after the effective date of this AD, the mandatory enhanced inspections need not be accomplished until the next piece-part opportunity. For example, there is no need for an operator to disassemble to piece-part level an engine or module returned to service by an FAA-certificated facility simply because that engine or module was previously operated by an entity not required to comply with this AD. Furthermore, the FAA intends for operators to perform the enhanced inspections of these parts at the next piece-part opportunity following the initial acquisition, installation, and removal of the part following the effective date of this AD. For piece parts that have not been approved for return to service prior to the effective date of this AD, the FAA does intend that the mandatory enhanced inspections required by this AD be performed before such parts are approved for return to service. Piece parts that have been approved for return to service prior to the effective date of this AD may be installed; however,

enhanced inspection will be required at the next piece-part opportunity.

This proposal would require, within the next 30 days after the effective date of this AD, revisions to the Time Limits Section (TLS) of the Engine Manuals for PW4000 series turbofan engines, and, for air carriers, the approved continuous airworthiness maintenance program. Pratt & Whitney, the manufacturer of PW4000 series turbofan engines, used on 14 CFR part 25 airplanes has provided the FAA with a detailed proposal that identifies and prioritizes the critical life-limited rotating engine parts with the highest potential to hazard the airplane in the event of failure, along with instructions for enhanced, focused inspection methods. The enhanced inspections resulting from this AD will be conducted at piece-part opportunity, as defined below in the compliance section, rather than specific time inspection intervals.

There are approximately 1,900 engines of the affected design in the worldwide fleet. The FAA estimates that 450 engines installed on airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 8 work hours for the fan disk inspection. The average labor rate is $60 per work hour. Based on these figures, and using recent shop visit rate data, the total cost impact of the proposed AD on U.S. operators is estimated to be $70,000 per year.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Pratt & Whitney: Docket 98–ANE–66–AD.

Applicability: Pratt & Whitney PW4050, PW4052, PW4056, PW4060, PW4060A, PW4062, PW4060C, PW4152, PW4156, PW4156A, PW4158, PW4160, PW4460, PW4462, PW4164, PW4168, PW4074, PW4074D, PW4077, PW4077D, PW4084, PW4084D, and PW4090 series turbofan engines, installed on but not limited to Airbus A300, A310, and A330 series, Boeing 747, 767, 777 series, and McDonnell Douglas MD–11 series airplanes.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, If the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent critical life-limited rotating engine part failure, which could result in an uncontained engine failure and damage to the airplane, accomplish the following:

(a) Within the next 30 days after the effective date of this AD, revise the manufacturer's Time Limits section of the manufacturer's Engine Manual, Part Numbers (P/Ns) 50A605, 50A443, 51A342, 50A822, 51A751, and 51A345, as applicable, for Pratt & Whitney PW4050, PW4052, PW4056, PW4060, PW4060A, PW4062, PW4060C, PW4152, PW4156, PW4156A, PW4158, PW4160, PW4460, PW4462, PW4164, PW4168, PW4074, PW4074D, PW4077, PW4077D, PW4084, PW4084D, and PW4090 series turbofan engines, and for air carrier operations revise the approved continuous airworthiness maintenance program, by adding the following:

"MANDATORY INSPECTIONS

(1) Perform inspections of the following parts at each piece-part opportunity in accordance with the instructions provided in the PW4000 series Engine Cleaning, Inspection, and Repair (CIR) Manuals:

Part nomen	P/N	Manual section	Inspection	CIR manual
Hub, LPC Assembly	50B221 (50B201 Detail)	72–31–07	02	51A357
Hub, LPC Assembly	50B321 (50B301 Detail)	72–31–07	02	51A357
Hub, LPC Assembly	51B321 (51B301 Detail)	72–31–07	02	51A357
Hub, LPC Assembly	52B021 (52B001 Detail)	72–31–07	02	51A357
Hub, LPC Assembly	51B631 (50B601 Detail)	72–31–07	02	51A750
Hub, LPC Assembly	51B821 (51B801 Detail)	72–31–07	02	51A750
Hub, LPC Assembly	52B521 (52B501 Detail)	72–31–07	02	51A750

(2) For the purposes of these mandatory inspections, *piece-part opportunity* means:

(i) The part is considered completely disassembled when done in accordance with the disassembly instructions in the engine manufacturer's Engine Manual; and

(ii) The part has accumulated more than 100 cycles in service since the last piece-part opportunity inspection, provided that the part was not damaged or related to the cause for its removal from the engine."

(b) Except as provided in paragraph (c) of this AD, and notwithstanding contrary provisions in section 43.16 of the Federal Aviation Regulations (14 CFR 43.16), these mandatory inspections shall be performed only in accordance with the Time Limits

section of the applicable PW4000 series Engine Manuals.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Engine Certification Office. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector (PMI), who may add comments and then send it to the Engine Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(e) The records of the mandatory inspections required as a result of revising the Time Limits section of the PW4000 series Engine Manuals and the air carrier's continuous airworthiness maintenance program as provided by paragraph (a) of this AD shall be maintained by FAA-certificated air carriers which have an approved continuous airworthiness maintenance program in accordance with the record keeping system currently specified in their manual required by sections 121.369 of the Federal Aviation Regulations (14 CFR 121.369); or, in lieu of the record showing the current status of each mandatory inspection required by sections 121.380(a)(2)(vi) of the Federal Aviation Regulations (14 CFR 121.380(a)(2)(vi)), certificated air carriers may establish an approved alternate system of record retention that provides a method for preservation and retrieval of the maintenance records that include the inspections resulting from this AD, and include the policy and procedures for implementing this alternate method in the air carrier's maintenance manual required by sections 121.369 (c) of the Federal Aviation Regulations (14 CFR 121.369 (c)); however, the alternate system must be accepted by the appropriate PMI and require the maintenance records be maintained either indefinitely or until the work is repeated.

Note 3: These record keeping requirements apply only to the records used to document the mandatory inspections required as a result of revising the Time Limits section of the PW4000 series Engine Manuals as provided in paragraph (a) of this AD, and do not alter or amend the record keeping requirements for any other AD or regulatory requirement.

Issued in Burlington, Massachusetts, on October 30, 1998.

David A. Downey,

Assistant Manager, Engine and Propeller Directorate, Aircraft Certification Service.

RIN 0910–AB42

Electronic Reporting of Postmarketing Adverse Drug Reactions; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: The Food and Drug Administration (FDA) is announcing that it is considering preparing a proposed rule that would require applicants, manufacturers, packers, and distributors of marketed human drugs and licensed biological products to submit postmarketing expedited individual case safety reports and individual case safety reports contained in periodic safety reports to the agency electronically using standardized medical terminology, data elements, and electronic transmission standards recommended by the International Conference on Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH). The proposed rule would help harmonize reporting of postmarketing safety information worldwide and expedite detection of safety problems for marketed drugs, thus enhancing FDA's ability to protect and promote public health. FDA is soliciting comments from interested persons to assist with the development of the proposed rule. The agency is specifically seeking comments on whether exemptions from any electronic safety reporting requirements should be granted to any entity and, if so, the basis on which they should be granted, the cost benefits or burdens of such requirements, and timeframes for implementing the requirements.

DATES: Written information and comments by February 3, 1999.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville MD 20852.

FOR FURTHER INFORMATION CONTACT: Thomas C. Kuchenberg, Center for Drug Evaluation and Research (HFD–7), 5600 Fishers Lane, Rockville, MD 20857, 301–594–5621 (Internet electronic mail: kuchenbergt@cder.fda.gov) or Marcel Salive, Center for Biologics Evaluation and Research (HFM–220), 1401 Rockville Pike, Rockville, MD 20852, 301–827–3974 (Internet electronic mail: salive@cber.fda.gov).

SUPPLEMENTARY INFORMATION:

I. Background

A. International Harmonization

For several years, FDA has cooperated with industry associations and the regulatory authorities of certain other nations to promote international harmonization of regulatory requirements. Much of this effort has been coordinated through ICH, which is facilitating the harmonization of technical requirements for the registration of pharmaceutical products among three regions: The European Union, Japan, and the United States. The six ICH sponsors are: the European Commission, the European Federation of Pharmaceutical Industries Associations, the Japanese Ministry of Health and Welfare, the Japanese Pharmaceutical Manufacturers Association, the Centers for Drug Evaluation and Research and Biologics Evaluation and Research at FDA, and the Pharmaceutical Research and Manufacturers of America. The ICH Secretariat, which coordinates the preparation of documentation, is provided by the International Federation of Pharmaceutical Manufacturers Associations (IFPMA).

The ICH Steering Committee includes representatives from each of the ICH sponsors and the IFPMA, as well as observers from the World Health Organization (WHO), the Canadian Therapeutic Products Directorate, and the European Free Trade Area.

One ICH initiative is to harmonize certain safety reporting requirements of the three regions. Through the ICH process, recommendations have been developed regarding the content, format, and reporting frequency for expedited individual case safety reports and periodic safety reports for human drugs and biological products. In the **Federal Register** of March 1, 1995 (60 FR 11284), FDA published an ICH final guidance entitled "Clinical Safety Data Management: Definitions and Standards for Expedited Reporting" (the ICH E2A guidance). In the **Federal Register** of May 19, 1997 (62 FR 27470), FDA published an ICH final guidance entitled "Clinical Safety Data Management: Periodic Safety Update Reports for Marketed Drugs" (the ICH E2C guidance). Under the auspices of ICH, standards for electronic submission of safety information have been developed, as described in the Appendices, including a standard medical terminology for regulatory purposes, ICH M1 (see Appendix A in section VII.A of this document); electronic standards for the transfer of regulatory information, ICH M2 (see Appendix B in section VII.B of this document); and standardized data elements for transmission of individual case safety reports, ICH E2B format (see Appendix C in section VII.C of this document). FDA believes the changes recommended by ICH will result in more effective and efficient safety reporting to regulatory authorities worldwide.

There is now international agreement on the major components for standardizing electronic transmission of certain safety reports, and worldwide implementation of this initiative has begun.

B. Postmarketing Safety Reports

Under existing regulations, manufacturers, packers, distributors, applicants of approved new and abbreviated marketing applications for drugs, and licensed manufacturers of biological products must submit expedited individual case safety reports of postmarketing adverse drug experiences under §§ 310.305, 314.80, 314.98, and 600.80 (21 CFR 310.305, 314.80, 314.98, and 600.80). Applicants and licensed manufacturers must also submit periodic reports of postmarketing adverse drug experiences under §§ 314.80, 314.98, and 600.80.

Expedited individual case safety reports are required to be submitted for each adverse drug experience that is both serious and unexpected, whether foreign or domestic, as soon as possible, but in no case later than 15 calendar days of initial receipt of the information (§§ 310.305(c)(1), 314.80(c)(1)(i), and 600.80(c)(1)(i)). Followup reports to these expedited reports are required to be submitted within 15 calendar days of receipt of new information or as requested by FDA (§§ 310.305(c)(2), 314.80(c)(1)(ii), and 600.80(c)(1)(ii)).

Presently, periodic reports are required to be submitted at quarterly intervals for 3 years from the date of approval of the application and annually thereafter (§§ 314.80(c)(2)(i) and 600.80(c)(2)(i)). The periodic report is required to contain: (1) A narrative summary and analysis of the information in the report and an analysis of the expedited individual case safety reports submitted during the reporting interval, (2) individual case safety reports for each adverse drug experience not previously reported, and (3) a history of actions taken since the last periodic report (§§ 314.80(c)(2)(ii) and 600.80(c)(2)(ii)).

Each adverse drug experience is required to be submitted to the agency on an FDA Form 3500A (§§ 310.305(d), 314.80(f), and 600.80(f)). Foreign events may be submitted either on an FDA Form 3500A or, if preferred, on a CIOMS (Council for International Organizations of Medical Sciences) I form.

FDA is in the process of revising these regulations to be consistent with safety reporting recommendations developed by ICH. In the **Federal Register** of October 27, 1994 (59 FR 54046), FDA published a proposed rule to amend its postmarketing expedited and periodic safety reporting requirements, as well as others, to implement international standards and to facilitate the reporting of adverse drug experiences. In the **Federal Register** of October 7, 1997 (62 FR 52237), FDA published a final rule amending its premarketing and postmarketing expedited safety reporting regulations to implement certain recommendations in the ICH E2A guidance on definitions and standards for expedited reporting. At this time, the agency is considering other recommendations in the ICH E2A guidance and plans to propose additional amendments to its postmarketing expedited safety reporting regulations. With regard to the amendments to the postmarketing periodic adverse drug experience reporting requirements proposed on October 27, 1994, FDA has decided to repropose these amendments based on recommendations in the ICH E2C guidance on postmarketing periodic safety update reports. In developing the reproposal, FDA will consider comments submitted in response to the proposed rule of October 27, 1994, regarding postmarketing periodic adverse experience reports.

II. Proposed Policy

FDA is considering preparing a proposed rule that would require that applicants, manufacturers, packers and distributors of marketed human drugs and licensed biological products submit postmarketing expedited individual case safety reports and individual case safety reports contained in periodic safety reports to the agency electronically rather than on paper. The proposed rule would require that the electronic submission of postmarketing expedited and periodic individual case safety reports be precoded in the standardized M1 international medical terminology, use the E2B format, and be transmitted using M2 specifications. FDA may also propose requiring that textual materials contained within periodic safety reports (e.g., narrative summary and analyses, history of actions taken) be submitted electronically.

In the **Federal Register** of March 20, 1997 (62 FR 13430), FDA published a final rule in part 11 (21 CFR part 11) providing the conditions under which the agency will accept electronic signatures, electronic records, and handwritten signatures executed to electronic records as equivalent to paper records and handwritten signatures executed to paper records. Part 11 applies to any required records submissions under the Federal Food, Drug, and Cosmetic Act, the Public Health Service Act, or Title 21 of the Code of Federal Regulations. Part 11 provides that for records required to be maintained but not submitted to the agency, electronic records and accompanying signatures may be used in lieu of traditional records and signatures provided certain requirements are met. Electronic records and accompanying signatures that are submitted to the agency must meet the requirements of part 11 and must also be identified in public docket number 92S–0251 as the type of submission the agency is prepared to accept electronically. It is important to note that the use of electronic records, as well as their submission to FDA under part 11, is voluntary.

However, for a number of reasons, FDA believes that it is essential to mandate the electronic submission of postmarketing expedited and periodic individual case safety reports as well as the use of international standards for electronic safety reporting.

The rapid identification and dissemination of information about emerging problems with individual drugs or harmful drug interactions is central to the agency's mission to protect and promote public health and safety. First, receipt of safety information electronically will vastly increase FDA's ability to quickly analyze data and identify emerging safety problems. Second, the agency believes that use of international standards for electronic safety reporting will eliminate the costs to industry associated with maintaining multiple systems designed to meet the needs of different terminologies, data elements, and electronic transmission standards of different regulatory authorities, and would thereby greatly enhance the utility of the system. Third, electronic submissions will improve the speed and efficiency of industry and agency operations and enhance the quality of the safety data.

III. Solicitation of Comments

All interested persons are invited to submit to FDA their comments on any aspect of this advance notice of proposed rulemaking (ANPRM). In particular, FDA is seeking public comment on the following subjects:

1. Exemptions

The agency believes that the electronic reporting of postmarketing individual case safety reports will be welcomed by most of industry. The agency is aware, however, that some entities may have difficulty adapting existing systems to the requirements of a mandatory standardized electronic reporting system. The agency seeks guidance on whether exemptions should be granted and, if so, what considerations should be used to determine whether requesting entities may continue submitting postmarketing individual case safety reports in a paper format and whether any such exemptions should continue indefinitely or be terminated after a certain period of time.

In the **Federal Register** of October 30, 1997 (62 FR 58647), the Securities and Exchange Commission (SEC) published a final rule stating that it would no longer accept paper copies of filings and required filers to submit information electronically unless certain requirements for a temporary or continuing hardship were met. Filers may claim or request, as appropriate, hardship exemptions based on certain criteria, including: Technical difficulties in filing and undue burden and expense of conversion to electronic format. A temporary hardship exemption, generally for unanticipated technical difficulties, is available automatically, but submission of a paper copy of the filing must be followed, within 6 business days, by a confirming electronic copy. A continuing hardship exemption is also available but must be granted by the SEC. It may be granted for a specific period (after which a confirming electronic copy of the paper copy must be filed) or for an indefinite period.

FDA is seeking specific comments on whether a similar exemption provision would be appropriate for electronic reporting for postmarketing individual case safety reports.

2. Cost Benefits and Burdens

The agency is interested in comments on the impact of a mandatory standardized electronic reporting requirement on different segments of regulated industry. For example, how will such a requirement affect manufacturers of different type and size over the short term during implementation and over the long term once systems are established? FDA is also interested in information on the benefits that industry could derive from a mandatory standardized electronic reporting requirement (e.g., reduced paperwork burden, reduced errors, increased convenience and more timely receipt of information).

3. Timeframes for Implementation

The SEC model, described in section III.1 of this document, phased companies into its electronic filing system over a 4-year period, with small business filers being the last to be required to file electronically. The agency is seeking comments on whether a similar implementation plan, based on the size of a firm, would be appropriate for electronic reporting of postmarketing individual case safety reports and, if not, how it should be modified, and what criteria should be used to define an implementation plan.

4. OMB Circular A–130

Section 8a(3) of OMB circular A–130 cites a policy to encourage agencies to explore the use of automated techniques for the collection of information and conditions conducive to the use of those techniques. Section 8a(3) reads as follows:

Electronic Information Collection. Agencies shall use electronic collection techniques where such techniques reduce burden on the public, increase efficiency of government programs, reduce costs to the government and the public, and/or provide better service to the public. Conditions favorable to electronic collection include:

(a) The information collection seeks a large volume of data and/or reaches a large proportion of the public;

(b) The information collection recurs frequently;

(c) The structure, format, and/or definition of the information sought by the information collection does not change significantly over several years;

(d) The agency routinely converts the information collected into electronic format;

(e) A substantial number of the affected public are known to have ready access to the necessary information technology and to maintain the information in electronic form;

(f) Conversion to electronic reporting, if mandatory, will not impose substantial costs or other adverse effects on the public, especially State and local governments and small business entities.

FDA is soliciting comments on whether a proposed rule consistent with the objectives discussed in this ANPRM would advance the objectives of the policy stated in the OMB circular.

If FDA develops a proposed rule for electronic reporting of postmarketing individual case safety reports, it will take into consideration comments submitted in response to this ANPRM.

IV. Executive Order 12866 Analysis

In any rulemaking proposed as a result of comments received on this ANPRM, FDA will examine the economic implications of the proposed rule as required by Executive Order 12866, which directs agencies to assess all costs and benefits of available regulatory alternatives. Executive Order 12866 classifies a rule as significant if it meets any one of a number of specified conditions, including having an annual effect on the economy of $100 million or adversely affecting in a material way a sector of the economy, competition, or jobs, or if it raises novel legal or policy issues. In any rulemaking, the agency will examine the potential costs and potential benefits of the proposed rule. FDA requests information that would aid the agency in responding to the Executive Order.

V. Regulatory Flexibility Analysis

If a rule has a significant economic impact on a substantial number of small entities, the Regulatory Flexibility Act (5 U.S.C. 601–612) requires agencies to analyze options that would minimize the economic impact of that rule on small entities. FDA requests information regarding the impact on small entities of the three subjects identified in section III of this document.

VI. Comments

Interested persons may on or before February 3, 1999, submit to the Dockets Management Branch (address above) written comments regarding this ANPRM. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

VII. Appendices

A. Appendix A: M1 Medical Terminology

Most organizations currently process their regulatory data using an international adverse drug reaction (ADR) terminology in combination with a morbidity terminology. In Europe, many users combine the World Health Organization's Adverse Reaction Terminology with the ninth revision of the International Classification of Diseases (ICD–9). In the United States, Coding Symbols for a Thesaurus of Adverse Reaction Terms with Clinical Modification of ICD–9 (ICD–9–CM) is very commonly used, and Japan has developed its own version of these ADR terminologies, J–Art and MEDIS.

The established terminologies have been criticized for a number of reasons, including: Lack of specificity, limited data retrieval options, and an inability to effectively handle complex combinations of signs and symptoms (syndromes). In addition, use of different terminologies at different stages in the development and use of products complicates data retrieval and analysis of information and makes it difficult to effectively cross-reference data through the lifetime of a product. Internationally, communication is impaired between regulatory authorities because of the delays and distortions caused by the translation of data from one terminology to another.

Use of different terminologies also has significant consequences for pharmaceutical firms. Companies operating in more than one jurisdiction have had to adjust to subsidiaries or clinical research organizations that use different terminologies because of variations in data submission requirements. The difficulty of analyzing data comprehensively may be compounded by use of incompatible terminologies and could lead to delays in recognizing potential public health problems.

A medical terminology designed for regulatory purposes was recognized as necessary by industry and regulatory authorities to support the computerization and transmission of information related to many aspects of the regulation of medical products. In October 1994, the ICH Steering Committee introduced a multidisciplinary communication initiative to establish an international medical terminology for regulatory purposes (M1).

In November 1994, the ICH Steering Committee released a draft (or alpha) version of the M1 terminology for review and evaluation. The alpha version was made available free of charge to all national regulatory entities participating in the WHO International Drug Monitoring Program and, on request, to pharmaceutical companies and contract research organizations. More than 600 electronic copies were distributed with a testing guide which provided suggestions on how the terminology could be evaluated.

In March 1995, the M1 ICH working group met to evaluate the results of the alpha test, review proposals submitted by potential users participating in the alpha test, and evaluate suggested changes. Since 1995, the working group has: (1) Refined and documented the definitions of the levels in the structural hierarchy; (2) reviewed and established the scope of the terminology; (3) reviewed terms and codes of the established terminologies, made necessary linkages and deletions, and included the most recent versions of the current terminologies to facilitate the transfer of historical data; (4) reviewed the results of the extensive and systematic Organ Class reviews performed in the United States and Japan; and (5) made necessary changes to facilitate data analysis and presentation.

Over time, it is essential that the M1 medical terminology be maintained and updated in response to medical/scientific advances and regulatory changes. An international maintenance and service organization (MSSO) is being established to provide this function as well as serve as the licensing agent for the distribution of the M1 medical terminology. It is anticipated that the MSSO will begin licensing the M1 medical terminology in the near future.

B. Appendix B: Electronic Transmission Standards

The ICH Steering Committee recognized the need for rapid communication of regulatory information between pharmaceutical manufacturers and regulatory authorities and, in particular, the need for the electronic communication of safety information. The ICH Steering Committee also noted that rapid communication required universal standards and that separate, uncoordinated initiatives launched in various countries could compromise the benefits of electronic communication and jeopardize the harmonization process. As a result, the ICH Multidisciplinary Group 2 (M2) Expert Working Group (EWG) was established in October 1994 to recommend electronic standards and provide solutions to facilitate international electronic communication in the three ICH regions.

The M2 EWG recommended various open international standards that allow for the worldwide transmission of information regardless of the technical infrastructure. The electronic standards for the transfer of regulatory information (ESTRI) gateway is designed to ensure reliable regulatory communications by using certain common electronic elements. The M2 EWG recommended the following:

1. Physical Media

Use of 3.5 inch floppy disk (ISO 8860) (1 and 2) and CD–ROM 640 MB (ISO 9660) as standard media for physical data storage and transferability across heterogenous computer platforms.

2. Network Messaging

Use of the Internet (STP/MIME) and X400 as network messaging standards that will provide for the efficient transport of heterogenous data formats and complex documents among the three ICH regions.

3. Electronic Document Format

Use of the Portable Document Format (PDF) as the interchange format for the transfer of certain types of documents.

4. Secure Electronic Data Interchange (EDI) Over the Internet

Use of Templar, a standards-based solution that facilitates the transmission of secure EDI over the Internet in all three ICH regions.

In addition, the M2 EWG facilitated the implementation of E2B data elements by defining an attribute list and deriving a relational view that allows for transmission of all types of individual case safety reports, regardless of source and destination. The E2B/M2 attribute list will form the basis for defining E2B data elements in various structured formats such as standard generalized markup language (SGML).

C. Appendix C: E2B Data Elements for Transmission of Individual Case Safety Reports

In the **Federal Register** of October 1, 1996 (61 FR 51287), FDA published a draft guidance entitled "Data Elements for Transmission of Individual Case Safety Reports." The notice gave interested parties an opportunity to submit comments by December 30, 1996. After consideration of the comments received and revisions to the guidance, a final draft was submitted to the ICH Steering Committee and endorsed by the three participating regulatory parties on July 17, 1997. The final guidance entitled "E2B Data Elements for Transmission of Individual Case Safety Reports" (ICH E2B guidance) was published in the **Federal Register** of January 15, 1998.

The guidance is intended to facilitate the standardization of data elements for transmission of individual case safety reports. The format for individual case safety reports includes provisions for transmitting all the relevant data elements useful to assess an individual ADR or adverse event report. The data elements are sufficiently comprehensive to cover complex reports from most sources, different data sets, and transmission situations or requirements. In many, if not most, instances a

substantial number of the data elements will not be known, but as much information as possible should be provided. The minimum information for the transmission of a safety report should include an identifiable patient, an identifiable reporter, a reaction/event, and a suspect drug or biological product.

Dated: October 6, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 900

[Docket No. 98N–0728]

Quality Mammography Standards

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to amend its regulations governing mammography that published in a document entitled "Quality Mammography Standards." The purpose of these amendments is to eliminate a conflict between the mammography regulations, which must be followed by all facilities performing mammography, and FDA's Electronic Product Radiation Control (EPRC) performance standards, which establish radiation safety performance requirements for x-ray units, including mammographic systems.

DATES: Submit written comments on the proposed rule by January 4, 1999.

ADDRESSES: Submit written comments on the proposed rule to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Roger L. Burkhart, Center for Devices and Radiological Health (HFZ–240), Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850, 301–594–3332.

SUPPLEMENTARY INFORMATION:

I. Background

The Mammography Quality Standards Act (the MQSA) (Pub. L. 102–539) was signed on October 27, 1992, to establish national quality standards for mammography. The MQSA required that, to provide mammography services legally after October 1, 1994, all facilities, except facilities of the Department of Veterans Affairs, be accredited by an approved accreditation body and certified by the Secretary of Health and Human Services (the Secretary). The authority to approve accreditation bodies and to certify facilities was delegated by the Secretary to FDA.

A specific requirement of the MQSA was that quality standards be established for mammographic equipment and practices, including quality assurance and quality control programs. Mammography facilities had to meet these standards to become accredited and certified. The standards were intended to replace the patchwork of Federal, State, and private standards existing in 1992 to ensure that all women nationwide receive uniformly high quality mammography services. Since October 1, 1994, these standards have been provided by interim rules published in the **Federal Register** of December 21, 1993 (58 FR 67558 and 58 FR 67565) and amended in the **Federal Register** of September 30, 1994 (59 FR 49808).

On April 3, 1996, FDA proposed final regulations to replace the interim regulations (61 FR 14856, 14870, 14884, 14898, and 14908). Developed with strong congressional encouragement, these proposed final regulations reflected FDA's belief that more comprehensive quality standards would further optimize facility performance. After analysis of the extensive public comments received on the proposed regulations, revisions were made and a final rule was published on October 28, 1997 (62 FR 55852). The effective date for most of the final rule is April 28, 1999. A few equipment and equipment quality assurance requirements do not become effective until October 28, 2002.

FDA has subsequently discovered that some mammographic x-ray systems will have difficulty meeting certain of the new requirements because of design features that were used by the manufacturers in order to ensure that their units met the agency's EPRC performance standards for diagnostic x-ray systems. The purpose of these amendments is to resolve this conflict.

II. Need for Proposed Amendments

The source of the conflict lies in the requirements for the collimation of the x-ray field and the alignment of that field with the image receptor found in § 900.12(b)(5) and (e)(5)(vii)(A) (21 CFR 900.12(b)(5) and (e)(5)(vii)(A)) of the MQSA final regulations. Two problems exist with these provisions as they appeared in the **Federal Register** of October 28, 1997.

First, both of these provisions permit the x-ray field "to extend to or beyond the edges of the image receptor." This allowance was made in response to the expressed desire of some mammography facilities to have the capacity to "blacken" the film to the edges, a capacity that is particularly useful when automated viewing devices are used. Masking clear borders of mammography films is difficult to accomplish with such devices. However, the manufacturers of all diagnostic x-ray systems, including mammography systems, must comply with applicable performance standards established by FDA. These performance standards currently require that mammography systems be manufactured with collimation to ensure that the x-ray field does not extend beyond the nonchest wall edges of the image receptor.

It is possible for a mammography system to meet both of these sets of standards as they are currently written. However, FDA has been informed by one manufacturer that in the past, in order to be sure to meet the EPRC standards, their systems were designed so that the x-ray field does not reach the nonchest wall edges of the image receptor. Such systems would not meet the final MQSA regulations as presently written. Units of other manufacturers may have the same problem.

Without an amendment to the MQSA regulations, in order to be in compliance, some facilities would have to choose among three courses of action. The first would be to apply for and receive approval of an alternative requirement for alignment under 21 CFR 900.18 of the MQSA regulations that would allow the facility to continue using its system unchanged. The second would be to purchase a retrofit of their system under a variance to the performance standards that has already been approved by FDA for one manufacturer. The third would be to purchase a new system that meets both sets of existing requirements.

FDA is proposing to solve this first problem by changing § 900.12(e)(5)(vii)(A) so that the x-ray field will be allowed, but not required as at present, to extend to or beyond the nonchest wall sides of the image receptor. This would permit facilities whose systems are not presently capable of "blackening" the films to these edges to continue to use those systems without the need of either applying for an alternative requirement or purchasing an expensive retrofit.

The second problem is that the limit on the extension of the x-ray field beyond all edges of the image receptor to "within 2 percent of the SID", discussed at 62 FR 55852 at 55945 of the regulation preamble was erroneously applied in the regulations only to the chest-wall side of the image receptor. This omission raises the possibility of an unnecessary radiation hazard to the patient if the x-ray field extends an excessive amount beyond the nonchest wall edges of the image receptor. The agency is proposing to remove the radiation hazard concern by amending § 900.12(e)(5)(vii)(A) to apply the 2 percent of the source-image receptor distance (SID) extension limit to all edges of the image receptor, in accordance with the intentions expressed in the preamble.

Finally, FDA is also proposing to simplify the regulations by dropping all mention of alignment from § 900.12(b)(5), thus consolidating all alignment requirements at one location in § 900.12(e)(5)(vii)(A). The portion of § 900.12(b)(5) dealing with the light field remains unchanged.

III. Environmental Impact

The agency has determined under 21 CFR 25.30(i) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IV. Analysis of Impacts

FDA has examined the impact of this rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612) (as amended by subtitle D of the Small Business Regulatory Fairness Act of 1996 (Pub. L. 104–121)), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, this rule is not a significant regulatory action as defined by the Executive Order and so is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. The agency certifies that this rule, if finalized, will not have a significant economic impact on a substantial number of small entities. This rule also does not trigger the requirement for a written statement under section 202(a) of the Unfunded Mandates Reform Act because it does not impose a mandate that results in an expenditure of $100 million or more by State, local, or tribal governments in the aggregate, or by the private sector, in any 1 year.

FDA had previously estimated (62 FR 55852 at 55968) that the expected average annual benefits from the final regulations would range between $181.7 to $262.7 million. Average annual compliance costs were estimated at $38.2 million. The compliance cost estimate did not include the possible added costs related to the alignment requirement discussed previously, as the difficulty noted by the one manufacturer was not foreseen during the development of the regulations. These added costs would be minimal if an alternative requirement was applied for and received but would be more significant if retrofitting or purchasing of a new unit was carried out to meet the requirement. However, amending the regulations as proposed by FDA would eliminate the requirement leading to the possible extra costs and thus eliminate any possible extra cost.

V. Paperwork Reduction Act of 1995

The agency has tentatively determined that this proposed rule contains no additional collections of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

List of Subjects in 21 CFR Part 900

Electronic products, Health facilities, Mammography, Medical devices, Radiation protection, Reporting and recordkeeping requirements, X-rays.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 900 is amended as follows:

PART 900—MAMMOGRAPHY

1. The authority citation for 21 CFR part 900 continues to read as follows:

Authority: 21 U.S.C. 360i, 360nn, 374(e); 42 U.S.C. 263b.

2. Section 900.12 is amended by removing paragraph (b)(5)(i) and by redesignating paragraph (b)(5)(ii) as paragraph (b)(5), by revising newly redesignated paragraph (b)(5), and by revising paragraph (e)(5)(vii)(A) to read as follows:

§ 900.12 Quality standards.

* * * * *

(b) * * *

(5) *Light fields.* For any mammography system with a light beam that passes through the X-ray beam-limiting device, the light shall provide an average illumination of not less than 160 lux (15 foot candles) at 100 cm or the maximum source-image receptor distance (SID), whichever is less.

* * * * *

(e) * * *

(5) * * *

(vii) * * *

(A) All systems shall have beam-limiting devices that allow the entire chest wall edge of the X-ray field to extend to the chest wall edge of the image receptor and provide means to assure that the X-ray field does not extend beyond any edge of the image receptor by more than two percent of the SID.

* * * * *

Dated: September 8, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

BILLING CODE 4160–01–F

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[DEA–180P]

21 CFR Parts 1308 and 1312

Schedules of Controlled Substances: Rescheduling of Synthetic Dronabinol (Martinol®; (-)-Δ⁹-(trans)-Tetrahydrocannabinol in Sesame oil and Encapsulated in Soft Gelatin Capsules) From Schedule II to Schedule III.

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Notice of proposed rulemaking.

SUMMARY: This proposed rule is issued by the Acting Deputy Administrator of the Drug Enforcement Administration (DEA) to remove the Food and Drug Administration (FDA) approved drug product containing dronabinol [Marinol®; (-)-Δ⁹-(*trans*)-tetrahydrocannabinol in sesame oil and encapsulated in soft gelatin capsules] from Schedule II and place it into Schedule III of the Controlled Substances Act (CSA). This proposed action is based on an evaluation of the relevant data by the DEA and a recommendation from the Assistant Secretary for Health of the Department of Health and Human Services (DHHS)

that the FDA-approved dronabinol product [Marinol®; (-)-Δ^9-(*trans*)-THC in sesame oil and encapsulated in soft gelatin capsules] be rescheduled from Schedule II to Schedule III. If finalized, this action will impose the regulatory controls and criminal sanctions of Schedule III on those who handle dronabinol and products containing dronabinol.

DATES: Comments, objections and requests for a hearing must be received on or before December 7, 1998.

ADDRESSES: Comments, objections and requests for a hearing should be submitted in quintuplicate to the Acting Deputy Administrator, Drug Enforcement Administration, Washington, DC. 20537; Attention: DEA Federal Register Representative/CCR.

FOR FURTHER INFORMATION CONTACT: Frank Sapienza, Chief, Drug and Chemical Evaluation Section, Drug Enforcement Administration, Washington, DC. 20537, 202–307–7183.

SUPPLEMENTARY INFORMATION: Dronabinol is the synthetic equivalent of the (-)-isomer of Δ^9-(*trans*)-tetrahydrocannabinol [Δ^9-(*trans*)-THC], which is the major psychoactive component of *Cannabis sativa L.* (Marijuana). Dronabinol, under the trade name Marinol®, was approved for marketing by the FDA on May 31, 1985 for the treatment of nausea and vomiting associated with cancer chemotherapy. Dronabinol [Marinol®; (-)-Δ^9-(*trans*)-THC in sesame oil and encapsulated in soft gelatin capsules], but not THC itself, was transferred from Schedule I to Schedule II of the CSA on May 13, 1986, in accordance with 21 U.S.C. 811(a) and the FDA approval of a new drug application for Marinol® capsules. The rescheduling of Marinol® was based on a recommendation from the Assistant Secretary for Health which also stated that THC should remain in Schedule I. Marinol®'s indications were expanded on December 22, 1992 to include the treatment of anorexia associated with weight loss in patients with AIDS.

On February 3, 1995, UNIMED Pharmaceuticals, Inc. petitioned the Administrator of the DEA to reschedule dronabinol formulations from Schedule II to Schedule III. This request involves only dronabinol [synthetic (-)-Δ^9-(*trans*)-THC], specifically the product Marinol® (dronabinol in sesame oil in a soft gelatin capsule). Prior to a review of the data in the petition, the DEA had to determine whether the rescheduling of dronabinol formulations to Schedule III was possible, in light of the control of THC in Schedule II of the 1971 Convention on Psychotropic Substances. The DEA concluded that control of dronabinol formulations in Schedule III of the CSA was possible and would meet the requirements of Schedule II of the convention provided that THC remained in Schedule I or II of the CSA and that 21 CFR 1312.30 was amended to require import and export permits for international transactions involving dronabinol.

On December 11, 1996, UNIMED Pharmaceuticals, Inc. submitted a supplement to its petition to reschedule dronabinol formulations from Schedule II to Schedule III. This supplement provided data regarding the pharmacokinetics of Marinol®, additional data about the chemistry of the product and studies regarding the actual abuse of the Marinol® product. This information specifically addressed the criteria required to be considered under the CSA.

On August 7, 1997, after gathering the necessary data, the DEA sent its review document and a letter to the Acting Assistant Secretary for Health, DHHS requesting a scientific and medical evaluation of the available data and a scheduling recommendation on dronabinol, as required by 21 U.S.C. 811(b).

On September 11, 1998, the Acting Assistant Secretary for Health sent to the DEA a letter recommending that dronabinol (Marinol®; (-)-Δ^9-(trans)-THC in sesame oil and encapsulated in soft gelatin capsules) be transferred from Schedule II to Schedule III of the CSA. Enclosed with the September 11, 1998 letter was a document prepared by the FDA entitled "Basis for the Recommendation for Rescheduling Marinol® Capsules from Schedule II to Schedule III of the CSA." In this document, the FDA defines the Marinol® product as "an FDA approved drug product containing synthetically produced dranabinol dissolved in sesame oil and encapsulated in soft gelatin capsules (2.5 mg, 5 mg, and 10 mg per dosage unit." The document contained a review of the factors which the CSA requires the Secretary to consider [21 U.S.C. 811(c)].

The factors considered by the Acting Assistant Secretary for Health and the DEA with respect to dranabinol were:

(1) Its actual or relative potential for abuse;

(2) Scientific evidence of its pharmacological effect, if known;

(3) The state of current scientific knowledge regarding the drug or other substance;

(4) Its history and current pattern of abuse;

(5) The scope, duration, and significance of abuse;

(6) What, if any, risk there is to the public health;

(7) Its psychic or physiological dependence liability; and

(8) Whether the substance is an immediate precursor of a substance already controlled under this subchapter.

The pharmacological and behavioral effects of dronabinol are comparable to those of Δ^9-THC, marijuana and other active cannabinoids. There are few scientific studies that directly evaluate the pharmacologeutical and behavioral effects of the product Marinol® to indicate that there are differences in its abuse liability compared to oral THC. Nevertheless, there is little evidence of actual abuse of Marinol®, despite modest annual increases in the total number of prescriptions written. Despite dronabinol's THC-like abuse liability, there are several factors that deter its actual abuse and trafficking. These factors include dronabinol's formulation in sesame oil, the improbability that the THC would be extracted from the product and abused by another route of administration, and its delayed onset of effects. Although excessive use of Marinol® may result in the development of psychological dependence, there has been no evidence of such use. The scientific data reviewed to date and the minimal evidence of actual abuse and trafficking support the transfer of dronabinol to Schedule III of the CSA.

Relying on the scientific and medical evaluation and the recommendation of the Assistant Secretary for Health in accordance with section 201(b) of the CSA (21 U.S.C. 811(b)), and the independent review of the DEA, the Acting Deputy Administrator of the DEA, pursuant to sections 201(a) and 201(b) of the CSA (21 U.S.C. 811(a) and 811(b)), finds that:

(1) Based on information now available, dronabinol (Marinol®) has a potential for abuse less than the drugs or other substances in Schedules I and II.

(2) Marinol® [(-)-Δ^9-(trans)-THC in sesame oil and encapsulated in soft gelatin capsules] is an FDA approved drug product and has a currently accepted medical use in treatment in the United States; and

(3) Abuse of dronabinol [Marinol®; (-)-Δ^9-(*trans*)-THC in seasame oil and encapsulated in soft gelatin capsules] may lead to moderate or low physical dependence or high psychological dependence.

Based on these findings, the Acting Deputy Administrator of the DEA concludes that dronabinol [Marinol®; (-)-Δ^9-(*trans*)-THC in sesame oil and encapsulated in soft gelatin capsules] should be removed from Schedule II and placed into Schedule III of the CSA.

Special Provisions Regarding Import/Export Authorization

Dronabinol is internationally controlled in Schedule II of the 1971 Convention on Psychotropic Substances, to which the United States is a party. Under the special obligations of the Convention, Article 12 defines provisions relating to international trade relative to Schedule II substances. Specifically, signatory countries are required to issue import/export permits/authorizations to import or export a Schedule II substance. Due to its international control status, import/export permits for dronabinol still will be required despite the proposed transfer of dronabinol to Schedule III of the CSA.

In accordance with 21 CFR 1312.13(b) "[t]he Administrator may require that such non-narcotic controlled substances in Schedule III as he shall designate by regulation in § 1312.30 of this part be imported only pursuant to the issuance of an import permit" (21 U.S.C. 952(b)(2)). Similarly, the DEA could require export permits for Schedule III non-narcotic substances (21 CFR 1312.23(b) and 21 U.S.C. 953(e)(2)).

Currently, there are no Schedule III non-narcotic substances for which the Administrator requires an import/export permit. However, in accordance with 21 CFR 1312.30, this proposed designation of dronabinol as a Schedule III non-narcotic substance requiring an import/export permit is necessary for the United States to remain in compliance with the Convention.

Interested persons are invited to submit their comments, objections or requests for a hearing, in writing, with regard to this proposal. Requests for a hearing should state, with particularity, the issues concerning which the person desires to be heard. All correspondence regarding this matter should be submitted to the Acting Deputy Administrator, Drug Enforcement Administrator, Washington, DC 20537. Attention: DEA Federal Register Representative/CCR. In the event that comments, objections, or requests for a hearing raise one or more issues which the Acting Deputy Administrator finds warrant a hearing, the Acting Deputy Administrator shall order a public hearing by notice in the **Federal Register**, summarizing the issues to be heard and setting the time for the hearing.

In accordance with the provisions of the CSA (21 U.S.C. 811(a)), this action is a formal rulemaking "on the record after opportunity for a hearing," such proceedings are conducted pursuant to the provisions of 5 U.S.C. 556 and 557 and, as such, are exempt from review by the Office of Management and Budget pursuant to Executive Order (E.O.) 12866, section 3(d)(1). The Acting Deputy Administrator, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this proposed rule and by approving it certifies that it will not have a significant economic impact on a substantial number of small entities. Dronabinol products are prescription drugs used to treat nausea due to cancer chemotherapy and AIDS wasting. Handlers of dronabinol are likely to handle other controlled substances used to treat cancer or AIDS, which are already subject to the regulatory requirements of the CSA. Further, placement of dronabinol in Schedule III of the CSA will mean a significant decrease in the regulatory requirements for persons handling dronabinol products.

This rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under provisions of the Unfunded Mandates Reform Act of 1995.

This rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This rule will not result in an annual effect on the economy of $100,000,000 or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States based companies to compete with foreign based companies in domestic and export markets.

This rule will not have substantial direct effects on the United States, on the relationship between the national government and the United States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with E.O. 12612, it is determined that this rule, if finalized, will not have sufficient federalism implications to warrant the preparation of Federalism Assessment.

List of Subjects

21 CFR Part 1308

Administrative practice and procedure, Drug traffic control, Narcotics, Prescription drugs.

21 CFR Part 1213

Administrative practice and procedure, Drug traffic control, Exports, Imports, Narcotics, Reporting requirements.

Under the authority vested in the Attorney General by section 201(a) of the CSA (21 U.S.C. 811(a)), and delegated to the Administrator of the DEA by the Department of Justice regulations (28 CFR 0.100) and redelegated to the Deputy Administrator pursuant to 28 CFR 0.104, the Acting Deputy Administrator hereby proposes that 21 CFR parts 1308 and 1312 be amended as follows:

PART 1308—[AMENDED]

1. The authority citation for 21 CFR part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b) unless otherwise noted.

§ 1308.12 [Amended]

2. Section 1308.12 is proposed to be amended by removing paragraph (f)(1) and redesignating the existing paragraph (f)(2) as (f)(1).

3. Section 1308.13 is proposed to be amended by adding a new paragraph (g)(1) to read as follows:

§ 1308.13 Schedule III.

* * * * *

(g) *Hallucinogenic substances.*

(1) Dronabinol (synthetic) in sesame oil and encapsulated in a soft gelatin capsule in a U.S. Food and Drug Administration approved product 7369

[Some other names for dronabinol: (6aR-trans)-6a,7,8,10a-tetrahydro-6,6,9-trimethyl-3-pentyl-[6H-dibenzo[b,d]pyran-1-ol] or (-)-delta-9-(trans)-tetrahydrocannabinol]

PART 1312—[AMENDED]

1. Section 1312.30 is proposed to be amended by adding a new paragraph (a) to read as follows:

§ 1313.30 Schedule III, IV and V non-narcotic controlled substances requiring an import and export permit.

* * * * *

(a) Dronabinol (synthetic) in sesame oil and encapsulated in a soft gelatin capsule in a U.S. Food and Drug Administration approved product.

* * * * *

Approval and Promulgation of Air Quality Implementation Plans; Maryland; Proposed Approval of Revision to the VOC Rule Governing Automotive and Light-duty Truck Coating Operations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes to approve the State Implementation Plan (SIP) revision submitted by the State of Maryland. This action revises the rule citation for the VOC provisions governing automotive and light-duty truck coating operations. The intended effect of this action is to provide consistency between Maryland's current regulatory numbering format and the Maryland SIP numbering format with regard to this rule. There are no substantive revisions. In the Final Rules section of this **Federal Register**, EPA is approving the State's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time.

DATES: Comments must be received in writing by December 7, 1998.

ADDRESSES: Written comments should be addressed to Marcia L. Spink, Associate Director, Air Programs, Mailcode 3AP21, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the documents relevant to this action are available for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103; and the Maryland Department of the Environment, 2500 Broening Highway, Baltimore, Maryland 21224.

FOR FURTHER INFORMATION CONTACT: Harold A. Frankford (3AP20), (215) 814–2108, at the EPA Region III address above, or by e-mail at frankford.harold@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: For additional information, see the Direct Final action which is located in the Rules and Regulations Section of this **Federal Register**.

Dated: October 27, 1998.

Thomas Voltaggio,

Acting Regional Administrator, Region III.

Lead, Identification of Dangerous Levels of Lead; Extension of Comment Period and Rescheduling of Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is extending the time for the public to provide written comments on a proposed rule, issued under section 403 of the Toxic Substances Control Act (TSCA), that would provide guidelines for managing lead in paint, dust, and soil in residences and child-occupied facilities. The public now has until December 31, 1998, to submit written comments. EPA is also rescheduling a public meeting on the proposed rule from its original date of November 16, 1998, to December 4, 1998. The purpose of this meeting is to provide an opportunity for nationally recognized experts to offer their perspectives on the proposed rule and for the public to present oral comments. The public would still have the opportunity to submit written comments after the meeting.

DATES: Written comments on the proposed rule must be received on or before December 31, 1998.

The public meeting will be held on December 4, 1998, from 9 a.m. to 9 p.m. EPA requests that members of the public wishing to present oral comments at the meeting register by November 23, 1998, persons may also register to speak at the time of the meeting, if any comment time is remaining.

ADDRESSES: *Public meeting:* The meeting will be held at the Grand Hyatt San Francisco, 345 Stockton St., San Francisco, CA.

Comments: Each written comment must bear the docket control number OPPTS–62156D. All comments should be sent in triplicate to: OPPT Document Control Officer (7407), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Rm. G–099, East Tower, Washington, DC 20460.

Written comments and data may also be submitted electronically to: oppt.ncic@epa.gov. Follow the instructions in Unit III. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

All written comments which contain information claimed as CBI must be clearly marked as such. Three copies, sanitized of any comments containing information claimed as CBI, must also be submitted and will be placed in the public record for this rulemaking. Persons submitting information, any portion of which they believe is entitled to treatment as CBI by EPA, must assert a business confidentiality claim in accordance with 40 CFR 2.203(b) for each such portion. This claim must be made at the time that the information is submitted to EPA. If a submitter does not assert a confidentiality claim at the time of submission, EPA will consider this as a waiver of any confidentiality claim and the information may be made available to the public by EPA without further notice to the submitter.

FOR FURTHER INFORMATION CONTACT: *For general information and to register to present oral comments at the meeting:* National Lead Information Center's Clearinghouse, 1–800–424–LEAD (5323).

For technical and policy questions: Jonathan Jacobson, telephone: (202) 260–3779 or e-mail: jacobson.jonathan@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of June 3, 1998 (63 FR 30302) (FRL–5791–9), EPA published a proposed rule under Title IV of TSCA. Section 403 of TSCA (15 U.S.C. 2683) directs EPA to promulgate regulations identifying lead-based paint hazards, lead-contaminated dust, and lead-contaminated soil. Section 402 of TSCA (15 U.S.C. 2682) directs EPA to promulgate regulations governing lead-based paint activities. Section 404 of TSCA (15 U.S.C. 2684) requires that any State that seeks to administer and enforce the requirements established by the Agency under section 402 of TSCA must submit to the Administrator a request for authorization of such a program.

On October 1, 1998, EPA announced in the **Federal Register** (63 FR 52662) (FRL–6037–7) that it would extend the public comment period until November 30, 1998. On October 28, 1998, EPA announced in the **Federal Register** (63 FR 57636) (FRL–6041–1) that it would be holding a public meeting on November 16, 1998, to provide an opportunity to present oral comments. Upon further reflection, the Agency has decided that it would be more valuable to expand the scope of this meeting and include nationally recognized experts to offer their perspectives on the proposed rule in a public workshop. Following the workshop, members of the public will have the opportunity to present oral comments on the proposed rule to the Agency. In order to accommodate this type of forum, EPA is rescheduling the public meeting to December 4, 1998, and will further extend the time for submitting written comments to December 31, 1998.

II. Meeting Process

The workshop component of the meeting, consisting of nationally recognized experts, will convene at approximately 9 a.m. and will end at 2:30 p.m. Oral comments from the public will be heard between 3 p.m. and 9 p.m.

The workshop will begin with presentations by EPA officials on the Agency's approach described in the proposed rule and an explanation of the decisions in the proposal. These presentations will be followed by several discussion segments that will address the major issues of concern. In each segment, several experts have been invited to present formal remarks on EPA's proposed standards. After the conclusion of the formal presentations during each segment, there will be an open discussion among the invited participants. EPA officials will facilitate the discussion and will be available to answer questions that will help clarify materials contained in the public record. In addition, the public is encouraged to attend the workshop to hear the discussions and will have the opportunity to offer comments later in the day.

The public comment component of the meeting will run from approximately 3 p.m. to 9 p.m. with an hour break from 5 p.m. to 6 p.m. EPA will hear as many comments as time permits. Commenters will speak in the order in which they register. Individuals are requested to limit their presentations to 10 minutes in order to allow as many persons as possible a fair chance to participate. Individuals interested in presenting comments at the meeting should register in advance by contacting the National Lead Information Clearinghouse at 1–800–424–LEAD (5323). Individuals should indicate whether they wish to speak at the afternoon or evening session.

III. Public Record and Electronic Submissions

The official record for this rulemaking, as well as the public version, has been established for this rulemaking under docket control number OPPTS-62156D (including comments and data submitted electronically as described in this unit). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 12 noon to 4 p.m., Monday through Friday, excluding legal holidays. The official rulemaking record is located in the TSCA Nonconfidential Information Center, Rm. NE–B607, 401 M St., SW., Washington, DC. Electronic comments can be sent directly to EPA at: oppt.ncic@epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comments and data will also be accepted on disks in WordPerfect 5.1/6.1 or ASCII file format. All comments and data in electronic form must be identified by the docket control number OPPTS-62156D. Electronic comments on this proposed rule may be filed online at many Federal Depository Libraries.

BILLING CODE 6560–50–F

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Chapter I

[IB Docket No. 98–192, FCC 98–280]

Direct Access to the INTELSAT System

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Commission is seeking comment on the legal, economic, and policy ramifications of permitting direct access to the INTELSAT system in the United States. Direct access to INTELSAT would enable U.S. carriers and users to obtain space segment capacity directly from INTELSAT rather than through Comsat, the U.S. Signatory to INTELSAT. The Commission tentatively concludes that the Communications Satellite Act of 1962 and the Communications Act give it discretion to permit U.S. carriers and users the option of obtaining contractual, or Level 3, direct access to the INTELSAT system. The Commission does not, however, reach tentative conclusions as to whether and under what circumstances the Commission may permit direct access. On this issue, the Commission is seeking comments on: What are the potential benefits of direct access?; what competitive concerns are raised by direct access?; how would direct access affect U.S. efforts to privatize INTELSAT?

DATES: Comments must be submitted on or before December 18, 1998; reply comments must be submitted on or before January 8, 1999.

ADDRESSES: Magalie Roman Salas, Office of the Secretary, Federal Communications Commission, 445 12th Street, SW, Washington, D.C. 20554. Also, comments should also be filed with: Kathleen A. Campbell, International Bureau, 2000 M Street, N.W., Suite 800, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Jim Ball at (202) 418–0427 or Sande Taxali at (202) 418–7586.

SUPPLEMENTARY INFORMATION: This is a summary of the commission's Notice of Proposed Rulemaking in IB Docket No. 98–192; FCC 98–280, adopted October 22, 1998 and released October 28, 1998. The complete text of this Notice of Proposed Rulemaking is available for inspection and copying during normal business hours in the FCC Reference Center (Room 239), 1919 M Street, NW., Washington, DC and also may be purchased from the commission's copy contractor, International Transcription Service, 1231 20th Street, N.W., Washington, DC 20036, phone: (202) 857–3800, fax: (202) 857–3805.

To file formally in this proceeding, comments may be filed using the Commission's Electronic Comment Filing System (ECFS). See Electronic Filing of Documents in Rulemaking Proceedings (63 FR 24121, May 1, 1998). Comments filed through the ECFS can be sent as an electronic file via the Internet to <http://www.fcc.gov/

ecfs.html>. Generally, only one copy of an electronic submission must be filed. If multiple docket or rulemaking numbers appear in the caption of this proceeding, however, commenters must transmit one electronic copy of the comments to each docket or rulemaking number referenced in the caption. In completing the transmittal screen, commenters should include their full name, Postal Service mailing address, and the applicable docket or rulemaking number. Parties may also submit an electronic comment by Internet e-mail. To get filing instructions for e-mail comments, commenters should send an e-mail to ecfs@fcc.gov, and should include the following words in the body of the message, "get form <your e-mail address>." A sample form and directions will be sent in reply.

Parties may also choose to file comments by paper. To file by paper, parties must file an original and four copies of each filing. If more than one docket or rulemaking number appear in the caption of this proceeding, commenters must submit two additional copies for each additional docket or rulemaking number. All filings must be sent to the Commission's Secretary, Magalie Roman Salas, Office of the Secretary, Federal Communications Commission, 445 12th Street, SW, Washington, D.C. 20554. Paper filings will be received at a designated counter located at TW–A325 in the 12th street lobby. In addition, comments should be filed with: Kathleen A. Campbell, International Bureau, 2000 M Street, N.W., Suite 800, Washington, D.C. 20554. The Commission expects to complete its relocation to The Portals within the next six months. During the transition period, paper filings also will be accepted at 1919 M Street, NW, Room 222, but only between the hours of 4:00pm to 5:30pm.

Summary of Notice of Proposed Rulemaking

1. On April 29, 1998, the Commission granted Comsat's petition for reclassification as a non-dominant carrier in competitive product markets and denied its petition for reclassification in non-competitive product markets.[1] For non-competitive markets where Comsat remains dominant the Commission denied Comsat's request for forbearance under Section 10 of the Communications Act. The Commission stated it would consider favorably in its analysis of any forbearance request certain actions that Comsat might undertake to promote competitive market conditions, including, for example, the provision of direct access and a waiver of privileges and immunities. The Commission said that it would expeditiously initiate a proceeding to explore the legal, economic, and policy ramifications of direct access.

2. The Commission previously considered direct access to the INTELSAT system in 1984.[2] At that time, the Commission concluded that the specific direct access alternatives then under consideration would result in little savings to end users and would not be in the public interest. The Commission did, however, indicate that it would be amenable to reconsider the issue of direct access at a future date.

3. Beginning in 1992, INTELSAT developed procedures for non-Signatory carriers and users to obtain space segment capacity directly from INTELSAT rather than through Signatories. INTELSAT now offers to non-Signatories four types or "levels" of direct access. The first two levels involve access to information.[3] The third and fourth levels involve access to communication services: (a) Level 3 direct access permits a customer to enter into a contractual agreement with INTELSAT for ordering, receiving and paying for INTELSAT space segment capacity at the same rate that INTELSAT charges its Signatories; and (b) Level 4 direct access permits a customer to make a capital investment in INTELSAT in proportion to its customers' utilization of the INTELSAT system at INTELSAT tariff rates.

4. For both Level 3 and Level 4 direct access, a customer is required to enter into a service agreement with INTELSAT that sets forth the general terms and conditions for INTELSAT supply of its space segment capacity. So long as the service agreement remains in effect, a customer is able to access INTELSAT space segment directly. Level 3 customers would benefit from INTELSAT rates lower than Signatory "marked up" rates, and would have no investment obligations in the system. A Signatory permitting Level 3 direct access, however, will earn a return on its investment in space segment capacity used by a Level 3 customer (currently up to 21 percent as established by the INTELSAT Board of Governors).[4] A Level 4 customer undertakes all of the financial obligations under the INTELSAT Operating Agreement that are applicable to Signatories and thus is entitled to earn on its investment (but is not entitled to participate in the INTELSAT governance process absent special arrangements with the Party and Signatory of its country).

5. INTELSAT offers direct access only in countries where it is authorized by the Signatory. Currently 94 countries permit either Level 3 or Level 4 direct access. Seventy-six countries permit contractual Level 3 direct access and 18 countries permit Level 4 direct access to INTELSAT. Comsat has not authorized direct access in the United States.

6. The Commission tentatively concludes that the Commission has authority under the Communications Satellite Act of 1962 to permit Level 3 direct access but not level 4 direct access. The Satellite Act requires Comsat to be the sole U.S. participant in INTELSAT. This requirement is satisfied under Level 3 direct access because Comsat continues to be the only U.S. investor in INTELSAT and the only U.S. representative within the governing bodies of INTELSAT. This requirement is not satisfied under Level 4 direct access which would involve investment in INTELSAT by U.S. direct access customers. Further, nothing in the Satellite Act requires Comsat to be the only provider of INTELSAT services in the U.S. and the Commission tentatively concludes that the Satellite Act gives the Commission discretion to mandate Level 3 direct access. The Commission tentatively concludes that permitting level 3 direct access would not violate the Fifth Amendment to the Constitution. The Commission seeks comment on these tentative conclusions and corresponding analysis.

7. The Commission does not reach tentative conclusions as to whether and under what circumstances it may permit direct access in the United States. The Commission seeks comment on (1) What are the potential benefits of direct access? (2) what competitive concerns are raised by direct access? and (3) how would direct access affect efforts to privatize INTELSAT?

8. On the issue of potential benefits of direct access, the Commission compared the differences between prices Comsat offers to customers and services providers and INTELSAT tariffs, the latter which reflect substantially lower prices in most instances. It noted the potential for greater customer choice and cost savings from direct access. It requests comment on the desirability of allowing direct access to INTELSAT with respect to all product and geographic markets including those markets that are competitive and for which Comsat is non-dominant. The Commission requests comments on whether direct access to all markets would further increase the level of competition to the extent that prices to consumers would be likely to fall, even in competitive markets. The Commission also requests, however, comment on whether Comsat would be able to recover its costs under a Level 3 direct access scheme and asks whether Comsat, as a matter of law and policy, must be allowed to recoup its costs and the Commission requests comment on whether circumstances have changed since the Commission's *1984 Direct Access Order*. Further, it asks carriers seeking direct access to comment on how cost savings would be passed on to their customers.

9. Finally, on the question of competitive concerns, the Commission asks for comment on whether permitting direct access in the United States would result in a concentration of control of cable and satellite facilities by U.S. carriers, and whether INTELSAT should be allowed to compete in the U.S. market free from FCC jurisdiction over rates and under cover of immunity from suit and process. As to INTELSAT privatization, the Commission requests comment on whether permitting direct access in the U.S. will reinforce U.S. efforts to promote competition and privatize INTELSAT. The Commission noted that, in the *Comsat Non-Dominant Order*, it determined that Level 3 direct access would neither dilute Comsat's voting power on the INTELSAT Board of Governors nor give direct access customers any right to participate in the INTELSAT governance process. The Commission, therefore, then found no basis to find that direct access would undermine U.S. efforts to privatize INTELSAT in a pro-competitive manner.

Administrative Matters

10. This is a non-restricted notice and comment rulemaking proceeding. Ex parte presentations are permitted, except during the Sunshine Agenda period, provided they are disclosed as provided in the Commission's rules. See generally 47 CFR 1.1202, 1.203 and 1.206(a). The Sunshine Agenda period is the period of time that commences with the release of public notice that a matter has been placed on the Sunshine Agenda and terminates when the Commission (1) releases the text of a decision or order in the matter, (2) issues a public notice stating that the matter has been deleted from the Sunshine Agenda; or (3) issues a public notice stating that the matter has been returned to the staff for further consideration, whichever occurs first 47 CFR 1.202(f). During the Sunshine Agenda period, no presentations, ex parte or otherwise, are permitted unless specifically exempted (47 CFR 1.203. Pursuant to applicable procedures set forth in §§ 1.415 and 1.419 of the Commission's Rules, interested parties may file comments on or before December 18, 1998 and reply comments on or before January 8, 1999. To file formally in this proceeding, you must file an original and five copies of all comments, reply comments and supporting comments. If you want each Commissioner to receive a personal copy of your comments, send additional copies to Office of the Secretary, Federal Communications Commission, 445 12th Street, SW., Washington, DC 20554. Comments and reply comments will be available for public inspection during regular business hours in the Federal Communications Commission Reference Center, Room 239, 1919 M Street, NW., Washington, DC 20554. For further information concerning this rulemaking, contact Jim Ball at (202) 418–0427 or Sande Taxali at (202) 418–7586.

Initial Regulatory Flexibility Analysis

11. As required by the Regulatory Flexibility Act, ("RFA"),[5] the Commission has prepared an Initial Regulatory Flexibility Analysis ("IRFA") of the expected significant economic impact on small entities by the rules proposed in this *Notice of Proposed Rulemaking* ("*NPRM*"). Written public comments are requested on the IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments set forth in paragraph 65 of the *NPRM*. The Commission will send a copy of the *NPRM*, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration. *See* 5 U.S.C. § 603(a).

Need for, and Objectives of, the Proposed Rules

12. The purposes of the *NPRM* are to initiate a notice and comment proceeding that explores the legal, economic and policy ramifications of permitting direct access to the INTELSAT[6] system in the United States and to propose rules for permitting U.S. carriers and users to obtain non-discriminatory direct access to INTELSAT's satellites. "Direct access" is a term used to refer to the means by which users of the INTELSAT satellite system obtain service directly from INTELSAT rather than through INTELSAT's Signatories.

13. The *NPRM* tentatively concludes that (a) the Commission has authority under applicable statutes to permit U.S. carriers and users to obtain services from INTELSAT directly at the same rates that INTELSAT charges its Signatories; and (b) direct access presents the opportunity to introduce competition in markets where competition does not exist and enhance competition in markets where it does exist. Consistent with these tentative conclusions, the *NPRM* proposes rules that would permit U.S. carriers and users to obtain direct access to INTELSAT. The *NPRM* invites interested parties to comment on these tentative conclusions and related proposed rules. If commenters believe that the proposed rules discussed in the *NPRM* require additional RFA analysis, they should include a discussion of this in their comments.

Legal Basis

14. The authority for the *NPRM* is the Administrative Procedure Act, 5 U.S.C. 553; and sections 4(i) and 201(b) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i) and 201(b), and sections 201(c)(5) and (c)(11) of the Communications Satellite Act of 1962, 47 U.S.C. 721(c)(5), (c)(11) and 741.

15. Description and Estimate of the Number of Small Entities to Which Proposed Rule Will Apply Under the Small Business Act, a "small business concern" is one that: (1) Is independently owned and operated; (2) is not dominant in its field of operation; (3) meets any additional criteria

[1] Comsat Corporation Petition pursuant to Section 10(c) of the Communications Act of 1939, as amended, for forbearance from Dominant Carrier Regulation and for Reclassification as a Non-Dominant Carrier, *Comsat Non-Dominant Order*, and *Notice of Proposed Rulemaking*, FCC 98–78, (released April 28, 1998) (*Comsat Non-Dominant Order*).

[2] Regulatory Policies Concerning Direct Access to INTELSAT Space Segment for the U.S. International Service Carriers (*1984 Direct Access Order*) 97 FCC 2d 296 (1984), *Western Union International, Inc.* v *FCC* 814 F.2d 1280 (D.C. Cir. 1986).

[3] Level 1 direct access permits a customer to receive operational and technical information and attend global traffic meetings as an operations representative. Level 2 direct access permits a customer to meet with INTELSAT management and staff regarding capacity availability, commercial and INTELSAT tariff matters.

[4] Under the INTELSAT Operating Agreement, the Board of Governors establishes a target rate of compensation (return) on shareholders (Signatories) invested capital. All shareholders are entitled to the target rate of return. *See* INTELSAT Operating Agreement, Article 8; *See also* INTELSAT Annual Report, 1996, "Report of Independent Public Accountants, Arthur Anderson LLP" at p. 36.

[5] *See* 5 U.S.C. § 603. The RFA, *see* 5 U.S.C. § 601 *et seq.*, has been amended by the Contract with America Advancement Act of 1996, Public L. 104–121, 110 Stat. 847 (1996) ("CWAAA"). Title II of the CWAAA is The Small Business Regulatory Enforcement Fairness Act of 1996.

[6] INTELSAT is an acronym for the International Telecommunications Satellite Organization.

established by the Small Business Administration.[7]

16. The Commission has not developed a definition of small entities applicable to satellite service licensees. Therefore, the applicable definition of small entity is the definition under the Small Business Administration ("SBA") rules applicable to Communications Services "Not Elsewhere Classified." This definition provides that a small entity is one with $11 million or less in annual receipts.[8]

17. If the Commission adopts the proposed rules permitting U.S. carriers and users to obtain direct access to INTELSAT, the Commission would require Comsat Corporation ("Comsat") to take appropriate actions within INTELSAT to give effect to these rules. Comsat's 1996 revenues were in excess of $11 million. Thus, Comsat does not qualify as a small entity under the SBA's definition. U.S. carriers and users that may benefit from the Commission's adoption of the proposed rules, may include small entities that offer communications services. According to the SBA, the Census Bureau estimates that there are approximately 848 entities providing communications services, not elsewhere classified. Of those, approximately 775 reported annual receipts of less than $9.999 million or less and would qualify as small entities subject to the proposed rules.[9] More precise data is not available.

Description of Projected Reporting, Recordkeeping or Other Compliance Requirements

18. The proposals in the *NPRM* are not expected to result in any additional reporting, recordkeeping and other compliance.

Steps Taken To Minimize Significant Economic Burden on Small Entities, and Significant Alternatives Considered

19. The *NPRM* considers two alternatives for U.S. carriers and users to obtain direct access to INTELSAT: Level 3 direct access and Level 4 direct access. Level 3 direct access permits a customer to enter into a contractual agreement with INTELSAT for ordering, receiving and paying for INTELSAT space segment capacity at the same rate that INTELSAT charges its Signatories. Level 4 direct access permits a customer to make a capital investment in INTELSAT in proportion to its customers' utilization of the INTELSAT system at INTELSAT tariff rates. The *NPRM* proposes rules that would permit U.S. carriers and users to obtain Level 3 direct access to INTELSAT. The *NPRM* does not propose a rule permitting Level 4 direct access to INTELSAT because the *NPRM* tentatively concludes that such a rule would contravene the requirement under the Communications Satellite Act of 1962 that Comsat be the sole U.S. participant in INTELSAT. The proposed rules would permit small entities to obtain Level 3 direct access to INTELSAT, however, as a Level 3 direct access customer of INTELSAT, such small entities would not be required to undertake any of the financial obligations or be entitled to participate in the INTELSAT governance process as are Signatories. We believe that the proposed rules will permit authorized carriers and users, including small entities, to benefit from direct access through greater choice and lower rates in connection with use of the INTELSAT system and we seek comment on these and other benefits that may result from direct access. We recognize that other issues not raised in the *NPRM* may be significant to carriers and users, including small entities, and we also request comment on issues relating to direct access that are not raised in the *NPRM*. We do not expect the proposed rules to cause any economic burden to small entities, and seek comment on any issues pertinent to this.

Federal Rules That Overlap, Duplicate, or Conflict With These Proposed Rules

20. None.

Ordering Clauses

21. Accordingly, it is ordered that pursuant to the authority contained in sections 4(i), 4(j) 201, 214, 301 *et seq.*, and 403, and sections 201(c)(5) and (c)(11) and 401 of the Communications Satellite Act of 1962, 47 U.S.C. 721(c)(5) and (c)(11) and 741 of the applicable procedures set forth in sections 1.415 and 1.3–419 of the Commission's rules, 47 CFR 1.415 and 1.419 that this *Notice of Proposed Rulemaking* is hereby adopted.

22. It is further ordered that interested parties may comment until December 18, 1998 and file reply comments until January 8, 1999.

23. It is further ordered that the Commission's Office of Public Affairs Reference Operations Division shall send a copy of this *Notice of Proposed Rulemaking*, including the Initial Regulatory Flexibility Analysis, to Chief Counsel for Advocacy of the Small Business Administration.

Federal Communications Commission.

Magalie Roman Salas,

Secretary.

National Oceanic and Atmospheric Administration

50 CFR Part 660

[I.D. 103098A]

RIN 0648–AL49

Fisheries Off West Coast States and in the Western Pacific; Pelagic Fisheries, Amendment 8; Crustacean Fisheries, Amendment 10; Bottomfish and Seamount Groundfish Fisheries, Amendment 6; Precious Corals Fisheries, Amendment 4

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce,

ACTION: Notice of availability of fishery management plan amendments; request for comments.

SUMMARY: NMFS issues this notice that the Western Pacific Fishery Management Council (Council) has submitted for Secretarial review Amendment 8 to the Pelagic Fisheries Management Plan (FMP), Amendment 10 to the Crustaceans Fisheries FMP, Amendment 4 to the Precious Corals Fisheries FMP, and Amendment 6 to the Bottomfish and Seamount Groundfish Fisheries FMP and is requesting comments from the public. The amendments were prepared so that the FMPs would comply with provisions of the Sustainable Fisheries Act (SFA) regarding bycatch, fishing sectors, essential fish habitat, fishing communities, and overfishing. Copies of the amendments may be obtained from the Council (See **ADDRESSES**).

DATES: Written comments on the amendments must be received on or before January 4, 1998.

ADDRESSES: Written comments should be sent to Charles Karnella, Administrator, Pacific Islands Area Office, National Marine Fisheries Service, 2570 Dole Street, Room 106, Honolulu, HI 96822–2396. Copies of the comprehensive amendment document are available from, Kitty Simonds, Executive Director, Western Pacific Fishery Management Council, 1164 Bishop St., Suite 1400, Honolulu, HI 96813.

FOR FURTHER INFORMATION CONTACT: Alvin Katekaru, Fishery Management Specialist, Pacific Islands Area Office, NMFS, at (808) 973–2985 or Kitty Simonds at (808) 522–8220.

SUPPLEMENTARY INFORMATION: The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) requires that each Regional Fishery Management Council submit any amendment to a FMP to NMFS for review and approval, disapproval, or partial approval. The Magnuson-Stevens Act also requires that NMFS, upon receiving an amendment, immediately publish a notice that the amendment is available for public review and comment. NMFS will consider all public comments received during the comment period in determining whether to approve the amendments for implementation.

The SFA amended the requirements for FMPs in section 303(a) of the Magnuson-Stevens Act. The SFA established a 2-year deadline by which the FMPs had to be in compliance with the SFA/Magnuson-Stevens Act requirements. The proposed amendments are intended to supplement the FMPs to conform to the new requirements in section 303(a) of the Magnuson-Stevens Act. The proposed amendments: address bycatch and bycatch mortality issues by presenting an overview of the type and amount of bycatch in each managed fishery, assessing the adequacy of bycatch reporting, and examining the existing and possible new measures to minimize bycatch and mortality of bycatch in each fishery; describe the likely effects of management measures on fishing communities; specify overfishing criteria to determine whether a fishery is overfished; identify commercial, recreational, and charter fishing activity in each sector; identify pertinent data associated with the fishing activity in each sector; and identify essential fish habitat/areas of particular concern for management unit species. The new overfishing criteria are not expected to result in major changes to allowable catches in these fisheries. Specifically, the amendments would add or revise existing definitions in the four Western Pacific FMPs for: "Bycatch," "Charter fishing," "Commercial fishing," "Recreational fishing," "Essential fish habitat," "Fishing community," "Individual fishing quota," "Optimum," "Overfishing," "Overfished," and "Pacific Insular Area." Recommendations are also presented for obtaining additional data that would enable NMFS and the Council to implement effectively the new requirements under the proposed amendments.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 2, 1998.

Bruce C. Morehead,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Food Safety and Inspection Service

[Docket No. 98–058N]

Codex Alimentarius Commission: Meeting of the Codex Committees on Methods of Analysis and Sampling, and Natural Mineral Waters

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice.

SUMMARY: The Under Secretary for Food Safety, U.S. Department of Agriculture (USDA); the Food Safety and Inspection Service, USDA; and the Food and Drug Administration (FDA), U.S. Department of Health and Human Services, are sponsoring a public meeting on November 10, 1998, to provide information and receive public comments on agenda items that will be discussed at the following upcoming committee meetings:

- Twenty-Second Session of the Codex Committee on Methods of Analysis and Sampling, Budapest, Hungary, November 21–27, 1998.
- Sixth Session of the Codex Committee on Natural Mineral Waters, Bern, Switzerland, November 19–21, 1998.

DATES: The public meeting is scheduled for Tuesday, November 10, 1998, from 9:00 a.m. to 12:15 p.m.

ADDRESSES: The public meeting will be held in Room 1409, Department of Health and Human Services, Food and Drug Administration Building, 200 C Street, SW, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Patrick J. Clerkin, Associate U.S. Manager for Codex, U.S. Codex Office, Food Safety and Inspection Service, Room 4861, South Agriculture Building, 14th Street and Independence Avenue, SW, Washington, DC 20250–3700. Telephone: (202) 205–7760; Fax: (202) 720–3157.

SUPPLEMENTARY INFORMATION:

Background

The Codex Alimentarius Commission (Codex) was established in 1962 by two United Nations organizations, the Food and Agriculture Organization and the World Health Organization. Codex is the principal international organization for encouraging fair international trade in food and protecting the health and economic interests of consumers. Through adoption of food standards, codes of practice and other guidelines developed by its committees, and by promoting their adoption and implementation by governments, Codex seeks to ensure that the world's food supply is sound, wholesome, free from adulteration and correctly labeled.

Issues to be Discussed at the Public Meeting

The U.S. Delegate for the Codex Committee on Methods of Analysis and Sampling will provide information and receive public comments on the following subjects at the public meeting from 9:00 a.m. to 11:00 a.m.:

Agenda item/subject matter	Doc. Ref. No.
1. Methods of Sampling	
(a) Proposed Draft General Guidelines on Sampling at Step 4	CX/MAS 98/3.
(b) Draft Revised Recommended Methods of Sampling for the Determination of Pesticide Residues for Compliance with MRLs.	CX/MAS 98/4.
2. Criteria for Evaluating Acceptable Methods of Analysis for Codex Purposes	CX/MAS 98/5.
3. Harmonization of Reporting of Test Results Corrected for Recovery Factors. Progress Report on Development of Harmonized Guidelines for the Use of Recovery Factors in Analytical Measurement.	CX/MAS 98/6.
4. Harmonization of Analytical Terminology in Accordance with International Standards. Report of Inter-Agency Meeting on "Limits"	Conference Room Document (CRD) 1.
5. Measurement Uncertainty	CX/MAS 98/7.
6. In-House Method Validation	CX/MAS 98/8.

The U.S. Delegate for the Codex Committee on Natural Mineral Waters will provide information and receive public comments on the following subject at the public meeting as soon as the earlier discussion ends or from 11:15 a.m. to 12:15 p.m.:

Agenda item/subject matter	Doc. Ref. No.
1. Consideration of Proposed Draft General Standard for Bottled/Packaged Waters Other Than Natural Mineral Waters at Step 4	CX/NMW 98/2.

Patrick J. Clerkin,
Associate U.S. Manager for Codex.

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

Special Provision for Frozen Concentrated Orange Juice Under the North American Free Trade Agreement Implementation Act

AGENCY: Foreign Agricultural Service, USDA.

ACTION: Notice of Determination of Termination of Existence of Price Conditions Necessary for Imposition of Temporary Duty on Frozen Concentrated Orange Juice from Mexico.

SUMMARY: Pursuant to Section 309(a) of the North American Free Trade Agreement Implementation Act of 1993 ("NAFTA Implementation Act"), this is a notification that for 5 consecutive business days the daily price for frozen concentrated orange juice has exceeded the trigger price.

FOR FURTHER INFORMATION CONTACT: Mark Petry, Horticultural and Tropical Products Division, Foreign Agricultural Service, U.S. Department of Agriculture, Washington, DC 20250–1000 or telephone at (202) 720–6877.

SUPPLEMENTARY INFORMATION: The NAFTA Implementation Act authorizes the imposition of a temporary duty (snapback) for Mexican frozen concentrated orange juice when certain conditions exist. Mexican articles falling under subheading 2009.11.00 of the Harmonized Tariff Schedule of the United States (HTS) are subject to the snapback duty provision.

Under Section 309(a) of the NAFTA Implementation Act, certain price conditions must exist before the United States can apply a snapback duty on imports of Mexican frozen concentrated orange juice. In addition, such imports must exceed specified amounts before the snapback duty can be applied. The price conditions exist when for each period of 5 consecutive business days the daily price for frozen concentrated orange juice is less than the trigger price.

For the purpose of this provision, the term "daily price" means the daily closing price of the New York Cotton Exchange, or any successor as determined by the Secretary of Agriculture (the "Exchange"), for the closest month in which contracts for frozen concentrated orange juice are being traded on the Exchange. The term "business day" means a day in which contracts for frozen concentrated orange juice are being traded on the Exchange.

The term "trigger price" means the average daily closing price of the Exchange for the corresponding month during the previous 5-year period, excluding the year with the highest average price for the corresponding month and the year with the lowest average price for the corresponding month.

Price conditions no longer exist when the Secretary determines that for a period of 5 consecutive business days the daily price for frozen concentrated orange juice has exceeded the trigger price. Whenever the price conditions are determined to exist or to cease to exist the Secretary is required to immediately notify the Commissioner of Customs of such determination. Whenever the determination is that the price conditions exist and the quantity of Mexican articles of frozen concentrated orange juice entered exceeds (1) 264,978,000 liters (single strength equivalent) in any of calendar years 1994 through 2002, or (2) 340,560,000 liters (single strength equivalent) in any calendar years 2003 through 2007, the rate of duty on Mexican articles of frozen concentrated orange juice that are entered after the date on which the applicable quantity limitation is reached and before the date of publication in the **Federal Register** of the determination that the price conditions have ceased to exist shall be the lower of—(1) the column 1—General rate of duty in effect for such articles on July 1, 1991; or (2) the column 1—General rate of duty in effect on that day. For the purpose of this provision, the term "entered" means entered or withdrawn from warehouse for consumption in the customs territory of the United States.

In accordance with Section 309(a) of the NAFTA Implementation Act, it has been determined that for the period October 12–16, 1998, the daily price for frozen concentrated orange juice has exceeded the trigger price.

Issued at Washington, DC the 30th day of October, 1998.

Lon Hatamiya,
Adminstrator, Foreign Agricultural Service.

COMMISSION ON CIVIL RIGHTS

Agenda and Notice of Public Meeting of the Alaska Advisory Committee

Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights, that a meeting of the Alaska Advisory Committee to the Commission will convene at 1 p.m. and adjourn at 3 p.m. on November 19, 1998, at the Anchorage Hilton, 500 West Third Avenue, Anchorage, Alaska 99501. The purpose of the meeting is to discuss civil rights issues and review a special education draft report.

Persons desiring additional information, or planning a presentation to the Committee, should contact Philip Montez, Director of the Western Regional Office, 213–894–3437 (TDD 213–894–3435). Hearing-impaired persons who will attend the meeting and require the services of a sign language interpreter should contact the Regional Office at least ten (10) working days before the scheduled date of the meeting.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission.

Dated at Washington, DC, November 2, 1998.

Carol-Lee Hurley,
Chief, Regional Programs Coordination Unit.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Order No. 1004]

Expansion of Foreign-Trade Zone 15, Kansas City, Missouri, Area

Pursuant to its authority under the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board (the Board) adopts the following Order:

Whereas, the Greater Kansas City Foreign Trade Zone, Inc., grantee of Foreign-Trade Zone 15, submitted an application to the Board for authority to expand FTZ 15 to include a new site in Hermann, Missouri, within the St. Louis Customs port of entry area (FTZ Docket 44–97; filed 5/29/97);

Whereas, notice inviting public comment was given in **Federal Register** (62 FR 32582, 6/16/97) and the application has been processed pursuant to the FTZ Act and the Board's regulations; and,

Whereas, the Board adopts the findings and recommendations of the examiner's report, and finds that the requirements of the FTZ Act and Board's regulations are satisfied, and that the proposal is in the public interest;

Now, therefore, the Board hereby orders:

The application to expand FTZ 15 is approved, subject to the Act and the Board's regulations, including Section 400.28, and further subject to the Board's standard 2,000-acre activation limit, and to a sunset provision that

terminates the authority for the site on December 31, 2005, unless the site is activated pursuant to 19 CFR Part 146 of the U.S. Customs Service regulations.

Signed at Washington, DC, this 19th day of October, 1998.

Robert S. LaRussa,

Assistant Secretary of Commerce for Import Administration, Alternate Chairman, Foreign-Trade Zones Board.

Attest:

Dennis Puccinelli,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Order No. 1005]

Grant of Authority for Subzone Status Lucent Technologies Inc. (Telecommunications Equipment), Columbus, Ohio

Pursuant to its authority under the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board (the Board) adopts the following Order:

Whereas, the Foreign-Trade Zones Act provides for "* * * the establishment * * * of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes," and authorizes the Foreign-Trade Zones Board to grant to qualified corporations the privilege of establishing foreign-trade zones in or adjacent to U.S. Customs ports of entry;

Whereas, the Board's regulations (15 CFR Part 400) provide for the establishment of special-purpose subzones when existing zone facilities cannot serve the specific use involved;

Whereas, the Rickenbacker Port Authority, grantee of Foreign-Trade Zone 138, has made application to the Board for authority to establish special-purpose subzone status at the telecommunications equipment manufacturing facility of Lucent Technologies Inc., located in Columbus, Ohio, (FTZ Docket 73–97, filed 9/29/97);

Whereas, notice inviting public comment has been given in the **Federal Register** (62 FR 52683, 10/9/97); and,

Whereas, the Board adopts the findings and recommendations of the examiner's report, and finds that the requirements of the FTZ Act and the Board's regulations are satisfied, and that approval of the application is in the public interest;

Now, therefore, the Board hereby grants authority for subzone status at the telecommunications equipment manufacturing facility of the Lucent Technologies Inc., located in Columbus, Ohio, (Subzone 138E), at the location described in the application, and subject to the FTZ Act and the Board's regulations, including § 400.28.

Signed at Washington, DC, this 19th day of October 1998.

Robert S. LaRussa,

Assistant Secretary of Commerce for Import Administration, Alternate Chairman, Foreign-Trade Zones Board.

Dennis Puccinelli,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Order No. 1006]

Grant of Authority for Temporary Time Extension, Subzones 78C and 78D (Nuclear Power Equipment), Hartsville and Phipps Bend, Tennessee

Pursuant to its authority under the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board (the Board) adopts the following Order:

Whereas, FTZ Subzones 78C and 78D at Global Power Company's nuclear equipment storage facilities in Hartsville and Phipps Bend, Tennessee, were approved in 1984, subject to a voluntary time limit (Board Order 246, 3/30/84);

Whereas, the Metropolitan Nashville Port Authority, grantee of FTZ 78, has applied to the Board for extension of the time limit to allow Global Power Company further time to sell the equipment (Docket 39–98, filed August 14, 1998);

Whereas, the Board adopts the findings and recommendations of the examiner's report, and finds that the requirements of the FTZ Act and the Board's regulations are satisfied, and that approval of the application is in the public interest;

Now, therefore, the Board hereby grants authority for the extension of the time limit for Subzones 78C and 78D to October 25, 2003.

Signed at Washington, DC, this 19th day of October, 1998.

Robert S. LaRussa,

Assistant Secretary of Commerce for Import Administration, Alternate Chairman, Foreign-Trade Zones Board.

Attest:

Dennis Puccinelli,

Acting Executive Secretary.

International Trade Administration

[A–570–848]

Freshwater Crawfish Tail Meat From the People's Republic of China: Initiation of New-Shipper Antidumping Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of Initiation of New-Shipper Antidumping Administrative Review.

SUMMARY: The Department of Commerce (the Department) has received a request from Lianyungang Haiwang Aquatic Products Co., Ltd. (Haiwang), Qingdao Rirong Foodstuff Co., Ltd. (Rirong), and Yangcheng Baolong Biochemical Products Co., Ltd. (Yangcheng) to conduct new-shipper administrative reviews of the antidumping duty order on freshwater crawfish tail meat from the People's Republic of China (PRC). In accordance with the Department's current regulations, we are initiating this administrative review.

EFFECTIVE DATE: November 5, 1998.

FOR FURTHER INFORMATION CONTACT: Laurel LaCivita, Mark Hoadley, Thomas Gilgunn, or Maureen Flannery, AD/CVD Enforcement, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, N.W., Washington, D.C. 20230; telephone: (202) 482–4236, (202) 482–4106, (202) 482–0648, or (202) 482–3020, respectively.

The Applicable Statute and Regulations

Unless otherwise indicated, all citations to the statute are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Tariff Act of 1930 (the Act) by the Uruguay Round Agreements Act. In addition, unless otherwise indicated, all citations to the Department's regulations are to the current regulations, codified at 19 CFR Part 351 (1998).

Background

On September 29, 1998 and September 30, 1998, the Department received timely requests, in accordance with section 751(a)(2)(B) of the Act, and section 351.214(c) of the Department's regulations, for new shipper reviews of this antidumping duty order which has a September anniversary date.

Initiation of Review

In its September 29, 1998 request for review, Haiwang certified that it did not export the subject merchandise to the United States during the POI and that it is not affiliated with any company which exported subject merchandise to the United States during the POI. Haiwang further certified that its export activities are not controlled by the central government of the PRC.

In its September 29, 1998 request for review, Rirong certified that it did not export the subject merchandise to the United States during the POI and that it is not affiliated with any company which exported subject merchandise to the United States during the POI. Rirong further certified that its export activities are not controlled by the central government of the PRC. In addition, Rirong submitted a statement from Weishan Hongfa Lake Foodstuffs Co., Ltd. (Weishan), the producer/supplier of subject merchandise to Rirong. In that statement, Weishan certified that it did not export subject merchandise during the POI and that it is not affiliated with any exporter or producer who exported subject merchandise during the POI. Weishan further certified that its export activities are not controlled by the government of the PRC.

In its September 30, 1998 request for review, Yangcheng certified that it did not export the subject merchandise to the United States during the POI and that it is not affiliated with any company which exported subject merchandise to the United States during the POI. Yangcheng further certified that its export activities are not controlled by the central government of the PRC. In addition, Yangcheng submitted a statement from the processor of its subject merchandise. In that statement, the processor certified that it did not export subject merchandise during the POI and that it is not affiliated with any exporter or producer who exported subject merchandise during the POI. The processor further certified that its export activities are not controlled by the government of the PRC.

In accordance with section 751(a)(2)(B) and 19 CFR 351.214(d), we are initiating new-shipper reviews of the antidumping duty order on freshwater crawfish tail meat from the PRC. Haiwang and Rirong have agreed to waive the standard deadline for new-shipper reviews. Therefore, we intend to conduct the new-shipper reviews for these parties concurrent with the administrative review initiated on October 29, 1998 (63 FR 58009). With respect to the new-shipper review for Yangcheng, the Department will issue the final results not later than 270 days from the publication of this notice.

In accordance with section 351.214(g)(ii) of the Department's regulations, the period of review (POR) for a new shipper review initiated in the month immediately following the annual anniversary month of the first administrative review extends from the date of suspension of liquidation to the end of the month immediately preceding the first anniversary month of the antidumping duty order. Therefore, the POR for these new-shippers is:

Antidumping duty proceeding	Period to be reviewed
Fresh Water Crawfish Tail Meat from the PRC, A–570–848	
Lianyungang Haiwang Aquatic Products Co., Ltd	3/26/97–8/31/98
Qingdao Rirong Foodstuff Co., Ltd	3/26/97–8/31/98
Yangcheng Baolong Biochemical Products Co., Ltd	3/26/97–8/31/98

Concurrent with publication of this notice and in accordance with CFR 351.214(e), we will instruct the U.S. Customs Service to allow, at the option of the importer, the posting of a bond or security in lieu of a cash deposit for each entry of the merchandise exported by the companies listed above, until the completion of the review.

The interested parties must submit applications for disclosure under administrative protective order in accordance with 19 CFR 351.305 and 351.306.

This initiation and notice are in accordance with section 751(a) of the Act (19 U.S.C. 1675(a)) and 19 CFR 351.214.

Dated: October 30, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton and Man-Made Fiber Textile Products Produced or Manufactured in the Dominican Republic

November 2, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs adjusting limits.

EFFECTIVE DATE: November 6, 1998.

FOR FURTHER INFORMATION CONTACT: Naomi Freeman, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port or call (202) 927–5850. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The current limits for certain categories are being adjusted for swing and special shift.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Also see 62 FR 67622, published on December 29, 1997.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 2, 1998.

Commissioner of Customs,

Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on December 19, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool and man-made fiber textile products, produced or manufactured in the Dominican Republic and exported during the twelve-month period which began on January 1, 1998 and extends through December 31, 1998.

Effective on November 6, 1998, you are directed to adjust the current limits for the

following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted twelve-month limit [1]
340/640	830,076 dozen.
342/642	144,115 dozen.
351/651	1,243,383 dozen.

[1] The limits have not been adjusted to account for any imports exported after December 31, 1997.

The guaranteed access levels for the foregoing categories remain unchanged.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

October 30, 1998.

Commissioner of Customs,

Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on November 25, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, man-made fiber, silk blend and other vegetable fiber textile products, produced or manufactured in the United Arab Emirates and exported during the twelve-month period which began on January 1, 1998 and extends through December 31, 1998.

Effective on November 6, 1998, you are directed to adjust the limits for the following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted twelve-month limit [1]
335/635/835	195,343 dozen.
338/339	735,224 dozen of which not more than 462,653 dozen shall be in Categories 338–S/339–S [2].
351/651	218,160 dozen.
352	208,582 dozen.
363	7,561,378 numbers.
647/648	426,073 dozen.
847	136,499 dozen.

[1] The limits have not been adjusted to account for any imports exported after December 31, 1997.

[2] Category 338–S: only HTS numbers 6103.22.0050, 6105.10.0010, 6105.10.0030, 6105.90.8010, 6109.10.0027, 6110.20.1025, 6110.20.2040, 6110.20.2065, 6110.90.9068, 6112.11.0030 and 6114.20.0005; Category 339–S: only HTS numbers 6104.22.0060, 6104.29.2049, 6106.10.0010, 6106.10.0030, 6106.90.2510, 6106.90.3010, 6109.10.0070, 6110.20.1030, 6110.20.2045, 6110.20.2075, 6110.90.9070, 6112.11.0040, 6114.20.0010 and 6117.90.9020.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMODITY FUTURES TRADING COMMISSION

New York Mercantile Exchange Amendment to Petition for Exemption from the Dual Trading Prohibition in Affected Contract Markets

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of amendment to a petition for exemption from the prohibition on dual trading in an affected contract market.

SUMMARY: New York Mercantile Exchange ("NYMEX" or "Exchange") has submitted to the Commodity Futures Trading Commission ("Commission") an amendment and update to its October 25, 1993 petition for exemption from the prohibition against dual trading in five contract markets. The Exchange had resubmitted a corrected petition on December 1, 1993. Copies of the entire file, including any future submissions, will be available to the public upon request, except to the extent the Exchange has requested confidential treatment.

ADDRESSES: Copies of the file are available from the Office of the Secretariat, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW, Washington, DC 20581. Reference should be made to the NYMEX dual trading exemption petition file.

FOR FURTHER INFORMATION CONTACT: Duane C. Andresen, Special Counsel, Division of Trading and Markets, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW, Washington, DC 20581; telephone: (202) 418–5490.

SUPPLEMENTARY INFORMATION: Pursuant to Sections 4j(a)(1) and (3) of the Commodity Exchange Act ("Act") and Commission Regulation 155.5 thereunder, a board of trade may submit a petition to the Commission to exempt any of its affected contract markets (markets with an average daily trading volume equal to or in excess of 8,000 contracts for four consecutive quarters) from the prohibition against dual trading. Regulation 15.5(d)(6) authorizes the Director of the Division of Trading and Markets to publish notice of each exemption petition deemed complete under Regulation 155.5(d) and to make the petition available to the public as required by Section 4j(a)(5) of the Act.

NYMEX originally submitted a petition for a dual trading exemption on October 25, 1993. After the Commission requested additional information, the Exchange submitted a corrected petition on December 1, 1993. That petition was made available to the public by a notice of availability published in the **Federal Register** on December 22, 1993. Pursuant to a request from the Commission, NYMEX submitted a dual trading petition amendment and update dated September 30, 1998 for its Light Sweet Crude Oil, Natural Gas, New York Harbor No. 2 Heating Oil, and Harbor Unleaded Gasoline futures contracts and the option contracts on Light Sweet Crude Oil futures.

Copies of the file containing all these materials and any future submissions, except to the extent the Exchange has requested confidential treatment in accordance with 17 CFR 145.9, are available for inspection at the Commission's Office of the Secretariat, Three Lafayette Centre, 1155 21st Street, NW, Washington, DC 20581, and may be obtained by mail at that address or by telephone at (202) 418–5100.

Petition materials subject to NYMEX's request for confidential treatment may be available upon request pursuant to the Freedom of Information Act ("FOIA") (5 U.S.C. § 552) and the Commission's regulations thereunder (17 CFR Part 145), except to the extent they are entitled to confidential treatment as set forth in 17 CFR 145.5 and 145.9. Requests for copies of such materials should be made to FOIA, Privacy and Sunshine Act Compliance Staff of the Office of the Secretariat at the above address in accordance with 17 CFR 145.7 and 145.8.

NYMEX timely submitted its original petition before October 26, 1993, the effective date of the dual trading prohibition. Therefore, application of the prohibition against the contract markets covered by the petition has been suspended in accordance with Commission Regulation 155.5(d)(5) and will remain suspended until the petition is acted upon.

Issued in Washington, DC, on October 30, 1998.

Alan L. Seifert,

Deputy Director, Division of Trading and Markets.

DEPARTMENT OF DEFENSE

Office of the Secretary

Submission for OMB Review; Comment Request

ACTION: Notice.

The Department of Defense has submitted to OMB for clearance, the following proposal for collection of information under the provision of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Title and OMB number: Defense Federal Acquisition Regulation Supplement (DFARS) Part 219, Small Business Programs, and the Clause at 252.219–7003; OMB Number 0704–0386.

Type of request: Extenstion.

Number of respondents: 41.

Responses per respondent: 1.

Annual responses: 41.

Average burden per response: 1 hour.

Annual burden hours: 41.

Needs and uses: This collection of information is necessary to implement the reporting requirements of the acquisition-related sections of the Small Business Act (15 U.S.C. 631, et seq.) and applicable sections of the Armed Services Procurement Act (10 U.S.C. 2302, et seq.). DFARS 219.704 and the clause at DFARS 252.219–7003, Small, Small Disadvantaged and Women-owned Small Business Subcontracting Plan (DoD Contracts), require prime contractors to notify the administrative contracting officer of any substitutions of firms that are not small, small disadvantaged, or women-owned small businesses for the firms listed in those subcontracting plans that specifically identify small, small-disadvantaged, and women-owned small businesses. Notifications must be in writing and may be submitted in a contractor-specified format.

Affected public: Business or Other For-Profit; Not-For-Profit Institutions.

Frequency: On occasion.

Respondent's obligation: Required to obtain or retain benefits.

OMB Desk Officer: Mr. Peter N. Weiss. Written comments and recommendations on the proposed information collection should be sent to Mr. Weiss at the Office of Management and Budget, Desk Officer for DoD, Room 10236, New Executive Office Building, Washington, DC 20503.

DOD Clearance Officer: Mr. Robert Cushing. Written requests for copies of the information collection proposal should be sent to Mr. Cushing, WHS/DIOR, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202–4302.

Dated: October 30, 1998.

Patricia L. Toppings,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Department of the Army

Privacy Act of 1974; System of Records

AGENCY: Department of the Army, DoD.

ACTION: Notice to Amend System of Records.

SUMMARY: The Department of the Army is amending a system of records notice in its existing inventory of record systems subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended.

DATES: This proposed action will be effective without further notice on December 7, 1998 unless comments are received which result in a contrary determination.

ADDRESSES: Privacy Act Officer, Records Management Program Division, U.S. Total Army Personnel Command, ATTN: TAPC-PDR-P, Stop C55, Ft. Belvoir, VA 22060–5576.

FOR FURTHER INFORMATION CONTACT: Ms. Janice Thornton at (703) 806–4390 or DSN 656–4390.

SUPPLEMENTARY INFORMATION: The Department of the Army systems of records notices subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address above.

The specific changes to the record system being amended are set forth below followed by the notice, as amended, published in its entirety. The proposed amendments are not within the purview of subsection (r) of the Privacy Act of 1974, (5 U.S.C. 552a), as amended, which requires the submission of a new or altered system report.

Dated: October 30, 1998.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

SYSTEM NAME:

Resumes for Non-Government Technical Personnel.

SYSTEM LOCATION:

U.S. Army Research Office, 4300 South Miami Blvd, Research Triangle Park, NC 27703–9142.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Resumes of candidates who can provide scientific and engineering discipline services to federal agencies, namely mathematics, physical science, and geosciences.

CATEGORIES OF RECORDS IN THE SYSTEM:

Individual's name, personal history resume, affiliations, area of expertise, Social Security Number, record of remuneration for services provided, and performance evaluations.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301, Departmental Regulations; DoD Directive 4205.2, Acquiring and Managing Contract Advisory Services; Army Regulation 5-14, Management of Contracted Advisory and Assistance Services; and E.O. 9397 (SSN).

PURPOSE(S):

To provide a source of qualified scientists and technical personnel to solve scientific and technical problems for the Federal government.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, these records or information contained therein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

The 'Blanket Routine Uses' set forth at the beginning of the Army's compilation of systems of records notices also apply to this system.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper records in metal containers; magnetic discs, tapes.

RETRIEVABILITY:

By candidate's surname.

SAFEGUARDS:

Records are maintained in areas accessible only to authorized, properly trained personnel who have official need therefor.

RETENTION AND DISPOSAL:

Retained for life of the contract; destroyed by shredding when no longer needed.

SYSTEM MANAGER(S) AND ADDRESS:

Director, U.S. Army Research Office, 4300 South Miami Blvd, Research Triangle Park, NC 27703–9142.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether information about themselves is contained in this system should address written inquiries to the Contracting Officer, U.S. Army Research Office, 4300 South Miami Boulevard, Research Triangle Park, NC 27703–9142.

Individuals should provide his/her full name, current address and telephone number, position title, and current employer.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system should address written inquiries to the Contracting Officer, U.S. Army Research Office, 4300 South Miami Boulevard, Research Triangle Park, NC 27703–9142.

Individuals should provide his/her full name, current address and telephone number, position title, and current employer.

CONTESTING RECORD PROCEDURES:

The Army's rules for accessing records, and for contesting contents and appealing initial agency determinations are contained in Army Regulation 340–21; 32 CFR part 505; or may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

From the individual candidate.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

BILLING CODE 5000–04–F

DEPARTMENT OF DEFENSE

Department of the Navy

Record of Decision for the Disposal and Reuse of Mare Island Naval Shipyard, Vallejo, CA

Summary

The Department of the Navy (Navy), pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. § 4332(2)(C), and the regulations of the Council on Environmental Quality that implement NEPA procedures, 40 CFR Parts 1500–1508, hereby announces its decision to dispose of mare Island Naval Shipyard in Vallejo, California.

Navy and the City of Vallejo analyzed the impacts of the disposal and reuse of Mare Island Naval Shipyard in a Joint Environmental Impact Statement/ Environmental Impact Report (EIS/EIR), as required by NEPA and the California Environmental Quality Act (CEQA), Cal. Pub. Res. Code, § 21000, *et seq.* The EIS/EIR analyzed three reuse alternatives and identified the Mare Island Final Reuse Plan, described in the EIS/EIR as the Reuse Plan Alternative, as the Preferred Alternative. The Reuse Plan Alternative proposed industrial, commercial, residential, and educational uses, the development of public parks and recreational areas, expansion of the existing golf course, and extensive roadway improvements.

Navy intends to dispose of the property in a manner that is consistent with the Mare Island Final Reuse Plan dated July 1994, as modified in March 1998 (Reuse Plan). The City of Vallejo, the Local Redevelopment Authority (LRA) for Mare Island Naval Shipyard, prepared the Reuse Plan.

In deciding to dispose of mare Island Naval Shipyard in a manner consistent with the Reuse Plan, Navy has determined that a mixed land use will meet the goals of achieving local economic redevelopment, creating new jobs, and providing additional housing, while limiting adverse environmental impacts and ensuring land uses that are compatible with adjacent property. This Record Of Decision does not mandate a specific mix of land uses. Rather, it leaves selection of the particular means to achieve the proposed redevelopment to the acquiring entity and the local zoning authority.

Background

Under the authority of the Defense Base Closure and Realignment Act of 1990 (DBCRA), Public Law 101–5 10, 10 U.S.C. § 2687 note, the 1993 Defense Base Closure and Realignment Commission recommended the closure of Mare Island Naval Shipyard. This recommendation was approved by President Clinton and accepted by the One Hundred Third Congress in October 1993. Mare Island Naval Shipyard closed on April 1, 1996, and Navy is currently maintaining the property in an inactive caretaker status.

Mare Island Naval Shipyard is located on the western edge of the City of Vallejo in Solano County, California, about 30 miles northeast of the City of San Francisco. The 5,252-acre property consists of four parcels: Mare Island comprising 5,197 acres; main entrance complex and railroad spur comprising 26 acres in the City of Vallejo; a housing complex comprising 29 acres in Vallejo; and a bulkhead in Vallejo.

Most of the Shipyard is situated on Mare Island, which lies west of the Napa River and mare Island Strait into which the river flows. About 3.5 miles long, the island is just west of the City and its axis runs approximately northwest to southeast. The eastern half of Mare Island is developed with about 960 buildings that contain about 10.5 million square feet of space. It lies adjacent to Mare Island Strait. The western half of Mare Island is composed largely of wetlands, dredge material disposal ponds, and submerged lands. It lies adjacent to San Pablo Bay. The southern end of Mare Island touches Carquinez Strait.

The State of California granted about 3,629 acres of tidal and submerged lands to the United States for the establishment of a Naval base at Mare Island. These grants were issued in 1854, 1897, and 1963. By the terms of these grants, title to the property reverts to the State of California when the United States no longer occupies the ceded lands for military purposes, as in the case of the 1854 statute, or no longer continues to hold and own the adjacent lands, as in the case of both the 1897 and 1963 statutes. Navy has no discretion regarding the return of this property to the state of California nor any authority to control its use after reversion.

During the Federal screening process, six Federal agencies requested interagency transfers of base closure property at Mare Island. These included the Department of Agriculture's United States Forest Service, the United States Coast Guard, the Department of the Interior's United States Fish and Wildlife Service, the Department of the Army, the Department of Justice's Immigration and Naturalization Service, and the Department of the Air Force.

Navy will transfer 207 acres of Shipyard property to four of these Federal agencies. Navy has already transferred part of the former Combat Systems Technical School (Buildings 1306 and 1324) and about 8 acres of land in the southern part of the base to the United States Forest Service for use as the headquarters for its Pacific Southwest Region.

Navy will transfer about one acre in the southern part of the base to the Coast Guard for the operation of a communications tower. Additionally, Navy will grant the Coast Guard easements to permit it to continue operating a navigational aid and vessel traffic service remote radar on Pier 35 at the southeastern tip of Mare Island.

Navy will transfer about 162 acres in the north central part of the base that contain wetlands, dredge material disposal ponds, and Building 505 to the United States Fish and Wildlife Service. The Service will use this property to enlarge the San Pablo Bay National Wildlife Refuge and establish a wildlife interpretive center. While the Service initially requested 670 acres, 508 of those acres will revert to the State of California. Thus, only 162 acres were available for this interagency transfer.

Navy will transfer about 36 acres in the southeastern part of the base to the Department of the Army for use as an Army Reserve Center. Army initially also requested an interagency transfer of 600 housing units at Roosevelt Terrace but later withdrew that request.

The Immigration and Naturalization Service initially requested an interagency transfer of three buildings on Mare Island for use as a detention facility, but subsequently withdrew its request. Similarly, the Department of the Air Force expressed interest in 481 housing units and supporting facilities on Mare Island, but subsequently withdrew its request.

After the Federal screening process had concluded, Navy received additional expressions of interest in base closure property at Mare Island from the United States Department of Agriculture and the Department of the Interior's National Park Service. Both agencies subsequently withdrew their requests.

The remaining property, comprising about 1,416 acres, is surplus to the needs of the Federal Government. Therefore, in this Record Of Decision, the Federal action is the disposal of 1,416 acres of surplus Federal property associated with Mare Island Navy Shipyard.

Navy published a Notice of Intent in the **Federal Register** on September 1, 1994, announcing that Navy and the City of Vallejo would prepare a Joint EIS/EIR to analyze the impacts of disposal and reuse of the land, buildings, and infrastructure at Mare Island Navy Shipyard. Navy and Vallejo held a public scoping meeting at the John F. Kennedy Library in Vallejo on September 22, 1994, and the scoping period concluded on October 21, 1994.

On September 1, 1995, Navy and Vallejo distributed a Draft EIS/EIR (DEIS/EIR) to Federal, State, and local agencies, interested parties, and the general public. On September 27, 1995, Navy held a public hearing concerning the DEIS/EIR at Vallejo City Hall. During the 45-day review period after publication of the DEIS/EIR, Federal, State, and local agencies, community groups and associations, and the general public submitted oral and written comments concerning the DEIS/EIR. These comments and Navy's responses were incorporated in the Final EIS/EIR (FEIS/EIR), which was distributed to the public on May 1, 1998, for a 30-day review period that concluded on June 1, 1998. Navy received nine letters concerning the FEIS/EIR.

Alternatives

NEPA requires Navy to evaluate a reasonable range of alternatives for the disposal and reuse of this surplus Federal property. In the Joint EIS/EIR, Navy and Vallejo analyzed the environmental impacts of three "action" alternatives that could result from the disposal of Mare Island Naval Shipyard property. In the NAPA process, Navy also evaluated a "No action" alternative that would leave the property in a caretaker status with Navy maintaining the physical condition of the property, providing a security force, and making repairs essential to safety.

The City of Vallejo developed the Reuse Plan with extensive public involvement and comment that began with its establishment of the Mare Island Futures Project in October 1993. Vallejo created the Mare Island Futures Work Group to guide the reuse planning process. This Group was composed of representatives from local government, labor, business, educational institutions, environmental organizations, and private citizens who were interested in the reuse of Mare Island Naval Shipyard.

In November 1993, the Work Group completed a Conceptual Reuse Plan that was accepted by the Vallejo City Council in December 1993. In April 1994, Vallejo evaluated the market feasibility of the Conceptual Reuse Plan. Based upon the findings of the market feasibility study and an economic analysis, the Work Group prepared the Final Reuse Plan. During preparation of the Final Reuse Plan, all Work Group meetings were open to the public. This Plan addressed all of the property associated with Mare Island Naval Shipyard, and in July 1994, the Vallejo City Council accepted the Mare Island Final Reuse Plan.

After the Plan was completed and the reversionary property and Federal agency requests for base closure property were considered, Navy determined that about 3,629 acres on Mare Island would revert to the State of California and about 207 acres on Mare Island would be transferred to other Federal agencies. In March 1998, Vallejo modified the Final Reuse Plan to take account of the Department of the Army's request for an interagency transfer of base closure property.

The Preferred Alternative, designated in the FEIS/EIR as the Reuse Plan Alternative, would implement the Reuse Plan for the surplus Shipyard property. This alternative proposed extensive use of existing structures and land uses that were similar to Navy's use of the property. In particular, the Reuse Plan Alternative proposed industrial, commercial, residential and educational uses as well as expansion of the nine-hole golf course to 18 holes and relocation of the rifle range activity from the center of Mare Island to an undeveloped area in the southeastern part of the island.

The Reuse Plan also proposed to build a bridge across Mare Island Strait and to redevelop the southeastern part of Mare Island for retail commercial and residential uses. Additionally, this alternative proposed to make extensive roadway improvements that would serve the proposed redevelopment. Under the Reuse Plan, there are about 81 acres of wetlands in the northeastern, central, southern and southeastern parts of the base available for disposal that will be protected by conservation easements or similar real estate instruments.

The Reuse Plan designated 13 Reuse Areas on the eastern side of Mare Island and identified wetland, submerged land, and dredge material disposal areas on the eastern and western sides and at the southern end of Mare Island. Although not included within these 13 Reuse Areas, the main entrance office building and causeway bridge, the railroad spur, the Roosevelt Terrace housing complex, and the bulkhead are also addressed in the Reuse Plan.

Reuse Area 1, the North Light Industry Area, covers about 192 acres at the northern end of Mare Island. It contains buildings that are surrounded by paved or grassy open areas. Navy used this part of the base for warehouse activity and light industrial, retail, administrative, residential, and recreational activities. Under the Reuse Plan, this area would contain an industrial park. The 29-acre wetland area on its eastern boundary will be protected by a conservation easement or similar real estate instrument.

Reuse Area 2, the Neighborhood Center, covers 85 acres located south of the North Light Industry Area. It contains recreational facilities, *i.e.*, the base theater, gymnasium, and athletic fields. Under the Reuse Plan, this area would be used for community and social services and housing.

Reuse Area 3, the Office and Light Industry Area, covers 111 acres and consists of historic and non-historic industrial and office buildings in the eastern part of Mare Island, south of the North Light Industry area. Under the Reuse Plan, this part of the base would be redeveloped as a small business and residential complex. Some buuildings would be subdivided to provide residential units, and other buildings would be demolished to provide space for parking. A waterfront promenade would extend along the length of this Reuse Area.

Reuse Area 4, the Historic District, covers about 47 acres along the waterfront in the east central part of Mare Island. The historic resources located here such as Saint Peter's Chapel, Alden Park, 21 houses, and Drydock 1 are components of the area that the Secretary of the Interior designated in 1976 as the Mare Island Naval Shipyard National Historic Landmark. Under the Reuse Plan, the area along the waterfront would be used for ship repair, historic ship restoration, and an extension of the waterfront promenade. Saint Peter's Chapel and Alden Park would be used for tours and special events and as visitor attractions. The historic houses would be used for permanent private residences, guest lodging, restaurants, and as office space. Because of the presence of these historic structures, there would be very little demolition in this Reuse Area.

Reuse Area 5, the Heavy Industry Area, covers 119 acres along the waterfront south of the Historic District. Navy will transfer Pier 22, Buildings 573 and 743, and about 7 acres here to Army for use as part of the Reserve Center. The remaining 112 acres are available for reuse. This area, which Navy formerly used for shipbuilding and ship repair, contains some of the largest buildings on Mare Island, two drydocks, and several overhead cranes.

Under the Reuse Plan, this property would be used for manufacturing, *e.g.*, metal processing and fabrication and biotechnology. The railroad lines that serve this area would remain in their present configuration. Historic buildings and landmarks would be preserved, and the waterfront promenade would be extended, to the extent practicable, into the industrial shoreline area.

Reuse Area 6, Farragut Village, covers 107 acres and is located west of the Historic District. It contains duplex residences, barracks, an elementary school building, and adjacent playgrounds. About 15 acres in this Reuse Area, where 30 duplex housing units are located, will revert to the State of California. The remaining 92 acres are available for reuse.

Under the Reuse Plan, these 92 acres would contain residential structures and retail stores. The Vallejo Unified School District would continue to operate the elementary school and playgrounds. The 32-acre wetland at the northwest boundary of this Reuse Area will be protected by a conservation easement or similar real estate instrument.

Reuse Area 7, the Developed Recreation Area, covers 48 acres in the center of Mare Island, south of Farragut Village. This Reuse Area contains the rifle range, open laydown storage areas, and undeveloped lands. About 36 of the 48 acres in this part of the base will revert to the State of California, including most of the property where the rifle range is currently located. The remaining 12 acres are available for reuse. Under the Reuse Plan, this property would be redeveloped for recreational uses, *i.e.*, athletic fields and enlargement of the nine-hole golf course. The rifle range activity would be moved to the southeastern part of Mare Island.

Reuse Area 8, Coral Sea Village, is a 70-acre residential development with a parade ground located southeast of the Developed Recreation Area. Under the Reuse Plan, this area would be used for housing. The parade ground would be used as a recreational field.

Reuse Area 9, the Education and Office Area, covers 101 acres in the south central part of the base between Reuse Area 5 (Heavy Industry) and Reuse Area 8 (Coral Sea Village). It contains the 30-building school and campus of the former Combat Systems Technical School, office buildings and a large electrical shop (Building 866). Navy has transferred Buildings 1306 and 1324 and about 8 acres of land to the Forest Service for use as the headquarters for its Pacific Southwest Region. Navy will transfer 9 buildings (A–272, 726, 776, 930, 934, 936, 938, 1294, and 1296) and about 13 acres here to Army for use as part of the Reserve Center. The remaining 80 acres are available for reuse. Under the Reuse Plan, the school and campus, the office buildings, and the electrical shop would be used for educational activities and as a conference center.

Reuse Area 10, the Retail and Residential Area, covers 94 acres adjacent to Mare Island Strait in the southeastern part of the base, south of the Heavy Industry Area. Navy will transfer Pier 23, 6 buildings (A–279, 597, 724, 736, 762, and FA1–0) and about 16 acres here to Army for use as part of the Reserve Center. The remaining 78 acres are available for reuse.

This Reuse Area contains vacant lots and many small buildings that would be demolished. Under the Reuse Plan, a retail commercial complex and residential apartments and condominium units would be built in this part of the base. The 9-acre wetland area along the eastern edge next to Mare Island Strait will be protected by a conservation easement or similar real estate instrument. Where practicable, the waterfront promenade would be extended into Reuse Area 10. A southern crossing bridge across Mare Island Strait, connecting Mare Island with the City of Vallejo, would be built in this area but its precise location has not yet been determined.

Reuse Area 11, the Golf Course Area, is located in the south central part of Mare Island and covers about 172 acres. It consists of the existing nine-hole golf course and clubhouse and undeveloped open space. Under the Reuse Plan, the nine-hole golf course, now covering about 100 acres, would be expanded to 18 holes over 172 acres. The existing clubhouse and parking facilities would also be expanded.

Reuse Area 12, the Regional Park, covers about 241 acres of undeveloped property at the southeastern end of Mare Island. The FEIS/EIR erroneously stated that Reuse Area 12 contained 172 acres and that 69 acres of dredge material disposal ponds were available for disposal. There are actually 241 acres of property in Reuse Area 12, and there are no dredge material disposal ponds here. Navy will transfer a one-acre site in this part of the base to the Coast Guard for its communications tower, and about 10 acres will revert to the State of California. The remaining 230 acres are available for reuse.

Under the Reuse Plan, public recreational facilities would be built here. Walking, bicycling, and equestrian paths and trails would link the various parts of Mare Island, particularly the wetland and dredge material disposal ponds to the west with the waterfront promenade along the eastern shoreline. These trails would be designed and built in a manner that preserves the natural terrain and character of the island. The 11-acre wetland area along the southeastern edge of Reuse Area 12 will be protected by a conservation easement or similar real estate instrument. The Regional Park would also provide horse stables and a rifle range. These facilities are currently located on reversionary property in the center of the island. The cemetery in Reuse Area 12 would be preserved as an historic cemetery.

Reuse Area 13, the Open Space and Recreation Area, covers 92 acres and is located on a landfill site between the dredge material disposal ponds and the nontidal wetlands in the northwestern part of Mare Island west of the wetlands adjacent to Reuse Area 2, the Neighborhood Center. The entire area is located on property that will revert to the State of California.

There is additional surplus Shipyard property that is located off the island in the City of Vallejo and covers about 55 acres. The main entrance office building, the causeway bridge, the railroad spur, and the bulkhead cover about 26 acres, and the Roosevelt Terrace housing complex covers about 29 acres. Under the Reuse Plan, the main entrance office building would be used for retail commercial activities or professional office space; the causeway bridge would continue to serve as the primary access to Mare Island; and the railroad spur would be used to support industrial and commercial activities on Mare Island that require rail service.

The Roosevelt Terrace housing complex is located in Vallejo, about one mile northeast of the main entrance office building. Under the Reuse Plan, half of this 600-unit housing complex would be remodeled for residential use. The remaining housing units would be demolished to provide space for landscaping, recreational activities, and parking.

The bulkhead is located in Vallejo across Mare Island Strait from the southeastern end of Mare Island. Under the Reuse Plan, this 2,150 foot concrete and stone bulkhead would continue to serve as a breakwater.

In the NEPA process, Navy considered a second "action" alternative, described in the FEIS/EIR as the Medium Density Alternative. In the Medium Density Alternative, the reuse of Mare Island Naval Shipyard would be similar to that proposed in the Preferred Alternative but with reduced development densities, *i.e.*, less new construction and fewer people. This alternative includes the same 81 acres of wetlands that would be protected by conservation easements or similar real estate instruments.

The southern crossing bridge across Mare Island Strait, linking Mare Island with Vallejo, would not be built. Reuse Area 10, the Retail and Residential Area, would not be developed. The rifle range activity would remain at its present location in Reuse Area 7, the Developed Recreation Area. No new apartment or condominium units and a minimal number of industrial and commercial structures would be built. Instead, existing facilities would be converted for industrial, commercial, and residential reuse.

Navy also considered a third "action" alternative, described in the FEIS/EIR as the Open Space Alternative. In the Open Space Alternative, there would be substantially less development than in the Preferred Alternative.

The southern crossing bridge linking Mare Island and Vallejo would not be built. Reuse Area 10, the Retail and Residential Area, would not be developed. The sites of the existing rifle range and golf course would be used as

open space in an expanded Regional Park covering 344 acres. No new industrial, commercial, and residential structures would be built. Instead, existing facilities would be converted for reuse. This alternative also includes the same 81 acres of wetland that would be protected by conservation easements of similar real estate instruments.

Environmental Impacts

Navy analyzed the direct, indirect, and cumulative impacts of the disposal and reuse of this Federal property. The EIS/EIR addressed impacts of the Preferred Alternative, the Medium Density Alternative, the Open Space Alternative, and the "No action" alternative for each alternative's effects on land use, socioeconomic, public services, cultural resources, aesthetics and scenic resources, biological resources, water resources, geology and soils, traffic and circulation, air quality, noise, utilities, and hazardous materials and waste.

The direct environmental impacts are those associated with Navy's proposed disposal of 1,416 acres of surplus Shipyard property and with the "No action" alternative. The indirect impacts are those associated with the reuse of this surplus property. The cumulative impacts are those associated with reuse of the Shipyard property that reverts to the State of California (3,629 acres), the Shipyard property that will be transferred to other Federal agencies (207 acres), and other projects within the Vallejo area.

No significant direct impacts will result from Navy's disposal of the surplus Shipyard property. Therefore, this Record Of Decision focuses on the indirect and cumulative impacts that are likely to result from implementation of the Reuse Plan Alternative, designed in the FEIS/EIR as the Preferred Alternative.

The Preferred Alternative would he significant impacts on land use. The intensive development of new retail commercial and residential structures in the Retail and Residential Area in the southeastern part of Mare Island would not be compatible with the proposed open space and passive recreational uses of the adjacent Regional Park. The proposed relocation of the rifle range activity to the Regional Park would also conflict with the proposed recreational use of this park because it would introduce safety concerns, noise, and new structures into this otherwise undeveloped area.

The proposed southern crossing bridge would have significant land use impacts on both Mare Island and Vallejo. Siting the bridge in the southeastern part of Mare Island would not be compatible with the proposed residential and open space uses planned for that property. It could also require construction in a shoreline area that contains sensitive wetland habitat that will be protected by the conservation easement. In the City of Vallejo, construction of the proposed bridge could divide and substantially alter the South Vallejo residential and commercial neighborhood by virtue of the need to demolish buildings and other structures and increase the size of roadways serving this area.

The proposed redevelopment in Reuse Areas 3, 4, 5, 10, and 12 (Office and Light Industry, Historic District, Heavy Industry, Retail and Residential, and Regional Park) would involve the construction of new buildings, roads, and utilities. In order to accommodate this redevelopment, it may be necessary to remove and relocate segments of the dredge slurry pipelines that traverse these Reuse Areas as well as their supporting facilities. Navy used these pipelines to carry material dredged from Mare Island Strait across the island to the dredge material disposal ponds on the western side of Mare Island.

The Preferred Alternative would not have any adverse effect on employment and housing in the Vallejo area. On the contrary, the Reuse Plan would generate about 9,669 jobs on Mare Island and add about 1,786 dwelling units to the Vallejo area. Similarly, the proposed redevelopment of the Shipyard would substantially increase the amount of public recreational resources available in Vallejo.

The Preferred Alternative would have significant impacts on schools. Student enrollment would exceed capacity at the Mare Island Elementary School that serves Mare Island and at the Federal Terrace School that serves the Roosevelt Terrace Housing Complex in Vallejo. The Vallejo Unified School District would be responsible for providing facilities to accommodate the additional students.

The Preferred Alternative would also have significant impacts on police and fire protection and emergency medical services. A substantial increase in the demand for these services in the Vallejo area would result from the increased population and redevelopment on Mare Island.

The Preferred Alternative would not have a significant impact on cultural resources. Many of the historic buildings, structures, and landscapes will be preserved. However, some demolition and construction activities would take place within the Mare Island Naval Shipyard Historic District and in sensitive archaeological areas.

Navy has completed consultation pursuant to Section 106 of the National Historic Preservation Act, 16 U.S.C. § 470(f), and its implementing regulations, "Protection of Historic Properties", 36 CFR Part 800, with the California State Historic Preservation Officer (SHPO) and the Advisory Council on Historic Preservation (ACHP). This consultation addressed the potential adverse effects of the Reuse Plan on the Mare Island Naval Shipyard Historic District, which is listed on the National Register of Historic Places and includes the properties comprising the Mare Island Naval Shipyard National Historic Landmark. In particular, the consultation considered the demolition of historic buildings and structures and the construction of new buildings within the Mare Island Naval Shipyard Historic District and in sensitive archaeological areas.

The consultation also identified measures to be taken by Navy and Vallejo that would avoid or mitigate adverse effects on Mare Island's historic properties. These measures are set forth in the Memorandum Of Agreement Among the United States Navy, the Advisory Council on Historic Preservation and the California State Historic Preservation Officer Regarding the Layaway, Caretaker Maintenance, Leasing, and Disposal of Historic Properties on the Former Mare Island Naval Shipyard, Vallejo, California, dated April 1, 1997 (MOA). This MOA was executed by Navy, the SHPO, and the ACHP and concurred in by the City of Vallejo and the National Park Service.

Under the terms and conditions of this MOA, Navy will secure and maintain the historic properties and implement a program of recording representative historic buildings according to the standards of the Historic American Engineering Record or the Historic American Buildings Survey before conveying any property at Mare Island Naval Shipyard. The City will extend the protection of its historic preservation ordinance to include all of the historic properties in Reuse Area 4 (the Historic District) and selected historical buildings, structures, and landscape features elsewhere within the Mare Island Naval Shipyard Historic District. Vallejo will also ensure compliance with those requirements of the California Environmental Quality Act applicable to the protection of historic archaeological sites.

The Preferred Alternative would have significant impacts on aesthetics and scenic resources. The proposed walking, bicycling, and equestrian trails and the rifle range and horse stables in the Regional Park at the southwestern end of the island would be visible from many places in the Vallejo area. Similarly, the proposed southern crossing bridge across Mare Island Strait would have a significant impact on aesthetics and scenic resources because it would also be visible from many places in the Vallejo area.

The Preferred Alternative could have adverse effects on biological resources. In general, the proposed construction and redevelopment in areas adjacent to wetlands could add sediment to those resources. Construction of the southern crossing bridge could have a negative impact if the project were to include removal of shoreline wetlands and/or sensitive species habitat such as that which lies adjacent to the proposed retail and residential development in Reuse Area 10. If construction of this bridge would result in the placement of fill in a wetland, permits required by Section 404 of the Clean Water Act, 33 U.S.C. § 1251, *et seq.*, must be obtained from the United States Army Corps of Engineers.

Navy has completed consultations with the National Marine Fisheries Service and the United States Fish and Wildlife Service pursuant to Section 7 of the Endangered Species Act, 16 U.S.C. § 1531, *et seq.* In a letter dated March 29, 1996, the National Marine Fisheries Service concurred that the endangered winter-run chinook salmon would not be adversely affected by the proposed redevelopment. On May 23, 1997, the U.S. Fish and Wildlife Service issued a Biological Opinion in which it concluded that the disposal and reuse of Mare Island Naval Shipyard property would not jeopardize the continued existence of the endangered California clapper rail, the endangered salt marsh harvest mouse, the threatened Delta smelt, or the proposed threatened Sacramento splittail.

The Service's Opinion was conditioned upon Navy and the City of Vallejo implementing measures that will protect these species. Before disposal, Navy will protect the California clapper rail and salt marsh harvest mouse by providing predator management (*i.e.*, monitoring, managing, and removing predators likely to adversely affect these species) and by establishing conservation easements or similar real estate instruments on the 81 acres of wetlands that provide suitable habitat for these species.

Navy expects that the conservation easements or similar real estate instruments will be held and administered by the U.S. Fish and Wildlife Service. Additionally, in accordance with Executive Order 11990, Protection of Wetlands, dated May 24, 1977, Navy will place a Notice in the conveyance document that describes the conservation easements or similar real estate instruments and identifies those uses that are restricted by Federal, State, and local wetland regulations.

Navy will also develop a predator management plan and a public access management program for Mare Island Naval Shipyard that it will implement during the caretaker period preceding conveyance. After conveyance of the surplus Shipyard property, the City of Vallejo will be responsible for implementing a similar plan and program. Vallejo will also limit the number of cats and dogs allowed in each residential unit on Mare Island and will restrict cats and unleashed dogs to the property lines of individual housing units.

Navy will protect the Delta smelt and the Sacramento splittail by providing a Notice in the conveyance document that future users of the drydocks and other waterfront property at Mare Island such as piers, berths, and pilings may be required to obtain endangered species incidental take permits from the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, and the California Department of Fish and Game.

The Preferred Alternative could degrade water resources. Demolition and construction activities may disturb the soil, increasing erosion and sedimentation into Mare Island Strait. Thus, the California Water Resources Board and the Regional Water Quality Control Board will impose controls on redevelopment that require the use of stormwater pollution prevention plans and best management practices.

Certain property on Mare Island could be subject to flooding from high tides and water flow on the Napa River and as a result of land subsidence and rising sea level. Those parts of the North Light Industry, Office and Light Industry, Historic District, Heavy Industry, and Retail and Residential Areas with elevations less than 10 feet above sea level could be flooded if not adequately protected. Consequently, the acquiring entity must comply with the Vallejo Municipal Code, Title VII, Chapter 7.98, Flood Damage Protection. Additionally, in accordance with Executive Order 11988, Floodplain Management, dated May 24, 1997, Navy will place a Notice in the conveyance document that describes those uses that are restricted under Federal, State, and local floodplain regulations.

Dredging the ship berths along the eastern side of Mare Island could expose aquatic organisms in the flood chain to disturbed contaminated sediments from Mare Island Strait. The nature and extent of these impacts cannot be determined before the sediments have been tested and the dredging methods and dredge disposal sites have been selected. It may be necessary to use special dredging equipment such as closed clamshell buckets that would minimize the escape and dispersion of contaminated water and sediment. In any event, the acquiring entity will be required to obtain permits for such dredging from the U.S. Army Corps of Engineers under Section 404 of the Clean Water Act, 33 U.S.C. § 1251, *et seq.*

The Preferred Alternative would have significant impacts on geology and soils. As discussed earlier, certain parts of Mare Island could be subject to flooding from naturally occurring high water levels. In addition, the southern end of Reuse Area 10, the Retail and Residential Area, could be flooded if the saltwater reservoir dam in Reuse Area 12's Regional Park were to fail. Similarly, if the Golf Course's freshwater reservoir dam in Reuse Area 11 were to fail, the resultant flooding would affect nearby wetland and open space areas.

Additionally, the Preferred Alternative would allow redevelopment in parts of Mare Island that contain potential geological hazards. Because the Shipyard is located in a seismically active area, buildings there would be susceptible to structural damage from ground shaking, liquefaction of soil, and slope failures that may occur during a large earthquake.

The Preferred Alternative would have significant impacts on traffic and circulation. Although the proposed reuse would generate about 60,224 average daily vehicle trips, significantly less than the 76,350 average daily vehicle trips that were associated with Navy's use of the Shipyard property, the Preferred Alternative would result in an increase in truck traffic during construction and subsequent reuse. This increased truck traffic, arising out of the proposed warehouse and industrial activities, could cause traffic congestion during peak commuting periods.

Additionally, these trucks would be traveling on narrow Mare Island roadways that were not designed to accommodate such traffic, introducing safety hazards for other vehicles. The use of railroad lines that run on the causeway bridge and on and close to Mare Island's roadways would pose similar safety hazards. Neither the

railroad lines nor the roadways were designed to accommodate the nature and extent of public use proposed in the Reuse Plan.

The Preferred Alternative would have a significant impact on air quality. Local dust would be generated during demolition, renovation, and construction activities, including construction of the southern crossing bridge.

Section 176(c) of the Clean Air Act, 42 U.S.C. § 7506, as amended, requires Federal agencies to review their activities to ensure that they do not hamper local efforts to control air pollution. This statute prevents Federal agencies from conducting activities that do not conform to an approved implementation plan. The United States Environmental Protection Agency regulations implementing this statute recognize certain categorically exempt activities. Conveyance of title to real property and leases in furtherance of conveyance that meet certain criteria are categorically exempt activities. 49 CFR § 93.153(c)(2). Accordingly, the disposal of Mare Island Naval Shipyard property does not require Navy to conduct a conformity determination.

Navy holds Bay Area Air Quality Management District (BAAQMD) air emission reduction credits (ERCs) for stationary air emission sources such as the boilers, paint spray booths, and fuel storage facilities and historically produced air emissions at Mare Island Naval Shipyard. These ERCs include 18.9 tons of nitorgen oxides, 12.7 tons of precursor organic compounds, one ton of non-precursor organic compounds, 1.2 tons of particulate matter (PM10), 11.5 tons of carbon monoxide, and 0.9 tons of sulfur oxides. Navy has placed these ERCs in the BAAQMD Emission Bank, from which they can be withdrawn later to offset air emissions from new sources. Navy will retain the stationary source ERCs to meet the future permit requirements of Department of Defense facilities and activities. If there are no future Department of Defense needs, the credits will be reallocated.

Navy also documented, as part of the NEPA process, mobile source emissions associated with the operation of motor vehicles and other non-stationary sources such as locomotives, vessels, and portable generators at Mare Island. These mobile emission sources historically produced 259 tons per year of reactive organic compounds, 397 tons per year of nitrogen oxides, 1,823 tons per year of carbon monoxide, 50 tons per year of sulfur oxides, and 60 tons per year of particulate matter (PM10).

The mobile sources emission reductions resulting from the closure of Mare Island can be applied to offset emissions from other Federal mobile sources to satisfy Federal Clean Air Act conformity determinations in the area. Navy will retain the mobile source offsets to meet future Federal Clean Air Act conformity requirements.

The Preferred Alternative would have significant temporary noise impacts on adjacent lands use arising out of demolition, renovation, and construction activities, including construction of the proposed southern crossing bridge. Noise levels in residential areas along Cedar Avenue between Seventh Street and Twelfth Street and at some other locations would significantly increase as a result of the increased traffic generated by the proposed reuse. In addition, a significant noise impact would result from use of the proposed rifle range in the Regional Park in Reuse Area 12. Noise generated at this rifle range would adversely affect the nearby residential areas and passive recreational uses of the Regional Park.

The Preferred Alternative would have a significant impact on one utility system. The existing sanitary waste water collection system lacks sufficient capacity to serve areas where there will be substantial increases in users, such as the planned residential development in Reuse Area 10. Consequently, it will be necessary for the acquiring entity to upgrade and improve the existing system in those areas where significant increases in population would result from the proposed redevelopment.

The Preferred Alternative would not have a significant impact on the other utility systems that serve Mare Island, *i.e.*, water distribution, solid waste management, natural gas, electric power, and storm water drainage. Navy will convey easements and rights-of-way to permit the continuing operation and maintenance of the communications, electricity, and natural gas utility systems at Mare Island that have already been conveyed to local utility providers.

Implementation of the Preferred Alternative would not have any impact on existing environmental contamination at Mare Island Naval Shipyard. Before conveyance, Navy will remediate contamination from hazardous substances and investigate and remove unexploded ordnance in a manner that protects human health and the environment. If Navy conveys property at Mare Island Naval Shipyard before completion of the required remediation, Navy will endure that the property is suitable for disposal for its intended use. In either case, Navy will inform future property owners about the environmental condition of the property and may, where appropriate, include restrictions, notifications, or covenants in deeds to ensure protection of human health and the environment in light of the intended use of the property.

No significant adverse impacts would be cause by the hazardous materials and hazardous waste that may be used and generated by the Preferred Alternative. The quantity of hazardous materials used, stored, and disposed of, and the quantity of hazardous waste generated on the property will be less under the Preferred Alternative than during Navy's use of the Shipyard property. Hazardous materials used under the Preferred Alternative will be managed according to applicable Federal and State regulations. Hazardous wastes transported for disposal or generated under the Preferred Alternative and stored for more than 90 days will be controlled by the Resource Conservation and Recovery Act of 1976, (RCRA), 42 U.S.C. § 6901, *et seq.*

Navy also analyzed the impacts of low-income and minority populations pursuant to Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, reprinted in 42 U.S.C. § 4321 note. Construction of the proposed southern crossing bridge could have disproportionate and adverse land use, noise, traffic, and air quality impacts on the minority and low-income residential neighborhood in South Vallejo. The acquiring entity could avoid adversely affecting this neighborhood by siting the Vallejo access to the bridge in an industrial area at Solano Avenue.

A separate environmental analysis will be conducted, with public participation, when the City selects a right-of-way for the bridge. Consultation and coordination with Federal, State, and local environmental and permitting agencies will be required throughout the project review and approval process. No other disproportionately high and adverse human health or environmental effects would be experienced by minority and low-income populations as a result of the Preferred Alternative.

Navy also analyzed the impacts on children pursuant to Executive Order 13045, Protection of Children from Environmental Health and Safety Risks, dated April 21, 1997. Under the Preferred Alternative, the largest concentration of children would be present in the residential, educational, and recreational areas on Mare Island and at the Roosevelt Terrace housing complex in the City of Vallejo. The Preferred Alternative would not impose any disproportionate environmental health or safety risks on children.

Mitigation

Implementation of the decision to dispose of Mare Island Naval Shipyard does not require Navy to perform any mitigation measures beyond those discussed here. Navy will take certain actions to implement existing agreements and regulations. These actions were treated in the FEIS/EIR as agreements or regulatory requirements rather than as mitigation.

As required by Executive Order 11990, Protection of Wetlands, and Executive Order 11988, Floodplain Management, Navy will incorporate Notices in the conveyance documents describing wetland and floodplain uses that are restricted under Federal, State, and local regulations. Before property is conveyed, Navy will execute conservation easements or similar real estate instruments for the 81 acres of wetlands that provide suitable habitat for endangered species.

Before conveying any Shipyard property, Navy will record representative historic buildings according to the standards of the Historic American Engineering Record or the Historic American Buildings Survey, as required by the Memorandum of Agreement dated April 1, 1997. Additionally, in accordance with Federal and State laws, Navy will include appropriate restrictive covenants in the property deeds for any parcels where hazardous substances remain. As discussed above, Navy will inform future property owners about the environmental condition of the property and may, where appropriate, include restrictions, notifications, or covenants in deeds to ensure the protection of human health and the environment in light of the intended use of the property.

The FEIS/EIR identified and discussed those actions that would be necessary to mitigate impacts associated with the disposal and reuse of Mare Island. The acquiring entity, under the direction of Federal, State, and local agencies with regulatory authority over protected resources, will be responsible for implementing necessary mitigation measures.

Comments Received on the FEIS

Navy received comments on the FEIS/EIR from the United States Environmental Protection Agency (EPA), the California Department of Transportation, the California State Lands Commission, the Greater Vallejo Recreation District, Arc Ecology (a private organization), and four individuals. All of the substantive comments concerned issues already discussed in the FEIS/EIR. Those comments that require clarification are addressed below.

The California Department of Transportation commented that the FEIS/EIR did not propose adequate mitigation measures for the highway interchange on State Route 37 at Mare Island's North Gate. This agency suggested that it may be necessary to rebuild the interchange to accommodate the traffic that would be generated by the proposed reuse activities. As discussed in the FEIS/EIR, the acquiring entity will widen roads leading to and from this interchange to reduce potential traffic congestion near Mare Island's North Gate.

The California Department of Transportation also commented that the FEIS/EIR did not analyze the environmental impact of the additional traffic on State Route 29 (Sonoma Boulevard) that would be generated by the southern crossing bridge. The City of Vallejo and the California Department of Transportation will determine the location of the bridge in a future planning study. Thereafter, construction of the southern crossing bridge will be subject to environmental impact analysis and permitting requirements. At that time, appropriate mitigation measures to address any additional traffic on State Route 29 can be identified.

The California State Lands Commission, Arc Ecology, and two private citizens challenged Navy's determination of the amount of Mare Island property that is subject to reversion to the State of California. They also requested that Navy consider impacts associated with the different configuration of reversionary land at Mare Island advanced by the State Lands Commission. Navy's determination of the amount of property that is subject to reversion to the State of California is based upon the decision of the Supreme Court of the United States in *United States* v. O'Donnell, 303 U.S. 501 (1938). The impacts that could arise from other hypothetical configurations of reversionary lands need not be considered.

A private citizen commented that in the FEIS/EIR, Navy should also have considered alternative uses for certain property that reverts to the State of California, *i.e.*, the dredge material disposal ponds. Similarly, Arc Ecoloy commented that, in addition to the Reuse Plan's proposals for reuse of the surplus Shipyard property, Navy should also have evaluated in the FEIS/EIR, future uses of the reversionary property and the property transferred to other Federal agencies.

The reversionary property will revert to the State of California by operation of law. Since neither Navy nor the City of Vallejo can determine the future use of this reversionary property, it would not be appropriate to include a discussion of alternatives for the reuse of such property in the FEIS/EIR. Similarly, the property transferred to other Federal agencies to meet other Federal requirements is not surplus to the needs of the Federal Government. Therefore, it is not being considered for disposal in this FEIS/EIR. However, the FEIS/EIR does analyze the potential cumulative environmental impacts arising out of the proposed reuse of the Shipyard property, the reuse of base closure property by other Federal agencies, and the reuse of reversionary property by the State of California.

The Greater Vallejo Recreation District commented that additional evaluation would be required before implementing particular recreational projects such as construction of the horse stables and rifle range in the Regional Park. The FEIS/EIR, however, recognizes that future projects and redevelopment proposals will be subject to CEQA and the City of Vallejo's zoning requirements.

Arc Ecology also commented that Navy narrowly defined the disposal action to avoid responsibility for mitigating environmental impacts that may occur after conveyance of the Shipyard property. The FEIS/EIR fully analyzes the direct environmental impacts associated with the disposal of surplus Shipyard property at Mare Island and the indirect environmental impacts associated with reuse of that property. The FEIS/EIR also clearly identifies mitigation related to the direct impacts of Navy's disposal and the indirect impacts of reuse. Navy cannot control reuse after conveyance of the property, and the acquiring entity will be responsible for implementing any mitigation required by reuse activities.

A private citizen expressed concern that Navy had leased property at Mare Island to the City of Vallejo and transferred Shipyard property to other Federal agencies before completing the FEIS/EIR. Navy leased property at Mare Island Naval Shipyard to Vallejo only after conducting separate NEPA evaluations and preparing appropriate NEPA documentation for these interim leases. Additionally, the uses allowed under these leases are limited to those that are substantially the same as Navy's historical uses of the property. Moreover, these leases can be cancelled

upon 30 days notice if the uses are incompatible with this Record of Decision.

Arc Ecology also commented that Navy's use of historical environmental conditions as the basis for its assessment of the effects of projected future impacts could minimize or understate future environmental impacts. In the FEIS/EIR, Navy employed the most recent conditions representative of historical full scale Navy operations at Mare Island as the baseline for evaluating impacts that would likely result from the proposed reuse. Navy believes that this is an appropriate standard to apply when assessing potential future conditions.

In further comments on the FEIS/EIR, Arc Ecology suggested that Navy had concluded that as a result of compliance with existing laws, there would be no environmental impacts. On the contrary, Navy identified several potential environmental impacts that could occur as a result of implementing the Reuse Plan. Navy concluded, however, that these impacts would be reduced to insignificant levels through the required compliance with existing Federal, State, and local regulations. These include compliance with Federal and State air pollution emissions regulations and guidelines, Federal and State hazardous waste management and remediation regulations, the Vallego General Plan, and the Vallejo Municipal Code. Implementation of the Reuse Plan will not require mitigation or protection beyond the applicable requirements of these regulations and guidelines.

Arc Ecology also commented that Navy had incorrectly concluded that the proposed redevelopment would be consistent with the goals, policies, and land use designations set forth in the Vallejo General Plan. This comment pointed to the need to revise the General Plan to take account of the proposed reuse. The General Plan Land Use Map will be amended to reflect the planned reuse, but the amendments to the General Plan will fall within and be consistent with the current policies and goals of the Vallejo General Plan.

Arc Ecology and a private citizen commented that Navy had not adequately analyzed the potential impacts of future human or ecological exposure to currently unknown contamination at Mare Island. Navy is remediating contamination at Mare Island to levels that are protective of human health and the environment pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 U.S.C. 9601, *et seq.*, and Executive Order 12580, Superfund Implementation, dated January 23, 1987. If any additional contamination is discovered and is attributable to Navy, it too would be addressed under CERCLA. It would be speculative now to identify mitigation measures that would address unknown contamination. Furthermore, it is unnecessary to an analysis of the proposed disposal and reuse of the Shipyard.

A private citizen expressed concern that additional minority and low-income areas in Vallejo, beyond those already identified in the FEIS/EIR, would be disproportionately and adversely affected by reuse activities on and off Mare Island. As discussed in the FEIS/EIR, however, only the southern crossing bridge (depending upon the location selected) could result in disproportionately high and adverse impacts on a minority and low-income population. The other environmental impacts identified in the FEIS/EIR would occur only on Mare Island where no one presently resides or over a broad geographic area. Therefore, these impacts would not result in disproportionately high and adverse impacts on minority and low-income populations.

Another private citizen expressed concern that future redevelopment projects could adversely affect wetlands because they may rely upon the general wetland map that was included in the FEIS/EIR. This citizen asked that Navy annotate the FEIS/EIR to state that its wetland map is not adequate for project planning. This citizen also suggested that the City adopt a mitigation measure requiring that project proponents submit a wetland delineation approved by the United States Army Corps of Engineers for any project that would affect lands which are not paved, built upon, or landscaped. Section 404 of the Clean Water Act, 33 U.S.C. 1344, as implemented by its regulations, provides protection for the wetlands at Mare Island. In addition, as required by Executive Order 11990, Protection of Wetlands, Navy will place a Notice in the property conveyance document that describes those uses that are restricted under Federal, State, and local wetland regulations.

Several comments expressed concern that Navy had underestimated the levels of police and fire protection services required to serve Mare Island and that the costs of providing these services would result in an overall reduction in public services in the City of Vallejo. Navy's analysis in the FEIS/EIR adopted projected staffing requirements that were provided by the City of Vallejo's Police and Fire Departments during the reuse planning process. The Vallejo General Plan provides that new development should bear the cost of extending or upgrading public services. It is the policy and practice of the City of Vallejo to require a new development to pay its fair share of the costs of public services generated by the development.

Several private citizens and Arc Ecology, none of whom commented on the Draft EIS/EIR, suggested making several changes to, or providing additional detail concerning, aspects of the Reuse Plan and the alternatives. They also requested more detailed analysis of certain environmental impacts. Navy analyzed a reasonable range of alternatives in the FEIS/EIR at a reasonably specific level. Future reuse proposals will be subject to the environmental requirements of CEQA when particular redevelopment plans are submitted to the City of Vallejo for its consideration.

Regulations Governing the Disposal Decision

Since the proposed action contemplates a disposal action under the Defense Base Closure and Realignment Act of 1990 (DBCRA), Public Law 101–510, 10 U.S.C. § 2687 note, Navy's decision was based upon the environmental analysis in the FEIS/EIR and application of the standards set forth in DBCRA, the Federal Property Management Regulations (FPMR), 41 CFR Part 101–47, and the Department of Defense Rule on Revitalizing Base Closure Communities and Community Assistance (DoD Rule), 32 CFR Parts 174 and 175.

Section 101–47.303–1 of the FPMR requires that the disposal of Federal property benefit the Federal government and constitute the "highest and best use" of the property. Section 101–47.4909 of the FPMR defines the "highest and best use" as that use to which a property can be put that produces the highest monetary return from the property, promotes its maximum value, or serves a public or institutional purpose. The "highest and best use" determination must be based upon the property's economic potential, qualitative values inherent in the property, and utilization factors affecting land use such as zoning, physical characteristics, and other private and public uses in the vicinity, neighboring improvement, utility services, access, roads, location, and environmental and historical considerations.

After Federal property has been conveyed to non-Federal entities, the property is subject to local land use regulations, including zoning and subdivision regulations and building codes. Unless expressly authorized by statute, the disposing Federal agency cannot restrict the future use of surplus Government property. As a result, the local community exercises substantial control over future use of the property. For this reason, local land use plans and zoning affect determination of the highest and best use of surplus Government property.

The DBCRA directed the Administrator of the General Services Administration (GSA) to delegate to the Secretary of defense authority to transfer and dispose of base closure property. Section 2905(b) of DBCRA directs the Secretary of Defense to exercise this authority in accordance with GSA's property disposal regulations, set forth in Part 101–47 of the FPMR. By letter dated December 20, 1991, the Secretary of Defense delegated the authority to transfer and dispose of base closure property closed under DBCRA to the Secretaries of the Military Departments. Under this delegation of authority, the Secretary of the Navy must follow FPMR procedures for screening and disposing of real property when implementing base closures. Only where Congress has expressly provided additional authority for disposing of base closure property, *e.g.*, the economic development conveyance authority established in 1993 by Section 2905(b)(4) of DBCRA, may Navy apply disposal procedures other than those in the FPMR.

In Section 2901 of the National Defense Authorization Act for Fiscal Year 1994, Public Law 103–160, Congress recognized the economic hardship occasioned by base closures, the Federal interest in facilitating economic recovery of base closure communities, and the need to identify and implement reuse and redevelopment of property at closing installations. In Section 2903(c) of Public law 103–160, Congress directed the Military Departments to consider each base closure community's economic needs and priorities in the property disposal process. Under Section 2905(b)(2)(E) of DBCRA, Navy must consult with local communities before it disposes of base closure property and must consider local plans developed for reuse and redevelopment of the surplus Federal property.

The Department of Defense's goal, as set forth in Section 174.4 of the DoD Rule, is to help base closure communities achieve rapid economic recovery through expeditious reuse and redevelopment of the assets at closing bases, taking into consideration local market conditions and locally developed reuse plans. Thus, the Department has adopted a consultative approach with each community to ensure that property disposal decisions consider the Local Redevelopment Authority's reuse plan and encourage job creation. As a part of this cooperative approach, the base closure community's interests, *e.g.*, reflected in its zoning for the area, play a significant role in determining the range of alternatives considered in the environmental analysis for property disposal. Furthermore, Section 175.7(d)(3) of the DoD Rule provides that the Local Redevelopment Authority's plan generally will be used as the basis for the proposed disposal action.

The Federal Property and Administrative Services Act of 1949, 40 U.S.C. § 484, as implemented by the FPMR, identifies several mechanisms for disposing of surplus base closure property: by public benefit conveyance (FPMR § 101–47.303–2); by negotiated sale (FPMR § 101–47.304–9); and by competitive sale (FPMR § 101–47.304–7). Additionally, in, Section 2905(b)(4), the DBCRA established economic development conveyances as a means of disposing of surplus base closure property. The selection of any particular method of conveyance merely implements the Federal agency's decision to dispose of the property. Decisions concerning whether to undertake a public benefit conveyance or an economic development conveyance, or to sell property by negotiation or by competitive bid are committed by law to agency discretion. Selecting a method of disposal implicates a broad range of factors and rests solely within the Secretary of the Navy's discretion.

Conclusion

The City of Vallejo's proposed reuse of Mare Island Naval Shipyard, reflected in the Reuse Plan, is consistent with the requirements of the FPMR and Section 174.4 of the DoD Rule. The LRA has determined in its Reuse Plan that the property should be used for several purposes, including industrial, commercial, residential, educational, and recreational uses. The property's location, physical characteristics, and existing infrastructure as well as the current uses of adjacent property make it appropriate for the proposed uses.

The Preferred Alternative responds to local economic conditions, promotes rapid economic recovery from the impact of the Shipyard's closure, and is consistent with President Clinton's Five-Part Plan for Revitalizing Base Closure Communities, which emphasizes local economic redevelopment and creation of new jobs as the means to revitalize these communities. 32 CFR Parts 174 and 175, 59 Fed. Reg. 16123 (1994). Although the "No action" alternative has less potential for causing adverse environmental impacts, this alternative would not take advantage of the property's location, physical characteristics, and infrastructure or the current uses of adjacent property. Additionally, it would not foster local economic redevelopment of the Mare Island Navy Shipyard property.

The acquiring entity, under the direction of Federal, State, and local agencies with regulatory authority over protected resources, will be responsible for adopting practicable means to avoid or minimize environmental harm that may result from implementing the Reuse Plan.

Accordingly, Navy will dispose of Mare Island Naval Shipyard in a manner that is consistent with the City of Vallejo's Reuse Plan for the property.

Dated: October 23, 1998.

William J. Cassidy, Jr.,

Deputy Assistant Secretary of the Navy (Conversion And Redevelopment).

BILLING CODE 3810–FF–M

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

SUMMARY: The Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before January 4, 1999.

ADDRESSES: Written comments and requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, S.W., Room 5624, Regional Office Building 3, Washington, D.C. 20202–4651, or should be electronically mailed to the internet address *Pat Sherrill@ed.gov*, or should be faxed to 202–708–9346.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339

between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g. new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment at the address specified above. Copies of the requests are available from Patrick J. Sherrill at the address specified above.

The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: November 2, 1998.

Kent H. Hannaman,

Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer.

Office of Educational Research and Improvement

Type of Review: New.

Title: School-level Expenditure Survey Field Test.

Frequency: One time.

Affected Public: Businesses or other for-profit; Not-for-profit institutions; State, local or Tribal Gov't, SEAs or LEAs.

Reporting and Recordkeeping Hour Burden:

Responses: 525.

Burden Hours: 658.

Abstract: This field test would test the procedures and an instrument for collecting public school-level expenditure data from public school district financial officers and private school finance data from private school business officers. Currently, national school level finance data are not available from any source. The public school component will satisfy the mandate from Congress for the development of school-level expenditure data collection. School-level expenditure data would allow for the comparison of per pupil expenditures, instructional and instructional support expenditures, and some program expenditures across school types, sizes, regions, and grade levels. Comparisons of the resource allocation and private schools could also be made.

DEPARTMENT OF EDUCATION

DEPARTMENT OF LABOR

The Advisory Council for School-to-Work Opportunities; Notice of Renewal

In accordance with the Federal Advisory Committee Act, the Secretaries of Labor and Education have renewed the charter for the Advisory Council for School-to-Work Opportunities.

The Advisory Council for School-to-Work Opportunities shall provide advice to the Departments of Education and Labor on a number of matters pertaining to implementation of the School-to-Work Opportunities Act of 1994. The Council shall be responsible for: Assessing the progress of School-to-Work Opportunities systems development and program implementation toward achieving the goals of the School-to-Work Opportunities initiative; providing feedback and making recommendations to the Steering Committee regarding the progress and direction of implementation of the School-to-Work Opportunities initiative; advising the Steering Committee on the effectiveness of the new Federal role in providing venture capital to States and localities to develop School-to-Work systems; and reporting periodically to the Steering Committee on emerging issues, actions, findings and advice; and providing input into policy issues, as requested.

The Council will meet two times a year. It will be composed of approximately 40 members, with the following representation: Educators (seven), employers (six), labor (six), community groups (five), the general public (four), students (two, one secondary and one post-secondary), parents (two), State officials (four e.g., current Governors, State legislators, State STWO officials), and local officials (four, e.g., mayors, county administrators, local STWO officials). None of these members shall be deemed to be employees of the United States.

The Council will report to the Departments of Education and Labor through the School-to-Work Opportunities Steering Committee, composed of senior executive Federal officials from the Departments of Education and Labor. It will function solely as an advisory body and in compliance with the provisions of the Federal Advisory Committee Act. Its charter will be filed under the Act fifteen (15) days from the date of this publication.

Interested persons are invited to submit comments regarding the renewal of The Advisory Council for School-to-Work Opportunities. Such comments should be addressed to: Stephanie Powers, School-to-Work Office, 400 Virginia Ave., SW, Room 210, Washington, DC 20024.

Signed at Washington, DC this 30th day of October, 1998.

Richard W. Riley,

Secretary of Education.

Alexis M. Herman,

Secretary of Labor.

DEPARTMENT OF LABOR

Office of School-to-Work Opportunities; Advisory Council for School-to-Work Opportunities; Notice of Open Meeting

SUMMARY: The Advisory Council for School-to-Work Opportunities was established by the Departments of Education and Labor to advise the Departments on implementation of the School-to-Work Opportunities Act. The Council shall assess the progress of School-to-Work Opportunities systems development and program implementation; make recommendations regarding progress and implementation of the School-to-Work Opportunities initiative; advise on the effectiveness of the new Federal role in providing venture capital to States and localities to develop School-to-Work systems and act as advocates for implementing the School-to-Work framework on behalf of their stakeholders.

Time and Place: The Advisory Council for School-to-Work Opportunities have an open meeting on Tuesday, November 24, 1998 from 9:00 a.m.–4:00 p.m. at the Renaissance Mayflower Hotel, 1127 Connecticut Avenue, NW, Washington, DC 20036.

Agenda: The agenda for the meeting on November 24, 1998 will include opening remarks, an overview of findings from the National Evaluation of School-to-Work and on School-to-Work progress measures and discuss issues related to sustainability of School-to-Work.

Public Participation: The meeting on Tuesday, November 24 from 9:00 a.m.–4:00 p.m. will be open to the public. Seats will be reserved for the media. Individuals with disabilities in need of special accommodations should contact the Designated Federal Official (DF)), listed below, at least 7 days prior to the meeting.

FOR ADDITIONAL INFORMATION CONTACT: Stephanie J. Powers, Designated Federal Official (DFO), Advisory Council for School-to-Work Opportunities, Office of School-to-Work Opportunities, 400 Virginia Avenue, SW, Room 210, Washington, D.C. 202/401–6222, (this is not a toll free number.)

Signed at Washington, D.C. this 30th day of October, 1998.

Raymond L. Bramucci,

Assistant Secretary for Employment and Training.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP99–36–000]

Equitrans, L.P.; Notice of Application

October 30, 1998.

Take notice that on October 27, 1998, Equitrans, L.P. (Equitrans), 3500 Park Lane, Pittsburgh, PA 15275, filed an application pursuant to Section 7(b) of the Natural Gas Act (NGA) and the Commission's Regulations thereunder, for an order permitting and approving the abandonment of individually certificated storage service to Equitable Gas Company (Equitable) under FERC Rate Schedule SS–3. Equitrans states that Equitable will convert a portion of its FERC Rate Schedule SS–3 entitlements, in the Total Annual Storage Quantity of 1,055,454 Dth with a corresponding Maximum Daily Withdrawal Quantity of 10,000 Dth and a maximum Daily Injection Quantity of 5,227 Dth to equivalent firm storage entitlements under Equitrans' open-access FERC Rate Schedule 115SS, all as more fully set forth in the application on file with the Commission and open to public inspection.

Equitrans states that this conversion will permit Equitrans to release its storage capacity to its own customers as part of its retail customer choice program in the State of Pennsylvania. Equitrans states that the certificated level of service entitlements to all other customers will remain unchanged, and that no modification of Equitrans' rates is required by this application. Equitrans states that it does not propose to abandon any facilities as part of this application.

Any person desiring to be heard or to make any protest with reference to said application should on or before November 20, 1998, file with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure provided for, unless otherwise advised, it will be unnecessary for Equitrans to appear or be represented at the hearing.

David P. Boergers,

Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. OR99–2–000]

Lakehead Pipe Line Company Limited Partnership; Notice of Offer of Settlement

October 30, 1998.

Take notice that pursuant to 18 CFR 385.602, Lakehead Pipe Line Company, Limited Partnership (Lakehead), a common carrier oil pipeline regulated by this Commission, on October 27, 1998 tendered for filing an Offer of Settlement.

By this offer, Lakehead seeks Commission approval for a comprehensive settlement agreement (1998 Settlement Agreement), which was entered into on October 21, 1998 by Lakehead and the Canadian Association of Petroleum Producers (CAPP), the principal representative of the producers Lakehead serves. The 1998 Settlement Agreement is intended to govern the rate recovery by Lakehead of the costs of three projects for the expansion of Lakehead's capacity and the broadening of its capability to transport heavier crude oil. Its primary features are:

(1) A cost-of-service based surcharge, for 15 years, on terms included as part of the settlement of Lakehead's most recent rate case, for recovery of costs associated with Lakehead's portion of the System Expansion Program Phase II (SEP II);

(2) An agreed-upon flat-rate surcharge for 15 years for recovery of costs associated with Lakehead's portion of the so-called Terrace Expansion Project (Terrace); and

(3) An increase in the existing heavy oil surcharge from 20 percent of the standard rate to as much as 22 percent to reflect a planned operational change permitting shippers to transport heavier grades of crude through the Lakehead system.

In the case of the two expansion-related surcharges, the terms of those surcharges have been extensively negotiated between CAPP and Lakehead's Canadian affiliate Enbridge

Pipelines, Inc. (Enbridge),[1] on behalf of itself and Lakehead. The resulting agreements have been formally approved by the National Energy Board of Canada (NEB), and the terms of the SEP II surcharge were included in the Lakehead rate settlement approved by this Commission on October 18, 1996. The proposed change to the heavy oil surcharge has also been agreed to by CAPP and the affected heavy oil producers, and has been approved in principle by the NEB. This change is conditional on CAPP giving notice to Enbridge and Lakehead of CAPP's intent to have the higher viscosity limit implemented, and on Lakehead's operations being altered to permit movement of much heavier crudes than could be accommodated in the past.

Lakehead states that its rates are currently governed by the 1996 FERC Settlement, which resolved Lakehead's most recent major rate proceeding before this Commission. Under the 1996 FERC Settlement, to the extent Lakehead undertakes system capacity expansions during the initial five-year period, the costs of such expansions can be recovered through an incremental surcharge to Lakehead's rates calculated in accordance with Appendix D to the 1996 FERC Settlement.

The Commission will follow its Rule 602 procedures for processing this Offer of Settlement. Parties seeking to comment on any aspect of the proposed settlement are required to do so within 20 days of the date of the filing of this Offer of Settlement (Rule 602(f)(2), 18 CFR 385.602(f)(2)), on or before November 16, 1998. Reply comments are due November 27, 1998.

David P. Boergers,

Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2114–070]

Public Utility District No. 2 of Grant County, Washington; Notice Establishing Comment Period for Complaint

October 30, 1998.

On May 29, 1998, Crescent Bar Homeowners Association, Crescent Bar Resort Condominium Association, Crescent Bar, Inc., and Commercial Leaseholders (collectively, Crescent Bar Residents) filed a complaint with the Commission regarding the Priest Rapids Hydroelectric Project No. 2114, which is located on the Columbia River in Chelan, Douglas, Kittitas, Grant, Yakima, and Benton Counties, Washington. The complaint alleges that excess lands containing private homes and businesses were unlawfully included within the project boundary, and should be removed. The Commission issued notice of this complaint on June 18, 1998.[1]

On October 16, 1998, a subgroup of Crescent Bar Residents, comprised of Crescent Bar Homeowners Association and Crescent Bar Resort Condominium Association, filed what they termed an amended complaint, seeking modified land exclusions. If the Commission were to treat this filing as an amended complaint, parties would be required to file answers within 15 days after the date of filing, and the amendment would become effective at the end of 15 days if no party filed an answer in opposition.[2] However, because the parties filing the amended complaint are not the same entities that filed the original complaint, the Commission has determined that this pleading should be considered a separate complaint.

Pursuant to Rule 213(d) of the Commission's regulations, answers to complaints are due within 30 days after filing or, if noticed, after publication of the notice in the **Federal Register**, unless otherwise ordered.[3] In general, the Commission's policy is to publish notice in the **Federal Register** of complaints against hydroelectric licensees.[4]

Any person may file an answer, comment, protests, or a motion to intervene with respect to the complaint in accordance with the requirements of the Rules of Practice and Procedure, 18 CFR 385.210, 385.211, 385.213, and 385.214. In determining the appropriate action to take with respect to the complaint, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in this proceeding in accordance with the Commission's rules may become a party to the proceeding.[5] Any answers, comments, or protests must be received no later than 30 days after publication of this notice in the **Federal Register**.

David P. Boergers,

Secretary.

BILLING CODE 6717–01–M

[1] Enbridge was formerly known as Interprovincial Pipe Line Inc. (IPL). The name was changed to Enbridge effective October 7, 1998.

[1] 63 FR 34372 (June 24, 1998).

[2] *See* 18 CFR 385.215.

[3] 18 CFR 385.213(d) *See also* 18 CFR 385.202.

[4] 18 CFR 2.1(a)(1)(iii)(j).

[5] Because the parties and issues are similar, the Commission will consider both complaints together, and parties who have already intervened in response to the first notice of complaint need not file a second motion to intervene in response to this notice.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP99–38–000]

Texas Eastern Transmission Corporation; Notice of Application

October 30, 1998.

Take notice that on October 27, 1998, Texas Eastern Transmission Corporation (Applicant), 5400 Westheimer Court, Houston, Texas, 77251–1642, filed in Docket No. CP99–38–000 an abbreviated application pursuant to Section 7(b) of the Natural Gas Act, as amended, and Sections 157.7 and 157.18 of the Federal Energy Regulatory Commission's (Commission) regulations thereunder, for permission and approval to abandon a certificated service agreement for Penn Fuel Gas, Inc. (Penn Fuel) under Applicant's Rate Schedule FTS–5, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant proposes to abandon, at Penn Fuel's request, an existing individually certificated firm transportation service for Penn Fuel and at Penn Fuel's request to convert said service to firm open-access transportation service under Applicant's Rate Schedule FTS–1 and Part 284 of the Commission's regulations. Applicant also requests a waiver of Section 12.2 of Rate Schedule FT–1 to effectuate the conversion.

Any person desiring to be heard or to make any protest with reference to said application should on or before November 20, 1998, file with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding.

Any person wishing to become a party to the proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission to Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission on this application if no petition to intervene is filed within the time required herein, and if the Commission on its own review of the matter finds that the abandonment is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provide for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

David P. Boergers,

Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6185–7]

Draft Toxicological Review of Benzene (Noncancer Effects): In Support of Summary Information on the Integrated Risk Information System

AGENCY: Environmental Protection Agency.

ACTION: Notice of extension of public comment period.

SUMMARY: This notice announces the extension of the public comment period for the external review draft document entitled, Toxicological Review of Benzene (Noncancer Effects) (NCEA-S–0455). The document was prepared by the National Center for Environmental Assessment-Washington Office (NCEA-W) within EPA's Office of Research and Development.

DATES: In the October 6, 1998, **Federal Register** (63 FR 53654), EPA announced a 45-day public comment period from October 9 through November 24, 1998. The Agency is now extending the public comment period to December 31, 1998. Comments must be in writing and postmarked by the December date.

ADDRESSES: The document is available on the Internet at http://www.epa.gov/ncea under the What's New and Publications menus. A limited number of paper copies are available from the Technical Information Staff (8623D), NCEA-W, telephone: 202–564–3261; facsimile: 202–565-0050. If you are requesting a paper copy, please provide your name, mailing address, and the title and number for the draft: Toxicological Review of Benzene (Noncancer Effects) (NCEA-S-0455).

Comments may be mailed to the Technical Information Staff (8623D), NCEA-W, U.S. Environmental Protection Agency, Washington, DC 20460, or delivered to the Technical Information Staff at 808 17th Street, N.W., 5th Floor, Washington, DC 20074. Please submit one unbound original with pages numbered consecutively, and three copies. For attachments, provide an index, number pages consecutively with the comments, and submit an unbound original and three copies. Electronic comments may be sent e-mail to benzene.new@epa.gov.

Please note that all technical comments received in response to this notice will be placed in a public record. For that reason, commentors should not submit personal information (such as medical data or home address), Confidential Business Information, or information protected by copyright. Due to limited resources, acknowledgments will not be sent.

FOR FURTHER INFORMATION CONTACT: For information contact Bob Sonawane (202–564–3292) or David Bayliss (202–564–3294); mailing address: NCEA-W (8623D), U.S. Environmental Protection Agency, Washington, DC 20460; facsimile: 202–565–0078; e-mail: benzene.new@epa.gov.

SUPPLEMENTARY INFORMATION: This draft report provides the scientific basis for deriving an oral reference dose (RfD) and inhalation reference concentration (RfC) for the noncancer health risk from exposure to benzene.

Dated: October 29, 1998.

William H. Farland,

Director, National Center for Environmental Assessment.

State FIFRA Issues Research and Evaluation Group (SFIREG) Pesticide Operations and Management Working Committee; Open Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The State FIFRA Issues Research and Evaluation Group (SFIREG) Pesticide Operations and Management Working Committee will meet on November 16 and 17, 1998. This notice announces the location and times for the meeting and sets forth the tentative agenda topics. The meetings are open to the public.

DATES: The SFIREG Working Committee on Pesticide Operations and Management will meet on Monday, November 16, 1998, from 8:30 to 5:00 p.m. and Tuesday, November 17, 1998, from 8:30 a.m. to 4:00 p.m.

ADDRESSES: The meeting will be held at: The Ronald Reagan National Airport, 300 Army-Navy Drive, Arlington-Crystal City, VA 22202.

FOR FURTHER INFORMATION CONTACT: By mail: Elaine Y. Lyon, Field and External Affairs Division, Office of Pesticide Programs (7506C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location and telephone number: 1921 Jefferson Davis Highway, Arlington, VA, CM #2; (703) 305–5306; e-mail: lyon.elaine@epa.gov.

SUPPLEMENTARY INFORMATION: The tentative agenda of the Working Committee on Pesticide Operations and Management includes the following.

1. Update of Pesticide Inspector Regulatory Training.
2. Submission of field data - 6(a)(2) rule and/other mechanisms.
3. Enforcement of FIFRA & other Pesticide laws on Federal lands.
4. Inspector use of credentials.
5. Antimicrobial compliance program.
6. Update from the Office of Enforcement and Compliance Assurance
7. Status of PR Notice on Greenhouse Pesticide labeling and enforcement.
8. Labeling issues:
   (a) user compliance with meteorological restrictions.
   (b) hazards of handling & disposal of swimming pool chemicals/pesticides.
   (c) compliance with surface water precautions.
9. SFIREG registrations issues:
   (a) addition of domestic/homeowner use to EPA approved for agriculture use only.
   (b) marketing of concentrated insecticides for indoor use/supplemental labels.
   (c) changing labels via "quick" notification subsequent to registration.
10. Update on National Environmental Laboratory Accreditation Conference policy issues.
11. Quality management plans/state lead agency mandatory compliance.
12. Update on methyl parathion.
13. Office of Pesticide Programs update:
   (a) bee labeling.
   (b) isoxaflutole conditional registration.
   (c) indoor insecticide label improvement.

(d) disclaimers, warranties & limitations of liability.

(e) use of chlorine gas as agricultural pesticide.

(f) modification of Worker Protection Standard posting requirements.

14. Reports from committee members.
15. Other topics as appropriate.

List of Subjects

Environmental protection.

Dated: November 2, 1998.

Charles Franklin,

Acting Acting Director, Field and External Affairs Division.

Pesticides; Science Policy Issues Related to the Food Quality Protection Act

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: To assure that EPA's science policies related to implementing the Food Quality Protection Act (FQPA) are transparent and open to public participation, EPA is soliciting comments on two draft science policy papers—"Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs" and "Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides." These policies have been peer reviewed by the Agency's FIFRA Scientific Advisory Panel and are now ready for broader public comment.

DATES: Written comments for each science policy paper, identified by separate docket numbers provided in the ADDRESSES section, should be submitted by January 4, 1999.

ADDRESSES: The docket number for "Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs" is OPP–00559 and for "Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides" is OPP–00560. By mail, submit written comments identified by the docket control number listed for each to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person, deliver comments to: Rm. 119, CM #2, 1921 Jefferson Davis Highway, Arlington, VA.

Comments and data may also be submitted electronically to: opp-docket@epa.gov. Follow the instructions under Unit V. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential will be included in the public docket by EPA without prior notice. The public docket is available for public inspection in Rm. 119 at the Virginia address given above, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: For "Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs" contact by mail: Kathleen Martin, Environmental Protection Agency (7509C), 401 M St., SW., Washington, DC 20460. Office location, telephone number, and e-mail: 1921 Jefferson Davis Highway, Arlington, VA, 703–308–2857, fax: 703–305–5147, e-mail: martin.kathleen@epa.gov.

For "Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides" contact William Wooge, Environmental Protection Agency (7509C), 401 M St., SW., Washington, DC 20460. Office location, telephone number, e-mail: 1921 Jefferson Davis Highway, Arlington, VA, 703–308–8794, fax: 703–305–5147, e-mail: wooge.william@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Electronic Availability

A. Internet

Electronic copies of this document and the two science policy papers are available from the EPA Home Page at the **Federal Register** - Environmental Documents entry for this document under "Laws and Regulations" (http://www.epa.gov/fedrgstr/).

B. Fax-on-Demand

For Fax-on-Demand, use a faxphone to call 202–401–0527 and select item 6021 for the draft document entitled "Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs" and item 6022 for the draft document entitled "Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides."

II. Background

On August 3, 1996, the FQPA was signed into law. Effective upon signature, the FQPA significantly amended the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug, and Cosmetic Act (FFDCA). Among other changes, FQPA established a stringent health-based standard ("a reasonable certainty of no harm") for pesticide residues in foods to assure protection from unacceptable pesticide exposure; provided heightened health protections for infants and children from pesticide risks; required expedited review of new, safer pesticides; created incentives for the development and maintenance of effective crop protection tools for farmers; required reassessment of existing tolerances over a 10 year period; and required periodic re-evaluation of pesticide registrations and tolerances to ensure that scientific data supporting pesticide registrations will remain up-to-date in the future.

Subsequently, the Agency established the Food Safety Advisory Committee (FSAC) as a subcommittee of the National Advisory Council for Environmental Policy and Technology to assist in soliciting input from stakeholders and to provide input to EPA on some of the broad policy choices facing the Agency and on strategic direction for the Office of Pesticide Programs (OPP). The Agency has used the interim approaches developed through discussions with FSAC to make regulatory decisions that met FQPA's standard but that could be revisited if additional information became available or as the science evolved. As EPA's approach to implementing the scientific provisions of FQPA has evolved, the Agency has sought independent review and public participation, often through presentation of many of the science policy issues to the FIFRA Scientific Advisory Panel (SAP), a group of independent, outside experts who provide peer review and scientific advice to OPP.

In addition, as directed by Vice President Albert Gore, EPA has been working with the U.S. Department of Agriculture (USDA) and another subcommittee of NACEPT, the Tolerance Reassessment Advisory Committee (TRAC), chaired by the EPA Deputy Administrator and the USDA Deputy Secretary, to address FQPA issues and implementation. TRAC comprises more than 50 representatives of affected user, producer, consumer, public health, environmental, states, and other interested groups. The TRAC has met five times as a full committee from May 27, 1998 through September 16, 1998.

The Agency has been working with the TRAC to ensure that its science policies, risk assessments of individual pesticides, and process for decision making are transparent and open to public participation. An important product of these consultations with TRAC is the development of a framework for addressing key science policy issues. The Agency decided that the FQPA implementation process would benefit from initiating notice and comment on the major science policy issues.

The TRAC identified nine science policy issue areas they believe were key to implementation of FQPA and tolerance reassessment. The framework calls for EPA to provide one or more documents for comment on each of the nine issues by announcing their availability in the **Federal Register**. In addition to comments received in response to these **Federal Register** notices, EPA will consider comments received during the TRAC meetings. Each of these issues is evolving and in a different stage of refinement. Accordingly, as the issues are further refined by EPA in consultation with USDA and others, they may also be presented to the SAP.

In accordance with the framework described in a separate notice published in the **Federal Register** of October 29, 1998 (63 FR 58038) (FRL–6041–5), EPA is issuing a series of draft documents concerning nine science policy issues identified by the TRAC that are related to the implementation of FQPA. This notice announces the availability of two draft documents. The first paper relates to science policy area #2 (Dietary exposure and Monte Carlo techniques) as described in the framework notice published in the **Federal Register** of October 29, 1998 (63 FR 58038); this paper is one of three papers that will be issued for comment. The second paper addresses science policy area #9 (Cholinesterase (ChE) Inhibition) as described in the framework notice published in the **Federal Register** of October 29, 1998 (63 FR 58038); it is the only paper for this area.

III. Summary of Draft Papers

A. Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs

EPA assesses pesticide dietary exposure from raw and processed foods using two distinct pieces of information: The amount of pesticide residue that is present in and on food (i.e., the residue level) and the types and amounts of food that we eat (i.e., food consumption). The residue information comes from the numerous crop field trials and other sources where the amount of pesticide residues on a given commodity is measured. Consumption information comes primarily from USDA surveys of what people eat. In the past, EPA has used the Dietary Risk Evaluation System (DRES) to combine the residue and food consumption information with data on a pesticide's toxicity to calculate acute and chronic dietary risk from food. This deterministic model calculates an average value (sometimes referred to as a "point" estimate) for these exposure and risk assessments.

The science of risk assessment is constantly evolving. As better methods and techniques are developed, the Agency strives to incorporate these into its risk assessment methodologies. Over the last few years, a new technique has been applied to estimating acute pesticide dietary exposure during a single day, which is a probabilistic evaluation called Monte Carlo analysis. A probabilistic analysis uses the entire range of data from the numerous crop field trial studies or other sources to better estimate the distribution of exposure to the residues for the population of concern. This technique allows for a more realistic estimate of exposure, and depicts the variability in exposure that results from differences in individual eating patterns as well as differences in the levels of pesticide residues on food.

The Agency has been developing guidance on how to conduct probabilistic exposure assessments for pesticides as well as guidance to Agency reviewers on how to evaluate such assessments. In March 1998, draft guidance was presented to the SAP. The SAP was very supportive of the proposed guidance document and in general agreed with the proposed approach. EPA has since revised the draft guidance, incorporating the SAP's advice. Today, this revised draft guidance is being made available for public comment. EPA is inviting public comment on several issues listed in Unit IV.A.

The draft guidance is related to two of the other nine TRAC science policy issues as follows:

1. *Dietary exposure estimates (science policy issue area #4).* Dietary exposure estimates derived from probabilistic assessments are one input in the overall assessment of dietary exposures.

2. *Aggregate exposure (science policy issue area #7).* Again, exposure estimates derived from probabilistic assessments are part of the aggregate exposures. Also, the use of probabilistic techniques is being discussed among the scientific community as a method for aggregating exposure from multiple sources and pathways.

The draft guidance is not intended to address the following two other related issues:

1. The procedures (statistical and otherwise) used to address situations where no residue is detected.

2. The rationale for the Agency's interim decision to regulate at the 99.9th percentile of exposure when using probabilistic exposure evaluation techniques.

Separate issue papers will be prepared according to the schedule in the framework **Federal Register** notice to deal with these two topics.

A number of comments were provided by various industry and public interest groups in response to the TRAC meetings, which began in May 1998. Commenters included the Natural Resources Defense Council (NRDC), the National Food Processors Association (NFPA), Latham and Watkins, and the Implementation Working Group (IWG). However, only IWG's comments related to the draft guidance announced (in revised form) in this **Federal Register** notice. The IWG, a coalition of farm, food, pesticide manufacturing, and pest management organizations, provided a "road map" report entitled "A Science-Based Workable Framework for Implementing the Food Quality Protection Act." The IWG report stated that the Agency should more fully utilize probabilistic techniques for dietary, non-dietary and aggregate exposure assessments and that EPA regulatory staff should become more familiar with the concepts of using probabilistic analysis in decision making.

B. Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides

Most organophosphate (OP) and certain carbamate insecticides exert their toxic effects on insects and mammals by the mechanism of ChE inhibition. Communication between a large number of nerve cells in the peripheral and central nervous system is by means of acetylcholine, a neurotransmitter. Acetylcholinesterase is the enzyme that breaks down acetylcholine after it has communicated the nerve signal between two nerve cells or nerve and muscle cells. Inhibition of this enzyme prolongs the action of acetylcholine and results in the acute toxic effects known for these chemicals such as nausea, dizziness, confusion and, at high concentrations, more serious effects such as respiratory paralysis and death. This can also result in chronic effects that have been observed with many of these insecticides. Measures of cholinesterase levels in the blood or nervous system after exposure to OPs and certain carbamates have become the most common endpoint used in risk assessments of these chemical classes. For at least the last 10 years, EPA has used plasma, red blood cells, and/or brain ChE inhibition as the basis for determining critical effect levels and setting reference doses.

Over the last several years, the Agency has engaged with outside scientists and the regulatory community about which measures of ChE inhibition may be used for setting reference doses in risk assessments. Much of the discussion focused on two issues:

1. The role of blood measures, since blood cholinesterases are not part of the nervous system and therefore are only an indirect measure of neurotoxicity.

2. Whether plasma cholinesterases should be treated differently from red blood cell cholinesterases.

In June 1997, the Agency made a presentation to the SAP including a literature review, a series of case studies, a summary of activities related to methodology of ChE measurement, and a briefing. This briefing paper presented to the SAP, "Office of Pesticide Programs Science Policy on the Use of Cholinesterase Inhibition for Risk Assessment of Organophosphate and Carbamate Pesticides" (draft, April 30, 1997), provided EPA's analysis of the issues and options and its proposed policy to use a weight of evidence approach that would consider all of the data that might result in the use of ChE measures in plasma, red blood cells, and/or the brain for defining critical effects. In addition, EPA also asked the SAP about the feasibility of using measures of peripheral nervous system tissue to replace blood measures, which largely serve as indirect estimators of ChE inhibition in the peripheral nervous system in animals. The report of the SAP addresses these issues and is also included in the docket. The Agency's briefing paper cited above has been updated and is being made available for comment with this notice.

The IWG prepared a paper evaluating several science policy issues relating to EPA's implementation of FQPA. Issue paper II of the IWG report discussed the choice and use of endpoints in risk assessments of ChE inhibitors and provided a number of comments about their use. The IWG asserted several opinions: that ChE inhibition in blood itself is not an adverse effect; that use of ChE inhibition in blood has the effect of adding a safety factor; and that the additional safety factor should be considered when applying other safety factors related to infants and children.

During the public comment period for the SAP review, the Acute Cholinesterase Risk Assessment Work Group, a group of pesticide manufacturing organizations, proposed a complex alternative policy for using measures of ChE inhibition in risk assessments. They proposed not using plasma measures, reducing the uncertainty factor for red blood cell measures, establishing a generic threshold of 20 percent difference for blood or brain measures, and provided other comments.

The Natural Resources Defense Council, an environmental group, in a brief oral presentation to the SAP, provided general support for the Agency's proposed policy, but emphasized the need for broader pre-natal and post-natal testing of pesticides to provide more data specific to fetuses, infants, and children. This would, in their view, include both cholinesterase data and data on a variety of neurological functions, including in particular learning and memory.

Other regulatory bodies (i.e., agencies from California and Canada) and public commenters from outside the United States (including scientists from Great Britain and individual physicians who have worked with the World Health Organization) described their own policies and how those policies generally placed less reliance on plasma measures of ChE inhibition as a risk assessment endpoint.

IV. Questions/Issues for Comment

A. Guidance for Submission of Probabilistic Exposure Assessments to the Office of Pesticide Programs

1. Should outlier data points in residue or consumption data sets be excluded from consideration? If so, then what should be the criteria for excluding a data point from either food consumption or residue data sets on the grounds that it is an outlier?

2. What criteria should be used to determine if a data set is sufficiently "representative" of the population of interest to be used in a probablistic assessment? Are there minimum size or Quality Assurance/Quality Control (QA/QC) requirements that should be met?

3. Should the Agency allow exposure assessments to include data reflecting the range of typical application parameters? Are the conditions for accepting residue data based on typical parameters appropriate, or should they be modified?

4. Do the currently available consumption data permit probabilistic assessment of chronic dietary risk? If not, is there an appropriate process for using the available consumption data to permit probabilistic assessment of chronic dietary risk?

5. Is there a process or procedure which would allow the Agency to utilize post-farm monitoring data on composite samples (e.g., from the Food and Drug Administration (FDA), USDA, and State pesticide monitoring data) to assess acute dietary exposure for unblended commodities?

6. Is it appropriate to assess acute dietary risk on a population basis, and to assess short- and intermediate-term occupational and residential exposure on an exposed-individual basis? If it is more appropriate to assess short- and intermediate-term occupational and residential risk on a population basis, is there a process to do so?

7. What changes or additions to the document would improve its readability and make it easier for general audiences to understand? For example, would it be helpful to include a glossary of terms? Are there key scientific concepts that need to be better explained for a lay audience? Would the addition of a case study make any of the concepts easier to understand?

B. Office of Pesticide Program's Science Policy on the Use of Cholinesterase Inhibition for Risk Assessments of Organophosphate and Carbamate Pesticides

1. How should EPA use measures of ChE inhibition in plasma, red blood cells, and brain in determination of critical effect levels and setting reference doses?

2. Should plasma and red blood cell measures of ChE inhibition be treated differently from brain measures of ChE inhibition and/or from one another?

3. How should measures of peripheral tissues be used in these processes of risk assessment, both in a practical sense and a science policy sense?

4. Can measures of ChE inhibition in peripheral tissues, such as the heart and salivary glands, be used as a supplement or even an alternative to blood measures?

5. Should comparative data on ChE inhibition in the young exposed pre-natally, during infancy (nursing), and during childhood be considered essential for defining the relative sensitivity of the young and adults?

6. Are other measures, such as functional measures of clinical signs, or learning and memory, similarly important?

Based on special additional recommendations of the SAP, EPA wishes to highlight two other issues for public comment.

The first is the SAP's recommendation that plasma cholinesterase be differentiated by use of selective inhibitors into acetylcholinesterase and butyrylcholinesterase. At present, most animal studies received by EPA do not differentiate between these enzymes. An important part of the argument made for consideration of plasma activity was the fact that for rat studies, nearly half of the plasma cholinesterase is acetylcholinesterase, identical to the neuronal form. Such differential analyses would provide additional data on this topic.

7. Should EPA require the differentiation of acetylcholinesterase and butyrylcholinesterase in plasma, and how might this data be used?

The second is the SAP's recommendation that EPA ask for receptor binding assays for long term studies. A common consequence of prolonged ChE inhibition in the nervous system is the down regulation of cholinergic receptors. This represents a longer term response to exposure than the inhibition of enzyme activity. This effect might be differentially affected by some chemicals, and its time course might differ from enzyme activity. Such data would help to broaden the data base on which to characterize the hazards of these chemicals.

8. Should EPA require receptor binding assays for long term (subchronic and chronic) studies, and how should such data be interpreted?

9. A number of parameters related to the neurotoxicological potential of cholinesterase-inhibiting pesticides are measured and considered when developing a hazard characterization for these chemicals. Some of these parameters (e.g., clinical signs) represent direct observations of this potential; others serve as surrogates (e.g., inhibition of red cell cholinesterase) for potential effects not currently measured or observed directly. OPP has proposed to use a weight-of-the-evidence approach when characterizing the hazard of these chemicals and developing health-based benchmarks such as reference doses. A weight-of-the-evidence approach obligates the risk assessor to consider all of the study results as a whole, rather than focusing on any single result in isolation of the others. Is this approach a reasonable means for evaluating the overall significance of the potential neurotoxic effects associated with this type of pesticide?

10. What changes or additions to the document would improve its readability and make it easier for general audiences to understand? For example, would it be helpful to expand the glossary of terms? Are there key scientific concepts that need to be better explained for a lay audience? Would the addition of more examples make the concepts easier to understand?

V. Public Record and Electronic Submissions

A record has been established for these policy guidances under docket control numbers OPP–00559 and OPP–00560 (including comments and data submitted electronically as described below). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The official record is located at the Virginia address in "ADDRESSES" at the beginning of this document.

Electronic comments can be sent directly to EPA at:

opp-docket@epa.gov

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comment and data will also be accepted on disks in Wordperfect 5.1/6.1 or ASCII file format. All comments and data in electronic form must be identified by the docket control numbers OPP–00559 and OPP–00560. Electronic comments on this notice may be filed online at many Federal Depository Libraries.

VI. Contents of Docket

Documents that are referenced in this notice document will be inserted in the docket under the document control numbers OPP–00559 and OPP–00560. In addition, documents referenced in in the framework notice, which published in the **Federal Register** on October 29, 1998 (63 FR 58038) will also be inserted in the docket under docket control number OPP–00557.

List of Subjects

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests.

Dated: October 30, 1998.

Lynn R. Goldman,

Assistant Administrator for Prevention, Pesticides and Toxic Substances.

BILLING CODE 6560–50–F

ENVIRONMENTAL PROTECTION AGENCY

[OPPTS–51917; FRL–6040–7]

Certain Chemicals; Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5 of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical to notify EPA and comply with the statutory provisions pertaining to the manufacture or import of substances not on the TSCA Inventory. Section 5 of TSCA also requires EPA to publish receipt and status information in the **Federal Register** each month reporting premanufacture notices (PMN) and test marketing exemption (TME) application requests received, both pending and expired. The information in this document contains notices received from September 1, to September 30, 1998.

ADDRESSES: Written comments, identified by the document control number "[OPPTS–51917]" and the specific PMN number, if appropriate, should be sent to: Document Control Office (7407), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Rm. ETG–099 Washington, DC 20460.

Comments and data may also be submitted electronically by sending

electronic mail (e-mail) to: oppt.ncic@epamail.epa.gov. Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comments and data will also be accepted on disks in WordPerfect in 5.1/6.1 file format or ASCII file format. All comments and data in electronic form must be identified by the docket number [OPPTS–51917]. No Confidential Business Information (CBI) should be submitted through e-mail. Electronic comments on this notice may be filed online at many Federal Depository Libraries. Additional information on electronic submissions can be found under "SUPPLEMENTARY INFORMATION" of this document.

FOR FURTHER INFORMATION CONTACT: Susan B. Hazen, Director, Environmental Assistance Division (7408), Office of Pollution Prevention and Toxics, Environmental Protection Agency, Rm. E–531, 401 M St., SW., Washington, DC, 20460, (202) 554–1404, TDD (202) 554–0551; e-mail: TSCA-Hotline@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: Under the provisions of TSCA, EPA is required to publish notice of receipt and status reports of chemicals subject to section 5 reporting requirements. The notice requirements are provided in TSCA sections 5(d)(2) and 5(d)(3). Specifically, EPA is required to provide notice of receipt of PMNs and TME application requests received. EPA also is required to identify those chemical submissions for which data has been received, the uses or intended uses of such chemicals, and the nature of any test data which may have been developed. Lastly, EPA is required to provide periodic status reports of all chemical substances undergoing review and receipt of notices of commencement.

A record has been established for this notice under docket number "[OPPTS–51917]" (including comments and data submitted electronically as described below). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 12 noon to 3 p.m., Monday through Friday, excluding legal holidays. The public record is located in the TSCA Nonconfidential Information Center (NCIC), Rm. NEM–B607, 401 M St., SW., Washington, DC 20460.

Electronic comments can be sent directly to EPA at:

oppt.ncic@epamail.epa.gov

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption.

The official record for this notice, as well as the public version, as described above will be kept in paper form. Accordingly, EPA will transfer all comments received electronically into printed, paper form as they are received and will place the paper copies in the official record which will also include all comments submitted directly in writing. The official record is the paper record maintained at the address in "ADDRESSES" at the beginning of this document.

In the past, EPA has published individual notices reflecting the status of section 5 filings received, pending or expired, as well as notices reflecting receipt of notices of commencement. In an effort to become more responsive to the regulated community, the users of this information and the general public, to comply with the requirements of TSCA, to conserve EPA resources, and to streamline the process and make it more timely, EPA is consolidating these separate notices into one comprehensive notice that will be issued at regular intervals.

In this notice, EPA shall provide a consolidated report in the **Federal Register** reflecting the dates PMN requests were received, the projected notice end date, the manufacturer or importer identity, to the extent that such information is not claimed as confidential and chemical identity, either specific or generic depending on whether chemical identity has been claimed confidential. Additionally, in this same report, EPA shall provide a listing of receipt of new notices of commencement.

EPA believes the new format of the notice will be easier to understand by the interested public, and provides the information that is of greatest interest to the public users. Certain information provided in the earlier notices will not be provided under the new format. The status reports of substances under review, potential production volume, and summaries of health and safety data will not be provided in the new notices.

EPA is not providing production volume information in the consolidated notice since such information is generally claimed as confidential. For this reason, there is no substantive loss to the public in not publishing the data. Health and safety data are not summarized in the notice since it is recognized as impossible, given the format of this notice, as well as the previous style of notices, to provide meaningful information on the subject. In those submissions where health and safety data were received by the Agency, a footnote is included by the Manufacturer/Importer identity to indicate its existence. As stated below, interested persons may contact EPA directly to secure information on such studies.

For persons who are interested in data not included in this notice, access can be secured at EPA Headquarters in the NCIC at the address provided above. Additionally, interested parties may telephone the Document Control Office at (202) 260–1532, TDD (202) 554–0551, for generic use information, health and safety data not claimed as confidential or status reports on section 5 filings.

Send all comments to the address listed above. All comments received will be reviewed and appropriate amendments will be made as deemed necessary.

This notice will identify: (I) PMNs received; (II) TMEs received; (III) Notices of Commencement to manufacture/import.

I. 162 PREMANUFACTURE NOTICES RECEIVED FROM: 09/01/98 TO 09/30/98

Case No.	Received Date	Projected Notice End Date	Manufacturer/Importer	Use	Chemical
P–98–1154	09/01/98	11/30/98	CBI	(G) Lubricant Additive	(G) Reaction product of ethoxylated fatty amines and ammoniummolybate
P–98–1155	08/31/98	11/29/98	CBI	(G) Binder for graphic arts coatings and printing inks	(G) 2,5-furandione, polymer eith ethenylbenzene, 4-[(1-oxo-2-propenyl) oxy]alkyl propyl ester, ammonium salt*
P–98–1156	09/01/98	11/30/98	CBI	(G) Adhesive film on a tissue carrier	(G) Acrylic polymer amine salt

I. 162 PREMANUFACTURE NOTICES RECEIVED FROM: 09/01/98 TO 09/30/98—Continued

Case No.	Received Date	Projected Notice End Date	Manufacturer/Importer	Use	Chemical

New York Marine Sanitation Device Standard; Receipt of Petition and Tentative Determination

Notice is hereby given that a petition was received from the State of New York on June 2, 1998 requesting a determination by the Regional Administrator, Environmental Protection Agency (EPA), pursuant to Section 312(f) of Public Law 92–500, as amended by Public Law 95–217 and Public Law 100–4 (the Clean Water Act), that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for the harbors and creeks of the Peconic Estuary from the Sag Harbor Village Line to Montauk Point, East Hampton, New York. The harbors and creeks included in this tentative determination are Northwest Creek, Three Mile Harbor, Hog Creek, Accabonac Harbor, Napeague Harbor and Lake Montauk.

This petition was made by the New York State Department of Environmental Conservation (NYSDEC) in cooperation with the New York State Department of State and the Town of East Hampton. The State of New York has certified that greater protection of the surface water in the harbors and creeks of the Peconic Estuary in the Town of East Hampton is required than the applicable federal standards provide. Upon receipt of an affirmative determination in response to this petition, NYSDEC would completely prohibit the discharge of sewage, whether treated or not, from any vessel in Northwest Creek, Three Mile Harbor, Hog Creek, Accabonac Harbor, Napeague Harbor and Lake Montauk in accordance with Section 312(f)(3) of the Clean Water Act and 40 CFR 140.4(a). This prohibition would be part of a comprehensive approach to water quality management aimed at preventing water quality impairments and improving overall water quality in the harbors and creeks. This designation is part of a wider effort at controlling non-point source pollution including problems associated with stormwater runoff and residential septic systems.

The proposed No Discharge Area (NDA) lies within the Town of East Hampton, Suffolk County, New York. The boundaries of the Proposed NDAs will be the mouth of each individual creek or harbor and all the waters within the following harbors and creeks:

Name of harbor or creek	Latitude	Longitude
Northwest Creek.	N 41° 00.8′ ..	W 72° 15.3′
Three Mile Harbor.	N 41° 031″ ...	W 72° 11.3′
Hog Creek	N 41° 03.1′ ..	W 72° 08.2′
Accabonac Harbor.	N 41° 01.5′ ..	W 72° 18.2′
Napeague Harbor—west.	N 41° 00.8′ ..	W 72° 03.7′
Napeague Harbor—east.	N 41° 01.1′ ..	W 72° 03.3′
Lake Montauk	N 41° 04.7′ ..	W 72° 56.4′

Information submitted by the State of New York and the Town East Hampton shows that there are ten existing pump-out facilities available and that three pumpout boats service vessels in the proposed NDA. Harbor Marina, located in Three Mile Harbor, operates a portable pumpout. The pumpouts are available from 8:30 a.m. to 4:30 p.m. daily and the fee is $25. Town Dock—Gann Road, located in Three Mile Harbor, operates a stationary pumpout and a portable pumpout. The pumpouts, which are free to use, are available self-service 24 hours a day and from 8:00 a.m. to 4:00 p.m. with an attendant on duty. Maidstone Harbor Marina, located in Three Mile Harbor, operates a stationary pumpout. The pumpout is available on weekends from May 1 through October 31 from 9:00 a.m. to 5:00 p.m and the fee is $20. East Hampton Point Marina, located in Three Mile Harbor, operates a portable pumpout. The pumpout is available from 8:30 a.m. to 4:00 p.m. from May through October. The fee is $5. Shagwong Marina, located in Three Mile Harbor, operates a portable pumpout. The pumpout is available from 9:00 a.m. to 5:00 p.m. daily and the fee is $5. Town Dock—Star Island, located in Montauk Harbor, operates two stationary pumpout facilities. These facilities are available on a self-service basis 24 hours a day and operated by an attendant from 8:00 a.m. through 4:00 p.m. Montauk Sportsman's Dock, located in Montauk, operates a portable pumpout. The pumpout is available from 9:00 a.m. through 4:00 p.m. daily. Gone Fishing Marina, located in Montauk Harbor, operates a portable pumpout unit. The unit is available from 8:00 a.m. through 5:00 p.m. and the fee is $5. Darenberg Marine operates two pumpout boats in Three Mile Harbor and Lake Montauk, and will serve any harbor on an as-needed basis. Darenberg Marine can be reached at 329–2739 or VHF channel 73. The boat located on Three Mile Harbor operates from 8:00 a.m. through 2:00 p.m. on Tuesday and Wednesday, and from 7:00 a.m. through 12:00 p.m. Friday, Saturday and Sunday. The boat located on Lake Montauk operates from 2:30 p.m. through 7:00 p.m. on Tuesday and Wednesday, and from 12:30 p.m. through 7:00 p.m. Friday, Saturday and Sunday. Darenberg Marine charges a fee of $10 per boat. The Town of East Hampton operates a pumpout boat in Three Mile Harbor and does not charge for the service. East Hampton operates the boat 40 hours per week and can be contacted at 267–8688 or VHF Channel 73.

Draft restrictions at three of the marinas would exclude a certain number of the larger vessels from accessing the pumpouts at these three marinas. Montauk Sportsman's Dock has a water depth of 6 feet; it is estimated that 5% of the vessels would be excluded. Captain's Cove Marina has a water depth of 5 feet; it is estimated that 10% of the vessels would be excluded. Gone Fishing Marina has a water depth of 6 feet; it is estimated that 5% of the vessels would be excluded. For these excluded vessels, there are seven other pumpouts and three pumpout boats available for their use.

Vessel waste generated from the pump-out facilities operated by the Town of East Hampton is conveyed to a storage tank at the municipal scavenger waste treatment plant. The waste is hauled from the scavenger plant to the Bergen Point Wastewater Treatment Plant. With two exceptions, the other marinas empty their pumpouts into large storage tanks ranging in size from 500 gallons to 2,376 gallons. A certified hauler collects, transports and disposes of the sewage in accordance with all Federal, State and local laws. The two exceptions are Harbor Marina, which uses an on-site Bio-Robi septic system, and Captain's Cove Marina, which does not have a pumpout facility and instead uses a certified waste hauler to pumpout a vessel on request.

According to the petition, the slip and mooring capacity for each harbor or creek is as follows:

Name of harbor or creek	Number of slips/ moorings/docks
Northwest Creek	21
Three Mile Harbor	1067
Accabonac Harbor	56
Hog Creek	195
Napeague Harbor	20
Lake Montauk	1274
Total	2577

The New York State Department of State conducted a survey of recreational vessels using aerial photography during August 1995 for the New York State Clean Vessel Act Plan. Analysis of the photographs provided information on the total numbers of vessels by water body. Data indicates the following peak season vessel population in the proposed NDAs in East Hampton:

Name of harbor or creek	Number of vessels
Northwest Creek	No data available
Three Mile Harbor	734
Accabonac Harbor	38
Hog Creek	No data available
Napeague Harbor	56
Lake Montauk	883
Total	1711

Information regarding vessel population based on length shows that 63% of the boats are less than 40 feet and 37% of the vessels are 40 feet or greater in length. These percentages are based on a survey of overnight and long term occupancy and omitted marinas with recreational small crafts. Based on the number and size of boats, and using various methods to estimate the number of holding tanks, it is estimated that 5 to 8 pumpouts are needed to service the vessel population in the proposed NDAs. Currently, ten pumpouts and three pumpout boats exist in the proposed NDAs.

The EPA hereby makes a *tentative affirmative determination* that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for Northwest Creek, Three Mile Harbor, Hog Creek, Accabonac Harbor, Napeague Harbor and Lake Montauk in the Town of East Hampton, New York. A final determination on this matter will be made following the 30 day period for public comment. A final affirmative determination would result in a New York State prohibition of any sewage discharges from vessels in Northwest Creek, Three Mile Harbor, Hog Creek, Accabonac Harbor, Napeague Harbor and Lake Montauk.

Comments and views regarding this petition and EPA's tentative determination may be filed on or before December 7, 1998. Comments or requests for information or copies of the applicant's petition should be addressed to Walter E. Andrews, U.S. Environmental Protection Agency, Region II, Water Programs Branch, 290 Broadway, 24th Floor, New York, New York, 10007–1866. Telephone: (212) 637–3880.

Dated: October 21, 1998.

Jeanne Fox,

Regional Administrator, Region II.

[FR Doc. 98–29660 Filed 11–4–98; 8:45 am]

BILLING CODE 6560–60–P

FEDERAL MARITIME COMMISSION

Request for Additional Information

Agreement No.: 203–011474–002.

Title: The CSAV/CCNI Car Carrier Agreement.

Parties: Compania Sud Americana de Vapores S.A. Compania Chileana de Navegacion Interoceanica S.A.

Synopsis: The Federal Maritime Commission hereby gives notice, pursuant to section 6(d) of the Shipping Act of 1984, 46 U.S.C. app. §§ 1701 *et seq.*, that it has requested the agreement parties to submit additional information regarding their agreement. Further information is necessary so the Commission can determine the impact of the proposed agreement modification. This action prevents the agreement from becoming effective as originally scheduled.

By Order of the Federal Maritime Commission.

Dated: October 30, 1998.

Ronald D. Murphy,

Assistant Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Committee, NCEH Meeting

The National Center for Environmental Health (NCEH) of the Centers for Disease Control and Prevention (CDC) announces the following meeting:

Name: Advisory Committee to the Director, National Center for Environmental Health.

Times and Dates: 10 a.m.–5:15 p.m., November 23, 1998; 8:30 a.m.–3:30 p.m., November 24, 1998.

Place: CDC National Center for Environmental Health, Building 102, Room 2201A/B, 4770 Buford Highway N.E., Chamblee, Georgia, telephone 770/488–7020.

Status: Open to the public, limited only by space available. The meeting room will accommodate approximately 19 Committee members and presenters, plus 20 observers.

Matters To Be Discussed: The Committee will provide advice on environmental public health problems that potentially pose the greatest risks to human health and may not be receiving adequate attention; the primary prevention of birth defects and developmental and other disabilities; the prevention of secondary conditions in persons with a primary disability; and the research agenda needed to improve the science base relative to human health effects and environmental exposures and that will ultimately provide sound human health data for policy and decision-making. The Committee will also review NCEH's 1998–2002 Strategic Plan.

Persons wishing to make written or oral comments at the meeting should notify the contact person in writing or by telephone no later than close of business November 18, 1998.

Requests to make oral comments should contain the name, address, telephone number, and organizational affiliation of the presenter. Depending on the time available and the number of requests to make oral comments, it may be necessary to limit the time of each presenter.

Agenda items are subject to change as priorities dictate.

Contact Person for More Information: Anne Wilson, Program Analyst, Office of the Director, NCEH, CDC, 4770 Buford Highway, NE, M/S F49, Atlanta, Georgia 30341–3724, telephone 770/488–7321, e-mail amw6@cdc.gov.

The Director, Management Analysis and Services office has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Dated: October 30, 1998.

Carolyn J. Russell,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention (CDC).

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Joint Meeting of the Antiviral Drugs Advisory Committee and the Nonprescription Drugs Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). The meeting will be open to the public.

Name of Committee: Antiviral Drugs Advisory Committee and the Nonprescription Drugs Advisory Committee.

General Function of the Committees: To provide advice and recommendations to the agency on FDA's regulatory issues.

Date and Time: The meeting will be held on December 1, 1998, 8:30 a.m. to 5 p.m.

Location: Holiday Inn, Versailles Ballrooms I and II, 8120 Wisconsin Ave., Bethesda, MD.

Contact Person: Rhonda W. Stover or Sandra L. Titus, Center for Drug Evaluation and Research (HFD–21), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, (301–827–7001, or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area), code 12531. Please call the Information Line for up-to-date information on this meeting.

Agenda: The committees will jointly discuss new drug application (NDA) N20–629, to switch penciclovir (Denavir®, SmithKline Beecham) topical cream from prescription status to over-the-counter status for the treatment of recurrent herpes labialis (cold sores) in immunocompetent adults.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person by November 24, 1998. Oral presentations from the public will be scheduled between approximately 1 p.m. and 2 p.m. Time allotted for each presentation may be limited. Those desiring to make formal oral presentations should notify the contact person before November 24, 1998, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: October 27, 1998.

Michael A. Friedman,

Deputy Commissioner for Operations.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 98D–0298]

Guidance for Industry on General/ Specific Intended Use; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the guidance entitled "Guidance for Industry on General/ Specific Intended Use." FDA developed this guidance to satisfy a new section of the Federal Food, Drug, and Cosmetic Act (the act), which was added by the Food and Drug Administration Modernization Act of 1997 (FDAMA). This new section directs the agency to issue guidance explaining the general principles used by FDA in determining when a specific use may be added to a legally marketed device using premarket notification (510(k)) procedures and when a specific use triggers the need for a premarket approval (PMA) application.

DATES: Written comments concerning this guidance may be submitted at any time.

ADDRESSES: Submit written requests for single copies on a 3.5" diskette of the guidance document to the Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850. Send two self-addressed adhesive labels to assist that office in processing your electronic or written request, or fax your request to 301–443–8818. Submit written comments on "Guidance for Industry on General/Specific Intended Use" to the contact person. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance entitled "Guidance for Industry on General/Specific Intended Use."

FOR FURTHER INFORMATION CONTACT: Daniel G. Schultz, Center for Devices and Radiological Health (HFZ–470), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–594–5072.

SUPPLEMENTARY INFORMATION:

I. Background

Congress indicated that FDA should provide additional guidance on the approach that the agency takes when evaluating whether a new use, which appears to fall within the scope of the intended use of a legally marketed predicate device, is a new intended use that would require a PMA. This guidance is issued in accordance with the new section 513(i)(1)(F) of the act (21 U.S.C. 360c(i)(1)(f)), which was added by section 206 of FDAMA. The purpose of this document is to help medical device manufacturers understand the principles used by FDA to determine whether the addition of a specific indication for use to a medical device cleared for marketing with a general indication for use could trigger the need for a PMA application. The guidance is intended to help manufacturers answer the following questions: Under what circumstances is the device with a new, specific indication for use likely to be found to be substantially equivalent to a device legally marketed for a general indications for use? Conversely, when does a specific indication for use become a new intended use that requires submission of a PMA to establish the safety and effectiveness of the device? FDA announced the

availability of a draft guidance pertaining to General/Specific Intended use in the **Federal Register** of May 22, 1998 (63 FR 28392). The agency received two comments on the draft guidance. FDA has reviewed the comments and has made some revisions to the guidance in response to the comments.

II. Significance of Guidance

This guidance document represents the agency's current thinking on General/Specific Intended Use. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the applicable statute, regulations, or both.

The agency has adopted Good Guidance Practices (GGP's), which set forth the agency's policies and procedures for the development, issuance, and use of guidance documents (62 FR 8961, February 27, 1997). This guidance document is issued as a Level 1 guidance consistent with GGP's.

III. Electronic Access

In order to receive "Guidance for Industry on General/Specific Intended Use" via your fax machine, call the CDRH Facts-On-Demand (FOD) system at 800–899–0381 or 301–827–0111 from a touch-tone telephone. At the first voice prompt press 1 to access DSMA Facts, at second voice prompt press 2, and then enter the document number 499 followed by the pound sign (#). Then follow the remaining voice prompts to complete your request.

Persons interested in obtaining a copy of the guidance may also do so using the World Wide Web (WWW). CDRH maintains an entry on the WWW for easy access to information including text, graphics, and files that may be downloaded to a personal computer with access to the WWW. Updated on a regular basis, the CDRH home page includes "Guidance for Industry on General/Specific Intended Use," device safety alerts, **Federal Register** reprints, information on premarket submissions (including lists of approved applications and manufacturers' addresses), small manufacturers' assistance, information on video conferencing and electronic submissions, mammography matters, and other device-oriented information. The CDRH home page may be accessed at "http://www.fda.gov/cdrh".

IV. Comments

Interested persons may, at any time, submit written comments regarding this final guidance to the contact person. Such comments will be considered when determining whether to amend the current guidance.

Dated: October 28, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

[FR Doc. 98–29567 Filed 11–4–98; 8:45 am]

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 98D–0729]

Draft "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors;" Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance entitled "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors." This draft guidance is not final nor is it in effect at this time. FDA recognizes the importance of providing applicants and other interested parties the agency's 510(k) submission criteria for washers and washer-disinfectors intended to process reusable medical devices. The intent of this draft guidance is to provide specific directions regarding information and data which should be submitted to FDA in 510(k) submission for these types of devices. This draft guidance is posted on the Internet and will be included in the panel package for the formal classification of these devices at the General Hospital and Personal Use Devices Panel meeting on September 14, 1998.

DATES: Written comments concerning this guidance must be received by February 3, 1999.

ADDRESSES: Submit written requests for single copies of the draft guidance entitled "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors" to the Division of Small Manufacturers Assistance (HFZ–220), Center for Devices and Radiological Health, Food and Drug Administration, 1350 Piccard Dr., Rockville, MD 20850. Send two self-addressed adhesive labels to assist that office in processing your request, or fax your request to 301–443–8818. Written comments concerning this guidance must be submitted to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Comments should be identified with the docket number found in brackets in the heading of this document. Submit written comments on "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors" to the contact person listed below. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance.

FOR FURTHER INFORMATION CONTACT: Chiu S. Lin, Center for Devices and Radiological Health (HFZ–480), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–443–8913.

SUPPLEMENTARY INFORMATION:

I. Background

Washers and washer-disinfectors intended for cleaning and disinfection of reusable medical devices, such as stainless steel devices, surgical instruments, including devices with lumens, respiratory therapy equipment, and other medical devices, were legally marketed devices prior to the enactment of the Medical Device Amendments of 1976. These devices are considered "unclassified" medical devices. On June 2, 1998, FDA published on the Internet a guidance document entitled "CDRH Guidance Document for Washers and Washer–Disinfectors Intended for Processing Reusable Medical Devices" to provide direction to the regulated industry on when a premarket notification [510(k)] submission is required for these unclassified washers and washer-disinfectors. In the "CDRH Guidance Document for Washers and Washer–Disinfectors Intended for Processing Reusable Medical Devices," the agency made the commitment to provide industry with guidance on the information and data which should be included in a 510(k) submission. This draft guidance entitled "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors" provides regulated industry with specific guidance on the information and data that should be included in a 510(k) submission for these devices.

These unclassified washers and washer-disinfectors will undergo formal classification at the September 14, 1998, General Hospital and Personal Use Devices Panel meeting.

II. Significance of Guidance

This draft guidance represents the agency's current thinking on the

information and data which should be included in a 510(k) submission for the washers and washer-disinfectors intended to process reusable medical devices. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the applicable statute, regulations, or both.

The agency has adopted good guidance practices (GGP's), which set forth the agency's policies and procedures for the development, issuance, and use of guidance documents (62 FR 8961, February 27, 1997). This guidance document is issued as a Level 1 guidance consistent with GGP's.

III. Electronic Access

In order to receive "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors" via your fax machine, call the CDRH Facts–On–Demand (FOD) system at 800–899–0381 or 301–827–0111 from a touch-tone telephone. At the first voice prompt press 1 to access DSMA Facts, at second voice prompt press 2, and then enter the document number 1252 followed by the pound sign (#). Then follow the remaining voice prompts to complete your request.

Persons interested in obtaining a copy of the guidance may also do so using the World Wide Web (WWW). CDRH maintains an entry on the WWW for easy access to information including text, graphics, and files that may be downloaded to a personal computer with access to the Web. Updated on a regular basis, the CDRH home page includes "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors," device safety alerts, **Federal Register** reprints, information on premarket submissions (including lists of approved applications and manufacturers' addresses), small manufacturers' assistance, information on video conferencing and electronic submissions, mammography matters, and other device-oriented information. The CDRH home page may be accessed at "http://www.fda.gov/cdrh". "Guidance on the Content and Format of Premarket Notification [510(k)] Submissions of Washers and Washer–Disinfectors" will be available at "http://www.fda.gov/cdrh/ode/Ed☒dn.HTML".

IV. Comments

Interested persons may, on or before February 3, 1999, submit to Dockets Management Branch (address above) written comments regarding this draft guidance. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The draft guidance and received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: September 8, 1998.

D.B. Burlington,

Director, Center for Devices and Radiological Health.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

[Collection # HCFA–R–265]

Emergency Clearance: Public Information Collection Requirements Submitted to the Office of Management and Budget (OMB)

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Health Care Financing Administration (HCFA), Department of Health and Human Services (DHSS), has submitted to the Office of Management and Budget (OMB) the following request for Emergency review. We are requesting an emergency review because the collection of this information is needed prior to the expiration of the normal time limits under OMB's regulations at 5 C.F.R. Part 1320. We cannot reasonably comply with the normal clearance procedures because of the statutory requirement to implement section 4016 of Balanced Budget Act of 1997.

We are requesting OMB review and approval of this collection within 11 working days, with a 180-day approval period. Written comments and recommendations will be accepted from the public if received by the individual designated below, within 10 working days of the publication of this notice in the **Federal Register**. During this 180-day period HCFA will pursue OMB clearance of this collection as stipulated by 5 C.F.R. section 1320.5.

In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comments on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

Therefore, we are soliciting public comment on each of these issues for the information collection summarized and discussed below.

Type of Information Collection Request: New collection;

Title of Information Collection: Medicare Coordinated Care Demonstration Project and Request for Information on Potential Best Practices of Coordinated Care;

Form/Collection No.: HCFA-R–265;

Use: Section 4016 of the Balanced Budget Act of 1997 (Public Law 105–33) requires the Secretary of Health and Human Services (the Secretary) to evaluate best practices in the private sector for methods of coordinated care. The statute also directs the Secretary to design a demonstration project for the Medicare fee-for-service population based on such evaluation.

The purpose of the demonstration is to evaluate models of coordinated care that improve the quality of services provided to beneficiaries who have a chronic illness and reduce expenditures under Parts A and B of the Medicare program.

We competitively awarded a task order to Mathematica Policy Research, Inc. (MPR) to conduct a review of best practices in coordinating care and provide a recommendation of demonstration design options. We will perform the final assessment of best practices and select the demonstration design.

We will publish a notice to announce our intent to conduct the Medicare Coordinated Care Demonstration and inform interested parties of the opportunity to submit information on potential best practices of coordinated care, as well as comment on potential aspects of the overall demonstration. We will solicit information on successful models of coordinated care, disease management, or case management that are appropriate for the Medicare fee-for-service population.

In the notice we will request that any person or organization submit information about successful programs; however, the information must provide evidence of success in sufficient detail to be useful. Thus, operators of programs may be in the best position to submit information regarding their approach. We are interested in the following items of information:

- The name and address of the program.
- The name, address, telephone number, facsimile number, and E-mail address of a contact person.
- Background information on the program (including goals, history, relationship to larger organization(s), number of clients served, and length of time the program has been in operation).
- Special or innovative features of the program.
- Size and composition of the staff (number of registered nurses and number of social workers performing case management).
- Referral sources, targeting criteria, and selection criteria, if any, for participants.
- Information on the patients the program serves, including age ranges, diagnoses or conditions, and/or functional impairments.
- Program intervention and how services differ from the usual care the patient would have received.
- How care plans are developed and monitored for each patient.
- Patient education efforts, if any.
- Patient monitoring efforts, if any.
- Feedback to providers, if any.
- Average length of time patient is in program.
- Funding source(s) for the program.
- Financial incentives, if any, for providers and patients to participate.
- Outcome measures by which the program's performance is evaluated (including clinical, utilization, client-reported, and financial measures used).
- Program impacts on these measures.
- Cost savings due to the program (total and per person served per month).
- How the program impacts and cost savings were calculated (i.e., method of estimating reduction in use and costs, such as comparison to control group or prior year experience).
- Costs of operating the program (average per patient, per month costs).
- Adaptability of the program to the Medicare fee-for-service setting.
- Program brochures or published articles, if any.

We are also interested in comments on potential aspects of the overall demonstration. Specifically, we are interested in comments that discuss and distinguish program characteristics known to be essential for positive outcomes in a fee-for-service setting from characteristics of lesser or unknown importance. Commenters may also wish to address the types of providers, organizations, or entities that are capable of, and qualified to provide, coordinated care or case management services. Other topics of importance include, but are not limited to:

- The relationship of the case management entity with other providers.
- The potential role of the case manager in authorizing and/or providing services beyond coordinating and educational activities.
- Appropriate incentives for the case management entity, beneficiaries, and other providers.
- Appropriate payment methodology.
- Potential risk bearing arrangements for the case management entity.

In addition, we will seek comments regarding challenges to, and potential solutions for, implementing a coordinated care demonstration in rural sites.

Frequency: One time;

Affected Public: Business or other for-profit, not-for-profit institutions;

Number of Respondents: 1,000;

Total Annual Responses: 1,000;

Total Annual Hours: 10,000.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, E-mail your request, including your address, phone number, and HCFA form number referenced above, to Paperwork@hcfa.gov, or call the Reports Clearance Office on (410) 786–1326.

Interested persons are invited to send comments regarding the burden or any other aspect of these collections of information requirements. However, as noted above, comments on these information collection requirements must be mailed and/or faxed within 10 working days of the publication of this notice in the **Federal Register** to the designee referenced below:

Health Care Financing Administration, Office of Information Services, Standards and Security Group, Division of HCFA Enterprise Standards, Room N2–14–26, 7500 Security Boulevard, Baltimore, MD 21244–1850.

Attn: Dawn Willinghan, HCFA–R–265, Fax Number: (410) 786–0262 and,

Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, Attn: Allison Eydt, HCFA Desk Officer. *Fax Number:* (202) 395–6974 or (202) 395–5167.

Datedd: October 30, 1998.

John P. Burke III,

HCFA Reports Clearance Officer, HCFA, Office of Information Services, Security and Standards Group, Division of HCFA Enterprise Standards.

BILLING CODE 4120–03–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

National Vaccine Injury Compensation Program; List of Petitions Received

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice.

SUMMARY: The Health Resources and Services Administration (HRSA) is publishing this notice of petitions received under the National Vaccine Injury Compensation Program ("the Program"), as required by section 2112(b)(2) of the Public Health Service (PHS) Act, as amended. While the Secretary of Health and Human Services is named as the respondent in all proceedings brought by the filing of petitions for compensation under the Program, the United States Court of Federal Claims is charged by statute with responsibility for considering and acting upon the petitions.

FOR FURTHER INFORMATION CONTACT: For information about requirements for filing petitions, and the Program generally, contact the Clerk, United States Court of Federal Claims, 717 Madison Place, N.W., Washington, D.C. 20005, (202) 219–9657. For information on HRSA's role in the Program, contact the Director, National Vaccine Injury Compensation Program, 5600 Fishers Lane, Room 8A46, Rockville, MD 20857, (301) 443–6593.

SUPPLEMENTARY INFORMATION: The Program provides a system of no-fault compensation for certain individuals who have been injured by specified childhood vaccines. Subtitle 2 of title XXI of the PHS Act, 42 U.S.C. 300aa–10 *et seq.*, provides that those seeking compensation are to file a petition with the U.S. Court of Federal Claims and to serve a copy of the petition on the Secretary of Health and Human Services, who is named as the respondent in each proceeding. The Secretary has delegated her responsibility under the Program to HRSA. The Court is directed by statute to appoint special masters who take evidence, conduct hearings as appropriate, and make initial decisions as to eligibility for, and amount of, compensation.

A petition may be filed with respect to injuries, disabilities, illnesses, conditions, and deaths resulting from vaccines described in the Vaccine Injury Table (the Table) set forth at section 2114 of the PHS Act or as set forth at 42 CFR 100.3, as applicable. This Table lists for each covered childhood vaccine the conditions which will lead to compensation and, for each condition, the time period for occurrence of the first symptom or manifestation of onset or of significant aggravation after vaccine administration. Compensation may also be awarded for conditions not listed in the Table and for conditions that are manifested after the time periods specified in the Table, but only if the petitioner shows that the condition was caused by one of the listed vaccines.

Section 2112(b)(2) of the PHS Act, 42 U.S.C. 300aa-12(b)(2), requires that the Secretary publish in the **Federal Register** a notice of each petition filed. Set forth below is a list of petitions received by HRSA on July 1, 1998 through September 30, 1998.

Section 2112(b)(2) also provides that the special master "shall afford all interested persons an opportunity to submit relevant, written information" relating to the following:

1. The existence of evidence "that there is not a preponderance of the evidence that the illness, disability, injury, condition, or death described in the petition is due to factors unrelated to the administration of the vaccine described in the petition," and

2. Any allegation in a petition that the petitioner either:

(a) "Sustained, or had significantly aggravated, any illness, disability, injury, or condition not set forth in the Table but which was caused by" one of the vaccines referred to in the Table, or

(b) "Sustained, or had significantly aggravated, any illness, disability, injury, or condition set forth in the Table the first symptom or manifestation of the onset or significant aggravation of which did not occur within the time period set forth in the Table but which was caused by a vaccine" referred to in the Table.

This notice will also serve as the special master's invitation to all interested persons to submit written information relevant to the issues described above in the case of the petitions listed below. Any person choosing to do so should file an original and three (3) copies of the information with the Clerk of the U.S. Court of Federal Claims at the address listed above (under the heading "For Further Information Contact"), with a copy to HRSA addressed to Director, Bureau of Health Professions, 5600 Fishers Lane, Room 8–05, Rockville, MD 20857. The Court's caption (Petitioner's Name v. Secretary of Health and Human Services) and the docket number assigned to the petition should be used as the caption for the written submission.

Chapter 35 of title 44, United States Code, related to paperwork reduction, does not apply to information required for purposes of carrying out the Program.

List of Petitions

1. Lynette Lowe, Coal Township, Pennsylvania, Court of Federal Claims Number 98–0310V
2. Karyn and Gary Benner on behalf of Micah Benner, Harleysville, Pennsylvania, Court of Federal Claims Number 98–0311V
3. Karyn and Alan Friedman on behalf of James Friedman, Rochester, New York, Court of Federal Claims Number 98–0318V
4. Timmie Peterson on behalf of Christopher Avina, Deceased, Lake Elsinore, California, Court of Federal Claims Number 98–0324V

Substance Abuse and Mental Health Services Administration

Center for Substance Abuse Prevention; Notice of Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the Drug Testing Advisory Board of the Center for Substance Abuse Prevention in December 1998.

The Drug Testing Advisory Board meeting on December 7 will be an open meeting and will include a roll call, general announcements, and a discussion of various program, procedural, and technical issues. The preliminary agenda includes, but is not limited to, the following topics: HHS update, DOT update, and a discussion of the information submitted by industry representatives regarding the use of alternative matrices (hair, sweat, oral fluids) and on-site tests to test for drugs of abuse. A public comment period will be scheduled during the open session. If anyone needs special accommodations for persons with disabilities please notify the Contact listed above.

An agenda for this meeting and a roster of board members may be obtained from: Ms. Giselle Hersh, Division of Workplace Programs, 5600 Fishers Lane, Rockwall II, Suite 815, Rockville, MD 20857, Telephone: (301) 443–6014.

Substantive program information may be obtained from the contact whose name and telephone number is listed below.

Committee Name: Drug Testing Advisory Board.

Meeting Date: December 7, 1998.

Place: Holiday Inn, 5520 Wisconsin Avenue, Chevy Chase, Maryland 20815.

Open: December 7, 1998, 8:30 a.m.–4:00 p.m.

Contact: Donna M. Bush, Ph.D., Executive Secretary, Telephone: (301) 443–6014 and FAX: (301) 443–3031.

Dated: October 30, 1998.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration (SAMHSA); Notice of Meeting

Pursuant to Pub. L. 92–463, notice is hereby given of the following meeting of the SAMHSA Special Emphasis Panel II in November.

A summary of the meeting may be obtained from: Ms. Dee Herman, Committee Management Liaison, SAMHSA, Office of Program Planning and Coordination (OPPC), Division of Extramural Activities Policy and Review, 5600 Fishers Lane, Room 17–89, Rockville, Maryland 20857. Telephone: (301) 443–7390.

Substantive program information may be obtained from the individual named as Contact for the meeting listed below.

The meeting will include the review, discussion and evaluation of individual contract proposals. These discussions could reveal personal information concerning individuals associated with the proposals and confidential and financial information about an individual's proposal. The discussion may also reveal information about procurement activities exempt from disclosure by statute and trade secrets and commercial or financial information obtained from a person and privileged and confidential. Accordingly, the meeting is concerned with matters exempt from mandatory disclosure in Title 5 U.S.C. 552b(c) (3), (4), and (6) and 5 U.S.C. App. 2, § 10(d).

Committee Name: SAMHSA Special Emphasis Panel II.

Meeting Date: November 18–19, 1998.

Place: Parklawn Building, Room "P" and Room "N", 5600 Fishers Lane, Rockville, MD 20857.

Closed: November 18, 1998 8:30 a.m.–5:00 p.m.; November 19, 1998 8:30 a.m.–Adjournment.

Contact: Boris Aponte, Room 17–89, Parklawn Building, Telephone: (301) 443–2290 and FAX: (301) 443–3437.

Dated: October 30, 1998.

Jeri Lipov,

Committee Management Officer, Substance Abuse and Mental Health Services Administration.

BILLING CODE 4162–20–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Receipt of Application for Endangered Species Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of application for Endangered Species permit.

SUMMARY: The following applicants have applied for permits to conduct certain activities with endangered species. This notice is provided pursuant to Section 10(c) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

DATES: Written data or comments on these applications must be received, at the address given below, by December 7, 1998.

ADDRESSES: Documents and other information submitted with these applications are available for review, *subject to the requirements of the Privacy Act and Freedom of Information Act*, by any party who submits a written request for a copy of such documents to the following office within 30 days of the date of publication of this notice: U.S. Fish and Wildlife Service, 1875 Century Boulevard, Suite 200, Atlanta, Georgia 30345 (Attn: David Dell, Permit Biologist). Telephone: 404/679–7313; Facsimile: 404/679–7081.

FOR FURTHER INFORMATION CONTACT: David Dell, Telephone: 404/679–7313; Facsimile: 404/679–7081.

SUPPLEMENTARY INFORMATION:

Applicant: Stephen M. Shea, St. Joe Timberland Company, Port St. Joe, Florida, TE004399–0.

The applicant requests authorization to take (capture for surveys and population estimates) the endangered Choctawhatchee beach mouse, *Peromyscus polionotus allophrys*, throughout the species range in South Walton County, Florida, for the purpose of enhancement of survival of the species.

Applicant: Michael H. Smith, Savannah River Ecology Laboratory, Aiken, South Carolina, TE004317–0.

The applicant requests authorization to remove and reduce to possession leaf samples of the endangered smooth coneflower, *Echinacea laevigata*, from throughout the species range at the Savannah River Site and at Fort Jackson, South Carolina, for the purpose of enhancement of survival of the species.

Applicant: Forest Supervisor, Ouachita National Forest, Hot Springs, Arkansas, TE004289–0.

The applicant requests authorization to take (capture, band, translocate, and harass during nest monitoring and augmentation) the endangered red-cockaded woodpecker, *Picoides borealis*, throughout the species range in Arkansas and Oklahoma, for the purpose of enhancement of survival of the species.

Applicant: Dr. William Howell, Samford University, Birmingham, Alabama, TE003953–0.

The applicant requests authorization to take (capture for surveys and population estimates) the endangered watercress darter, *Etheostoma nuchale*, throughout the species range in Jefferson County, Alabama, for the purpose of enhancement of survival of the species.

Dated: October 28, 1998.

H. Dale Hall,

Acting Regional Director.

Notice of Receipt of Applications for Permit

The following applicants have applied for a permit to conduct certain activities with endangered species. This notice is provided pursuant to Section 10(c) of the Endangered Species Act of 1973, *as amended* (16 U.S.C. 1531, *et seq.*):

PRT–003841

Applicant: Mr. James.Y. Jones, Dublin, GA

The applicant has requested a permit to import one male wood bison (*Bison bison athabascae*) taken in the Mackenzie Bison Sanctuary, Northwest Territories, Canada, for the purpose of enhancement of the survival of the species.

PRT–004448

Applicant: Centers for Disease Control, Hepatitis Branch, Atlanta, GA

The applicant has requested a multiple-use permit to import blood samples from Bornean orangutans (*Pongo pygmaeus*) being held at Wanariset Station Orangutan Reintroduction Center on the island of Borneo, for the purpose of enhancement of the survival of the species.

PRT–004469

Applicant: John McLeod, Saginaw, MI

The applicant requests a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus dorcas*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

PRT–004344

Applicant: Charles R. Hutton, Memphis, TN

The applicant requests a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus dorcas*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

PRT–004468

Applicant: Donald D. Schmidtz, Tucson, AZ

The applicant requests a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus dorcas*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

PRT–004066

Applicant: Zoological Society of San Diego, San Diego, CA,

The applicant requests a permit to export two male and two female captive-born Chinese gorals (*Nemorhaedus goral arnouxianus*) to the Warsaw Zoo, Poland for enhancement of the survival of the species through captive propagation.

Written data or comments should be submitted to the Director, U.S. Fish and Wildlife Service, Office of Management Authority, 4401 North Fairfax Drive, Room 700, Arlington, Virginia 22203 and must be received by the Director within 30 days of the date of this publication.

Documents and other information submitted with these applications are available for review, *subject to the requirements of the Privacy Act and Freedom of Information Act*, by any party who submits a written request for a copy of such documents to the following office within 30 days of the date of publication of this notice: U.S. Fish and Wildlife Service, Office of Management Authority, 4401 North Fairfax Drive, Room 700, Arlington, Virginia 22203. Phone: (703/358–2104); FAX: (703/358–2281).

Dated: October 30, 1998.

MaryEllen Amtower,

Acting Chief, Branch of Permits, Office of Management Authority.

North American Wetlands Conservation Council; Meeting Announcement

AGENCY: U.S. Fish and Wildlife Service, Interior.

ACTION: Notice of meeting.

SUMMARY: The North American Wetlands Conservation Council (Council) will meet December 9, 1998 to review proposals for funding submitted pursuant to the North American Wetlands Conservation Act. Upon completion of the Council's review, proposals will be submitted to the Migratory Bird Conservation Commission with recommendations for funding. The meeting is open to the public.

DATES: December 9, 1998, Mexico—10:00 A.M.

ADDRESSES: The meeting will be held at the Hotel Finca Real, located at Victoria, Esquina Bustamante, Xalapa, Veracruz, Mexico. The North American Wetlands Conservation Council Coordinator is located at U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Suite 110, Arlington, Virginia, 22203.

FOR FURTHER INFORMATION CONTACT: David A. Smith, Coordinator, North American Wetlands Conservation Council, (703) 358–1784.

SUPPLEMENTARY INFORMATION: In accordance with the North American Wetlands Conservation Act (Pub. L. 101–223, 103 Stat. 1968, December 13, 1989, as amended), the North American Wetlands Conservation Council is a Federal-State-private body which meets to consider wetland acquisition, restoration, enhancement and management projects for recommendation to and final approval by the Migratory Bird Conservation Commission. Proposals from State, Federal, and private sponsors require a minimum of 50 percent non-Federal matching funds.

Dated: October 30, 1998.

Daniel M. Ashe,

Director, U.S. Fish and Wildlife Service.

[NV–020–1990–01]

Record of Decision

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability, Record of Decision for Newmont Gold Corporation's Trenton Canyon Mine Expansion Project.

DATES: The Record of Decision will be distributed and made available to the public on October 28, 1998. Anyone wishing to appeal the Record of Decision has 30 days following the date of publication of this notice in the **Federal Register.**

ADDRESS: A copy of the Record of Decision can be obtained from: Bureau of Land Management, Winnemucca Field Office, 5100 East Winnemucca Boulevard, Winnemucca, Nevada 89445.

FOR FURTHER INFORMATION CONTACT: Rod Herrick, Project Manager, at the above Winnemucca Field Office address or telephone (702) 623–1500.

SUPPLEMENTARY INFORMATION: The Record of Decision consists of the action proposed in the Plan of Operation and analyzed in the Draft and Final Environmental Impact Statements. The Agency Preferred Alternative includes all components of the Proposed Action with the partial sequential backfill alternative and implementing appropriate mitigation for each significant potential resource impact. The Agency Preferred Alternative is also the environmentally preferred alternative incorporating mitigation and monitoring measures.

Dated: October 27, 1998.

Front Range Resource Advisory Council (Colorado) Meeting

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972 (FACA), 5 U.S.C. Appendix, notice is hereby given that the next meeting of the Front Range Resource Advisory Council (Colorado) will be held on November 19, 1998 in Canon City, Colorado.

The meeting is scheduled to begin at 9:15 a.m. at the Holycross Abbey Community Center, 2951 E. Highway 50, Canon City, Colorado. Topics discussed at the meeting will include current issues within the district including a discussion on the Impacts of Dumping on Public Land and an update on the Penrose OHV Trails Environmental Analysis.

All Resource Advisory Council meetings are open to the public. Interested persons may make oral statements to the Council at 9:30 a.m. or written statements may be submitted for the Council's consideration. The District Manager may limit the length of oral presentations depending on the number of people wishing to speak.

DATES: The meeting is scheduled for Thursday November 19, 1998 from 9:15 a.m. to 4 p.m.

ADDRESSES: Bureau of Land Management (BLM), Canon City District Office, 3170 East Main Street, Canon City, Colorado 81212; Telephone (719) 269–8500; TDD (719) 269–8597.

FOR FURTHER INFORMATION CONTACT: Ken Smith at 719–269–8553.

SUPPLEMENTARY INFORMATION: Summary minutes for the Council meeting will be maintained in the Canon City District Office and will be available for public inspection and reproduction during regular business hours within thirty (30) days following the meeting.

Donnie R. Sparks,

District Manager.

Bureau of Land Management

[WY–921–1430–01; WYW 2866, WYW 72569, WYW 72585, WYW 72586, WYW 72591, and WYW 72592]

Public Land Order No. 7370; Partial Revocation of Secretarial Orders Dated October 21, 1913, April 27, 1922, May 24, 1922, April 20, 1928, and April 2, 1929, and Revocation of Public Land Order No. 4301; Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order partially revokes five Secretarial orders and revokes one public land order in its entirety, insofar as they affect 21,711.53 acres of public lands withdrawn for the Bureau of Reclamation's Shoshone Reclamation Project. The lands are no longer needed for reclamation purposes. Of the lands being revoked, 1,325.99 acres are within overlapping Bureau of Land Management withdrawals and will remain closed to surface entry and mining, and 19,745.54 acres will not be opened to surface entry and mining until the Bureau of Land Management completes a planning review. The lands have been and will remain open to leasing. The remaining 640 acres have been conveyed out of Federal ownership and the revocation of these lands is a record-clearing action only.

EFFECTIVE DATE: December 7, 1998.

FOR FURTHER INFORMATION CONTACT: Janet Booth, BLM Wyoming State Office, 5353 N. Yellowstone Road, Cheyenne, Wyoming 82003, 307–775–6124.

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714 (1994), it is ordered as follows:

1. The Secretarial Orders dated October 21, 1913, April 27, 1922, May 24, 1922, April 20, 1928, and April 2, 1929, and Public Land Order No. 4301, which withdrew public lands for the Bureau of Reclamation's Shoshone Reclamation Project, are hereby revoked insofar as they affect the following described lands:

Sixth Principal Meridian

T. 56 N., R. 97 W.,

Sec. 4, lots 5, 6, 7, 8, 13, and 14;
Sec. 5, lots 13, 21, and 22;
Sec. 25, lots 3 to 5, inclusive, and N½SW¼;
Sec. 26, lots 1 to 4, inclusive, N½SE¼, and SW¼SE¼;
Sec. 27, lot 5;
Sec. 29, lots 1 to 3, inclusive;
Sec. 31, lots 5, 11, 12, and 15, and E½SE¼;
Sec. 32, lot 1, SE¼NE¼, W½NE¼, NW¼, and S½;
Sec. 33, lots 1 to 4, inclusive, SW¼, and SW¼SE¼;
Sec. 34, lots 3 to 6, inclusive;
Sec. 35, lots 1 to 9, inclusive, and SW¼SE¼;
Sec. 36, lots 1–5;
Tracts 63E, 63F, and 63N;
Tracts 64 to 71, inclusive;
Tracts 76 to 85, inclusive;
Tracts 88 to 98, inclusive;
Tracts 107 to 116, inclusive;
Tracts 119 to 130, inclusive;
Tracts 139 to 150, inclusive;
Tracts 158 to 169, inclusive;
Tracts 172 to 179, inclusive;
Tracts 189 to 194, inclusive;
Tracts 199 to 204, inclusive;
Tracts 212 to 218, inclusive;
Tracts 225 to 235, inclusive;
Tracts 238 to 248, inclusive;
Tracts 252 to 260, inclusive;
Tracts 262 to 342, inclusive.
T. 57 N., R. 102 W.,
Sec. 35, E½E½.

The areas described aggregate 21,071.53 acres in Park and Big Horn Counties.

2. The Secretarial Order dated October 21, 1913, which withdrew public lands for the Bureau of Reclamation's Shoshone Reclamation Project, is hereby revoked insofar as it affects the following described land:

Sixth Principal Meridian

T. 56 N., R. 97 W.,
Tract 37.

The area described contains 640 acres in Big Horn County.

3. Of the lands described in paragraph 1, 1,325.99 acres are within overlapping withdrawals and will remain closed to surface entry and mining, and 19,745.54 acres will not be opened to surface entry and mining until a planning review and an analysis are completed to determine if any of the lands need special designation and protection or have exchange potential.

4. The land described in paragraph 2 has been conveyed out of Federal ownership and this is a record clearing action only.

Dated: October 26, 1998.

Bob Armstrong,

Assistant Secretary of the Interior.

BILLING CODE 4310–22–P

DEPARTMENT OF THE INTERIOR

Minerals Management Service (MMS)

Minerals Management Advisory Board Outer Continental Shelf Scientific Committee; Announcement of Plenary Session

This Notice is issued in accordance with the provisions of the Federal Advisory Committee Act, Pub. L. 92–463, 5 U.S.C., Appendix I, and the Office of Management and Budget Circular A–63, Revised.

The Minerals Management Advisory Board OCS SC will meet in plenary session on Wednesday, November 18, and on Thursday, November 19, and will meet in subcommittee meetings also on Thursday, November 19, 1998, at the Ramada Plaza Hotel Pentagon, 4641 Kenmore Avenue, Alexandria, Virginia 22304, telephone (703) 751–4510.

The OCS SC is an outside group of scientists which advises the Director, MMS, on the feasibility, appropriateness, and scientific merit of the MMS OCS Environmental Studies Program as related to information needed for informed OCS decisionmaking.

Below is a schedule of meetings that will occur.

The Committee will meet in plenary session on Wednesday, November 18, from 9:00 a.m. to 5:15 p.m. Discussion will focus on:

- Deepwater Issues
- National Ocean Conference Report
- Overview of the MMS Strategic Studies Plan

The SC will meet in subcommittees on Thursday, November 19, from 8:15 a.m. to noon, to review regional and Headquarters strategic plans. Another plenary session is scheduled for Thursday, November 19, from 1:30 p.m. to 4:30 p.m., and discussion will focus on Committee business.

The meetings are open to the public. Approximately 30 visitors can be accommodated on a first-come-first-served basis at the plenary session.

A copy of the agenda may be requested from the MMS by writing Ms. Phyllis Clark at the address below. Other inquiries concerning the OCS SC meeting should be addressed to Mr. Robert LaBelle, Executive Secretary to the OCS Scientific Committee, Minerals Management Service, 381 Elden Street, Mail Stop 4040, Herndon, Virginia 20170–4817. He may be reached by telephone at (703) 787–1756, and by electronic mail at Robert.Labelle@mms.gov.

Dated: October 29, 1998.

Michael Hunt,

Acting Associate Director for Offshore Minerals Management.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Notice on Final Publication of the Monetization Field Manual

AGENCY: U.S. Agency for International Development (USAID).

ACTION: Notice.

SUMMARY: The U.S. Agency for International Development announces that the rewrite of the Monetization Field Manual is completed. All comments received from the draft published on April 15, 1998, have been considered carefully, and changes and clarifications were made as appropriate to address them.

DATES: This document is final as of October 28, 1998 and replaces the draft document dated April 15, 1998.

ADDRESSES: The Monetization Field Manual can be read online, or downloaded from the following internet address: http://www.info.usaid.gov/hum_response/ffp/monetiz.htm.

A hard copy, or diskette of the Monetization Field Manual may be requested from USAID. Please submit all requests to: U.S. Agency for International Development, Attn: Mr. James F. Thompson, Bureau for Humanitarian Response, Office of Food for Peace, Room 7.06–111, Washington, DC 20523–6700. A request for a hard copy must be accomplished by an address label.

Any comments may also be submitted to the above address.

FOR FURTHER INFORMATION CONTACT: Mr. James F. Thompson, at the address identified above.

Dated: October 22, 1998.

Jeanne Markunas,

Acting Director, Office of Food for Peace, Bureau for Humanitarian Response.

BILLING CODE 8116–01–M

INTERNATIONAL TRADE COMMISSION

Termination of Five-Year Reviews

[Racing Plates From Canada (AA1921–137 (Review)); Acrylic Sheet from Japan (AA1921–154 (Review)); Cotton Yarn From Brazil (104–TAA–21 (Review)); Animal Glue From Germany (AA1921–172 (Review)); Railway Track Maintenance Equipment From Austria (AA1921–173 (Review)); Impression Fabric From Japan (AA1921–176 (Review)); Rayon Staple Fiber From Finland & Sweden (AA1921–191 & 104–TAA–13 (Review))]

AGENCY: United States International Trade Commission.

ACTION: Termination of five-year reviews.

SUMMARY: The subject five-year reviews were initiated in August and September 1998 to determine whether revocation of the existing antidumping and countervailing duty orders would be likely to lead to continuation or recurrence of dumping and material injury to a domestic industry. On October 22, 1998, the Department of Commerce published notice that it was revoking the orders because no domestic interested party responded to its notice of initiation by the applicable deadline (63 FR 56605, October 22, 1998). Accordingly, pursuant to section 207.69 of the Commission's Rules of Practice and Procedure (19 CFR § 207.69), the subject reviews are terminated.

EFFECTIVE DATE: October 22, 1998.

FOR FURTHER INFORMATION CONTACT: Vera Libeau (202–205–3176), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (http://www.usitc.gov).

Authority: These reviews are being terminated under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.69 of the Commission's rules (19 CFR § 207.69).

By order of the Commission.

Issued: October 28, 1998.

Donna R. Koehnke,

Secretary.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Sunshine Act Meeting

[USITC SE–98–018]

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: November 13, 1998 at 2:00 p.m.

PLACE: Room 101, 500 E Street S.W., Washington, DC 20436.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agenda for future meeting: None.

2. Minutes.
3. Ratification List.
4. Inv. Nos. 701–TA–384 and 731–TA–806–808 (Preliminary) (Hot-Rolled Steel Products from Brazil, Japan, and Russia)—briefing and vote.
5. Outstanding action jackets:
   1. Document No. ID–98–021: Approval of final report in Inv. No. 332–237 (Production Sharing: Use of U.S. Components and Materials in Foreign Assembly Operations, 1994–1997).
   2. Document No. ID–98–022: Approval of final report in Inv. No. 332–384 (The Changing Structure of the Global Large Civil Aircraft Industry and Market: Implications for the Competitiveness of the U.S. Industry).
   3. Document No. INV–98–063: Approval of the draft producers', importers', purchasers', and foreign producers' questionnaires in Inv. Nos. 751–TA–21–27 (Ferrosilicon from Brazil, China, Kazakhstan, Russia, Ukraine, and Venezuela).

In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

Issued: November 3, 1998.

By order of the Commission.

Donna R. Koehnke,

Secretary.

BILLING CODE 7020–02–P

DEPARTMENT OF LABOR

Office of the Secretary

Submission for OMB Review; Comment Request

November 2, 1998.

The Department of Labor (DOL) has submitted the following public information collection requests (ICRs) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). A copy of each individual ICR, with applicable supporting documentation, may be obtained by calling the Department of Labor, Departmental Clearance Officer, Todd R. Owen (202 219–5096 ext. 143) or by E-mail to Owen-Todd@dol.gov.

Comments should be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for MSHA, Office of Management and Budget, Room 10235, Washington, DC 20503 (202 395–7316), within 30 days from the date of this publication in the **Federal Register**.

The OMB is particularly interested in comments which:

* Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

* Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

* Enhance the quality, utility, and clarity of the information to be collected; and

* Minimize the burden of the collection of information on those who are to respond, including through the use of appropriated automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: Mine Safety and Health Administration.

Title: Radiation Sampling and Exposure Records.

OMB Number: 1219–0003 (Extension).

Frequency: Weekly.

Affected Public: Business or other for-profit.

Number of Respondents: 20.

Estimated Time Per Respondent: 10 minutes.

Total Burden Hours: 8,000.

Total Annualized Capital/startup Costs: $0.

Total Annual (operating/maintaining): $182,500.

Description: Airborne radon and radon daughters exist in every uranium mine and several other underground mining commodities. Radon is a radioactive gas. Operators are required to conduct weekly sampling where the fluctuation in radiation is substantial or concentrations of radon daughters exceed 0.3 WL. Monthly sampling is required where mines have consistent readings of 0.3 WL or less. The mine operators are required to keep records of all mandatory samplings, retained the results at the mine site or nearest mine office for two years.

Agency: Mine Safety and Health Administration.

Title: Notification of Legal Identity.

OMB Number: 1219–0008 (Extension).

Agency Form Number: MSHA Form 2000–7.

Frequency: On occasion.

Affected Public: Business or other for-profit.

Estimated Time Per Respondent: 23 minutes.

Total Responses: 6,307.

Total Burden Hours: 6,307.

Total Annualized Capital/startup Costs: $0.

Total Annual (operating/maintaining): $2,018.

Description: Requires mine operators to file with MSHA the name and address of the mine and the name and address of the persons who control and operate the mine, and any revisions of such names and addresses. The information is used to identify persons chargeable with violations of safety and health standards, in the assessment of civil penalties, and in the service of legal documents.

Agency: Mine Safety and Health Administration.

Title: Application for Waiver of Surface Facilities Requirement.

OMB Number: 1219–0024 (Reinstatement).

Frequency: On Occasion.

Affected Public: Business or other for-profit.

Number of Respondents: 419.

Estimated Time Per Respondent: 30 minutes.

Total Burden Hours: 470 hours.

Category	Applications	Minutes	Salary	Total cost	Total burden hours
Initial for management	419	20	$43	$6,020	140
Initial for clerical	.....	10	17	1,190	70
Exception for management	521	10	43	3,741	87
Exception for clerical	.....	10	17	1,479	87
Totals	940	.....	.....	12,430	384

Total Annualized Capital/startup Costs: $0.

Total Annual (operating/maintaining): $0.

Description: Coal mine operators are required to provide bathing facilities, clothing change rooms, and sanitary flush toilet facilities in a location convenient for use of the miners. If the operator is unable to meet any or all of the requirements, he/she may apply for a waiver. Applications are filed with the District Manager for the district in which the mine is located.

Agency: Mine Safety and Health Administration.

Title: Respirator Program Records.

OMB Number: 1219–0048 (Extension).

Frequency: On Occasion.

Affected Public: Business or other for-profit.

Number of Respondents: 2,700.

Estimated Time Per Respondent: 5-one half hours.

Total Burden Hours: 3,973.

Total Annualized Capital/startup Costs: $0.

Total Burden Costs (operating/maintaining): $131,666.

Description: Where protective equipment or respirators are required because of exposure to harmful substances, MSHA regulations require a written respirator program that addresses such issues as selection, fitting, use, and maintenance of respirators to ensure that workers are properly and effectively using the equipment, and that such equipment offers adequate protection for workers. Records of fit-testing are essential for determining that the worker is wearing the proper respirator. Certain records are also required to be kept in connection with respirators, including records of the date of issuance of the respirator, and fit-test results. The fit-testing records are essential for determining that the worker is wearing the proper respirator.

Agency: Mine Safety and Health Administration.

Title: Rock Burst Control Plan.

OMB Number: 1219–0097 (Extension).

Frequency: On Occasion.

Affected Public: Business or other for-profit.

Number of Respondents: 2.

Estimated Time Per Respondent: 12 hours.

Total Burden Hours: 24 hours.

Total Annualized Capitol/startup Costs: $0.

Total Annual (operating/maintaining): $864.

Description: Rock bursts in an underground mine pose a serious threat to the safety of miners in the area affected by the burst. These bursts may reasonably be expected to result in the entrapment of miners, death, and serious physical harm. Title 30 Section 57.3461 requires operators of underground metal and nonmetal mines to develop a rock burst control plan within 90 days after a rock burst has been experienced.

Todd R. Owen,

Departmental Clearance Officer.

BILLING CODE 4510–43–M

DEPARTMENT OF LABOR

Employment and Training Administration

Federal-State Unemployment Compensation Program: Certifications Under the Federal Unemployment Tax Act for 1998

On October 31, 1998, the Secretary of Labor signed the annual certifications under the Federal Unemployment Tax Act, 26 U.S.C. 3301 *et seq.*, thereby enabling employers who make contributions to State unemployment funds to obtain certain credits for their liability for the Federal unemployment tax. By letter of the same date the certifications were transmitted to the Secretary of the Treasury. The letter and certifications are printed below.

Dated: November 2, 1998.

Raymond L. Bramucci,

Assistant Secretary.

October 31, 1998.

The Honorable Robert E. Rubin,
Secretary of the Treasury,
Washington, D.C. 20220.

Dear Secretary Rubin: Transmitted herewith are an original and one copy of the certifications of the States and their unemployment compensation laws for the 12-month period ending on October 31, 1998. One is required with respect to normal Federal unemployment tax credit by Section 3304 of the Internal Revenue Code of 1986 (IRC), and the other is required with respect to additional tax credit by Section 3303 of the Code. Both certifications list all 53 jurisdictions.

In addition, due to the resolution of an issue arising under Section 3304(a) of the Internal Revenue Code of 1986, I hereby certify the State of Washington and its law for the 12-month period ending on October 31, 1997.

Sincerely,

Alexis M. Herman.

Enclosures.

Certification of States to the Secretary of the Treasury Pursuant to Section 3304 of the Internal Revenue Code of 1986

In accordance with the provisions of Section 3304(c) of the Internal Revenue Code of 1986 (26 U.S.C. 3304(c)), I hereby certify the following named States to the Secretary of the Treasury for the 12-month period ending on October 31, 1998, in regard to the unemployment compensation laws of those States which heretofore have been approved under the Federal Unemployment Tax Act:

Alabama
Alaska
Arizona
Arkansas
California
Colorado
Connecticut
Delaware
District of Columbia
Florida
Maryland
Massachusetts
Michigan
Minnesota
Mississippi
Missouri
Montana
Nebraska
Nevada
New Hampshire
New Jersey
New Mexico
New York
North Carolina
North Dakota
Ohio
Oklahoma
Georgia
Hawaii
Idaho
Illinois
Indiana
Iowa
Kansas
Kentucky
Louisiana
Maine
Oregon
Pennsylvania
Puerto Rico
Rhode Island
South Carolina
South Dakota
Tennessee
Texas
Utah
Vermont
Virginia
Virgin Islands
Washington
West Virginia
Wisconsin
Wyoming

This certification is for the maximum normal credit allowable under Section 3302(a) of the Code.

Signed at Washington, DC, on October 31, 1998.

Alexis M. Herman,

Secretary of Labor.

Certification of State Unemployment Compensation Laws to the Secretary of the Treasury Pursuant to Section 3303(b)(1) of the Internal Revenue Code of 1986

In accordance with the provisions of paragraph (1) of Section 3303(b) of the Internal Revenue Code of 1986 (26 U.S.C. 3303(b)(1)), I hereby certify the unemployment compensation laws of the following named States, which heretofore have been certified pursuant to paragraph (3) of Section 3303(b) of the Code, to the Secretary of the Treasury for the 12-month period ending on October 31, 1998:

Alabama
Alaska
Arizona
Arkansas
California
Colorado
Connecticut
Delaware
District of Columbia
Florida
Maryland
Massachusetts
Michigan
Minnesota
Mississippi
Missouri
Montana
Nebraska
Nevada
New Hampshire
New Jersey
New Mexico
New York
North Carolina
North Dakota
Ohio
Oklahoma
Georgia
Hawaii
Idaho
Illinois
Indiana
Iowa
Kansas
Kentucky
Louisiana
Maine
Oregon
Pennsylvania
Puerto Rico
Rhode Island
South Carolina
South Dakota
Tennessee
Texas
Utah
Vermont
Virginia
Virgin Islands
Washington
West Virginia
Wisconsin
Wyoming

This certification is for the maximum additional credit allowable under Section 3302(b) of the Code.

Signed at Washington, D.C., on October 31, 1998.

Alexis M. Herman,

Secretary of Labor.

[FR Doc. 98–29647 Filed 11–4–98; 8:45 am]

BILLING CODE 4510–30–M

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice.

SUMMARY: NARA is giving public notice that the agency has submitted to OMB for approval the information collection described in this notice. The public is invited to comment on the proposed information collection pursuant to the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted to OMB at the address below on or before December 7, 1998, to be assured of consideration.

ADDRESSES: Comments should be sent to: Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: Ms. Maya Bernstein, Desk Officer for NARA, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the proposed information collection and supporting statement should be directed to Tamee Fechhelm at telephone number 301–713–6730 or fax number 301–713–6913.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13), NARA invites the general public and other Federal agencies to comment on proposed information collections. NARA published a notice of proposed collection for this information collection on August 11, 1998 (63 FR 42882 and 42883). No comments were received. NARA has submitted the described information collection to OMB for approval.

In response to this notice, comments and suggestions should address one or more of the following points: (a) whether the proposed information collection is necessary for the proper performance of the functions of NARA; (b) the accuracy of NARA's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of information technology. In this notice, NARA is soliciting comments concerning the following information collection:

Title: National Archives and Records Administration Class Evaluation Forms.

OMB number: 3095–0023.

Agency form number: NA Forms 2019A, 2019B, 2019C, and 2019D.

Type of review: Regular.

Affected public: Individuals or households, Business or other for-profit, Nonprofit organizations and institutions, Federal, state, local, or tribal government agencies.

Estimated number of respondents: 6,744.

Estimated time per response: 5 minutes.

Frequency of response: On occasion (when respondent takes NARA sponsored training classes).

Estimated total annual burden hours: 562 hours.

Abstract: The information collection allows uniform measurement of customer satisfaction with NARA training. NARA distributes the approved forms to the course coordinators on diskette for customization of selected elements, shown as shaded areas on the forms submitted for clearance. NARA Form 2019A is used for courses having a single instructor; Form 2019B is used for courses with two instructors team-teaching, as is common in records management classes; and Form 2019C is used for one-day courses with several topics that are taught by different instructors or speakers, as is common with some archival and genealogical workshops. These forms are distributed at the end of the class for completion before the participant leaves. NARA Form 2019D is used for courses held on multiple days with a variety of speakers or instructors; this class format is used in the twice yearly Modern Archives Institute and some genealogical courses. For these courses, the daily evaluation form (NARA Form 2019D front) is distributed on a daily basis so the student may provide a rating while the experience with the material and instructor is fresh. The overall evaluation (NARA Form 2019D back) is distributed at the end of the class. The enclosed "Use of NARA Class Evaluation Form" instructions identify the degree of customization allowed on the forms.

Dated: October 27, 1998.

L. Reynolds Cahoon,

Assistant Archivist for Human Resources and Information Services.

BILLING CODE 7515–01–P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: National Science Foundation.

ACTION: Notice.

Title of Collection: NSF Proposal Review Process (OMB Control No. 3145–0060).

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the National Science Foundation (NSF) will publish periodic summaries of proposed projects. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments call Suzanne Plimpton, NSF Reports Clearance Officer, at (703) 306–1125x2017.

Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project Proposal Evaluation Process

The missions of the NSF are to: increase the Nation's base of scientific and engineering knowledge and strengthen its ability to support research in all areas of science and engineering; promote innovative science and engineering education programs that can better prepare the Nation to meet the challenges of the future; and promote international cooperation in science and engineering. The Foundation is also committed to ensuring the Nation's supply of scientists, engineers and science educators. In its role as leading Federal supporter of science and engineering, NSF also has an important role in national policy planning.

The Foundation fulfills this responsibility by initiating and supporting merit-selected research and education projects in all the scientific and engineering disciplines. This support is made primarily through grants, contracts, and other agreements awarded to approximately 2,000 colleges, universities, academic consortia, nonprofit institutions, and small businesses.

The Foundation relies heavily on the advice and assistance of external advisory committees, ad-hoc proposal reviewers, and to other experts to ensure that the Foundation is able to reach fair and knowledgeable judgments. These scientists and educators come from colleges and universities, nonprofit research and education organizations, industry, and other Government agencies.

In making its decisions on proposals the counsel of these merit reviewers has proven invaluable to the Foundation both in the identification of meritorious projects and in providing sound basis for project restructuring.

Review of proposals may involve large panel sessions, small groups, or use of a mail-review system. Proposals are reviewed carefully by scientists or engineers who are expert in the particular field represented by the proposal. About one-fourth are reviewed by mail reviewed by mail reviewers alone. Another one-fourth are reviewed exclusively by panels of reviewers who gather, usually in Arlington, VA, to discuss their advice as well as to deliver it. The remaining one-half are reviewed first by mail reviewers expert in the particular field, then by panels, usually of persons with more diverse expertise, who help the NSF decide among proposals from multiple fields or sub-fields.

Use of the Information

The information collected is used to support grant programs of the Foundation. The information collected on the proposal evaluation forms is used by the Foundation to determine the following criteria when awarding or declining proposals submitted to the Agency: (1) What is the intellectual merit of the proposed activity? (2) What are the broader impacts of the proposed activity?

The information collected on reviewer background questionnaires is used by managers to maintain an automated database of reviewers for the many disciplines represented by the proposals submitted to the Foundation. Information collected on gender, race, ethnicity is used in meeting NSF needs for data to permit response to Congressional and other queries into equity issues. These data are also used in the design, implementation, and monitoring of NSF efforts to increase the participation of various groups in science, engineering, and education.

Confidentiality

Verbatim but anonymous copies of reviews are sent to the principal investigators/project directors. Subject to this NSF policy and applicable laws, including the Freedom of Information Act, reviewers' comments will be given maximum protection from disclosure.

While listings of panelists' names are released, the names of individual reviewers, associated with individual proposals, are not released to anyone.

Because the Foundation is committed to monitoring and identifying any real or apparent inequities based on gender, race, ethnicity, or disability of the proposed principal investigator(s)/project director(s) or the co-principal investigator(s)/co-project director(s), the Foundation also collects information regarding race, ethnicity, disability, and gender. This information is also protected by the Privacy Act.

Burden on the Public

The Foundation estimates that anywhere from one hour to twenty hours may be required to review a proposal. It is estimated that approximately five hours are required to review an average proposal. Each proposal receives an average of seven reviews.

Send comments to Suzanne Plimpton, Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 295, Arlington, VA 22230. Written comments should be received by December 30, 1998.

Dated: October 30, 1998.

Mary Lou Higgs,

Acting NSF Reports Clearance Officer.

[FR Doc. 98–29604 Filed 11–4–98; 8:45 am]

BILLING CODE 7555–01–M

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–335, 50–389]

Florida Power & Light Company; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission or NRC) is considering issuance of amendments to Facility Operating License Nos. DPR–67 and NPF–16, issued to Florida Power & Light Company (the licensee), for operation of the St. Lucie Plant, Units 1 and 2, respectively, that are located in St. Lucie County, Florida.

The proposed amendments would revise the terminology used in the St. Lucie Plant Technical Specifications (TSs) relative to the implementation and automatic removal of certain reactor protection system trip bypasses to

ensure that the meaning of explicit terms used in the TSs are consistent with the intent of the stated requirements.

The circumstances surrounding this request support an exigent TS amendment process. St. Lucie Unit 2 is scheduled to enter their 10th refueling outage on November 9, 1998. The licensee currently plans to begin the Unit 2 startup activities on December 1, 1998. The staff finds that there are sufficient time restraints in the schedule, and with the current TSs, the reactor could not be started up without exposing the plant to the risk of unnecessary reactor trips. Therefore, this amendment request will be handled on an exigent basis.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

Pursuant to 10 CFR 50.91(a)(6) for amendments to be granted under exigent circumstances, the NRC staff must determine that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

(1) Operation of the facility in accordance with the proposed amendment would not involve a significant increase in the probability or consequences of an accident previously evaluated.

The proposed amendments are administrative in nature, and do not change the function or the setpoints of the RPS trip bypass features. The revisions simply make corrections to the Notation of TS Tables 2.2–1 and 3.3–1 to ensure that the meaning of explicit terms used in the Notes is consistent with the intent of the stated requirements based on the St. Lucie plant design. The proposed technical specification changes do not involve accident initiators, do not change the configuration or method of operation of any plant equipment that is used to mitigate the consequences of an accident, and do not alter any conditions assumed in the plant accident analyses. Therefore, operation of either facility in accordance with its proposed amendment would not involve a significant increase in the probability or consequences of an accident previously evaluated.

(2) Operation of the facility in accordance with the proposed amendment would not create the possibility of a new or different kind of accident from any accident previously evaluated.

The proposed amendments are administrative in nature and will not change the physical plant or the modes of plant operation defined in the Facility Operating Licenses. The changes do not involve the addition or modification of equipment nor do they alter the design or operation of plant systems. Therefore, operation of either facility in accordance with its proposed amendment would not create the possibility of a new or different kind of accident from any accident previously evaluated.

(3) Operation of the facility in accordance with the proposed amendment would not involve a significant reduction in a margin of safety.

The proposed amendments are administrative in nature and do not change the function or the setpoints of the RPS trip bypass features. The revisions simply make corrections to the Notation of TS Tables 2.2–1 and 3.3–1 to ensure that the meaning of explicit terms used in the Notes is consistent with the intent of the stated requirements based on the St. Lucie plant design. The proposed changes do not alter the basis for any technical specification that is related to the establishment of, or the maintenance of, a nuclear safety margin. Therefore, operation of either facility in accordance with its proposed amendment would not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

The Commission is seeking public comments on this proposed determination. Any comments received within 14 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of the 14-day notice period. However, should circumstances change during the notice period, such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 14-day notice period, provided that its final determination is that the amendment involves no significant hazards consideration. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish in the **Federal Register** a notice of issuance. The Commission expects that the need to take this action will occur very infrequently.

Written comments may be submitted by mail to the Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, and should cite the publication date and page number of this **Federal Register** notice. Written comments may also be delivered to Room 6D59, Two White Flint North, 11545 Rockville Pike, Rockville, Maryland, from 7:30 a.m. to 4:15 p.m. Federal workdays. Copies of written comments received may be examined at the NRC Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC.

The filing of requests for hearing and petitions for leave to intervene is discussed below.

By November 19, 1998, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for a hearing and a petition for leave to intervene. Requests for a hearing and a petition for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Indian River Community College Library, 3209 Virginia Avenue, Fort Pierce, Florida 34981–5596. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) the nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to 15 days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than 15 days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If the amendment is issued before the expiration of the 30-day hearing period, the Commission will make a final determination on the issue of no significant hazards consideration. If a hearing is requested, the final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment request involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, by the above date. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, and M.S. Ross, Florida Power & Light Company, P.O. Box 14000, Juno Beach, FL, 33408–0420, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

For further details with respect to this action, see the application for amendment dated October 29, 1998, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room, located at the Indian River Community College Library, 3209 Virginia Avenue, Fort Pierce, Florida 34981–5596.

Dated at Rockville, Maryland, this 30th day of October 1998.

For the Nuclear Regulatory Commission.

William C. Gleaves,

Project Manager, Project Directorate II–3, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 98–29642 Filed 11–4–98; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–302]

Florida Power Corporation et al. (Crystal River Unit 3); Exemption

I

The Florida Power Corporation et al. (FPC or the licensee) is the holder of Facility Operating License No. DPR–72, which authorizes the operation of Crystal River Unit 3. The license states that the licensee is subject to all rules, regulations, and orders of the Nuclear Regulatory Commission (NRC or the Commission) now or hereafter in effect.

The facility consists of a pressurized-water reactor at the licensee's site located in Citrus County, Florida.

II

The Code of Federal Regulations at 10 CFR Part 50, Appendix K, Section I.D.1, "Single Failure Criterion," requires that accident evaluations use the combination of emergency core cooling system (ECCS) subsystems assumed to be operative "after the most damaging single-failure of ECCS equipment has taken place." The proposed action would exempt the licensee from the single-failure requirement for very-low-probability scenarios under certain circumstances. The exemption is limited to the systems required for preventing boron precipitation during the long-term cooling phase of a loss-of-coolant accident (LOCA). 10 CFR 50.46(b)(5) requires that the ECCS be capable of providing long-term core cooling. Post-accident boron precipitation is a potential, but unlikely, challenge to maintaining long-term core cooling.

By letter dated October 31, 1997, as supplemented by letters dated December 13, 1997, February 27, 1998, and April 24, 1998, FPC requested an amendment to its operating license for Crystal River Unit 3. The FPC amendment request addressed prevention of boron precipitation following a LOCA that involved the following:

(1) Reactor vessel vent valves (RVVVs) that are effective when needed for all LOCA conditions except for (a) some LOCAs between the reactor coolant pumps and the reactor vessel (RV) at an elevation below the cold-leg mid-pipe at the junction with the RV and (b) decay heat generation rate comparable to approximately a month following extended operation at full power for some LOCAs.

(2) If the RVVVs are not effective, then, according to the licensee's

calculations, Motor Control Center (MCC) 3AB is needed to provide power to open valves within 8 hours for the worst-case LOCA to (a) initiate water injection via auxiliary pressurizer spray (APS) or (b) initiate the dump-to-sump (DTS) method of moving water from a hot leg to the reactor building sump.

Should MCC 3AB fail before the APS or DTS initiates, both of these systems will fail to initiate in these licensing scenarios. In a June 4, 1998, submittal, FPC requested an exemption from the single-failure requirement with respect to this failure. FPC justified its request by stating that the proposed exemption meets the underlying purpose of the rule in that there are conservatisms in the calculations that cause underprediction of available repair time, so that, using realistic assumptions, sufficient time would be available to perform repairs to restore MCC 3AB if needed. As a result, the licensee stated that there was reasonable assurance of the availability of an activo boron precipitation method (APS or DTS) if one were needed. FPC states that timely recognition of boron precipitation is assured by compliance with plant procedures and further states that prompt operator actions will be taken to restore an active method in the event of MCC 3AB failure.

One element of the licensee's justification was to credit flow through the hot-leg nozzle gaps. According to FPC's calculations, APS is not fully effective until 21 hours after LOCA initiation, but it may be needed within 8 hours if a single failure other than the failure of MCC 3AB makes DTS unavailable. FPC addressed this problem by crediting flow through hot-leg nozzle gaps to provide a boron dilution means for the first 21 hours. However, the NRC does not accept credit for hot-leg nozzle gap flow because FPC has not established that the nozzle gaps will remain functional after a LOCA. Therefore, during this time period, a failure to meet the Appendix K Item I.D.1 single-failure criterion remains. However, the NRC has determined that the licensee has given adequate justification in its submittal to extend the exemption to this scenario.

III

Pursuant to 10 CFR 50.12, the Commission may, upon application by any interested person or upon its own initiative, grant exemptions from the requirements of 10 CFR Part 50 (1) when the exemptions are authorized by law, will not present an undue risk to public health or safety, and are consistent with the common defense and security and (2) when special circumstances are present. Special circumstances are present whenever, according to 10 CFR 50.12(a)(2)(ii), "Application of the regulation in the particular circumstances would not serve the underlying purpose of the rule or is not necessary to achieve the underlying purpose of the rule. . . ."

The underlying purpose of the single-failure criterion requirement is to assure long-term cooling performance of the ECCS in the event of the most damaging single-failure of ECCS equipment. As a licensing review tool, the single-failure criterion helps assure reliable systems as an element of defense in depth. As a design and analysis tool, it promotes reliability through enforced redundancy. Since only those systems or components that are judged to have a credible chance of failure are assumed to fail, the criterion is applied to such responses as valve movement on demand, emergency diesel generator start, short circuit in an electrical bus, and fluid leakage caused by gross failure of a pump or valve seal during long-term cooling. Reactor vessels or certain types of structural elements within systems, when combined with other unlikely events, are not assumed to fail because the probabilities of the resulting scenarios have been deemed sufficiently small that they need not be considered. Certain passive failures 24 hours or more after initiation of a LOCA, such as pipe breaks, are not addressed as single failures because the compounded probabilities were judged sufficiently small that they could be discounted without affecting overall systems reliability.

The single-failure criterion was developed without the benefit of numerical failure assessments. Regulatory requirements and guidance consequently were based upon categories of equipment and examples that must be covered or that are exempt, and do not allow a probabilistic consideration during routine implementation. Hence, a single failure, whether or not there is a substantial impact upon overall system reliability, would not meet the regulatory requirements. A non-beneficial result is inconsistent with the objective of the single-failure criterion, which was not intended to force changes if essentially no benefit would accrue. This is the case with the potential MCC 3AB failure.

FPC estimated that the combined probability of the LOCA of concern and failure of MCC 3AB is 10^{-10}/reactor-year. (The probability of the LOCA of concern is 10^{-7}/reactor-year and the failure probability of MCC 3AB given the LOCA of concern is 10^{-3}/reactor-year.) If MCC 3AB were to fail, FPC would initiate its Emergency Plan Implementing Procedure to re-power MCC 3AB from an alternate electric power source. FPC stated that sufficient time will be available and that radiological conditions should permit such activities.

In addition, there are other conservatisms in the licensee's analyses. These include:

- *Presence of buffer compounds may increase solubility limit margins.* FPC concluded that solutes in the sump water will increase boron solubility, but did not credit the effect in its calculations. This is a conservatism when considering MCC 3AB repair and APS unavailability time.
- *Decay heat was calculated using Appendix K methods.* FPC's calculations, in accordance with its licensing basis, use a decay heat generation rate that is roughly 25 percent too high. A realistic decay heat would increase the time available before boron precipitation became a concern. This is a significant conservatism when considering MCC 3AB repair and APS unavailability time.
- *Boron solubility.* FPC used a boron solubility decreased by 4 weight percent from the published values, consistent with previously accepted evaluation models. This is a conservatism when considering MCC 3AB repair and APS unavailability time.
- *Boron precipitation.* The approved evaluation models are based upon preventing precipitation. Should precipitation occur, significant boron would have to precipitate to prevent core cooling. This unquantified conservatism is significant when considering MCC 3AB repair and APS unavailability time.

Despite the licensee's determination that there is no safety-significant vulnerability associated with the two particular instances of failing to meet the single-failure criterion, FPC has developed and implemented procedures to address the conditions should they occur. It has shown that there is essentially no benefit to be achieved by investing in additional equipment to eliminate the single-failure aspects since the combined probability of the LOCA of concern with the failure is very low. With regard to the availability of APS during the first 21 hours following a LOCA should DTS be unavailable, realistic calculations without the conservative assumptions discussed above predict that APS would be available.

These calculations, along with the low estimate of core damage probability resulting from this scenario, result in a conclusion that essentially no benefit would be achieved by requiring modifications to meet the single-failure criteria for the specific scenario during this time period.

IV

For these foregoing reasons, the NRC staff has concluded that it is not necessary to meet the single-failure requirement of Appendix K, Section I.D.1, with respect to (1) failure of Motor Control Center 3AB and the resulting inability to initiate an active means of controlling core boron concentration and (2) the active methods not meeting the single-failure criterion for the period when approved licensing methods predict that APS is not effective following certain LOCAs to adequately ensure that boron precipitation does not interfere with long-term cooling. The NRC staff has determined that there are special circumstances present, as specified in 10 CFR 50.12.(a)(2)(ii), in that application of 10 CFR Part 50, Appendix K, Section I.D.1, is not necessary in order to achieve the underlying purpose of this regulation, which is to provide adequate assurance that boron precipitation will not interfere with the capability of the ECCS to provide long-term core cooling.

Accordingly, the Commission has determined that, pursuant to 10 CFR 50.12(a), this exemption is authorized by law, will not endanger life or property or the common defense and security, and is otherwise in the public interest. Therefore, the Commission hereby grants the following exemption:

The Florida Power Corporation, et al., is exempt from the singie-failure criterion requirement of 10 CFR Part 50, Appendix K, Section I.D.1, with respect to (1) failure of Motor Control Center 3AB and the resulting inability to initiate an active means of controlling core boron concentration and (2) failure of the active means to meet the single-failure criterion for the period when approved licensing methods predict that APS is not effective following reactor coolant pump discharge breaks provided that: procedural guidance shall be maintained that describes the actions necessary to restore an active method of boron precipitation mitigation in the event of a failure of Motor Control Center 3AB.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this exemption will have no significant impact on the quality of the human environment (63 FR 54162).

This exemption is effective upon issuance.

Dated at Rockville, Maryland, this 29th day of October, 1998.

For the Nuclear Regulatory Commission.

Frank J. Miraglia,

Acting Director, Office of Nuclear Reactor Regulation.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–397]

Washington Public Power Supply System (Nuclear Project No. 2; Correction to Confirmatory Order Modifying License Effective Immediately

On March 25, 1998, the Commission issued a Confirmatory Order Modifying License for the Washington Public Power Supply System (WPPSS) Nuclear Project No. 2. The Order confirmed WPPSS' commitment to complete implementation of Thermo-Lag 330–1 fire barriers corrective actions. The Order was published in the **Federal Register** on April 2, 1998 (63 FR 16289). In Column 3, Line 4, "3485" should read "3486".

Dated at Rockville, Maryland, this 30th day of October 1998.

For the Nuclear Regulatory Commission.

Samuel J. Collins,

Director, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

RAILROAD RETIREMENT BOARD

1999 Railroad Experience Rating Proclamations, Monthly Compensation Base and Other Determinations

AGENCY: Railroad Retirement Board.

ACTION: Notice.

SUMMARY: Pursuant to section 8(c)(2) and section 12(r)(3) of the Railroad Unemployment Insurance Act (Act) (45 U.S.C. 358(c)(2) and 45 U.S.C. 362(r)(3), respectively), the Board gives notice of the following:

1. The balance to the credit of the Railroad Unemployment Insurance (RUI) Account, as of June 30, 1998, is $81,520,684.90;
2. The September 30, 1998, balance of any new loans to the RUI Account, including accrued interest, is zero;
3. The system compensation base is $2,817,307,517.24 as of June 30, 1998;
4. The cumulative system unallocated charge balance is ($202,216,518.19) as of June 30, 1998;
5. The pooled credit ratio for calendar year 1999 is zero;
6. The pooled charged ratio for calendar year 1999 is zero;
7. The surcharge rate for calendar year 1999 is 1.5 percent;
8. The monthly compensation base under section 1(i) of the Act is $970 for months in calendar year 1999;
9. The amount described in section 1(k) of the Act as "2.5 times the monthly compensation base" is $2,425 for base year (calendar year) 1999;
10. The amount described in section 2(c) of the Act as "an amount that bears the same ratio to $775 as the monthly compensation base for that year as computed under section 1(i) of this Act bears to $600" is $1,253 for months in calendar year 1999;
11. The amount described in section 3 of the Act as "2.5 times the monthly compensation base" is $2,425 for base year (calendar year) 1999;
12. The amount described in section 4(a–2)(i)(A) of the Act as "2.5 times the monthly compensation base" is $2,425 with respect to disqualifications ending in calendar year 1999;
13. The maximum daily benefit rate under section 2(a)(3) of the Act is $46 with respect to days of unemployment and days of sickness in registration periods beginning after June 30, 1999.

DATES: The balance in notice (1) and the determinations made in notices (3) through (7) are based on data as of June 30, 1998. The balance in notice (2) is based on data as of September 30, 1998. The determinations made in notices (5) through (7) apply to the calculation, under section 8(a)(1)(C) of the Act, of employer contribution rates for 1999. The determinations made in notices (8) through (12) are effective January 1, 1999. The determination made in notice (13) is effective for registration periods beginning after June 30, 1999.

ADDRESSES: Secretary to the Board, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092.

FOR FURTHER INFORMATION CONTACT: Marla L. Huddleston, Bureau of the Actuary, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611–2092, telephone (312) 751–4779.

SUPPLEMENTARY INFORMATION: The RRB is required by section 8(c)(1) of the Railroad Unemployment Insurance Act (Act) (45 U.S.C. 358(c)(1)) as amended by Public Law 100–647, to proclaim by October 15 of each year certain system-wide factors used in calculating experience-based employer contribution rates for the following year. The RRB is further required by section 8(c)(2) of the Act (45 U.S.C. 358(c)(2)) to publish the amounts so determined and proclaimed. The RRB is required by section 12(r)(3) of the Act (45 U.S.C. 362(r)(3)) to

publish by December 11, 1998, the computation of the calendar year 1999 monthly compensation base (section 1(i) of the Act) and amounts described in sections 1(k), 2(c), 3 and 4(a–2)(i)(A) of the Act which are related to changes in the monthly compensation base. Also, the RRB is required to publish, by June 11, 1999, the maximum daily benefit rate under section 2(a)(3) of the Act for days of unemployment and days of sickness in registration periods beginning after June 30, 1999.

Surcharge Rate

A surcharge is added in the calculation of each employer's contribution rate, subject to the applicable maximum rate, for a calendar year whenever the balance to the credit of the RUI Account on the preceding June 30 is less than the greater of $100 million or the amount that bears the same ratio to $100 million as the system compensation base for that June 30 bears to the system compensation base as of June 30, 1991. If the RUI Account balance is less than $100 million (as indexed), but at least $50 million (as indexed), the surcharge will be 1.5 percent. If the RUI Account balance is less than $50 million (as indexed), but greater than zero, the surcharge will be 2.5 percent. The maximum surcharge of 3.5 percent applies if the RUI Account balance is less than zero.

The system compensation base as of June 30, 1991 was $2,799,430,259.23. The system compensation base for June 30, 1998 was $2,817,307,517.24. The ratio of $2,817,307,517.24 to $2,799,430,259.23 is 1.00638603. Multiplying 1.00638603 by $100 million yields $100,638,603. Multiplying $50 million by 1.00638603 produces $50,319,302. The Account balance on June 30, 1998, was $81,520,684.90. Accordingly, the surcharge rate for calendar year 1999 is 1.5 percent.

Monthly Compensation Base

For years after 1988, section 1(i) of the Act contains a formula for determining the monthly compensation base. Under the prescribed formula, the monthly compensation base increases by approximately two-thirds of the cumulative growth in average national wages since 1984. The monthly compensation base for months in calendar year 1999 shall be equal to the greater of (a) $600 or (b) $600 [1 + {(A − 37,800)/56,700≡)], where A equals the amount of the applicable base with respect to tier 1 taxes for 1999 under section 3231(e)(2) of the Internal Revenue Code of 1986. Section 1(i) further provides that if the amount so determined is not a multiple of $5, it shall be rounded to the nearest multiple of $5.

The calendar year 1999 tier 1 tax base is $72,600. Subtracting $37,800 from $72,600 produces $34,800. Dividing $34,800 by $56,700 yields a ratio of 0.61375661. Adding one gives 1.61375661. Multiplying $600 by the amount 1.61375661 produces the amount of $968.25, which must then be rounded to $970. Accordingly, the monthly compensation base is determined to be $970 for months in calendar year 1999.

Amounts Related to Changes in Monthly Compensation Base

For years after 1988, sections 1(k), 2(c), 3 and 4(a–2)(i)(A) of the Act contain formulas for determining amounts related to the monthly compensation base.

Under section 1(k), remuneration earned from employment covered under the Act cannot be considered subsidiary remuneration if the employee's base year compensation is less than 2.5 times the monthly compensation base for months in such base year. Multiplying 2.5 by the calendar year 1999 monthly compensation base of $970 produces $2,425. Accordingly, the amount determined under section 1(k) is $2,425 for calendar year 1999.

Under section 2(c), the maximum amount of normal benefits paid for days of unemployment within a benefit year and the maximum amount of normal benefits paid for days of sickness within a benefit year shall not exceed an employee's compensation in the base year. In determining an employee's base year compensation, any money remuneration in a month not in excess of an amount that bears the same ratio to $775 as the monthly compensation base for that year bears to $600 shall be taken into account. The calendar year 1999 monthly compensation base is $970. The ratio of $970 to $600 is 1.61666667. Multiplying 1.61666667 by $775 produces $1,253. Accordingly, the amount determined under section 2(c) is $1,253 for months in calendar year 1999.

Under section 3, an employee shall be a "qualified employee" if his/her base year compensation is not less than 2.5 times the monthly compensation base for months in such base year. Multiplying 2.5 by the calendar year 1999 monthly compensation base of $970 produces $2,425. Accordingly, the amount determined under section 3 is $2,425 for calendar year 1999.

Under section 4(a–2)(i)(A), an employee who leaves work voluntarily without good cause is disqualified from receiving unemployment benefits until he has been paid compensation of not less than 2.5 times the monthly compensation base for months in the calendar year in which the disqualification ends. Multiplying 2.5 by the calendar year 1999 monthly compensation base of $970 produces $2,425. Accordingly, the amount determined under section 4(a–2)(i)(A) is $2,425 for calendar year 1999.

Maximum Daily Benefit Rate

Section 2(a)(3) contains a formula for determining the maximum daily benefit rate for registration periods beginning after June 30, 1989, and after each June 30 thereafter. Legislation enacted on October 9, 1996, revised the formula for indexing maximum daily benefit rates. Under the prescribed formula, the maximum daily benefit rate increases by approximately two-thirds of the cumulative growth in average national wages since 1984. The maximum daily benefit rate for registration periods beginning after June 30, 1999, shall be equal to 5 percent of the monthly compensation base for the base year immediately preceding the beginning of the benefit year. Section 2(a)(3) further provides that if the amount so computed is not a multiple of $1, it shall be rounded down to the nearest multiple of $1.

The calendar year 1998 monthly compensation base is $925. Multiplying $925 by 0.05 yields $46.25, which must then be rounded down to $46. Accordingly, the maximum daily benefit rate for days of unemployment and days of sickness beginning in registration periods after June 30, 1999, is determined to be $46.

Dated: October 28, 1998.

By Authority of the Board.

Beatrice Ezerski,

Secretary to the Board.

BILLING CODE 7905–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. IC–23512]

Notice of Applications for Deregistration Under Section 8(f) of the Investment Company Act of 1940

October 30, 1998.

The following is a notice of applications for deregistration under section 8(f) of the Investment Company Act of 1940 for the month of October, 1998. A copy of each application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth St., N.W., Washington, DC 20549 (tel. 202–942–8090). An order granting each application will be issued unless the SEC orders a hearing. Interested persons may request a hearing on any application by writing to the SEC's Secretary at the address and serving the relevant applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on November 23, 1998, and should be accompanied by proof of service on the applicant, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Secretary, SEC, 450 Fifth Street, N.W., Washington, DC 20549. For Further Information Contact: Diane L. Titus, at (202) 942–0564, SEC, Division of Investment Management, Office of Investment Company Regulation, Mail Stop 5–6, 450 Fifth Street, N.W., Washington, DC 20549.

New England Funds Trust IV [File No. 811–8473]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. Applicant has never made a public offering of its securities and does not propose to make a public offering or engage in business of any kind.

Filing Date: The application was filed on September 28, 1998.

Applicant's Address: 399 Boylston Street, Boston, Massachusetts 02116.

Heitman Securities Trust [File No. 811–5659]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. On June 30, 1998, applicant transferred all of its assets and liabilities to Heitman Real Estate Portfolio, a newly created series of the UAM Funds Trust (the "Acquiring Fund"), in exchange for Institutional Class and Advisor Class shares of the Acquiring Fund, based on the relative net asset value per share. Heitman/PRA Securities Advisors, Inc., applicant's investment adviser, paid approximately $142,500 in expenses incurred in connection with the reorganization.

File Date: The application was filed on October 13, 1998.

Applicant's Address: 180 North LaSalle Street, Suite 3600, Chicago, Illinois 60601.

Alamo Growth Fund, Inc. [File No. 811–9162]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. By July 23, 1998, applicant had distributed all of its assets to its security holders at the net asset value per share. Expenses incurred in connection with the liquidation are not expected to exceed $1,000 and will be paid by applicant's investment adviser, Alamo Advisers, Inc.

Filing Dates: The application was filed on May 20, 1998, and amended on September 15, 1998, and October 1, 1998

Applicant's Address: 1777 N.E. Loop 410, Suite 1512, San Antonio, Texas 78217.

Capitol Square Funds [File No. 811–7699]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. As of September 30, 1997, applicant's four series, Capitol Square Bond Fund, Capitol Square Large Cap Fund, Capitol Square Small Cap Fund, and Capitol Square Balanced Fund, each liquidated their portfolio securities and other assets, and distributed the proceeds *pro rata* to their shareholders based on the net asset value per share. Expenses associated with the liquidation totaled approximately $450.00, and were paid by applicant's investment adviser, Dillon Capitol Management.

File Dates: The application was filed on July 28, 1998, and amended on October 2, 1998.

Applicant's Address: 21 East State Street, Suite 1410, Columbus, Ohio 43215.

Scudder Institutional Fund, Inc. [File No. 881–4555]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. On April 3, 1998, applicant transferred its assets and liabilities to Scudder International Fund (the "International Fund"), a series of Scudder International Fund, Inc., based on the relative net asset values per share. Scudder Kemper Investments, Inc., investment adviser to both applicant and the International Fund, paid approximately $75,497 in expenses incurred in connection with the reorganization. In addition, applicant has incurred approximately $3,464 in liquidation expenses, and applicant's total liquidation expenses are not expected to exceed $4,500.

Filing Date: The application was filed on September 11, 1998.

Applicant's Address: 345 Park Avenue, New York, New York 10154.

Peachtree Funds [File No. 811–7107]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. On September 30, 1998, four portfolios of Peachtree Funds transferred all of their assets and liabilities to corresponding portfolios of Nations Funds Trusts. The remaining portfolio of Peachtree Funds, Peachtree Prime Money Market Fund, transferred all of its assets and liabilities to a corresponding portfolio of Nations Prime Fund, Inc. The reorganization incurred approximately $695,000 in expenses that were paid for by the acquiring funds' investment adviser, NationsBank, and their sponsor, distributor, and administrator.

Filing Dates: The application was filed on May 13, 1997, and amended on July 15, 1998.

Applicant's Address: Federated Investors Tower, Pittsburgh, Pennsylvania 15222–3779.

The Columbus Fund, Inc. [File No. 811–8418]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. Applicant has never made a public offering of its securities and does not propose to make a public offering or engage in business of any kind.

Filing Date: The application was filed on October 14, 1998.

Applicant's Address: c/o Dechert Price & Rhoads, 1775 Eye Street, N.W., Washington, D.C. 20006–2401.

Dodge & Cox Stock Fund [File No. 811–1294]; Dodge & Cox Income Fund [File No. 811–5580]

Summary: Each applicant seeks an order declaring that it has ceased to be an investment company. On April 30, 1998, each applicant transferred all of its assets and liabilities to a corresponding series of the Dodge & Cox Funds based on the net asset value per share. Applicants paid $158,581, and $38,008, respectively, in expenses related to the reorganizations.

Filing Dates: Each application was filed on August 12, 1998, and amended on October 22, 1998.

Applicants' Address: One Sansome Street, San Francisco, California 94104.

Oppenheimer Strategic Investment Grade Bond Fund [File No. 811–6458]; Oppenheimer Strategic Short-Term Income Fund [File No. 811–6533]

Summary: Each applicant seeks an order declaring that it has ceased to be an investment company. On September 21, 1995, Oppenheimer Strategic Investment Grade Bond Fund transferred all of its assets to Oppenheimer Bond Fund ("Bond Fund") at net asset value. Applicant and Bond Fund paid $26,882 and $20,057,

respectively, in expenses related to the reorganization. On September 21, 1995, Oppenheimer Strategic Short-Term Income Fund transferred all of its assets to Oppenheimer Limited-Term Government Fund ("Limited-Term Government Fund") at net asset value. Applicant and Limited-Term Government Fund paid $26,432 and $20,057, respectively, in expenses related to the reorganization.

Filing Dates: Each application was filed on September 28, 1998, and the application for Oppenheimer Strategic Short-Term Income Fund was amended on October 27, 1998.

Applicants' Address: 6803 S. Tucson Way, Englewood, Colorado 80112.

Composite Equity Series, Inc. [File No. 811–565]; Composite Income Fund, Inc. [File No. 811–2604]; Composite Tax-Exempt Bond Fund, Inc. [File No. 811–2681]; Composite Cash Management Company [File No. 811–2941]; Composite U.S. Government Securities, Inc. [File No. 811–3426]; Composite Northwest Fund, Inc. [File No. 811–4740]

Summary: Each applicant seeks an order declaring that it has ceased to be an investment company. On March 20, 1998, each applicant transferred all of its assets and liabilities to corresponding series of WM Trust I (formerly known as The Composite Funds) based on the relative net asset values per share. The aggregate amount of expenses incurred in connection with the reorganization was approximately $625,000 and was paid by WM Advisors, Inc., applicants' investment adviser, and/or its affiliates but not the applicants.

Filing Dates: Each application was filed on October 13, 1998. Each applicant has agreed to file an amendment during the notice period.

Applicants' Address: 601 West Main Avenue, Suite 300, Spokane, Washington 99201–0613.

Minerva Fund, Inc. [File No. 811–7828]

Summary: Applicant seeks an order declaring that it has ceased to be an investment company. On December 26, 1997, applicant made a liquidating distribution to its shareholders at the net asset value per share. Expenses incurred in connection with the liquidation totaled approximately $30,000, and were paid by LTCB–MAS Investment Management, Inc., applicant's investment adviser.

Filing Dates: The application was filed on August 21, 1998, and amended on October 26, 1998.

Applicant's Address: 3435 Stelzer Road, Columbus, Ohio 43219.

First Global Equity Portfolio [File No. 811–9072]; AIG All Ages Funds, Inc. [File No. 811–9022]

Summary: Each applicant seeks an order declaring that it has ceased to be an investment company. First Global Equity Portfolio ("Global Equity") is a master fund in a master-feeder structure. Global Equity has two feeder funds, the AIG Children's World Fund—2005 and the AIG Retiree Fund—2003 (collectively, the "AIG Funds"), each a series of AIG All Ages Funds, Inc. On January 21, 1998, the AIG Funds redeemed their respective shares of Global Equity at net asset value. On February 6, 1998, AIG Asset Management Services, Inc. ("AIG") redeemed its seed capital shares of Global Equity. AIG paid approximately $9,658 in expenses in connection with the liquidation of Global Equity. On January 26, 1998, the AIG Funds made a *pro rata* distribution to their shareholders of their net assets. AIG Capital Management Corp., the investment adviser to the AIG Funds, paid approximately $89,857 in expenses in connection with the liquidation of the AIG Funds.

Filing Dates: Each application was field on August 4, 1998. Each applicant has agreed to file an amendment during the notice period.

Applicants' Addresses: Global Equity, 80 Harcourt Street, Dublin, Ireland, and AIG Funds, 505 Carr Road, Wilmington, Delaware 19809.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40616; File No. SR–Amex–98–30]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the American Stock Exchange, Inc. Relating to Options of Advertisements

October 28, 1998.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 16, 1998,[3] the American Stock Exchange, Inc. ("Amex" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), the proposed rule change as described in Items I, II, and III below, which items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Amex proposes to adopt an interpretation to Rule 991 relating to options communications with customers. The text of the proposed rule change is available at the Office of the Secretary, Amex, and at the Commission.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, Amex included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. Amex has prepared summaries, set forth in sections A, B, and C below, on the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Amex Rule 991 details Exchange requirements with respect to options-related communications with customers. Commentary .02 and Commentary .03 to Rule 991, as well as the Guidelines for Options Communications (published by the self-regulatory organizations) provide in part that advertisements and educational material should contain the name and address of a specific person from whom an Options Disclosure Document ("ODD") may be obtained. Common practice within the securities industry is for such communications to be published as part of a national or regional marketing program. In that regard, the Exchange believes that it is both unnecessary and impractical for a member organization to list *one* person as the recipient for all requests concerning ODDs. It is important for investors to be able to readily obtain an ODD. The Exchange interprets Rule 991 to provide member organizations sufficient latitude to set forth other reasonably specific mechanisms by which clients and other investors may obtain the ODD. A firm may, for example, provide one or more telephone numbers or addresses from which an ODD may be obtained. Alternatively, in a communication addressed only to account holders the organization may direct them to contact their registered representative.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act[4] in general and furthers the objectives of Section 6(b)(5)[5] in particular in that it is designed to promote just and equitable principles of trade, remove impediments to a free and open market and a national market system, and protect investors and the public interest.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the proposed rule change will impose no burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The proposed rule change constitutes a stated policy, practice, or interpretation with respect to the meaning, administration, or enforcement of an existing rule of the Exchange and, therefore, has become effective upon filing pursuant to Section 19(b)(3)(A)(i) of the Act[6] and Rule 19b–4(e)(1)[7] thereunder. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.[8] Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of Amex. All submissions should refer to the File No. SR–Amex–98–30 and should be submitted by November 27, 1998.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.[9]

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40613; File No. SR–Amex–98–20]

Self-Regulatory Organizations; American Stock Exchange, Inc.; Order Granting Permanent Approval of the Exchange's Pilot Program for Specialists in Portfolio Depositary Receipts, Investment Trust Securities, and Index Fund Shares To Participate in the After-Hours Trading Facility

October 28, 1998.

I. Introduction

On June 9, 1998, the American Stock Exchange, Inc. ("Amex" or "the Exchange"), filed with the Securities and Exchange Commission ("SEC" or "the Commission") a proposed rule change pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4[2] thereunder seeking permanent approval of the pilot program permitting specialists in Portfolio Depositary Receipts[3] ("PDRs"), investment trust securities, and Index Fund Shares to participate in the after-hours trading ("AHT") facility to "clean-up" order imbalances and to effect closing price coupled orders.[4] The proposed rule change was published for comment in the **Federal Register** on July 23, 1998.[5] No comments were received on the Amex's proposal.

II. Description of the Proposal

The Commission originally approved the pilot program on August 29, 1994 ("Original Pilot Approval").[6] The pilot was scheduled to expire on August 29, 1995, but was extended for three successive one-year periods, and a thirty-day period.[7] With this proposed rule change, the Amex seeks permanent approval of the pilot program, which otherwise will expire on October 31, 1998.

In the Original Pilot Approval and in each one-year extension, the Commission requested that the

---

[1] The proposed rule change was originally submitted on August 5, 1998. On October 16, 1998, the Exchange submitted Amendment No. 1 to add a footnote to Commentary .02 and Commentary .03(v) to Rule 991 stating the requirement of providing in options advertisements the name and address of a person or persons from whom current Options Disclosure Documents may be obtained "may be satisfied by providing a reasonably specific mechanism by which clients and other investors may obtain this material." Letter from Claudia Crowley, Special Counsel, Amex to Katherine A. England, Assistant Director, Division of Market Regulation, Commission, dated October 15, 1998 ("Amendment No. 1").

[3] The Exchange currently lists three Portfolio Depositary Receipts, viz., Depositary Receipts on the Standard and Poor's 500® and MidCap® Indexes, and Depositary Receipts on the Dow Jones Industriel Average™. The Exchange also lists 17 Index Fund Shares which are commonly referred to as WEBS℠. WEBS are shares issued by an open-end management investment company that seek to provide investment results that correspond generally to the price and yield performance of a specified foreign or domestic equity market index. The Exchange currently lists WEBS based on the following Morgan Stanley Capital International ("MSCI") indices: MSCI Australia Index, MSCI Austria Index, MSCI Belgium Index, MSCI Canada Index, MSCI France Index, MSCI Germany Index, MSCI Hong Kong Index, MSCI Italy Index, MSCI Japan Index, MSCI Malaysia Index, MSCI Mexico Index, MSCI Netherlands Index, MSCI Singapore (Free) Index, MSCI Spain Index, MSCI Sweden Index, MSCI Switzerland Index, and MSCI United Kingdom Index. The Commission notes that due to certain restrictions imposed by the Malaysian government WEBS based on the MSCI Malaysia Index currently trade differently than the other WEBS trading on Amex.

[4] Pursuant to the pilot program, the specialist in PDRs, investment trust securities, and Index Fund Shares may participate in a coupled price closing order so long as the other side of the order is not for an account in which a member or member organization has a direct or indirect interest.

[5] Securities Exchange Act Release No. 40201 (July 15, 1998), 63 FR 39608.

[6] *See* Securities Exchange Act Release No. 34611 (Aug. 29, 1994), 59 FR 45739 (Sept. 2, 1994).

[7] *See* Securities Exchange Act Release Nos. 36123 (Aug. 18, 1995), 60 FR 44519 (Aug. 28, 1995); 37529 (Aug. 6, 1996), 61 FR 41814 (Aug. 12, 1996); 38986 (Aug. 27, 1997), 62 FR 46785 (Sept. 4, 1997); and 40533 (October 8, 1998), 63 FR 55660 (October 16, 1998).

Exchange submit a report and analysis regarding the operation of the pilot program. The Exchange did not submit a report until 1997, however, as specialists made little or no use of the pilot program until the period September 3, 1996 to May 30, 1997. The 1997 report stated that during that period, there were two trades for a total of 600 shares of PDRs in the AHT session for PDRs, investment trust securities, and Index Fund Shares.[8] The 1998 report stated that during the period June 1, 1997 to April 30, 1998, there were 12 trades for a total of 56,320 shares of PDRs in the AHT session.[9] No single-sided orders remained unexecuted at the end of the AHT session during the review period and there were no problems with any of these trades.[10]

The Exchange believes that permanent approval of the Exchange's pilot program to permit specialists in PDRs, investment trust securities, and Index Fund Shares to participate in the AHT facility in order to "clean-up" order imbalances and effect closing price coupled orders will benefit investors by providing additional liquidity to the listed cash market for derivative securities based upon market indexes. The market price of these exchange-traded funds is based upon transactions largely effected in markets other than the Amex. (In the case of Index Fund Shares, the market price of these securities is based exclusively on transactions occurring outside the Amex.) The Exchange represents that the specialist in the Amex-listed securities has no unique access to market sensitive information regarding the market for the underlying securities or closing index values. Further, to prevent the potential for manipulation or misuse, the pilot program eliminates the migration of limit orders for PDRs, investment trust securities, and Index Fund Shares from the specialists limit order book to the AHT facility. The Exchange, therefore, believes that permanent approval of specialist participation in the AHT facility in PDRs, investment trust securities and Index Fund Shares in the manner previously approved by the Commission on a pilot basis does not raise any market integrity issues. In addition, should a customer not care for an execution at the closing price, the rules of the Exchange's AHT facility permit cancellation of an order up to the close of the AHT session at 5:00 p.m. (Orders in the AHT facility are not executed until the 5:00 p.m. close of the AHT session.) Amex represents, therefore, that a customer has approximately 40 minutes to determine if an execution at the closing price suits his needs and may cancel the order if he believes that the closing price does not suit his objectives.

[10] *Id.*

III. Discussion

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, Sections 6(b)(5) and 11 of the Act.[11] The Commission believes that the rule change is consistent with the Section 6(b)(5) requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market, and in general, protect investors and the public interest.[12] The Commission also believes that the proposal is consistent with Section 11(b) of the Act and Rule 11b–1 thereunder,[13] which allow exchanges to promulgate rules relating to specialists in order to maintain fair and orderly markets.

Under the pilot program, specialists in PDRs, investment trust securities and Index Fund Shares may participate in the AHT facility to clean up order imbalances by entering an order for their own account. The pilot program also allows specialists in PDRs, investment trust securities and Index Fund Shares to participate in a coupled closing price order as long as the other side of the order is not for an account in which a member or member organization has a direct or indirect interest. Moreover, the pilot program eliminates the migration of limit orders for PDRs, investment trust securities, and Index Fund Shares from the specialists limit order book to the AHT facility to prevent the potential for manipulation or misuse of specialists' information regarding which limit orders are eligible for execution in the AHT facility.

[11] 15 U.S.C. 78f(b)(5) and 78k.

[12] In approving this rule, the Commission notes that it has considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

[13] 17 CFR 240.11b–1.

The Commission continues to believe, as it did when the pilot program was initially approved, that permitting specialists in PDRs, investment trust securities, and Index Fund Shares [14] to participate in the AHT facility by entering an order for the specialist's account to eliminate order imbalances should assist specialists in their obligation to minimize temporary disparity between supply and demand.[15] Moreover, the Commission agrees with the Amex that permitting specialists in PDRs, investment trust securities, and Index Fund Shares to participate in the AHT facility to effect closing price coupled orders should benefit investors by providing additional liquidity to the listed cash market for derivative securities based upon market indexes.

The Commission also continues to believe that the Amex's rule change strikes a reasonable balance between the Exchange's need to accommodate the needs of investors by increasing the liquidity in the listed cash market for derivative securities based on market indexes and the need to prevent the potential for manipulation or misuses of information. With regard to the latter concern, although Amex specialists will be aware of limit orders remaining on the specialist's limit order book, they generally will not be able to use this information to their advantage because, under the terms of the pilot program, as permanently approved, Amex Rule 1302(b) has been amended to eliminate the migration of limit orders for PDRs, investment trust securities, and Index Fund Shares from the specialist's limit order book to the AHT facility.[16] Further, the Commission notes that all orders entered by the specialist in the AHT facility receive the closing price in the Amex market on that same trading day, rather than a negotiated price. This should reduce the likelihood that any additional information the specialist has as a result of making a market in the speciality security could be misused in the AHT facility.

In addition, while the trading activity for PDRs, investment trust securities, and Index Fund Shares in the AHT facility has been modest, the Exchange has reported no problems with any of these trades. Moreover, as evidenced by the reports filed by the Exchange, the pilot program has been used increasingly over the past two years.

Finally, the Commission expects the Amex, through use of its surveillance procedures, to monitor closely the trading of PDRs, investment trust securities, and Index Fund Shares in the AHT facility to ensure that trading in these issues is not subject to any patterns of manipulation, trading abuses or unusual trading activity.

[14] The Commission notes that when the original pilot program was approved, it applied only to PDRs and investment trust securities. The pilot program was modified to include Index Fund Shares with the extension of the pilot program in August 1996. *See* Securities Exchange Act Release No. 37529 (August 6, 1996), 61 FR 41814 (August 12, 1996).

[15] *See* Original Pilot Approval, *supra* note 6.

[16] The Commission notes that the permanent approval of the pilot program includes permanent approval of the changes to Rule 1302(b) restricting the migration of limit orders.

IV. Conclusion

For the reasons discussed above, the Commission believes that permanent approval of specialist participation in the AHT facility in PDRs, investment trust securities and Index Fund Shares in the manner previously approved by the Commission is appropriate and consistent with the Act.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[17] that the proposed rule change (SR–Amex–98–20) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[18]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40622; File Nos. SR–Amex–98–32; SR–NASD 98–56; SR–NASD 98–67]

Self-Regulatory Organizations; American Stock Exchange, Inc., and National Association of Securities Dealers, Inc.; Order Granting Approval to Proposed Rule Changes and Notice of Filing and Order Granting Accelerated Approval to Amendment No. 2 Thereto; Relating to the Combination of the American Stock Exchange, Inc. and the National Association of Securities Dealers, Inc., Including Amendments to the Composition of the NASD Board and Relating to Policies Regarding Authority Over American Stock Exchange LLC and Composition of Board of Governors of American Stock Exchange LLC

October 30, 1998.

I. Introduction

Three separate filings have been submitted to the Securities and Exchange Commission ("SEC" or "Commission") in connection with the proposed combination between the National Association of Securities Dealers, Inc. ("NASD" or "Association") and the American Stock Exchange, Inc. ("Amex").

On August 10, 1998, the NASD submitted to the Commission, pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act" or "Exchange Act") [1] and Rule 19b–4 thereunder,[2] a proposed rule change (SR–NASD–98–56) to amend the NASD's By-Laws to reserve one NASD Board of Governors ("NASD Board") position for a person representing an NASD member firm having not more than 150 registered persons; to reserve two Board positions for the Chief Executive Officer and one Floor Governor of the American Stock Exchange LLC ("New Amex"); and to make other clarifying amendments, including the addition of certain definitions. The NASD also proposed to add corresponding clarifying amendments and definitions to the By-Laws of NASD Regulation, Inc. ("NASD Regulation") and The Nasdaq Stock Market, Inc. ("Nasdaq").

On September 3, 1998, Amex submitted to the Commission, pursuant to Section 19(b)(1) of the Exchange Act [3] and Rule 19b–4 thereunder,[4] a proposed rule change (SR–Amex–98–32) to make certain amendments to its Constitution and Rules that will become effective at the time they become the Constitution and Rules of New Amex. An amendment to SR–Amex–98–32 was filed with the Commission on October 29, 1998.[5]

On September 14, 1998, the NASD submitted to the Commission, pursuant to Section 19(b)(1) of the Exchange Act [6] and Rule 19b–4 thereunder,[7] a proposed rule change (SR–NASD–98–67) to state two policies regarding NASD's oversight of New Amex and the composition of the Board of Governors of New Amex.

Notice of the proposed rule changes, together with the substance of the proposals, was published for comment in Exchange Act Release Nos. 40339 (August 19, 1998), 63 FR 45547 (August 26, 1998) (SR–NASD–98–56); 40426 (September 10, 1998), 63 FR 49766 (September 17, 1998) (SR–Amex–98–32); and 40443 (September 16, 1998), 63 FR 51108 (September 24, 1998) (SR–NASD–98–67). One comment was received on the proposals.[8] The NASD responded to the comment letter, the substance of which is discussed in Item III below.[9]

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(1).

[5] *See* Letter to Michael Wallinskas, Deputy Associate Director, Division of Market Regulation, Commission, from James F. Duffy, Executive Vice President, Legal and Regulatory Policy, Amex, and Richard G. Ketchum, President and Chief Executive Officer, NASD, dated October 29, 1998 ("Amendment No. 2").

[6] 15 U.S.C. 78s(b)(1).

[7] 17 CFR 240.19b–4.

[8] *See* letter from Bill T. Singer, Singer Frumento L.L.P., to Secretary, Commission, dated September 11, 1998 (incorporating a report from Bill T. Singer to Alan Davidson, President, Independent Broker-Dealer Association, Inc., dated September 10, 1998) ("Singer Letter"). The comment letter was written in opposition of the proposed combination of the NASD and Amex. Although the comment letter responded specifically to SR–NASD–98–56, it addressed several general issues in connection with the proposed combination. As such, the Commission has determined to treat the comment letter as if it were a comment on each of the three submitted proposals.

[9] *See* letter from T. Grant Callery, Senior Vice President and General Counsel, NASD, to Katherine A. England, Assistant Director, Market Regulation, Commission, dated October 23, 1998 ("NASD Response").

II. Description

A. Background

On March 18, 1998, Amex and the NASD announced that their respective Boards of Governors had each agreed to enter into a merger agreement that, subject to finalization of a definitive agreement and approval by Amex Members, would result in Amex becoming a subsidiary of the NASD. On April 8, 1998, the Amex and NASD Boards each unanimously approved the terms of a definitive agreement (the "Transaction Agreement"), which was signed by the NASD and Amex as of May 8, 1998. At a Special Meeting of Members on June 25, 1998, the Amex Membership ratified the Transaction Agreement by a vote of 622 to 206.[10] NASD members were not required to vote on the merger.

[10] Two-thirds approval from the Amex Membership was required in order for the transaction to pass. The Membership approved the transaction by roughly 75 percent. In connection with Amex member approval of the agreement, Amex sent to all 864 Amex Regular Members and Options Principal Members (referred to collectively as "Members") an Information Memorandum, dated May 14, 1998, describing the transaction in detail. Attached as exhibits to the Information Memorandum were the Restated Certificate of Incorporation and the new By-Laws of Amex Corp. (as hereinafter defined), and the Constitution of New Amex. Members also were provided with documents relating to the transaction ("Transaction Documents"). These included, among other items, the Transaction Agreement and exhibits thereto, including the Limited Liability Company Agreement of New Amex ("LLC Agreement") and the Technology Transfer and Development Agreement. Copies of the Transaction Agreement, the LLC Agreement, and the Technology Transfer and Development Agreement are available at the Commission's Public Reference Room under File No. SR–Amex–98–32.

The merger has been represented as an alliance that will combine the resources of the NASD, including its technology and expertise, with Amex's auction market. It has further been represented that this combination has been designed to provide: Amex Member organizations with more efficient, less costly equity trade executions; issuers with additional listing choices; and investors with more transparent, less costly trading. The proposed technology upgrades to Amex center around a proposed "New Equity Market Structure" that, among other things, will introduce a new electronic limit order book and provide automatic execution for electronically delivered orders.[11] Although this program may be funded through New Amex revenues, NASD has committed up to $110 million, including through capital contributions, loans, or guarantees of loans, to complete the New Equity Market Structure and certain other trading facility and technology upgrades.[12]

B. Reorganization of Amex

The Transaction Agreement provides that, at the Closing, Amex will transfer its exchange registration and its assets to New Amex. New Amex will assume all existing liabilities, known and unknown, of Amex. New Amex will be a national securities exchange registered under Section 6 of the Exchange Act operating a floor-based, specialist auction market with its own members and listed securities.[13] New Amex will be structured as a Delaware Limited Liability Company ("LLC"), and will be jointly owned by The Amex Corporation ("Amex Corp.") (the name that Amex will use following the Closing), and the NASD (through a holding company, the NASD Market Holding Company ("Holdco")) pursuant to the LLC Agreement between the parties.[14] Under the LLC Agreement, Amex Corp. will be the holder of the Class A Interest and Holdco will be the holder of the Class B Interest in New Amex. Only Holdco will have a voting interest in New Amex. The NASD cannot amend the LLC Agreement without the consent of the Board of Amex Corp. or the Members of Amex Corp. (depending upon the type of change, as governed by the Transaction Documents).[15]

After the Closing, Amex will continue to exist as a New York not-for-profit corporation, under the name Amex Corp. Amex Corp.'s activities will be limited to holding an ownership interest in New Amex and exercising the rights incident to ownership arising under the Transaction Documents. Specifically, the Restated Certificate of Incorporation for Amex Corp. states that, except for those activities specifically mentioned in the Restated Certificate, Amex Corp. may not engage in any other business activities. Nor may it incur directly or indirectly any debt for borrowed money, or incur, without prior written consent from the Amex Corp. Chairman, any liability or make any expenditure unless the liability or expenditure is reasonable in amount and reasonably related to the corporate purpose of Amex Corp.[16] Except for the voting rights in connection with the request for consents from New Amex, described below, Amex Corp. will hold an otherwise nonvoting interest in New Amex. Amex Corp. will have its own Board, which will consist of the same four Floor Governors as those serving on the New Amex Board.

C. New Amex Corporation Governance

1. New Amex Board

The principal management authority of New Amex rests in the New Amex Board, which will be composed of 18 governors—including four floor governors (one of whom must be an equity specialist and at least one of whom must be a Registered Options Trader ("ROT"),[17] two Upstairs Industry Governors (*i.e.*, members affiliated with broker-dealers that have substantial contact with public customers); eight Public Governors;[18] the two most senior officers of New Amex; and two staff representatives from the NASD staff.[19] The eight Public Governors and two Upstairs Industry Governors will be nominated and elected by the NASD. The four Floor Governors will be nominated by Amex Corp. and elected by the NASD.[20] The NASD may reject a Floor Governor nominee only if (i) the nominee is subject to a statutory disqualification, (ii) the nominee is subject to a proceeding or investigation which could result in a statutory disqualification, or (iii) the nominee has been disciplined by a securities SRO with respect to a matter involving fraud or a serious violation of U.S. securities laws. In the event the NASD rejects a Floor Governor nominee, the Amex Corp. has the right to select a substitute nominee.

New Amex Governors will serve a two year term in office. The four Floor Governors will be divided into two classes of two each: the first class will include an equity specialist and the second class will include an ROT. The other elected governors also will be divided into two classes, each consisting of one Upstairs Industry Governor and four Public Governors. The term of the first class will expire in 1999 and the term of the second class will expire in 2000. Elected governors will be eligible to serve no more than three consecutive two year terms, except that governors in the class of 1999 and any elected governor appointed to serve for one year or less by reason of a vacancy may be elected to serve three subsequent consecutive two year terms. The term "elected governors" does not include governors who are New Amex officers or representatives of the NASD staff, who are appointed by New Amex or the NASD, respectively.

Floor Governor nominees will be proposed either by the Amex Nominating Committee or by petition signed by at least 25 Members and will be selected by a plurality of the Regular and Options Principal Members of Amex Corp. voting together as a single class. The Amex Nominating Committee will consist of five persons: three Floor Members and two persons having no affiliation with a registered broker or dealer ("Public Members"). Each of the three principal business activities on the floor, registered specialists, registered options traders, and floor brokers, will be represented on the Amex Nominating Committee. While the existence and behavior of the Amex Nominating Committee is described in the New Amex Constitution, the Amex Nominating Committee is a committee of Amex Corp., under the By-Laws of Amex Corp. The Amex Nominating Committee will be divided into two classes: the first (terminating in 1999) will consist of a Public Member and specialist, and the second (terminating in 2000) will consist of a Public Member, a floor broker and an ROT. Persons on the Amex Nominating Committee may not serve consecutive terms. No one affiliated with a member of the Amex Nominating Committee will be eligible as a candidate for a ticket named by it. In addition to proposing Floor Governor nominees, the Amex Nominating Committee also will propose nominees for Trustees of the Gratuity Fund, the Amex Nominating Committee, and Amex Adjudicatory Council. Candidates for these petitions can also be nominated through the independent petition process described above. Members of the Trustees of the Gratuity Fund, Amex Nominating Committee and the Amex Adjudicatory Council will be elected at the annual meeting by a plurality of Members voting together as a single class.

The filling of vacancies on the New Amex Board requires recommendation by Amex Corp. in the case of Floor Governors, and from the NASD for all other Governors. The recommendation from Amex Corp. will be made by the Amex Nominating Committee, while the NASD recommendation will be made by the NASD Nominating Committee. As with current Amex procedures, persons appointed to fill such vacancies will serve until the next annual election.

2. Role of the Amex Committee and Amex Corp.

Although most of the voting power in New Amex concerning the operation of New Amex will be vested in the NASD, the Transaction Agreement provides that certain actions affecting Amex Corp. Members will require their consent. Consent by Amex Corp. Members will occur through several means depending on particular circumstances, as provided for in the Transaction Agreement. The "Amex Committee" has been established under the Transaction Agreement to provide required consent under some circumstances. The Amex Committee will be required to represent and exercise its powers in the best interest of Amex Corp. and its Members, but will exist outside of both New Amex and Amex Corp.[21] The Amex Committee has seven members composed of (1) three non-industry[22] Members, one of whom will serve as chairman; (2) one person who is not active on the floor of New Amex but who is associated with a member organization of New Amex; and (3) three Floor Members who are active on the floor of New Amex, one whose principal business is as a specialist on the Equity Market or Options Market, one whose principal business is as a registered options trader and one whose principal business is as a floor broker.[23]

The Transaction Agreement provides that, during certain periods, New Amex will not be able to act on certain matters without the consent of the Amex Committee, Amex Corp.,[24] or both. Specifically, during the period from the Closing to the fifth anniversary of the Facility Commitment Date

[11] The New Equity Market Structure, which will be subject to future SEC review and approval, intends to retain Amex's centralized, floor-based specialist auction market, but would enhance the ability to access this market either electronically or thorough floor brokers. It plans to provide for automatic execution of electronically delivered orders, and would use a newly developed electronic order book that would display the aggregate size and price of orders on the book away from the best bid and offer. Specialists would be precluded from charging floor brokerage fees on electronically delivered orders. In order to offset the expected loss of floor brokerage revenue, New Amex would share its transaction-based revenue with the specialists. In addition, specialists may be allowed to hand discretionary orders as agent, and their specialist affirmative obligations may be liberalized. New Amex likely will file a rule filing reflecting these proposed changes following the closing of the transaction ("Closing").

[12] *See* Technology Transfer and Development Agreement.

[13] Upon succeeding to the exchange registration of Amex, New Amex promptly will file necessary amendments to New Amex's registration as a national securities exchange on Form 1–A, pursuant to Rule 6a–1 under the Act. Current Amex rules will become the rules of New Amex on the date of the Closing, amended only as described herein. Any amendments to such rules proposed after the Closing will be filed by New Amex pursuant to Rule 19b–4. New Amex will also succeed to any proposed rule change filed with the Commission by Amex before the Closing but not approved by the Commission by that time, and if ultimately approved such proposal would change the rules of New Amex.

[14] For tax consolidation purposes, the NASD will own its interest in New Amex and Nasdaq through Holdco, a wholly-owned subsidiary of the NASD.

[15] The New Amex Constitution provides that the Constitution may be amended by a majority vote of the New Amex Board of Governors and the holder of the Class B Interest, Holdco, without any further procedures at the SRO level except where the change would require the consent of Amex Corp. or the Amex Committee. Thus, the NASD, via its wholly-owned subsidiary Holdco, must approve, and has the power to veto, any proposed amendments to the New Amex Constitution.

[16] Amendments to the Restated Certificate of Incorporation of Amex Corp., which dictates the purposes and powers of Amex Corp., may not be made without the approval of the NASD.

[17] The Transaction Agreement provides that on the tenth anniversary of the closing date, one additional Floor Governor will be added to the New Amex Board. The fifth Floor Governor is intended to provide Members with additional representation on the Board upon the expiration of certain contractual provisions in the Transaction Agreement.

[18] "Public Governor" is defined in Article II, Section .01(a)(2) of the New Amex Constitution as someone who is neither a broker or dealer in securities nor affiliated with one. The Commission notes that the NASD definition of "Public Governor" restricts persons who have material business relationships with a broker or dealer from serving as Public Governors, whereas the New Amex definition of "Public Governor" does not contain this restriction.

The NASD and Amex have represented to the Commission that they will implement certain undertakings with respect to the operation of New Amex following the Closing of the Transaction Agreement, and that these undertakings will constitute SRO rules under the Exchange Act. The NASD and Amex have indicated that there is a likelihood of overlap of Public Governors between the NASD Board and the New Amex Board. The NASD and Amex have agreed through the undertakings, and have represented to the Commission, that not more than three of the nine non-industry governors on the New Amex Board may simultaneously serve as governors on the NASD Board. In this instance only, the term "non-industry" is used to refer to the eight Public Governors on the New Amex Board, as well as to the NASD staff representative who is required to meet the definition of "Non-Industry" as defined in the NASD By-Laws. *See* Amendment No. 2. With respect to those serving on both the New Amex and NASD Boards, the NASD and Amex also have agreed through the undertakings, and have represented to the Commission, that New Amex will implement conflict of interest policies and procedures, consistent with those now in place at the NASD, to address the potential unique issues facing those persons that overlap between Boards. *See* Amendment No. 2.

[19] The Commission notes that the NASD will appoint as one of these representatives a person who is not an employee of and has no material business relationship with a broker or dealer or with the NASD, NASD Regulation, Nasdaq or New Amex, but who may be an officer or employee of an issuer of securities listed on Nasdaq or New Amex or traded in the over-the-counter market. *See* File SR–NASD–98–56, described more fully in Section II.C.3. below.

[20] The NASD, acting through its Board or a Board representative, will cast the vote of the holder of the Class B Interest for all elected governors, including the four Floor Governors.

[21] The initial Amex Committee Floor Members will be nominated by current Amex floor governors on the Amex Board and agreed to by Amex and the NASD prior to the Closing. The remaining initial members of the Amex Committee will be selected by the NASD and agreed to by the NASD and Amex prior to the Closing. The existence of the Amex Committee will begin on the Closing Date. Five of the seven members of the Amex Committee will constitute a quorum for the transaction of business, and the Committee will act by majority vote.

[22] The term "non-industry" is used in the Transaction Agreement. It is intended to mean someone who is neither a broker or dealer in securities nor affiliated with one. Telephone call between James Duffy, Amex, and Michael Ryan, NASD, and Christine Richardson, Commission, on October 29, 1998.

[23] Amex Committee members will be divided into three classes with staggered three-year terms. No Amex Committee member may serve more than two consecutive three-year terms. Vacancies on the Amex Committee will be filled by a person of the same category as the vacating member. Replacements for Floor Members will be chosen by the Floor Governors on New Amex's Board. Replacement members for other Amex Committee members, including the chairman, will be chosen by a majority of the remaining members of the Amex Committee or, in some circumstances, by action of New Amex's Board (including the approval of at least two Floor Governors of New Amex). All replacements will be subject to the approval of the NASD's Chairman, including Floor Member representatives.

The NASD and Amex have agreed through the undertakings, and have represented to the Commission, that neither the member of the Amex Committee described in Section 9.9(a)(i) of the Transaction Agreement nor any of the non-industry members of the Amex Committee (those described in Section 9.9(a)(v) of the Transaction Agreement) will simultaneously serve on the Board of Governors of either the NASD or New Amex. See Amendment No. 2.

The NASD and Amex also have agreed through the undertakings, and have represented to the Commission, that for the purpose of confirming the SEC's jurisdiction over members of the Amex Committee, such persons will be deemed "directors" as that term is used in Section 3(a)(7), and will be deemed directors of an SRO under Section 19(h)(4), of the Exchange Act.

[24] Promptly after receiving a requested consent in writing from New Amex, the Secretary of Amex Corp. will call a meeting of the holders of the Memberships to vote on the requested consent. If, and only if, the required number of Memberships are voted in favor of authorizing the requested consent, the proper officers of Amex Corp. will promptly grant Amex Corp.'s consent to New Amex. Any requested consent will be granted only upon the affirmative vote of a majority of the Amex Corp. Regular Memberships and the Options Principal Memberships voted (as a single class) at a meeting duly called and convened and at which quorum is present.

(approximately six and one-half years after the Closing),[25] New Amex will not make any material market structure change [26] in the equity market without the consent of both Amex Corp. and the Amex Committee. From the fifth anniversary of the Facility Commitment Date until the tenth anniversary of the Closing, New Amex may not make any material market structure changes in the equity market without the consent of the Amex Committee and the Board of New Amex. From and after the tenth anniversary of the Closing, New Amex may not make any material structure change in the new equity market structure without the consent of the Amex Committee; however, an affirmative vote of two-thirds of the entire New Amex Board can override disapproval by the Amex Committee.[27] Similar provisions apply to material market structure changes to the options market.[28] The Amex Committee also has a role in a number of other significant matters, including the acquisition by the NASD of other options or securities exchanges, the timing of the modernization of the New Amex trading facility, and the monitoring of amounts spent on new technology by the NASD for New Amex.[29]

[25] "Facilities Commitment Date" is defined in the Technology Transfer and Development Agreement as the period "[w]ithin six months from the Pilot Program Initiation Date." The "Pilot Program Initiation Date" is defined in the Technology Transfer and Development Agreement as "[b]y the later of nine months form the Closing Date and June 30, 1999."

[26] "Material Market Structure Change" is defined in the Transaction Agreement as "any change or series of changes in the Transaction documents, [New] Amex Constitution, rules or methods of operation of [New] Amex that have the effect of changing in any material way a material element of the new Equity Market structure, as described in Exhibit D, or the Options Market, as existing at the Closing, or in the manner in which a Regular Member or an Options Principal Member is permitted to conduct business in either the new Equity Market structure or the Options Market structure, or the rights or obligations of any such Member in the new Equity Market structure or the Options Market structure. Notwithstanding the foregoing or any other provision herein or in the Exhibits hereto, a change in the market structure specification contained in Exhibit D which, notwithstanding the best efforts of [New Amex and the NASD], is required by the SEC and accepted by the New Amex as described in Section 9.15 [of the Transaction Agreement], shall not be considered a Material Market Structure Change. Any change in the matching procedure (e.g., algorithms) or in the fees provided in Exhibit D shall be deemed a Material Market Structure Change."

[27] *See* Transaction Agreement, Section 9.10.

[28] *See* Transaction Agreement, Section 9.11.

[29] New Amex also must give the Floor Members on the Amex Committee at least ten business days' prior notice before aggregate costs and fees to Floor Members and other floor participants on New Amex can be increased by more than ten percent in any calendar year. A majority of those persons may vote to submit the matter to binding arbitration. Such arbitration will last no more than 30 days and will determine whether the increases were reasonable and fair in light of all relevant factors, including the costs other major securities exchanges charge their Members, the costs historically imposed by New Amex, and changes in the expenses and overall economic performance of New Amex (other than debt service in connection with the $110 million Development Program).

The principal function of Amex Corp., as limited purpose corporation, will be to implement the voting process to obtain the consents necessary for New Amex to take action. All Amex Corp. Members will have equal voting rights and will vote on certain matters together as a single class.

Although the powers of Amex Corp. are limited, Amex Corp. Members will have certain voting and other rights. Notably, New Amex may increase the number of either Regular and Options Principal Memberships only if such action is consented to by Amex Corp. through a Membership vote. In addition, the right to trade on New Amex will continue to be embodied in Memberships which are interests in Amex Corp., although New Amex will have the authority and responsibility to approve transfers of such Memberships and changes in the "approved persons" of a member or member organization.[30] Amex Corp. Members also will have certain preferential liquidation rights, as set forth in the Transaction Agreement.

3. NASD Plan of Responsibility

In File SR–NASD–98–67, the NASD proposed two policies relating to the NASD's responsibilities concerning New Amex and the composition of the Board of Governors of New Amex.[31] Specifically, this proposed rule change sets forth certain principles to guide the NASD in fulfillment of its responsibilities as parent company of New Amex with ultimate responsibility for New Amex's compliance with its statutory responsibilities as a self-regulatory organization ("SRO"). The NASD has represented that it will exercise its powers and its managerial influence to ensure that the New Amex fulfills its self-regulatory obligations by directing New Amex to take action necessary to effectuate its purposes and functions as a national securities exchange operating pursuant to the Act, and ensuring that New Amex has and appropriately allocates such financial, technological, technical, and personnel resources as may be necessary or appropriate to meet its obligations under the Act. Furthermore, the NASD has committed to refraining from taking any action with respect to New Amex that, to the best of its knowledge, would impede, delay, obstruct, or conflict with efforts by New Amex to carry out its self-regulatory obligations under the Act and the rules and regulations thereunder. This filing also provides that the NASD will appoint as one of the two representatives of the NASD staff on the New Amex Board of Governors a person who is not an employee of and has no material business relationship with a broker or dealer or with the NASD, NASD Regulation, Nasdaq or New Amex, but who may be an officer or employee of an issuer of securities listed on Nasdaq or New Amex or traded in the over-the-counter market. The purpose of this change is to ensure compliance with the NASD Delegation Plan, which reflects the requirements of the Commission's Report Pursuant to Section 21(a) of the Act and related order and undertakings, and requires that all boards of NASD subsidiaries equal or exceed 50% non-industry representation in composition.[32]

D. NASD Corporate Governance

Although NASD Members were not required to vote to approve the merger, NASD Membership approval was required to amend the NASD By-Laws to reflect a term of the Transaction Agreement, requiring the inclusion of the Chief Executive Officer of New Amex and one Floor Governor from the New Amex Board on the NASD Board. File SR–NASD–98–56 reflects this proposed change.[33] Inclusion of these New Amex Members on the NASD Board is designed to provide for representation of New Amex, as a subsidiary of the NASD.

[30] There are no changes currently proposed to the rules and policies governing the Membership approval process.

[31] *See* Exchange Act Release No. 40443 (September 16, 1998), 63 FR 51108 (September 24, 1998) (NASD–98–67).

[32] Report and Appendix to Report Pursuant to Section 21(a) of the Exchange Act of 1934 Regarding the NASD and the Nasdaq Stock Market (August 8, 1996) and Exchange Act Release No. 37538 (August 8, 1996) (SEC Order Instituting Public Proceedings Pursuant to Section 19(h)(1) of the Securities Exchange Act of 1934, Making Findings and Imposing Remedial Sanctions, In the Matter of National Association of Securities Dealers, Inc. Administrative Proceeding File No. 3–9056), respectively. The undertakings were included in the SEC Order. *See also* Exchange Act Release No. 39326 (November 14, 1997), 62 FR 62385 (November 21, 1997) (File Nos. SR–NASD–97–71, 96–29 and 96–20).

[33] *See* Exchange Act Release No. 40339 (August 19, 1998), 63 FR 45547 (August 26, 1998) (NASD–98–56). This filing also proposed an additional position on the Board representing an NASD member firm having not more than 150 registered persons. The portion of SR–NASD–98–56 addressing the small firm Board representative was approved in Exchange Act Release No. 40615 (October 28, 1998).

The NASD Membership approved these changes to the NASD By-Laws. Voting on this proposal closed on September 14, 1998. Of the 2,658 ballots received by the NASD, 2,565 were in favor of the By-Law change, 82 opposed the change, and 11 ballots were received with no vote indicated.

E. Class C Trading Rights

The New Amex Constitution also provides for the creation of up to 25 trading rights that will allow holders to specialize in newly listed securities that they are responsible for bringing to New Amex ("Class C Trading Rights"). Class C Trading Rights will have a limited life and will expire on the earlier of three years from the date of issuance or the fifth anniversary of the Closing. These permits are intended to attract firms that are not currently involved in specialist activity on New Amex to bring substantial new listings to New Amex. Accordingly, holders of Class C Trading Rights only will be eligible to be allocated securities that they bring to New Amex, and they may not operate a joint book with a Regular Member.[34] The New Amex Board will determine when and to whom to issue Class C Trading Rights, and the fees, dues and other charges applicable to such rights. Class C Trading Rights will not be transferable except by reason of a business combination, reorganization or other transfer of all or substantially all of the assets from one member organization to another. Class C Trading Rights may be issued to qualified individuals or organizations who are instrumental in obtaining new listings of securities admitted to dealings on New Amex that are judged by New Amex to constitute demonstrable product. New Amex will exercise its judgment in this matter based on both the quantity and quality of listings brought to New Amex.

F. Discipline

The New Amex Constitution creates the Amex Adjudicatory Council ("AAC") to review appeals of right from Disciplinary Panel decisions (removing the current Board and Executive Committee review).[35] Modeled on NASD Regulation's National Adjudicatory Council, the AAC will consist of six persons, three of whom will be New Amex Floor Governors and three of whom will be New Amex Public Governors.[36] AAC members will be nominated by the Amex Nominating Committee or by independent petition signed by at least 25 Members and will be elected by the Regular and Options Principal Members of Amex Corp. voting together as a single class. AAC members will be divided into two classes. The first class (terminating in 1999) will consist of two Floor Governors and one Public Governor. The second class (terminating in 2000) will consist of one Floor Governor and two Public Governors. Apart from the members of the first class whose terms will expire in 1999, AAC members will be elected to two year terms. Beginning with the class elected in 2000, no AAC member may serve more than two consecutive terms unless the member initially is appointed to fill a term of less than one year, in which case the member may serve up to two consecutive terms following the expiration of the initial term.

Respondents in contested disciplinary proceedings can take an appeal of right to the AAC, and any member of the AAC may require the review of a Disciplinary Panel decision by the full AAC.[37] A quorum of the AAC will be four persons. In the event of a tie vote, the decision that is the subject of the review will be upheld. Proposed written decisions of the AAC in contested proceedings are provided to all members of the New Amex Board.

The New Amex Board will have a discretionary right to review decisions of the AAC. Any four members of the New Amex Board may require Board review of an AAC decision. Ten governors will constitute a quorum at a meeting where a decision by the AAC is reviewed and a majority vote of the governors present at the meeting will be required to modify, reverse or remand the decision. In the absence of such discretionary review by the Board, a decision by the AAC will be the final action of New Amex, and therefore appealable to the Commission.

[34] A specialist holding a Class C Trading Right ("Limited Specialist Trading Right") who then becomes a Regular Member will be considered to have continued his registration as a specialist in the securities allocated to him without any need to submit to a further allocation process.

It is anticipated that holders of Class C Trading Rights generally will not be existing Members of Amex Corp; however, the Commission notes that nothing in the New Amex Constitution would preclude current Amex Corp. Members of availing themselves of this provision.

[35] The Commission notes that the current hearing process for Members requiring a hearing before a Disciplinary Panel is not being changed from the current procedures. *See* New Amex Constitution, Article V. Section .01.

[36] For a description of the National Adjudicatory Council, *see* Article V of the By-Laws of NASD Regulation.

[37] The AAC may review settlements of disciplinary proceedings that have been approved by a Disciplinary Panel. If the AAC rejects the settlement, the matter would proceed before a Disciplinary Panel as if the settlement had never occurred. The AAC may reject a settlement or impose a lesser penalty upon a respondent; it cannot increase the penalty. AAC decisions to reject a settlement would not be subject to Board review. AAC decisions with respect to settlements (other than rejections) would constitute the final action of New Amex.

G. Arbitration

With regard to New Amex's arbitration program, the New Amex Constitution provides that any arbitration filed prior to the Closing will be conducted by means of the arbitration facilities and procedures that existed as of the date the arbitration was instituted. Actions filed *following* the Closing will be conducted pursuant to the NASD Code of Arbitration Procedure using the arbitration facilities of NASD Regulation, Inc., although an existing Amex provision is preserved allowing use of the New York Stock Exchange arbitration procedures if all parties to the controversy are members there. Certain portions of Amex's arbitration procedures, including that which permits the Board to decline to permit the use of New Amex's arbitration facilities in particular cases, and that which permits arbitration before the American Arbitration Association in certain circumstances, will be deleted in view of the complete assumption by NASD Regulation of New Amex's arbitration program and the adoption of the NASD Code of Arbitration Procedure.

The New Amex Constitution also states that a failure on the part of persons within New Amex's jurisdiction to pay an arbitration award of any exchange or the NASD, shall be deemed a failure to meet his or its engagements and subject him or it to suspension under Article V, Section 3 of the New Amex Constitution.

H. Seat Market Program

The Transaction Agreement provides that a Seat Market Program for Regular and Options Principal Memberships will begin immediately after the Closing. This program is intended to moderate possible downside volatility in seat prices following the Closing. The NASD has committed to fund this program, but no "trust" or other segregated fund will be created. Immediately after the Closing, the NASD will commit $30 million for this program. On January 1, 1999, the NASD will increase its commitment by $10 million. New Amex will fund this $10 million increase to the extent that its 1998 earnings allow, and the remainder will be funded by the NASD.[38] The

[38] In addition, the NASD will: (1) increase its commitment by any after-tax net proceeds received from leasing Regular or Options Principal Memberships purchased under the program; (2) increase or decrease its commitment, as the case may be, by the after-tax profit or loss realized from reselling such Memberships; (3) decrease its commitment by the payments or expenditures pursuant to the program (other than payments or

Continued

liquidation, dissolution or winding up of New Amex will not affect the NASD's funding commitment under the Seat Market Program.

The Transaction Agreement provides for control of the program by a six-member seat committee (the "Seat Committee"). The Seat Committee will be composed of three Regular or Options Principal Members (at least one who is active on the floor of New Amex and one who is not active on the floor), two Public Members, and the NASD's Chairman (or his designee). The Regular or Options Principal Members on the Seat Committee may not be from large multi-service broker-dealer firms.

The Floor Governors of New Amex will choose the Regular or Options Principal Members to serve on the Seat Committee, and will fill vacancies in those three positions, subject to approval by the NASD Chairman. The other members of the Seat Committee will be chosen, and vacancies filled, by the NASD's Chairman.

During the Seat Market Program, the NASD must purchase Regular and Options Principal Memberships, as and if directed by the Seat Committee. Memberships held or leased by the NASD may not be voted. The NASD may sell or lease Memberships purchased under the program, and net proceeds will be returned to the program.

On or soon after the fifth anniversary of the Closing, the Seat Committee may recommend that the NASD apply up to $30 million of the funds in the Seat Market Program as: (1) Distributions to Members, (2) reductions in New Amex fees, or (3) investments in technology for New Amex (which will not count toward the $110 million Development Program). The Seat Committee also may recommend that no fund amounts be spent on any of these choices. Every two years after the fifth anniversary of the closing, the Seat Committee can recommend that the balance of the commitment be applied in one or more of the ways described above.

Each of these Seat Committee recommendations will require the consent of Amex Corp. Upon receiving a Seat Committee recommendation, Amex Corp. must put the matter to a vote of its Members and give its consent if, and only if, authorized by the affirmative vote of a majority of the Regular and Options Principal Memberships voted (as a single class) at a meeting called for the purpose of considering the Seat Committee's recommendation. If it receives Amex Corp.'s consent, the NASD must comply with the Seat Committee's recommendation. If the Seat Committee's recommendation is not approved, the Seat Committee must make a new recommendation.[39]

In the case of any vote on the distribution of funds to Members,[40] the Regular and Options Principal Members of Amex Corp. will vote as separate classes on whether to approve the proposed allocation of the distribution between Regular and Options Principal Members. If either class of Members fails to approve the proposed allocation, the Seat Committee will appoint an arbitrator to decide an equitable allocation between the two classes.

I. Gratuity Fund

Certain changes are being made in the Constitution with regard to New Amex's Gratuity Fund.[41] Specifically, new language is being added to provide for proportional credits to each participant[42] in reduction of such participant's payments under Article IX in the event the Gratuity Fund receives any extraordinary payment from any source. The Trustees of the Gratuity Fund will be appointed by Amex Corp. following a vote by the Regular and Option Principal Members. This will essentially maintain the current process by which trustees are nominated and elected in the same manner, and at the same time, as governors of Amex. In the even of a vacancy, the Board of Amex Corp. will appoint a person qualified to serve as Trustee until the next meeting at which the Trustees to be appointed are selected. Currently, the Amex Board fills any vacancy, pending the next annual election. These procedures are consistent with procedures in the New By-Laws of Amex Corp. that provide for the election by Members of Amex Corp. of Trustees of the Gratuity Fund, as well as the Amex Nominating Committee, Amex Adjudicatory Council, and nominees for Floor Governors to serve on the New Amex Board.

J. Miscellaneous Provisions

The transaction also requires that several miscellaneous changes be made to the New Amex Constitution. For example, New Amex Constitution deletes language excepting the Amex Nominating Committee from among the committees that may be dissolved by the New Amex Board. In addition, the New Amex Constitution deletes references to the Executive Committee since New Amex, at least initially, will not have such a committee. The New Amex Constitution provides that the Chief Executive Officer of New Amex, who is the Chairman of the Board, will be elected by a majority of the entire Board. The New Amex Board will have only one Vice Chairman who must be a Floor Governor. The New Amex Constitution eliminates the section of the "Selection of General Counsel" in its entirety.

The New Amex Constitution eliminates the New Amex Chairman's status as an ex-officio member of all committees and further clarifies that the Chairman is not a member of certain committees (*e.g.*, the AAC). The New Amex Constitution also provides that the New Amex Chairman is required to call a special meeting of the Board upon the written request of three rather than four governors (reflecting the reduced size of the Board). The Chairman will no longer be permitted to call special meetings of regular members upon the direction of the Board or upon the written request of 50 regular members.[43] The position of "Executive Vice Chairman" is being eliminated as unnecessary.

The New Amex Constitution eliminates in its entirety the section on "Indemnification." Indemnification by New Amex of persons associated with it (*e.g.*, Governors, officers and employees) is covered through the provisions in the LLC Agreement.

The New Amex Constitution also will reduce the number of Regular Memberships from 675 to 661 to reflect the fact that only 661 Regular Memberships currently are outstanding. (675 Memberships had been authorized, but only 661 were issued.)

The New Amex Constitution also will provide that any Regular Member or lessee, by exercising any of the rights inherent in a regular trading right, shall be deemed to have pledged to abide by the New Amex Constitution. A similar provision will be applicable to Options Principal Members or lessees. The purpose of these provisions is to clarify that existing Members will continue to be subject to the jurisdiction of New Amex.

A New Amex Constitution provision concerning "Exchange Liability" will reflect the fact that New Amex provides services as well as facilities to its members.

The New Amex Construction will provide a procedure by which Members may challenge New Amex staff determinations. The appeal procedure will be clarified to eliminate the possibility of a review by a New Amex Disciplinary Panel which properly should consider only rule violations and not New Amex staff determinations.

The New Amex Constitution provision concerning "fixed income security options trading permits" and "options trading permits" will be deleted in its entirety since both of these classes of trading permits have expired. The provisions regarding Limited Trading Permits ("LTPs") will reduce the maximum number of such permits from 36 to 10 to reflect the fact that there currently are only 10 outstanding.

The New Amex Constitution provision concerning "Fees and Duties" will provide flat rate initiation fee of $2,500 for Regular and Options Principal Members. This fixed initiation fee replaces the former graduated initiation fee schedule that has become obsolete with the increase in seat prices. (The old formula established a base initiation fee of $1,000 that increased to a maximum of $2,500 when seat prices rose above $20,000.) Certain other additional obsolete provisions also will be deleted from this section.

Furthermore, the New Amex Constitution will make explicit the implicit authority of the New Amex Board to set different charges for different services and securities. Such charges will be subject to filing with, and under certain circumstances approval by, the Commission.

The New Amex Constitution will conform to the current Amex employee trading policy, which allows employees to trade standardized options issued by the Options Clearing Corporation unless such options are on an underlying security listed on the Amex.

The New Amex Constitution will now provide a provision concerning "Authority to Take Action under Emergency or Extraordinary Market Conditions" that will be comparable to Article VII, Section 3 of the NASD's By-Laws. In addition, the Amex Constitution currently references emergency by-laws under Subdivision 17 of Section 12 of the New York State Defense Emergency Act and to the effectiveness of emergency by-laws of New York Corporations. These references will no longer be appropriate to New Amex, as a Delaware Limited Liability Company.

Several necessary changes are being made to Amex Rules 345, 590 and 600 in order to make the rules consistent with the terms of the transaction and the New Amex Constitution.

III. Summary of Comments

The Commission received one comment letter from Bill T. Singer ("Singer"), who wrote on behalf of the Independent Broker-Dealer Association ("IBDA").[44] The NASD submitted a letter responding to the Singer Letter.[45]

A. NASD/Amex Consolidation Issues

Singer is concerned that NASD members were not allowed to vote on the substantive details of the merger and were not given copies of the merger transaction agreement. According to Singer, the ballot submitted to the NASD members did not contain any details about the merger. Instead, the ballot merely asked the members to approve changes to NASD by-laws affecting the composition of the Board of Governors. Singer also contends that the NASD, which did not seek membership approval of the merger, failed to meet the fair representation provision of Section 15A(b)(4) of the Act. Based on this contention, he asks whether the Commission will meet with individual constituencies of NASD members prior to approving the merger. Further, he questions whether the proposed rule change is consistent with the Act because the NASD failed to seek member comments about the merger.

In response, the NASD asserts that whether the merger should be approved by the membership is a matter of state corporate law and the NASD's certificate of incorporation. The NASD states that it is incorporated in Delaware and that the Delaware law does not require the NASD Board to submit the merger to membership approval. Additionally, the NASD maintains that neither the NASD's certificate of incorporation nor its by-laws requires it to submit the merger to membership approval.

The NASD also contends that its members were indirectly given the opportunity to approve the merger through their vote on a change to the NASD's by-laws to add two new Board seats,[46] a change that was necessary for the Closing to occur. According to the NASD, the members overwhelmingly approved the merger with a vote of 2,565 for and 82 against the addition of the new seats.

Additionally, Singer is concerned about the merger's effect on competition between the various markets, noting that the consolidation might increase listing fees for issuers and reduce the NASD's incentive for market innovation. Moreover, after the merger, Singer feels that the NASD might forsake its traditional role as a market for developing companies and an

---

expenditures for purchasing Memberships under the program); and (4) increase its commitment by imputed interest at an annual interest rate of five percent on the amount of the commitment, for the first five years after the Closing, and on the difference between the amount of the commitment and the aggregate purchase price of all Memberships purchased under the program during the period they are held by the NASD, after the fifth anniversary of the Closing.

[39] In *Selmo Philipson* v. *American Stock Exchange, et al.*, 98 Civ 4219 (DC), United States District Court, Southern District of New York, filed as a class action, plaintiff challenged the transaction between the Amex and the NASD on several grounds. The NASD and the Amex have negotiated an agreement in principle for the settlement of this litigation which provides that the Seat Committee shall consider, 18 months and 36 months after the Closing, whether half of the NASD's initial $30 million commitment to the Member Equity Program should be distributed to owners of Membership interests, used to reduce New Amex fees, or invested in technology for New Amex, rather than continuing to be held for the purchase of seats. After five years, any remaining portion of the initial $30 million commitment must be used for one of these purposes. In addition, the agreement provides that the NASD shall contribute to a separate fund 15% of any amount by which New Amex's annual after-tax income in each of the first ten years after the Closing exceeds a specified base amount. A committee consisting of three Members of New Amex and the Chairman of the NASD will determine whether this fund shall be distributed to owners of Membership interests, invested in technology for New Amex, or used to fund pension or retirement benefits for owners of Membership interests. The proposed settlement is subject to execution of a formal settlement stipulation, which will then be subject to court approval following notice to all members of the plaintiff class.

It is the view of Amex that, once court approval is received, the terms of the settlement can be implemented without the necessity of further amendment of the Transaction Agreement or any further approval from the Commission. Telephone call between James Duffy, Executive Vice President and General Counsel, Amex, and Michael Walinskas, Deputy Associate Director, Commission, on September 10, 1998.

The Commission notes that this information has been provided to the Commission for informational purposes only. Neither Amex nor the NASD have requested the Commission to approve this in the context of this rule filing or otherwise.

[40] If the Seat Committee's recommendation is other than that funds be distributed to Members, and two or more Floor Governors of New Amex disagree with that recommendation, they may require Amex Corp. to call for a vote of Members. In this case, the Regular and Options Principal Members, voting as a single class, will decide between (i) implementing the Seat Committee's recommendation and (ii) making a cash distribution to Members, in an allocation between Regular and Options Principal Members as proposed by the Seat Committee Floor Members. If two-thirds of the Regular and Options Principal Memberships voted (as a single class) at a meeting called for the purpose of considering the matter approve the distribution, the Seat Committee will direct the NASD to make such distribution.

[41] For a description of the Gratuity Fund, *see* New Amex Constitution, Article IX, Section 2.

[42] Participants to the Gratuity Fund include Regular and Options Principal Members, as well as owners, nominees, lessors and lessees of Regular and Options Principal Memberships who satisfy certain eligibility requirements. *See* New Amex Constitution, Article IX, Section 1(e).

[43] Amex believes that this change is appropriate given that Amex members will no longer be corporate owners of Amex after the Closing. Instead, Holdco and Amex Corp. will be the corporate owners of New Amex. Any meeting of Members will be conducted under the By-Laws of Amex Corp. in the circumstances specified therein and would not be governed by the New Amex Constitution.

[44] *See supra* note 8.

[45] *See supra* note 9.

[46] The By-Law change adds two Board positions: one for the Chief Executive Officer of New Amex and one for a Floor Governor from the New Amex Board.

association of independent/regional members.

In response, the NASD believes that the combination of the two markets will provide a more efficient mechanism for trading at lower costs. Furthermore, the NASD notes that the Antitrust Division of the Department of Justice reviewed the transaction for anticompetitive effects, and did not object. In sum, the NASD believes these benefits will improve the markets for investors, issuers, and NASD members.

Singer also asserts that the proposed operation of New Amex as an independent subsidiary poses significant issues. First, he maintains that the independent operation of New Amex might result in a loss of economy of scale and entail additional costs. The NASD, however, believes that the application of its modern technology to the New Amex market facilities will provide significant scale economies and result in cost savings for investors and traders. Second, Singer is concerned about how the NASD will decide between Nasdaq or New Amex when allocating listings. He also feels that issuers who would normally list on Nasdaq might choose New Amex instead. According to Singer, this choice could reduce the trading revenue of NASD market makers.

The NASD responds by asserting that, after the merger, NASD market makers will have greater access to the two markets at lower costs. The NASD also believes the creation of multiple market venues will provide market choices for issuers and additional business opportunities for NASD member firms who underwrite securities.

B. Financing the Merger

Singer notes that the NASD does not explain how it will finance the $30 million seat stabilization program. He believes that the money might be better spent on the improvement of NASD technology or the hiring of additional NASD employees. Furthermore, Singer observes that the NASD does not explain how it will finance the upgrade of Amex's technology. In both the seat stabilization plan and the technology upgrade. Singer fears that the NASD will assess its members with the costs. He believes that, although all NASD members will shoulder the burden of transferring resources to New Amex, most members will not receive anything in return.

The NASD responds by maintaining that its Board, after careful consideration of the transaction, found that the transaction was fair to the Association and in the best interests of its members. Moreover, the NASD contends that the money spent on upgrading Amex's technology will benefit all of the NASD's members, and that the increased technological capabilities will reduce costs for members trading on both the Nasdaq and Amex markets.

In addition, Singer suggests that the prior improper conduct of major Nasdaq market-makers might have contributed to the weakening of the Amex market. If this weakening did occur, then Singer believes that the major Nasdaq market-makers should bear the cost of the merger.

C. Regulatory and Other Concerns

Singer suggests that independent/regional members recently have experienced difficulties in securing permission to make markets in or to underwrite OTC Bulletin Board or Nasdaq Small Capitalization Issues. Because of these difficulties, Singer asks whether new NASD and Commission regulatory initiatives will further restrict these members' abilities to facilitate transactions in smaller capitalization issues. Singer also raises other general concerns about the merger.[47]

IV. Discussion

The Commission believes that Amex's proposed rule changes are consistent with Section 6(b)(3), 6(b)(5), and 6(b)(8) of the Act in that they are designed to assure a fair representation of an exchange's members in the selection of its directors and administration of its affairs and provide that one or more directors shall be representative of issuers and investors and not be associated with the exchange, broker, or dealer; to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system, and, in general, to protect investors and the public interest; and do not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

The Commission also finds that the NASD's proposed rule changes are consistent with Sections 15A(b)(6) and 15A(b)(9) of the Act in that they are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system, and, in general, to protect investors and the public interest; and do not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[48]

The proposed merger offers the promise of important benefits to the public. Specifically, the merger should help improve the competitiveness of New Amex's auction market by making it a more efficient, technologically advanced alternative to other exchange auction markets. This technological advance should increase competition between existing markets to improve their marketplaces in order to be able to offer the best available market trading mechanisms at the lowest cost. Of particular note, the proposed future introduction of a new electronic limit order book providing automatic execution for electronically delivered orders may offer a more efficient and lower-cost auction market for Amex equities.

The Commission disagrees with the argument made by the commenter that the merger is likely to have anticompetitive effects, particularly the possibility of higher listing fees for issuers and a reduced incentive for NASD market innovation. The Commission does not believe that listing fees were a primary form of competition between Amex and Nasdaq in the past; rather, competition focused on market structures, quality of executions and services. These alternative choices still remain between Nasdaq and Amex. Moreover, New Amex would need to file any proposed fee increases with the SEC pursuant to a rule filing that must meet the requirements of the Act. With regard to a possible reduction in market innovation, the Commission believes that the competition presented by the New York Stock Exchange and the regional exchanges provides a more than adequate incentive for the NASD and New Amex to each continue finding ways to create better markets. Moreover,

[47] For example, Singer expresses concern about the recent exodus of senior Commission staff to the NASD, Nasdaq market makers, and private firms. He feels that these groups might have greater access to the Commission and the merger approval process because of their ties with the Commission. Singer also notes that NASD Chairman Frank Zarb and Chairman Levitt were former business partners.

[48] In approving this rule, the Commission notes that it has considered the proposed rules' impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

the Commission emphasizes that the initial combination between the NASD and Amex will not result in the closure of any equity or options markets. Indeed, it is expected that New Amex and Nasdaq will remain as separate markets and each will retain their separate listings and offer different market features. The Commission notes that the transaction will not result in a combination of the Amex equity and options floors and Nasdaq, but rather results in a change of ownership of Amex. The basic market structure of Amex and Nasdaq will remain unchanged.

In addition to increased competition, the Commission observes that the proposal should help improve both the Amex and NASD marketplaces by combining the strengths of the two organizations, to the benefit of the markets and investors. Under the terms of the transaction, Amex will receive an infusion of new capital that will allow it to upgrade its trading facilities and technology. This should enable Amex to increase its trading capabilities, and remain competitive with other auction-based equity and option markets, possibly attracting new listings and increasing volume. The Commission also believes that the NASD, by gaining control of an established options exchange and a specialist-based auction market that complements Nasdaq, its dealer-based equity market, will be able to offer issues and investors greater choice in where to list and where to invest.

A. Transfer of Section 6 Registration

As a general matter, the Commission does not view registration as a national securities exchange under the Act as an asset that is freely transferable or that can be bought and sold. Based on the unique facts and circumstances presented by this proposal, however, the Commission believes it is reasonable under, and consistent with, the Act for Amex effectively to transfer its Section 6 exchange registration to New Amex. The Commission notes that, except for the changes currently proposed to the Amex Constitution and Rules, the Constitution and Rules of New Amex will remain unchanged from those of existing Amex. In addition, the Amex Corp. Members will be the same as the current Amex Members, and the operation of the floor of the exchange will remain unchanged. If New Amex were not permitted to, in effect, succeed to the registration of Amex, it would have been forced to undertake the full process of reregistering, including refiling its entire Constitution, its By-Laws and Certificate of Incorporation, as well as all of its current Rules. In addition, New Amex would have had to submit a complete explanation of New Amex and its operations, its listing and membership forms and requirements, consolidated and unconsolidated financial statements, a list of all members and member organizations, and a list of all the securities listed on New Amex or traded pursuant to unlisted trading privileges. This process would have added little of value to the review previously given to these matters in filings made under Section 19 of the Act and Rule 19b–4 thereunder. The 19b–4 rule filing process has afforded essentially the same opportunity for public notice and comment and Commission review as would have been provided by a New Amex application for exchange registration. Accordingly, on the facts presented here, the Commission has not required Amex to deregister as a national securities exchange and New Amex to file an application for exchange registration.

B. Corporate Structure—Regulation of New Amex and Amex Corp. Members

The Commission believes that the framework of the proposal provides for sufficient regulatory oversight of Amex Corp. Members and the operation of New Amex as an SRO, as required by the Act. The Commission notes that New Amex, as a registered SRO under Section 6 of the Act, will have the statutory authority and responsibility to, among other things, discipline its Members, amend its Constitution and Rules (subject to the consent of the NASD, the parent company), list and delist securities, and grant or deny Membership in New Amex.[49]

The Commission notes that Amex Corp. Members are subject to the jurisdiction of New Amex through the provisions of the New Amex Constitution. Members (both Regular and Options Principal) are defined in the New Amex Constitution as those persons holding trading rights issued by Amex Corp. which grant them the right to transact business on the floor of New Amex. The New Amex Constitution states that by exercising the trading rights on the floor of New Amex, both the Amex Corp. Regular and Options Principal members have pledged to abide by the New Amex Constitution and all the rules and regulations (or orders, directives or decisions) adopted pursuant to the New Amex Constitution.

C. NASD Ownership and Responsibility

The Commission believes that the proposal adequately addresses the role of the NASD, as the parent corporation, in the operation of New Amex. Particularly, the Commission finds it critical to the proposal that the NASD, as the parent company with a controlling interest in New Amex, has committed to ensuring that New Amex meets its obligations as an SRO. It has been represented that the NASD will bear ultimate responsibility to ensure that New Amex meets its statutory obligations and that the necessary and appropriate resources are available to New Amex so that it can meet the evolving demands of operating a regulatory and compliance program in an advanced marketplace.[50] The acceptance of this responsibility is entirely appropriate given the management and financial control held by the NASD as a result of the terms of the merger. In order to codify this responsibility, the NASD submitted a filing which states that the NASD, as the parent company of New Amex, will be responsible to ensure that New Amex meets its obligations as a self-regulatory organization. It will be the policy of the NASD that in discharging this responsibility the NASD will be governed by the following principles: The NASD will exercise its powers and its managerial influence to ensure that New Amex fulfills its self-regulatory obligations by directing New Amex to take action necessary to effectuate its purposes and functions as a national securities exchange operating pursuant to the Act, and ensuring that New Amex has and appropriately allocates such financial, technological, technical, and personnel resources as may be necessary or appropriate to meet its obligations under the Act. Finally, the NASD has also committed to refrain from taking any action with respect to New Amex that, to the best of its knowledge, would impede, delay, obstruct, or conflict with efforts by New Amex to carry out its SRO obligations under the Act, and the rules and regulations thereunder. The Commission believes it is reasonable and consistent with the Act for the NASD, as parent company and controlling owner, to make these commitments. Indeed, the adoption of this policy statement, which shall constitute a rule of a self-regulatory

[49] The Commission notes that the present filing is silent as to whether it is the intention of the NASD and New Amex to consolidate SRO functions. A consolidation of SRO functions potentially raises important issues under the Exchange Act. The Commission notes that if Amex were to propose any changes to consolidate its SRO functions and have them performed by the NASD (or any other party) it should notify the Commission prior to implementing such change, so that the Commission may determine if a rule filing is necessary.

[50] *See* Transaction Documents, Information Memorandum, pp. 14 and 40.

organization under the Act enforceable by the Commission pursuant to Section 19 of the Act, is a necessary component to the Commission's determination that the submitted proposals are consistent with the Act.

D. New Amex Corporate Governance

The requirement of Section 6(b)(3) of the Act that the rules of an exchange assure a fair representation of its members in the selection of its directors and administration of its affairs and provide that one or more directors shall be representative of issuers and investors and not be associated with a member of the exchange, broker, or dealer is designed to ensure in a traditional exchange structure that a member has a voice in the use of self-regulatory authority that may affect the member. This requirement, among other things, also helps ensure that the member's financial stake in its seat and the structure of the market is considered in the decisions of the exchange, and it protects members from unfair, unfettered disciplinary actions under the rules of the exchange. Although the terms of the merger provide the NASD with ultimate control over New Amex, the merger has been structured to satisfy the principles of fair representation in several ways.

1. New Amex Board Composition

The Commission believes that the composition of the New Amex Board of Governors ("New Amex Board") is consistent with Section 6(b)(3) of the Act in that it provides for fair representation of its members in the selection of its directors and administration of its affairs and provides that one or more directors shall be representative of issuers and investors and not be associated with a member of the exchange, broker, or dealer. First, nine of the eighteen New Amex Board members are "public" representatives who are not affiliated with the securities industry, and no more than three of these nine non-industry governors may serve on both the New Amex and NASD Boards.[51] Second, the proposed New Amex Constitution provides the Amex Corp. Membership the opportunity to select member representatives on the New Amex Board by granting Amex Corp. The authority to nominate the four New Amex Board members that are Floor Governors, one of whom must be an equity specialist and one whom must be an ROT. Floor Governor nominees would be proposed by either the Amex Nominating Committee (consisting of three Floor Members and two Public Members) or a petition signed by 25 Members and would be selected by a plurality of the Amex Corp. Regular and Options Principal members voting together as a single class. The Amex Corp. Membership elects the members of the Amex Nominating Committee, which is an Amex Corp. committee under the By-Laws of Amex Corp.[52] The Commission believes that these nominating procedures for Member representatives on the New Amex Board should help ensure that the diverse interests of Floor Members are represented. The Commission notes that even though the NASD must approve the Floor Governors, it can reject the nominees only on specific regulatory grounds.[53] In addition, the proposed rule change provides that the Vice Chairman of the New Amex Board must be a Floor Governor. The Commission also believes it is appropriate for the New Amex Board members to be divided into classes to ensure that the terms of all the Floor Governor New Amex Board members and the public New Amex Board members do not expire at one time, and for New Amex to establish limits on the number of consecutive terms a New Amex Board member can serve.

Additionally, the Commission believes that inclusion of one New Amex Floor Governor and the Chief Executive Officer of New Amex on the NASD on the NASD Board as representatives of New Amex helps fulfill the fair representation requirements of the Act on the part of New Amex. The New Amex Floor Governor is nominated by the Amex Corp. Membership and will be able to most directly express their viewpoint and concerns within the NASD Board forum. In addition, the Chief Executive Officer of New Amex will be able to provide information about, and communicate the needs of, New Amex to the NASD Board.

Under the proposed corporate structure, there is the potential for members of the boards of the NASD or one of its other subsidiaries and New Amex to overlap. The Commission believes that such overlap presents potential conflicts. Conflicts could occur notwithstanding that each Board member must vote in the best interests of the entity on whose board he or she is sitting at that time. For example, a dual Board member could be asked to vote on whether or not to allocate money to New Amex operations. As a New Amex Board member, he or she could conclude that it is in the best interest of New Amex to allocate the funds. However, as an NASD Board member, he or she could conclude that the money would be better spent on the NASD, or Nasdaq. The Commission believes that the limitation of three non-industry board members who can serve on both the NASD Board and the New Amex Board, coupled with New Amex's assertion that it will implement conflict of interest policies and procedures to address potential unique issues facing governors serving on both boards, adequately addresses the issue.

2. Protection of Amex Membership Interests

The Commission believes that the proposal provides for fair representation and participation of the various types of Amex Corp. Members in the governance and operation of New Amex. Although the NASD has majority control over New Amex, several important structures are provided to better ensure that the interests of Amex Corp. Members are adequately represented in the critical decisions regarding New Amex. This is accomplished by requiring consent of either Amex Corp. (through a Membership vote), the Amex Committee, or both, in situations impacting certain Membership interests or material changes to New Amex, as described above in Section II.C.2. Additionally, the Commission believes that even after the expiration of the express limits on changes to the New Amex structure, the authority exercised by the Amex Committee provides on an ongoing basis for significant member and public input, representation, and participation in the operation of the equity and options markets and the development of new trading facilities on New Amex. The Commission notes that no member of the Amex Committee designated as either a non-industry member or an "upstairs" member may overlap with the NASD or New Amex Boards. The Commission believes that this limitation is appropriate to help avoid potential conflicts of interest for Amex Committee members in the exercise of their duties and to preserve their independence. The Commission believes that the Amex Committee should adequately represent the interests of Amex Corp. members as it exercises its specific powers.

The Commission believes it is appropriate for the Amex Corp. members, through the Amex Committee, to have a vote in contemplated changes to the basic structure and operation of Amex's equity and options trading floors, including the amount of money spent by the NASD to upgrade the technology used on the floor, as well as certain increases in member fees, because these areas affect the operation of the trading floor and financial burdens imposed on the Amex Corp. Membership. The Commission also believes that it is import for Amex Corp. Members to have a degree of control over the areas of new memberships, changes to the basic market structure, and amendments to the New Amex LLC agreement because they implicate the value of member seats and member's trading rights on the Amex floor, as well as New Amex's authority as contained in the LLC agreement. Without these powers, New Amex and the NASD would have the authority to take steps to dilute Amex Corp. Memberships and restructure the basic trading structure on the equity and options floors, and Amex Corp. members would have little influence over the imposition of fees upon themselves.

Although the Commission recognizes the need for the Amex Committee, it also believes that the Amex Committee will be performing certain functions similar to those performed by the board of New Amex, a registered self-regulatory organization. For example, the Amex Committee has the right to review and veto changes to the structure and operation of Amex's equity and option trading floor, as well as any changes that would implicate the value of member seats and member trading rights. Because the Amex Committee will be performing important functions with respect to the board of an SRO, as a material condition to this order of approval the Commission is deeming the members of the Amex Committee to be "director[s] of [a] self-regulatory organization" for purposes of Commission oversight. Exchange Act Section 19(h)(4).[54]

3. Disciplinary Process

The Commission believes that proposed rule changes to the disciplinary process for New Amex are consistent with the requirement of Section 6(b)(7) of the Act that the rules of an exchange provide a fair procedure for the disciplining of members and persons associated with members because the process, as proposed, provides for review of all disciplinary matters by a committee composed of both Amex Corp. Members and public representatives. The Commission notes in particular that the AAC, which is empowered to act for the full New Amex Board in reviewing appeals from disciplinary proceedings, is composed of three Public Members and three Floor Governors, all of whom are nominated by the Amex Nominating Committee (or by petition signed by twenty-five Members) and elected by a full Amex Corp. Membership vote. In addition, all respondents in contested disciplinary proceedings have the right to appeal the decision of a Disciplinary Panel to the AAC, and all decisions of the AAC are appealable to the Commission (or by the full New Amex Board, if at least four Governors desire such review).

E. Seat Market Program

The Commission believes that the Seat Market Program, run by the Seat Committee, is a reasonable means to help protect the value of Amex Corp. Member seats from any downside volatility that may occur as a result of the merger.[55] The Seat Program may help protect the value of member seats by authorizing the NASD, upon a recommendation from the NASD Seat Committee, to buy Memberships. In addition, the Seat Market Program also provides additional monetary benefits for Amex Corp. Members in that the Seat Committee may recommend that the NASD apply the Seat Program funds to reduce fees, invest in technology for New Amex, or distribute the funds to Members.[56] A Seat Committee recommendation that is approved by a majority vote of all Amex Corp. Members voting as a single class must be complied with by the NASD.

F. Class C Trading Rights

The Commission believes that the creation of Class C Trading Rights is reasonable in that it may serve to encourage new firms to bring new listings to New Amex without having to become full Members. The Commission believes that the creation of Class C Trading Rights should not harm the value of full Membership seats because they are of limited duration (expiring on the earlier of three years from the date of issuance or the fifth anniversary of the closing), are limited in number (25), and the owner of the right is not allowed to operate a joint book with a regular member. The Commission notes that any person holding a Class C Trading right would still be bound by New Amex Rules relating to the obligations of and restrictions on specialists, including Rule 190 regulating specialist relationships with the issuer of a stock in which that specialist is registered and Rule 170 and procedures adopted thereunder for the evaluation of specialist performance and imposition of non-disciplinary sanctions, including reallocations for unsatisfactory performance.

G. NASD Compliance With the Act and Its Rules

In response to the commenter's concern that the members of the NASD neither received any detailed information on the terms of the transaction nor had the opportunity to approve or disapprove the substance of the transaction, the NASD represented that it followed proper corporate governance procedure in approving the transaction and was not required to submit the transaction to a full NASD membership vote. The Commission believes there was adequate notice and opportunity for comment on the substance of the current proposals because the Commission published the substance and terms of each of the three proposals for the full notice and comment period. The request for comments was highlighted on the Commission's website,[57] and was published in the **Federal Register**. The NASD Board, which has the authority to approve the transaction on behalf of its members, determined that the

[51] Eight public governors are nominated by the NASD Nominating Committee, and one of the two NASD representatives on the New Amex Board is a person that meets the qualifications of Non-Industry Governor as defined under NASD rules.

[52] In addition, the members of the Amex Nominating Committee are also divided into two classes, with a public member in each class, whose terms expire at different times. Persons on the Amex Nominating Committee cannot serve consecutive terms and no one affiliated with a member of the Amex Nominating Committee can be eligible as a candidate for a ticket named by it.

[53] The NASD can reject the Floor Governor nominee only if the nominee is (1) subject to a statutory disqualification, or (2) subject to a proceeding or investigation which could result in a statutory disqualification, or (3) has been disciplined by a securities SRO with respect to a matter involving fraud or a serious violation of U.S. securities laws.

[54] See also Exchange Act Section 3(a)(7) ("The term 'director' means any director of a corporation or any person performing similar functions with respect to any organization, whether incorporated or unincorporated."). The joint letter from the NASD and Amex, dated October 29, 1998, amending the Amex rule filing acknowledges and accepts the Commission's interpretation: "For the purpose of confirming the SEC's jurisdiction over such persons, the members of the Amex Committee shall be deemed 'directors' as that term is used in section 3(a)(7), and shall be deemed directors of a self-regulatory organization under Section 19(h)(4), of the Exchange Act."

[55] The Seat Committee is composed of three members (at least one who is active on the New Amex floor and one who is not, none of whom can be from multi-service broker-dealer firms), two Public Members and the NASD's Chairman. The initial and replacement Regular and Options Principal Members will be chosen by the floor governors on the New Amex Board and must be approved by the NASD's Chairman. The remaining initial and replacement members will be chosen by the NASD's Chairman.

[56] The Seat Committee can also recommend that no money be spent at a particular time.

[57] See www.sec.gov.

transaction was fair to the NASD and in the best interests of its members.[58]

H. Miscellaneous

The Commission believes that it is consistent with the Act to amend the language of Article IX, Section 10 of the New Amex Constitution to provide specifically for the appointment of Trustees of the Gratuity Fund by the Amex Corp. Membership. Currently, the Trustees are appointed by the Amex membership, but the wording of Article IX, Section 10, which states that they are appointed in the same manner as the Amex governors, will not remain the same under the proposal. The Commission also believes it is reasonable to provide that the Amex Corp. Board will appoint interim replacement Trustees, rather than the New Amex Board, in order to allow for member input. Additionally, the Commission believes it is consistent with the Act to provide that in the event of an extraordinary payment received by the Gratuity Fund, a proportion of such payment shall be credited to each participant in reduction of his or her payments under the Gratuity Fund.

The Commission believes that the proposed rule change eliminating Amex's arbitration program and referring cases to the NASD is consistent with the Act because it will maintain a fair arbitration forum available for all Amex arbitration claims, despite Amex's small caseload, which may not sustain an independent program. Merging the Amex program with the NASD arbitration program, the industry's largest, takes advantage of economies of scale. The Commission also believes that procedurally the proposed rule change should adequately ensure that all arbitration cases that would be subject to Amex's arbitration process will be provided for under the NASD's arbitration program. The proposed rule change also provides for adequate enforcement in that any violation of the NASD's Code of Arbitration Procedure by Amex Corp. Members would be considered a violation of New Amex rules, subjecting the violator to New Amex disciplinary action.

The Commission believes that it is consistent with the Act to amend Section 1(e) of Article IV of the New Amex Constitution relating to New Amex liability to reflect the fact that New Amex provides services as well as facilities to its members. The Commission notes that it approved a similar change to the Chicago Board Options Exchange ("CBOE") liability provisions.[59] The Commission also believes it is reasonable for Amex to delete Article II, Section 5 of the Constitution, Indemnification, because the LLC Agreement provides for indemnification of the persons associated with New Amex.

The Commission believes that the amendment to Article VII, Section 1 of the New Amex Constitution to revise member fees is consistent with Section 6(b)(4) of the Act in that it provides for the equitable allocation of reasonable fees among its members. The amendment provides a flat rate initiation fee of $2,500 for Regular and Options Principal Members, replacing the former graduated initiation fee schedule that Amex believes has become obsolete with the increase in seat prices. The Commission also believes it is consistent with Section 6(b)(4) of the Act to codify existing practice by granting the New Amex Board the authority to set different rates for equity or options transactions effected in different securities or through different mechanisms.

The Commission believes it is consistent with the Act to amend the Amex employee option trading policy to reflect the policy that Amex employees can trade standardized options issued by the Options Clearing Corporation, unless such option is on an underlying security listed on Amex. The Commission also believes it is reasonable for Amex to delete current Article XII, relating to an emergency committee that has authority to act in emergency situations, in its entirety and to replace it with an emergency provision comparable to Article VII, Section 3 of the NASD's By-Laws. The provisions of the current Article XII state that they constitute emergency by-laws under the New York State Defense Emergency Act, which Amex states will no longer be applicable because New Amex is an LLC incorporated under Delaware Law, not New York law. In addition, the Commission believes that new Article XII provides an adequate procedure for New Amex operations in the case of emergencies or extraordinary market conditions.[60]

The proposed rule change makes several other miscellaneous amendments to the New Amex Constitution and Rules that are dictated by the Transaction Documents. The Commission believes that these changes, which are extremely technical in nature, are reasonable in that they generally are nonsubstantive or address particular corporate governance requirements that are necessary in order to make the New Amex Constitution and Rules consistent with the new proposed governance structure.

No provision contained in the Transaction Documents or in any other agreement or document, nor any actions taken pursuant to them, shall be construed to affect, or shall affect, any right or responsibility of the Commission to take any action under the Federal Securities Laws. This includes, but is not limited to, the Commission's rights and responsibilities under Section 19 of the Act (i) to review and approve rule changes by an SRO, as those terms are defined under the Act and interpreted by the Commission; (ii) to take appropriate disciplinary action against an SRO or its officers and directors; or (iii) to amend the rules of an SRO. The Commission's approval of the rule changes necessary for the consummation of the merger of the NASD and Amex is expressly conditioned on this statement.

The Commission finds good cause to approve Amendment No. 2 to SR–Amex–98–32 prior to the thirtieth day after the date of publication of notice of filing thereof in the **Federal Register**. Specifically, Amendment No. 2 clarifies and strengthens the proposed rule change in that it limits the number of overlapping public and non-industry governors on the NASD and New Amex Boards, and restricts the non-industry and upstairs members of the Amex Committee from also serving on the NASD or New Amex Boards, thereby furthering the independence of these bodies. Additionally, Amendment No. 2 provides that New Amex will implement conflict of interest policies and procedures to address any potential issues facing overlapping members on the NASD and New Amex Boards. This provision will serve to help New Amex comply with the requirements of the Act. Finally, Amendment No. 2 strengthens the proposed rule change by addressing the Commission's jurisdiction over Amex Committee members. Accordingly, the Commission believes that it is consistent with Section 6(b)(5) of the Act to approve Amendment No. 2 to the proposal on an accelerated basis.

Interested persons are invited to submit written data, views, and arguments concerning Amendment No. 2 to SR–Amex–98–32, including whether Amendment No. 2 is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission's Public Reference Room. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All submissions should refer to File No. SR–Amex–98–32 and should be submitted by November 27, 1998.

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[61] that the proposed rule changes (SR–Amex–98–32; SR–NASD–98–56; SR–NASD–98–67) are approved, as amended.

By the Commission.

Margaret H. McFarland,

Deputy Secretary.

[FR Doc. 98–29624 Filed 11–4–98; 8:45 am]

BILLING CODE 8010–01–M

[58] In response to the commenter's concern over the NASD's financial commitments under the transaction, the Commission notes that such commitments were given in consideration of the acquisition of a controlling interest in New Amex. The Commission also notes that the NASD's Board determined that the transaction is fair and in the best interests of its members based upon an independent assessment of the fairness of the transaction to the NASD. Finally, the Commission notes that the NASD represents that it plans to allocate sufficient resources to upgrade its technological capabilities in order to provide investors with the fastest, fairest and least expensive marketplace access on a global scale, and that this will be accomplished within the context of the transaction, which will benefit all of its members, large or small.

[59] *See* CBOE rule 6.7(a).

[60] The new Article XII provides that in the event of an emergency or extraordinary market conditions the New Amex Board (or such person or persons as the Board designates) shall have the authority to take action regarding the trading of securities on the Exchange and the operation of any Exchange trading system or facility, if the Board decides that the action is necessary or appropriate to protect investors or the public interest or for the orderly operation of the Exchange or any Exchange system or facility.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40623; File No. SR–GSCC–98–02]

Self-Regulatory Organizations; Government Securities Clearing Corporation; Order Approving a Proposed Rule Change Regarding the Implementation of the GCF Repo Service

October 30, 1998.

On April 10, 1998, the Government Securities Clearing Corporation ("GSCC") filed with the Securities and Exchange Commission "(Commission") a proposed rule change (File No. SR–GSCC–98–02) pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act").[1] Notice of the proposal was published in the **Federal Register** on June 9, 1998.[2] The Commission received six comment letters from five commenters in response to the proposed rule change.[3] For the reasons discussed below, the Commission is approving the proposed rule change.

I. Description

Under the proposed rule change, GSCC will implement a new service called the GCF Repo service. The GCF Repo service will allow GSCC's dealer members to trade general collateral repos involving U.S. Government securities throughout the day without requiring intraday, trade for trade settlement on a delivery versus payment ("DVP") basis.

A. General Description of the GCF Repo Service

The GCF Repo service will enable netting members of GSCC that are not interdealer brokers ("dealers") to trade general collateral repos, based on rate and term, with interdealer broker netting members of GSCC ("brokers") on a blind basis throughout each day. Brokers will be required to submit GCF Repo trade data to GSCC within five minutes of trade execution through a new terminal function. Brokers will not be able to submit GCF Repo trades in batch. Upon receipt of the trade data, GSCC immediately will report transaction details to dealers through a terminal facility, and the GCF Repos will receive GSCC's settlement guarantee. Standardized, generic CUSIP numbers established exclusively for the GCF Repo service will be used to specify the acceptable type of underlying eligible collateral, which will include Treasuries, Agencies, and mortgage-backed securities.[4]

The daily cutoff for submission of trades through the GCF Repo service will be five minutes after a predetermined trading deadline, which initially will be 3:30 p.m. GSCC will reject all trades submitted for same day processing that are received after the cutoff. Dealers initially will have until 3:45 p.m. to affirm or disaffirm trade data submitted against them by a broker. If a dealer takes no action either to affirm or to disaffirm trade data, the trade automatically will be deemed to be affirmed. GSCC will then conduct an afternoon net exclusively for GCF Repo service activity and will establish a single net receive or deliver obligation for each dealer in each generic CUSIP.

Each dealer with a net deliver obligation will allocate acceptable securities (determined by the generic CUSIP) and will deliver those securities on a DVP basis to a GSCC account within the dealer's clearing bank using a modified triparty arrangement. GSCC will then instruct the clearing bank to deliver those securities to dealers that have net receive obligations. All GCF Repo service activity will settle between dealers and GSCC within the dealers' clearing banks.

GSCC initially will implement the GCF Repo service within each of its participating clearing banks separately.[5] As a result, a participating dealer will be able to trade GCF Repos only with other dealers that use the same clearing bank.[6]

B. Participant Eligibility

To be eligible for the GCF Repo service, brokers and dealers will be required to meet the qualifications for

[1] 15 U.S.C. 78s(b)(1).

[2] Securities Exchange Act Release No. 40057 (June 2, 1998), 63 FR 31539.

[3] *Infra* note 12.

[4] The specific collateral will not be known at the time of the trade. As a result, brokers will submit all GCF Repo trades to GSCC using generic general collateral CUSIPs that denote the underlying category of security. GSCC expects that the initial types of generic CUSIPs that will be used for GCF Repo activity will denote the following categories of securities: all Treasury securities, Treasury securities with a remaining maturity of ten years and under, all Fedwire-eligible Agency securities, and all Fedwire-eligible mortgage-backed securities.

[5] Currently, GSCC's clearing banks are the Bank of New York and the Chase Manhattan Bank. Under the proposed rule change, any clearing bank that meets GSCC's operational requirements will be able to provide GCF Repo settlement services to GSCC netting members.

[6] GSCC has informed the Commission that it eventually would like to expand the GCF Repo service to allow dealers to engage in GCF Repo trading with dealers that use different clearing banks. As a result, GSCC currently is engaged in discussions with staff of the Federal Reserve Bank of New York regarding the means by which to accomplish "after-hours" interbank securities allocations. A resolution of the issues involved may require, among other things, opening of the securities Fedwire after its normal close.

repo netting membership as provided in GSCC's rules. In addition, dealers will be required to designate the brokers that are authorized to submit GCF Repo trades on their behalf. GSCC members that wish to become eligible to use the GCF Repo service also will be required to test with GSCC and to demonstrate that they are able to submit data to and to receive output from GSCC using the communications links and in the formats, timeframes, and deadlines established for the service.

C. Securities Eligibility

The securities eligible for the GSF Repo service are U.S. Treasury securities (other than inflation-indexed securities or STRIPs), agency securities that are not mortgage-backed, and book-entry mortgage-backed securities that are Fedwire-eligible.

D. Broker Submission

Under the rule change, all GCF Repos will be executed by dealers as money-fill transactions[7] through eligible GSCC brokers on a blind-brokered basis. Brokers will be required to submit GCF Repo trades within five minutes of trade execution. Each GCF Repo trade will have a single dealer on the repo side that is matched to a single dealer on the reverse side. The facilitate broker submission, GSCC will implement a new terminal facility that will provide the following services:

1. Large Trade Submission

Brokers will be able to submit GCF Repo trades to GSCC having principal values of up to $2 billion. The current maximum transaction size is $50 million.[8] The GCF Repo service will have a $1 million minimum transaction size and a $1 million multiple requirement.

2. Submission of Trade Data

Brokers will be able to submit data simultaneously for both the repo and reverse sides of the trade using a single screen. GSCC automatically will populate certain fields of the GCF Repo service's screen design (such as trade date and start date) with default values. Brokers will have to enter any information that differs from the default values. The system also will automatically calculate the end money for the repo based on start amount, term, and rate. In addition, GSCC will require that every broker participating in the GCF Repo service provide its terminal on GSCC's premises so that GSCC operations staff can monitor whether the broker is satisfactorily fulfilling its trade submission responsibilities.

E. Trade Recordings and Dealer Notification

GSCC will immediately record, as compared, all GCF Repos upon receipt of trade data from the brokers. This type of "locked-in" trade recording, called broker-assisted processing, will replace the traditional matched comparison process. As a result, both the repo and reverse sides of the transaction will be processed solely based upon broker input without requiring the submission and matching of corresponding trade details from the dealer members.

Upon receipt of trade data from the brokers, GSCC will immediately provide dealers with GCF Repo transaction details by way of a dynamic, real time, online display. The five most recent trades will be displayed in a window at the bottom of these screens while current position information will be displayed at the top of the screens. Position information will be available at both the individual CUSIP level and the cumulative, overall level.

F. Dealer Affirmation

The rule change requires dealers to review GCF Repo trades and to either affirm or disaffirm them by a predetermined deadline, which initially will be 3:45 p.m. Affirming a trade will indicate that the dealer recognizes the trade and agrees to its terms. If a dealer disaffirms a trade, its GCF Repo position will be adjusted automatically, and a notification will be sent to the broker for prompt resolution. During the affirmation process, dealers will be able to provide their own internal reference number. Entry of a reference number will result in the automatic affirmation of the trade.

Any trade that has not been affirmed or disaffirmed by the close of business will be affirmed automatically by the system.[9] GSCC will assess penalties for late dealer affirmations.

G. Netting and Position Reporting

GSCC will net all GCF Repo trades on a real time basis intraday for each dealer into a single net settlement position for each generic general collateral CUSIP submitted. This position will represent the aggregate net dollar amount "borrowed" by the repo dealer or "loaned" by the reverse dealer.

Each day, netting will consist of adding all of the carryover activity (*i.e.*, term repos that are already in effect and forward starting repos that have already been submitted and for which the start date is the current day)[10] in GCF Repos together with the current day's activity. As a result, positions associated with term repos will be renetted each day with the dealer's current activity. GSCC will provide netting results to the clearing banks and its dealer members. Clearing banks participating in the GCF Repo service will be responsible for notifying their members regarding the allocation of collateral and the transfer of funds.

GSCC will carry every GCF Repo trade in its system and will be responsible for maintaining a database of all financial date for the repos that are traded. This will include tracking all relevant terms of each transaction and insuring that the appropriate final settlement amounts are paid at the conclusion of each repo.

Real time, online output will be provided to brokers, dealers, and the clearing banks over GSCC terminals to provide all transaction and position information necessary for the intraday processing of GCF Repo activity. Brokers and dealers will be able to view real time position information, both at the individual CUSIP and overall position levels, on their terminals throughout the day. The bottom of each position screen also will display the five most recent transactions processed against that participant. Each clearing bank will be able to monitor the positions of its clearing members using its terminal.

H. Securities Allocation

Each dealer that is a net lender of securities through the GCF Repo service will be responsible for allocating the appropriate collateral (as defined by the generic general collateral CUSIP) to its clearing banks using whatever mechanism it mutually agrees upon with the bank. All such collateral movements will be made on a DVP basis to and from a GSCC account. As a practical matter, dealers will have to give priority to the allocation of GCF Repo service collateral so that reallocation to the ultimate customer may occur promptly. GSCC will impose a penalty on collateral allocations that are made after 4:30 p.m. Allocations not made by 7:00 p.m. will be considered fails.

Dealers that receive securities as the result of reverse GCF Repos will be required to reallocate them to a location that is available for reversal before the opening of the securities wire on the next day. Examples of these locations are overnight triparty repos, hold-in-custody repos, and bank loans.

I. Next-Day Return of Collateral

All GCF Repo positions will be reversed on the morning of the next business day prior to the opening of the securities Fedwire. This next day reversal will occur for all GCF transactions regardless of the term of the transaction. The repos themselves will be fully collateralized intraday by cash.

J. Risk Management

GCF Repo transactions and resulting settlement obligations will be subject to all of GSCC's existing risk management processes. GSCC will assess its members' overall, cumulative exposure as a result of their combined DVP buy/sell and repo activity and their GCF Repos service activity.[11]

K. Trade Modification/Cancellation

The rules for GCF Repo trade modification are: (1) any data input field on an unaffirmed trade may be modified unilaterally by the broker at any time during the processing day and (2) dealers may not modify any data on GCF Repos. Rather, dealers must cancel (or request cancellation of) the trade. The modification of an unaffirmed trade will result in the immediate replacement of the original trade and all affected processing screens will be immediately updated accordingly.

Under the rule change, the two basic rules for canceling GCF Repos are: (1) an unaffirmed trade may be unilaterally canceled by either the broker or the dealer at any time during the processing day and (2) a trade that has been affirmed, either by a dealer or by the system as part of end-of-day processing, will require bilateral cancellation. This means that a broker may cancel a trade unilaterally at any time during the day if it has not been affirmed by either the dealer or by the system. A unilateral cancellation of a GCF Repo trade by the broker will result in the cancellation of both sides of the trade. Trade cancellation by the broker will result in the cash and collateral positions being reversed by the amount of the canceled trade and taken out of account balances.

A dealer may cancel a GCF Repo trade unilaterally at any time during the day if it has not been affirmed either by the dealer or by the system. Trade cancellation will result in the dealer's cash and collateral position balances being adjusted by the amount of the canceled trade and in the automatic replacement of the dealer by the broker in the transaction. The broker will carry the position and incur all associated responsibilities unless and until the broker submits a correcting entry (*i.e.*, an entry where the broker enters a new single-sided transaction with another dealer to eliminate the broker's position). Cancellation of a trade by the dealer results in the cancellation of that dealer's side only. The other dealer's side of the trade will remain intact.

Cancellation of trades that have been affirmed by the dealer or by the system will be required to be bilateral (*i.e.*, if the dealer requests a cancellation, the broker must approve it and vice-versa). The submission by a broker or dealer of a request for cancellation of an affirmed trade will result in the generation of a trade cancellation request to the original broker or dealer. Upon approval of the cancel request, the dealer will automatically be replaced by the broker in the transaction. The broker will carry the position and incur all associated responsibilities unless and until the broker submits a correcting entry (*i.e.*, an entry where the broker enters a new single-sided transaction with another dealer to eliminate the broker's position). A dealer or broker request for cancellation of an affirmed trade that is not acted upon by the counterparty will require manual intervention (*i.e.*, contacting the counterparty) by GSCC operations to determine whether or not the trade should be canceled.

L. Output and Reports

GSCC will establish a separate reporting stream to produce a full range of machine-readable output ("MRO") and print image end-of-day reports for the GCF Repo service, which will be substantially similar to the output currently provided to participants in conjunction with their regular cash and repo trading activity. In implementing the GCF Repo service, GSCC will attempt to limit the number and magnitude of changes made to existing MRO formats in order to minimize the development effort required by participating members.

II. Comment Letters

The Commission received six comment letters from five commenters in response to GSCC's filing.[12]

A. Comment Letters Submitted by CBOT, CME and the CFTC

CBOT, CME, and the CFTC addressed the possibility that GCF Repo service might be subject to the CFTC's jurisdiction.

1. Letter From CBOT

CBOT stated that the GCF Repo service might be subject to the exclusive jurisdiction of the CFTC. CBOT further stated that if any of the repos that would be cleared through the GCF Repo service are futures then the CFTC has exclusive jurisdiction over the service even if the repos also are securities. CBOT requested that the Commission defer final action on the proposed rule change until the CFTC had an opportunity to consider those issues.

2. Letter From CME

CME stated that the forward starting repos that GSCC proposed to clear through the GCF Repo service might be futures subject to the CFTC's jurisdiction. CME stated further that the forward starting repos described in the proposed rule change might not qualify for the forward contract exemption from the Commodity Exchange Act ("CEA"). As a result, CME concluded that the trading of forward starting repos might violate Section 4(a) of the CEA.

CME went on to consider whether the forward starting repo transactions are exempt from the CEA either through Section 2(a)(1)(A)(ii) of the CEA, known as the "Treasury Amendment,"[13] or through the CFTC's Part 35 swaps exemption.[14] CME stated that forward starting repos contemplated by the proposed rule change are transactions in repurchase agreements and are not "enumerated in the Treasury Amendment" and that government securities are not the subject of the forward starting repos. In addition, CME stated that the Treasury Amendment does not apply to the forward starting repos because the inter-dealer brokers

---

[7] A money-fill repo transaction is a repo transaction in which the amount of securities sold and repurchased is determined by the market value of the securities rather than on the par value.

[8] This limit on transaction size results from the $50 million limit on book-entry securities transfers over Fedwire.

[9] GSCC will send a message to participants fifteen minutes prior to running the automated process that will affirm all pending trades.

[10] In a forward starting repo, the term of the repo beings on a day after the trade date.

[11] For a more detailed description of how GSCC will apply its risk management procedures to the GCF Repo service, refer to Securities Exchange Act Release No. 40057 (June 2, 1998), 63 FR 31539.

[12] Letters from Thomas R. Donavan, President and Chief Executive Officer, Chicago Board of Trade ("CBOT") (June 30, 1998); Jean Webb, Secretary, U.S. Commodity Futures Trading Commission ("CFTC") (June 30, 1998); T. Eric Kilcollin, President and Chief Executive Officer, Chicago Mercantile Exchange ("CME") (June 30, 1998); Daniel O. Minerva, Chair, and Paul G. Schuefele, Vice Chair, Funding Division, The Bond Market Association (July 24, 1998); Sal Ricca, President and Chief Operating Officer, GSCC (July 31, 1998); and I. Michael Greenberger, Director, Division of Trading & Markets, CFTC (September 21, 1998).

[13] The Treasury Amendment states that:

Nothing in the (CEA) shall be deemed to govern or in any way be applicable to transactions in foreign currency, security warrants, security rights, resales of installment loan contracts, repurchase options, government securities, or mortgages and mortgage purchase commitments, unless such transactions involve the sale thereof for future delivery conducted on a board of trade.

7 U.S.C. 2(ii).

[14] The Part 35 exemption exempts certain swap transactions from the provisions of the CEA. 17 CFR 35.2.

executing the transactions constitute a board of trade.

In addition, CME presented three reasons why it believes that the CFTC's Part 35 swaps exemption does not apply to the forward starting repos that would be cleared through the GCF Repo service: first, the transactions that would be cleared through the GCF Repo service are subject to multilateral clearing arrangements; second, the forward starting repos transactions that would be cleared through the GCF Repo service are standardized and fungible; and third, the proposed rule change "contemplates trading through multilateral execution facilities maintained by blind-brokers."

CME requested that the Commission defer action on the proposed rule change until the CFTC had an opportunity to consider those issues.

3. Letters From the CFTC

The Commission received two comment letters from the CFTC. In the first letter, the CFTC stated that it was analyzing the repos that would be cleared through the GCF Repo service and requested that the Commission defer final action on the proposed rule change until the CFTC had time to complete its review of the proposal. The second letter stated that staff of the CFTC's Division of Trading & Markets "has completed a review of the GCF Repo Service and has determined that we have no further comment on this service or the transactions contemplated thereby."

B. Letters From the Bond Market Association and GSCC

The Bond Market Association ("BMA") and GSCC responded to CBOT's and CME's letters and to the CFTC's first letter. GSCC and the BMA stated that forward start repos are not futures. GSCC and the BMA stated further that a forward starting repo is the same as a standard repo except that the obligations created by a forward starting repo begin on a day after the day that the transaction is executed.

In addition, GSCC and the BMA stated that the forward starting repos that would be cleared through the GCF Repo service are covered by the Treasury Amendment. GSCC stated that forward starting repos are transactions in government securities because they obligate the parties to purchase and sell specified government securities on specified dates. The BMA stated that market participants understand that the Treasury Amendment applies to transactions in and in any way involving government securities (as long as the transactions do not involve the sale of such securities for future delivery conducted on an organized exchange). Moreover, GSCC and the BMA stated that the facilities of interdealer brokers should not be considered boards of trade because they are not formally organized exchanges.

III. Discussion

Under Section 19(b) of the Act,[15] the Commission is required to approve a proposed rule change of a clearing agency if it finds that the proposed rule change is consistent with the Act and the rules and regulations thereunder. In reviewing GSCC's proposal under this standard, the Commission has looked primarily to Section 17A(b)(3) of the Act.[16] This section requires, among other things, that the rules of a clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions and to remove impediments to and perfect the mechanism of a national system for prompt and accurate clearance and settlement of securities transactions.

The market in repo transactions involving government securities, including general collateral repos, is already well established. The proposed rule change would expand the types of repo transactions that can be processed through GSCC. As a result, the Commission believes that the proposed rule change is consistent with GSCC's obligations under Section 17A(b)(3) because it should provide a more efficient method for the clearance and settlement of general collateral repo transactions in government securities. Specifically, the Commission believes that the use of the GCF Repo service should reduce exposure to counterparty default, increase payment netting, and apply advance clearing and risk management practices to the market in general collateral repos. Accordingly, the Commission believes that the rule change should enable GSCC to help facilitate the prompt and accurate clearance and settlement of general collateral repos involving U.S. Government securities and to remove impediments to and help perfect the mechanism of the national clearance and settlement system for securities transactions.

The comment letters that the Commission received from CBOT and CME raised a question as to whether some of the repos that will be processed through the GCF Repo service are futures subject to the CFTC's jurisdiction. The BMA and GSCC asserted that forward starting repos are distinct from futures, and even if futures they would be exempt from CFTC jurisdiction. CBOT and CME urged the Commission to defer action until the CFTC had an opportunity to address the question. The CFTC requested that the Commission defer final action until the CFTC had an opportunity to review whether the proposal "raise[d] legal issues under the Commodity Exchange Act." The CFTC's Division of Trading & Markets has advised the Commission that it has no further comment on the GCF Repo service or the transactions that will be processed through it.

IV. Conclusion

On the basis of the foregoing, the Commission finds that the proposal is consistent with the requirements of the Act and in particular with the requirements of Section 17A of the Act and the rules and regulations thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act, that the proposed rule change (File No. SR–GSCC–98–02) be and hereby is approved.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.[17]

Margaret H. McFarland,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40624; File No. SR–OCC–98–06]

Self-Regulatory Organizations; The Options Clearing Corporation; Notice of Filing of a Proposed Rule Change Relating to Market Coordination in the Application of Circuit Breakers

October 30, 1998.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] notice is hereby given that on June 9, 1998, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission ("Commission") and on July 23, 1998 and October 27, 1998, amended the proposed rule change as described in Items I, II, and III below, which items have been prepared primarily by OCC. The Commission is publishing this notice to solicit comments on the proposed rule change.

[1] 15 U.S.C. 78s(b)(1).

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would provide OCC with the authority to adjust margin requirements with respect to cross-margined accounts in the event of an asynchronized application of circuit breakers by the securities and futures exchanges.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, OCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. OCC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.[2]

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

OCC believes there are no assurances that the application of trading halts or "circuit breakers" will be coordinated among the securities markets and the stock index futures markets. According to OCC, the securities markets could reopen after a significant market decline while trading in stock index futures remained halted. A a result, OCC believes that the closing prices used by the futures markets to determine variation margin on index futures and the closing prices of futures options may lose their theoretical relationship to the closing prices of related index option contracts. Under such circumstances OCC's margin calculation for cross-margined accounts may either overestimate or underestimate the actual risk of the cross-margined positions.

Under the proposed rule change, OCC will have plenary authority to take whatever actions that it deems appropriate to adjust margins with respect to cross-margined accounts when futures and options markets have become delinked as a result of an asynchronized application of circuit breakers in the futures and securities options markets.

OCC has submitted comments regarding asynchronized application of circuit breakers to the Commission with respect to the amendments to New York Stock Exchange ("NYSE") Rule 80B.[3] In its comment letter, OCC noted that the amended Rule 80B would permit the securities markets to reopen after a trading halt and continue to trade in the range of twenty to thirty percent down while the rules of the Chicago Mercantile Exchange ("CME") would not permit index futures contracts to trade below twenty percent down. Moreover, OCC noted that CME variation settlements would be based on the limit price, potentially resulting in inconsistent closing prices in the two markets.

As a result of the potentially disparate application of the circuit breaker rules, OCC believes that it is necessary to have the authority to address as best it can the distortions in risk calculations and settlement values that could result with respect to cross-margined accounts. OCC believes that it has been able to identify certain actions it might take in the exercise of its authority. However, OCC also believes that it is presently unable to ascertain each and every type of action that it might need to take in the event of asynchronized application of circuit breakers.

OCC believes that the proposed rule change is consistent with the purposes and requirements of Section 17A of the Act[4] in that it is designed to address the potential problems caused by a lack of coordination among markets in the application of circuit breakers. OCC believes that the authority to address distortions in risk calculation and settlement values when there is an asynchronized application of circuit breakers should promote the protection of investors and the safety of the national system for the clearance and settlement of securities transactions.

(B) Self-Regulatory Organization's Statement on Burden on Competition

OCC does not believe that the proposed rule change would impose any material impact on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were not and are not intended to be solicited with respect to the proposed rule change, and none have been received.

[2] The Commission has modified the text of the summaries prepared by OCC.

[3] Securities Exchange Act Release No. 39846 (April 9, 1998), 63 FR 18477 (April 15, 1998) (order approving NYSE's proposed rule change). OCC's comment letter is attached to OCC's filing of this proposed rule change which is available for inspection and copying at the Commission's Public Reference Room and through OCC.

[4] 15 U.S.C. 78q–1.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within thirty-five days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to ninety days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which OCC consents, the Commission will:

(A) By order approve such proposed rule change or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. § 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing also will be available for inspection and copying at the principal office of OCC. All submissions should refer to File No. SR–OCC–98–06 and should be submitted by November 27, 1998.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.[5]

Margaret H. McFarland,

Deputy Secretary.

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket No. 301–115]

Section 304 Determination: Korean Barriers to Auto Imports

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of determination under section 304 of the Trade Act of 1974, as amended.

SUMMARY: Having concluded the investigation undertaken pursuant to section 302 of the Trade Act of 1974, as amended ("Trade Act"), the United States Trade Representative ("USTR") has determined pursuant to section 304(a)(1)(A)(ii) of the Trade Act that certain acts, policies, and practices of the Government of the Republic of Korea related to exports of U.S. motor vehicles to the Korean market are unreasonable and discriminatory and burden or restrict U.S. commerce. The Korean government, however, has agreed to take several measures to resolve the matters under investigation. Therefore, pursuant to section 304(a)(1)(B) of the Trade Act, the USTR has determined that the appropriate action in this case is to terminate the investigation and to monitor under section 306 the Korean government's implementation of these measures to eliminate those acts, policies, and practices.

EFFECTIVE DATE: October 20, 1998.

FOR FURTHER INFORMATION CONTACT: Mary Latimer, Director of Korean Affairs, Office of Asia and the Pacific, (202) 395–3077.

SUPPLEMENTARY INFORMATION: On October 1, 1997, pursuant to Executive Order No. 12901 of March 3, 1994, as extended by Executive Order No. 12973 of September 27, 1995, regarding the "Super 301" annual review, the USTR identified as a "priority foreign country practice" the Government of the Republic of Korea's barriers to auto imports. On October 20, 1997, also pursuant to Executive Orders 12901 and 12973, the USTR initiated an investigation under section 302(b)(1)(A) of the Trade Act (19 U.S.C. 2412) with respect to certain acts, policies, and practices of the Korean government that pose barriers to imports of U.S. motor vehicles into the Korean market.

On October 28, 1997, (62 FR 55843), the USTR invited written comments on the acts, policies and practices of the Korean government that were the subject of this investigation, including the amount of burden or restriction on U.S. commerce caused by these acts, policies and practices, and the determinations required under section 304 of the Trade Act regarding whether they are actionable under section 301, and if affirmative, the appropriate action, if any, to take in response.

During the course of this investigation, the U.S. and Korean governments held a series of consultations on the matters under investigation. Specific Korean government practices raised during the consultations included an array of cumulative tariff and tax disincentives that have a discriminatory effect on imports, onerous and costly standards and certification procedures, financing restrictions, and a climate of bias against imported vehicles. While some of these barriers were addressed in a 1995 bilateral agreement between the United States and Korea, implementation of that agreement had been disappointing, especially as new practices had been introduced that undermined the 1995 agreement. Also discussed during the consultations was the application of the market economic reform measures that Korea is undertaking to the operation of the Korean motor vehicle sector.

On October 20, 1998, the United States and Korea concluded a Memorandum of Understanding (MOU) to improve market access of U.S. and other foreign motor vehicles to the Korean market. The new MOU addresses certain acts, policies, and practices that are unreasonable and discriminatory and burden or restrict U.S. commerce and were the subject of the section 301 investigation. Specifically, the MOU provides that the Government of the Republic of Korea will:

(a) Reduce specific motor vehicle-related taxes that have significantly increased, in comparison to Korean vehicles, the purchase price of and cost of retaining foreign motor vehicles, including: a 30 percent reduction in the Special Consumption tax until at least July 2005, and a 40 percent reduction in the rate applied to U.S.-type vehicles under the Annual Motor Vehicle Registration tax; not increase the tax differentials between engine-displacement based categories; eliminate an Education tax and the Rural Development tax on motor vehicles in Korea; equalize the Subway Bond purchase and revenue requirements for Korean and domestic foreign motor vehicles within engine-displacement categories; and, in the longer term, simplify Korea's motor vehicle tax structure and reduce the tax burden on Korea motor vehicle purchases;

(b) Lower Korea's WTO tariff bindings on motor vehicles from 80% to its current applied rate of 8% and actively participate in future multilateral negotiations aimed at reducing or eliminating tariffs in this sector;

(c) Revise standards and certification procedures that have imposed increased costs and time delays on imported motor vehicles through redundant testing and excessive documentation requirements through a number of actions, including: institution of a self-certification system by 2002 that will allow U.S. manufacturers to certify compliance of their own products with Korean safety standards; acceptance of U.S. headlamp standards; and significant streamlining of the current safety and environmental standards certification system;

(d) Institute an expeditious and efficient secured financing system for the purchase of motor vehicles that will enable Korean consumers to more easily finance purchases of U.S. vehicles; and

(e) Continue government efforts to improve public perception of imports by: addressing instances of anti-import activity targeting foreign motor vehicles, such as discriminatory use of tax audits; encouraging equal treatment of foreign and Korean motor vehicles; and actively promoting Korean understanding of the benefits of free and open trade and competition; Sport utility vehicles and minivans are specifically included in the scope of the MOU.

The MOU also sets forth goals and general policies, including the goals of substantially increasing market access for foreign motor vehicles in Korea and establishing conditions so that the Korean motor vehicle sector operates according to market principles. In that regard, the Korean government confirmed that it is implementing a wide range of economic reform measures, including structural reforms of the financial and corporate sectors, and that it expects these reforms will create a dramatic change in the Korean business environment and contribute to a more market-oriented and transparent Korean motor vehicle industry.

Section 304 Determination

(1) Korea's Acts, Policies, and Practices

Having concluded the investigation undertaken pursuant to section 302 of the Trade Act and on the basis of consultations with the Government of the Republic of Korea, the affected U.S. industry, and the relevant private sector advisory committees, the USTR has determined pursuant to section 304(a)(1)(A)(ii) of the Trade Act that certain acts, policies, and practices of the Korean government related to exports of U.S. motor vehicles to the Korean market are unreasonable and discriminatory and burden or restrict U.S. commerce.

(2) U.S. Action

The Government of the Republic of Korea has agreed to take several measures, described above, to resolve the matters under investigation. Therefore, pursuant to section 304(a)(1)(B) of the Trade Act, the USTR has determined that the appropriate action in this case is to terminate the investigation and to monitor under section 306 the Korean government's implementation of these measures to eliminate those acts, policies, and practices.

Joanna K. McIntosh,

Chairman, Section 301 Committee.

BILLING CODE 3190–01–M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–98–4671]

Notice of Request for Clearance of a New Information Collection: Local Technical Assistance Program Extent of Coverage

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the requirement in section 3506(c) (2)(A) of the Paperwork Reduction Act of 1995, this notice announces the intention of the FHWA to request the Office of Management and Budget (OMB) to approve a new information collection related to the Local Technical Assistance Program (LTAP) which provides for training, technology transfer and technical assistance to local and tribal government transportation providers. This information collection will be in the form of a survey that will document the extent of coverage of the LTAP and provide a baseline from which to measure the Program's progress in expanding that coverage between now and the year 2002.

DATES: Comments must be submitted on or before January 4, 1999.

ADDRESSES: All signed, written comments should refer to the docket number that appears in the heading of this document and must be submitted to the Docket Clerk, U.S. DOT Dockets, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590–0001. All comments received will be available for examination at the above address between 10:00 a.m. to 5:00 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped envelope or postcard.

FOR FURTHER INFORMATION CONTACT: Dr. Anna K. Bennett, LTAP Project Manager, (415) 744–2616, Federal Highway Administration, Western Resource Center, 201 Mission Street, Suite 2100, San Francisco, CA 94105. Office hours are from 7:30 a.m. to 4:00 p.m., p.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: Local Technical Assistance Program Extent of Coverage

OMB Number:

Background: The LTAP has established a network of 57 technology transfer centers at universities and state highway agencies for the purpose of improving the skills and knowledge of local and tribal transportation providers through training, technical assistance and technology transfer. The LTAP Strategic Plan, adopted in 1997, calls for increasing usage of the program to 75 percent of local and tribal governments by the year 2002. Information is needed to document the extent to which local and tribal transportation agencies recognize, utilize, and are satisfied with the services provided by their LTAP Centers. The information will establish the baseline from which progress towards the goal of increasing coverage to 75 percent of all local and tribal transportation agencies will be measured.

The information will be collected through a mail survey. Respondents will be asked to complete a brief, standardized questionnaire asking if employees of their agency are aware of the existence of their local or tribal LTAP Center, have read its newsletter, attended training sessions or utilized other technology transfer services provided by the Center within the past year, and their satisfaction with those services.

Information will be collected from a simple random sample of all local and tribal governments in the U.S. In order to sample the population of local and tribal governments in the United States and Puerto Rico with +/−three percent error at 95 percent confidence, 1,100 surveys need to be completed. Based on responses to an earlier LTAP study, a 17 percent response rate to the mail survey is anticipated. Therefore, questionnaires will be mailed to 6,500 randomly selected employees of local and tribal governments to ensure obtaining 1,100 completed survey forms.

The results of the survey will be retained by the Office of Technology Applications for comparison with the results of a subsequent collection in 2002. The results of the survey will also be presented in a report for dissemination to LTAP partners, including national associations, state departments of transportation, LTAP centers, and local and tribal governments.

Respondents: Employees of local and tribal government transportation providers.

Estimated average burden per response: 20 minutes to read and respond to the mail survey.

Estimated total annual Burden: 367 hours.

Frequency: The survey will be conducted once for a baseline measurement and again in the year 2002 to measure progress.

Public comments invited: Interested parties are invited to send comments regarding any aspect of this information collection, including, but not limited to: (1) the necessity and utility of the information collection for the proper performance of the functions of the FHWA; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB's clearance of this information collection.

Electronic access: Internet users can access all comments received by the U.S. DOT Dockets, Room PL–401, by using the universal resource locator (URL): *http://dms.dot.gov.* It is available 24 hours each day, 365 days each year. Please follow the instructions online for more information and help.

An electronic copy of this document may be downloaded using a modem and suitable communications software from the Government Printing Office Electronic Bulletin Board Service at telephone number 202–512–1661. Internet users may reach the **Federal Register**'s home page at *http://www.nara.gov/fedreg* and the Government Printing Office's database at: *http://www.access.gpo.gov/nara.*

Authority: 23 U.S.C. Section 504.

Issued on: October 28, 1998

George S. Moore, Jr.,

Associate Administrator for Administration.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Jackson County, Missouri

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement (EIS) will be prepared for proposed improvements to the transportation system in Jackson County, Missouri.

FOR FURTHER INFORMATION CONTACT: Mr. Donald Neumann, Programs Engineer, FHWA Division Office, 209 Adams St., Jefferson City, MO 65101, Telephone: (573) 636–7104 or Mr. Steve Noble, Manager, Long Range Transportation Planning, Mid-America Regional Council, 600 Broadway, Suite 300, Kansas City, MO 65105, Telephone: (816) 474–4240.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Mid-America Regional Council (MARC), will prepare an EIS for proposed improvements to the transportation system in Jackson County, Missouri. Improvements to the corridor are considered necessary to provide for a safe and efficient transportation network.

MARC initiated a Major Investment Study (MIS) in April 1997 to identify and evaluate potential transportation improvements in the Missouri River Corridor. The area studied during the MIS is generally located along the Missouri River in Clay and Jackson Counties. The boundaries of the study area were I–70 on the south, I–35 on the west, N. 48th Street on the north, and M–7 on the east. The east-west distance of the study area is approximately 17 miles. The north-south distance ranges from six miles on the eastern end to approximately 10 miles on the western end. Major Routes studied included M–210, U.S. 24, M–78, M–12, Chouteau Trafficway, Front Street, and the proposed Little Blue and South Riverfront Expressways. As a result of the MIS, this EIS will address the impacts associated with improvements on Front Street between I–29/35 and I–435, improvements on the Chouteau Trafficway between I–35 and Front street (excluding the Chouteau Bridge which is currently under construction), and construction of the South Riverfront and Little Blue River Expressways.

The goals of the proposed project established during the MIS include: 1) Improve the safety of the Missouri River Corridor facilities; 2) improve mobility in the Missouri River Corridor; 3) facilitate the development of an efficient, integrated transportation system; 4) support economic development; 5) manage the transportation system to maximize the return on the Region's investment in highway and transit networks; 6) maintain or improve the quality of the natural environment, and 7) enhance quality of life. A location study will run concurrently with the preparation of the EIS. It will advance both "build" and "no build" alternatives for evaluation by the EIS.

The scoping process, which began during the MIS, will continue with appropriate federal, state, local agencies, private organizations and citizens who have previously expressed or are known to have interest in this proposal. Preliminary information has been issued to local officials and other interested parties. Additional public meetings will be held to further engage the regional community in the decisionmaking process and to obtain public comment. A public hearing will be held to present the findings of the DEIS. The DEIS will be available for public and agency review and comment prior to the public hearing.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA or MARC at the addresses provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations Implementing Executive Order 12373 regarding intergovernmental consultation on Federal programs and activities apply to this program).

Issued: October 27, 1998.

Donald L. Neumann,

Programs Engineer, Jefferson City.

BILLING CODE 4910–22–M

UNITED STATES INFORMATION AGENCY

Development of an Educational Advisers Reference Tool and Research Service for Overseas U.S. Educational Advising Centers

ACTION: Notice—request for proposals.

SUMMARY: The Advising and Student Services Branch of the United States Information Agency's Bureau of Educational and Cultural Affairs announces an open competition for an assistance award. Public or private non-profit organizations meeting the provisions described in IRS regulation 26 CFR 1.501(c)(3)–1 may apply. In collaboration with the United States Information Agency (USIA), the organization should produce an educational advisers reference tool to provide timely and in-depth information on trends and developments in U.S. higher education and other issues and topics relevant to the USIA-affiliated overseas educational advising and information centers. The organization will also answer reference inquiries from USIA-designated educational advising offices overseas. USIA anticipates awarding up to $90,000 to one organization for these activities.

Overview

In the interest of providing this material in a broad and timely manner, USIA encourages submissions that propose delivery via electronic (e.g. web, e-mail) as well as traditional print means. The proposal should illustrate how the organization will produce an internet website, e-mail format, and/or print version to provide timely and in-depth information for the staff of the USIA-affiliated overseas educational advising and information centers which provide accurate, unbiased information on, and advise foreign nationals about, opportunities for studying in the United States. The information should be centered on an overall theme related to trends and developments in international student mobility, the practice of educational advising, or U.S. higher education which will enhance the guidance given by overseas educational advisers to international students and others who inquire about opportunities for studying in the United States.

Guidelines

The website must be designed in a user-friendly fashion, with an index of topics, and ideally in a format that can be shared directly with students with minimal repackaging by the adviser. If necessary, the website may be password protected. E-mail issues of timely topics must be distributed regularly. If a print version is produced, the organization should describe what publishing capacity will be used to assure that each issue (at least 32 pages) is produced quickly and efficiently (at least four times a year) in an attractive typeset quality format.

In addition, funds will be awarded to enable the recipient to perform supplemental research to provide in-depth responses to inquiries from USIA-affiliated educational advisers overseas. Answers to questions of general interest should be posted on the website.

The website and/or print version must acknowledge that its contents were developed, in part, under a grant from the Bureau of Educational and Cultural Affairs of the U.S. Information Agency. USIA reserves the right to use all materials produced for noncommercial purposes of educational advancement outside the U.S.

Proposed Budget

A comprehensive line item budget should be submitted together with the proposal. The budget should not exceed $90,000 for the development of the website/e-mail/print version and research service. Grants awarded to eligible organizations with less than four years of experience in conducting international educational programs will be limited to a total of $60,000. For both electronic and/or print versions, applicants may sell subscriptions and use advertising to offset production costs in excess of the grant.

The applicant is required to submit a comprehensive line item budget, based on the specific guidance in the Solicitation Package. There must be a summary budget as well as a breakdown of the administrative budget. USIA's grant assistance will not exceed $90,000. Of this amount, not more than $27,000 may be attributed to overhead expenses. The $90,000 is expected to constitute only a portion of the total project funding. Cost sharing is required and the proposal should list other anticipated sources of support. Grant applications should demonstrate financial and in-kind support.

Allowable costs for the program include the following:

(1) Salaries and fringe benefits
(2) Website design costs, printing, utilities, and other direct costs
(3) Indirect expenses, auditing costs

Applicants should refer to the Solicitation package for complete budget guidelines and formatting instructions.

Review Process

USIA will acknowledge receipt of all proposals and will review them for technical eligibility. Proposals will be deemed ineligible if they do not fully adhere to the guidelines stated herein and in the Solicitation Package. Eligible proposals will be forwarded to panels of USIA officers for advisory review. All eligible proposals will be reviewed by the Agency contracts office, as well as the USIA Area Offices and the USIA posts overseas, where appropriate. Proposals may also be reviewed by the Office of the General Counsel or by other Agency elements. Funding decisions are at the discretion of the USIA Associate Director for Educational and Cultural Affairs. Final technical authority for grant awards resides with USIA's contracting officer.

Review Criteria

Technically eligible applications will be competitively reviewed according to the criteria stated below. These criteria are not rank ordered and all carry equal weight in the proposal evaluation:

1. Program Planning

Proposals should exhibit originality, substance, precision, and relevance to design a website and e-mail system, and/or produce a publication which will successfully address the needs for timely information and in-depth and balanced exploration of issues and topics important to overseas educational advisers. In addition, the proposal should illustrate the resources and professional contacts necessary to respond in a timely manner to inquiries by overseas educational advisers are available.

2. Institution's Track Record/Ability

Proposals should demonstrate an institutional record of successful programs, including responsible fiscal management and full compliance with all reporting requirements for past Agency grants as determined by USIA's Office of Contracts. Proposed personnel and institutional resources should be adequate and appropriate to achieve the program goals.

3. Demonstrated Ability

Proposals should clearly demonstrate how the institution will meet the program's objectives and plan. The proposal should describe technological and editorial capability.

4. Project Evaluation

Proposal should provide a plan for evaluation by the grantee institution, including periodic progress reports at the end of the grant cycle, as well as intermediate reports.

5. Cost-Effectiveness

The overhead and administrative components of the proposal, including salaries, should be kept as low as possible. All other items should be necessary and appropriate.

6. Cost-Sharing

Proposals should maximize cost-sharing through other private sector support as well as institutional direct funding contributions. For both electronic and/or print versions, applicants may sell subscriptions and use advertising to offset production costs in excess of the grant.

7. Support of Diversity

Proposals should demonstrate the recipient's commitment to promoting the awareness and understanding of diversity, and should expose readers to the widest possible range of views and approaches to U.S. higher education. Attention should be given to printing articles relating to different kinds of schools and universities from various regions of the U.S.

Authorization

Overall grant making authority for this program is contained in the Mutual Educational and Cultural Exchange Act of 1961, Public Law 87–256, as amended, also known as the Fulbright-Hays Act. The purpose of the Act is "to enable the Government of the United States to increase mutual understanding between the people of the United States and the people of other countries * * *; to strengthen the ties which unite us with other nations by demonstrating the educational and cultural interests, developments, and achievements of the people of the United States and other nations* * *and thus to assist in the development of friendly, sympathetic and peaceful relations between the United States and the other countries of the world."

Programs and projects must conform with Agency requirements and guidelines outlined in the Solicitation Package. USIA projects and programs are subject to the availability of funds.

Announcement Name and Number

All communications with USIA concerning this announcement should refer to the above title and reference number E/ASA–99–08.

Deadline for Proposal

All copies must be received at the U.S. Information Agency by 5 p.m. Washington, D.C. time on December 16, 1998. Faxed documents will not be accepted, nor will documents postmarked on December 16, 1998 but received at a later date. It is the responsibility of each applicant to ensure that proposals are received by the above deadline. Grant should begin April 1, 1999 and run through March 31, 2000.

FOR FURTHER INFORMATION CONTACT: Advising and Student Services, E/ASA, Room 349, U.S. Information Agency, 301 4th Street, S.W., Washington, D.C.

20547, Tel: (202) 619–5549, Fax: (202) 401–1433, E-mail: aprince@usia.gov. Potential applicants are encouraged to contact the program office to request an Application Package, which includes more detailed award criteria; all application forms, and guidelines for preparing proposals, including specific criteria for preparation of the proposal budget. Please specify the USIA Program Officer, Ann Prince, on all inquiries and correspondences. Interested applicants should read the complete **Federal Register** announcement before addressing inquiries to E/ASA or submitting their proposals to the United States Information Agency. Once the RFP deadline has passed, the Bureau of Educational and Cultural Affairs may not discuss this competition in any way with applicants until after the Bureau proposal review process has been completed.

Submissions

Applicants must follow all instructions given in the Solicitation Package. The original and ten copies of the complete application, plus one extra copy of the cover sheet, should be sent to: U.S. Information Agency, Ref.: E/ASA–99–08, Office of Grants Management, E/XE, Room 326, 301 4th Street, S.W., Washington, D.C. 20547.

Diversity Guidelines

Pursuant to the Bureau's authorizing legislation, programs must maintain a non-political character and should be balanced and representative of the diversity of American political, social, and cultural life. "Diversity" should be interpreted in the broadest sense and encompass differences including, but not limited to ethnicity, race, gender, religion, geographic location, socio-economic status, and physical challenges. Applicants are strongly encouraged to adhere to the advancement of this principle both in program administration and in program content. Please refer to the review criteria under the "Support for Diversity" section for specific suggestions on incorporating diversity into the total proposal. Public Law 104–319 provides that "in carrying out programs of educational and cultural exchange in countries whose people do not fully enjoy freedom and democracy," USIA "shall take appropriate steps to provide opportunities for participation in such programs to human rights and democracy leaders of such countries." Proposals should reflect advancement of this goal in their program contents, to the full extent deemed feasible.

Year 2000 Compliance Requirement (Y2K Requirement)

The Year 2000 (Y2K) issue is a broad operational and accounting problem that could potentially prohibit organizations from processing information in accordance with Federal management and program specific requirements including data exchange with USIA. The inability to process information in accordance with Federal requirements could result in grantees' being required to return funds that have not been accounted for properly.

USIA therefore requires all organizations use Y2K compliant systems including hardware, software, and firmware. Systems must accurately process data and dates (calculating, comparing and sequencing) both before and after the beginning of the year 2000 and correctly adjust for leap years.

Additional information addressing the Y2K issue may be found at the General Services Administration's Office of Information Technology website at http://www.itpolicy.gsa.gov.

Notice

The terms and conditions published in this RFP are binding and may not be modified by any USIA representative. Explanatory information provided by the Agency that contradicts published language will not be binding. Issuance of the RFP does not constitute an award commitment on the part of the Government. The Agency reserves the right to reduce, revise, or increase proposal budget in accordance with the needs of the program and availability of funding. Final awards cannot be made until funds have been appropriated by Congress, allocated and committed through internal USIA procedures.

Notification

All applicant will be notified of the results of the review process on or about March 19, 1999. Awards will be subject to periodic reporting and evaluation requirements.

Dated: October 29, 1998.

John P. Loiello,

Associate Director for Educational and Cultural Affairs.

Notification

All applicants will be notified of the results of the review process on or about March 19, 1999. Awards will be subject to periodic reporting and evaluation requirements.

Judith Siegel,

Deputy Associate Director for Educational and Cultural Affairs.

BILLING CODE 8230–01–M

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–New (OP&P)]

Proposed Information Collection Activity: Proposed Collection; Comment Request

AGENCY: Office of Policy and Planning, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Office of Policy and Planning (OP&P), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed new collection of information, and allow 60 days for public comment in response to the notice. This notice solicits comments on the information that will be collected by a survey concerning the VA's three educational programs.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before January 4, 1999.

ADDRESSES: Submit written comments on the collection of information to Marcelle Habibion, Task Order Project Manager, Office of Assistant Secretary for Policy and Planning (008), Department of Veterans Affairs, 810 Vermont Ave., NW, Washington, DC 20420. Please refer to "OMB Control No. 2900–NEW (OP&P)" in any correspondence.

FOR FURTHER INFORMATION CONTACT: Marcelle Habibion at (202) 273–5058 or FAX (202) 273–5993.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Public Law 104–13; 44 U.S.C., 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, the Office of Policy and Planning invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VA's functions, including whether the information will have practical utility; (2) the accuracy of VA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Program Evaluation of VA's Education Programs.

OMB Control Number: None assigned.

Type of Review: New collection.

Abstract: The purpose of this project is to assess the effectiveness and efficiency of three education programs administered by the Department of Veterans Affairs: Montgomery GI Bill (Title 38 U.S.C., Chapter 30); Montgomery GI Bill for Selected Reserves (Title 10 U.S.C., Chapter 1606); and Dependents' Education Assistance (Title 38 U.S.C., Chapter 35). The telephone surveys will determine the extent to which each program meets its statutory intent and the expectations of veterans, school officials, legislators, and program officials. The surveys will also examine how well the programs are poised to meet the needs of veterans in the early 21st century and make recommendations as to how best to meet these needs. They will also make an independent, unbiased assessment and recommendation on a strategy to continue to deliver the best possible educational benefits and services at the least cost to all users of education benefits under these three programs administered by the Department of Veterans Affairs.

Affected Public: Individuals or households—Business or other for profit.

Estimated Annual Burden: 2,240 hours.

Estimated Time Per Respondent: 16 minutes.

Frequency of Response: One-time.

Estimated Number of Respondents: 8,400.

Dated: October 15, 1998.

By direction of the Secretary.

Sandra S. McIntyre,

Program Analyst Information Management Service.

Environmental Protection Agency

Final Guidelines for Implementation of the Drinking Water State Revolving Fund Program; Notice

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6154–7]

Final Guidelines for Implementation of the Drinking Water State Revolving Fund Program

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has published the Final Guidelines for the Drinking Water State Revolving Fund (DWSRF) program. The DWSRF program was established by the Safe Drinking Water Act (SDWA) Amendments of 1996, which were signed by President Clinton on August 6, 1996. The SDWA authorizes $9.6 billion for the DWSRF program and related programs under section 1452 from fiscal year 1994 through fiscal year 2003. For fiscal year 1997, EPA's budget includes $1.275 billion for these programs. On a national level, the Office of Water is responsible for implementing the SDWA requirements, including the DWSRF program and related programs under section 1452. The document is being published today for the benefit and interest of the general public.

DATES: The Final Guidelines were distributed to all State agencies with responsibility for the DWSRF program on February 28, 1997.

ADDRESSES: Copies of the Final Guidelines for implementation of the DWSRF program are available from the Safe Drinking Water Act Hotline, telephone (800) 426–4791. Copies are also available from the Office of Water Resource Center (RC4100), U.S. EPA, 401 M Street, SW, Washington, DC 20460. The DWSRF Guidelines may also be obtained from the EPA Web Site at the URL address http://www.epa.gov/OGWDW.

FOR FURTHER INFORMATION CONTACT: The Safe Drinking Water Act Hotline, telephone (800) 426–4791. For technical inquiries, contact James Bourne, Drinking Water Implementation and Assistance Division, Office of Ground Water and Drinking Water, U.S. EPA, (4606), 401 M Street SW, Washington, DC 20460, telephone (202) 260–5557.

SUPPLEMENTARY INFORMATION: The Drinking Water State Revolving Fund (DWSRF) program was established as a new section 1452 of the Safe Drinking Water Act (SDWA), 33 U.S.C. 300j–12, by the SDWA Amendments of 1996, Pub. L. 104–182, which were signed by President Clinton on August 6, 1996. The DWSRF is a State loan program, to be capitalized in large part by Federal contributions. Loans from the DWSRF must be made to protect public health and to achieve or maintain SDWA compliance. States have the flexibility to tailor DWSRF programs to address local needs as long as the programs meet the minimum Federal requirements in the law. States must describe how their programs will prioritize use of DWSRF funds and are required to develop a priority list of projects, subject to public review.

The SDWA amendments establish a strong emphasis on preventing contamination through source water protection and enhanced water system management. The amendments also emphasize the needs of small water systems. States may use portions of their DWSRF capitalization grants for programs that work toward attaining some of these goals and are required to reserve portions of their DWSRF loan funds for small water systems.

Interim guidance for the DWSRF program was released on October 4, 1996, to allow States to develop DWSRF programs so that capitalization grants could be awarded as soon as possible. A notice of availability of the interim guidance was published in the **Federal Register** on October 27, 1996, and announced a public comment period which ended on November 28, 1996. EPA subsequently held a series of public meetings with stakeholders to provide information about the program and to review the interim guidance. Comments received during the period of public comment and from attendees of public meetings were critical in developing the Final Guidelines for the program. After discussions with the Office of Management and Budget, the Final Guidelines for the program were released on February 28, 1997 and made widely available, including to all States, which are the recipients of capitalization grants under section 1452. The Guidelines were also made available to the general public at that time by placement on the Office of Ground Water and Drinking Water internet site. The Agency is publishing these guidelines for the benefit and interest of the public at large.

Paperwork Reduction Act

The information requirements for these Guidelines were submitted to the Office of Management and Budget (OMB) on March 14, 1997. OMB granted an emergency request for collecting information from State grant recipients on January 29, 1997 to allow for award of grants following release of the Final Guidelines. OMB approved the final requirements for collecting information from State grant recipients on June 30, 1997 and assigned OMB control number 2040–0185. The Information Collection Request is valid for a three year period. The estimated annual burden for EPA Headquarters and Regional review of applications, oversight of State programs and review of audits is 722 hours per State. The estimated annual burden per State for completing required capitalization grant applications, biennial reports and state audits is 3285 hours and the estimated annual burden for applicants to prepare applications for DWSRF assistance is 80 hours per community.

Dated: October 28, 1998.

Cynthia C. Dougherty,

Director, Office of Ground Water and Drinking Water.

DRINKING WATER STATE REVOLVING FUND PROGRAM GUIDELINES

Contents

Introduction

I. Development of a Capitalization Grant Application/Agreement
- A. Items Necessary To Establish a Loan Fund That Complies with Federal Requirements
  1. Assurance that the State has the authority to establish a Fund and to operate the DWSRF program in accordance with the SDWA
  2. Assurance that the State will comply with State statutes and regulations
  3. Assurance that the State has the technical capability to operate the program
  4. Assurance that the State will accept capitalization grant funds in accordance with a payment schedule
  5. Assurance that the State will deposit all capitalization grant funds in the Fund or Set-Aside Account
  6. Assurance that the State will provide an amount at least equal to 20 percent of the capitalization grant (State match) in the Fund
  7. Assurance that the State will deposit net bond proceeds, interest earnings, and repayments into the Fund
  8. Assurance that the State will match capitalization grant funds the State uses for 1452(g)(2) set-asides
  9. Assurance that the State will use Generally Accepted Accounting Principles
  10. Assurance that the State will have the Fund and set-aside account audited annually in accordance with Generally Accepted Government Auditing Standards
  11. Assurance that the State will adopt policies and procedures to assure that borrowers have a dedicated source of revenue for repayments (or in the case of a privately owned system, demonstrate that there is adequate security)
  12. Assurance that the State will commit and expend funds as efficiently as possible, and in an expeditious and timely manner
  13. Assurance that funds will be used in accordance with the Intended Use Plan
  14. Assurance that the State will provide EPA with a Biennial Report
  15. Assurance that the State will comply with all Federal cross-cutting authorities
- B. Intended Use Plan
  1. Priority list of projects, including description and size of community
  2. Description of criteria and method used for distribution of funds
  3. Description of the financial status of the DWSRF Program
  4. Description of the short- and long-term goals of the DWSRF Program
  5. Description of amounts transferred between the DWSRF and the CWSRF
  6. Description of the set-aside activities, and percentage of funds, that will be funded from the DWSRF capitalization grant, including DWSRF administrative expenses allowance, PWSS program support, technical assistance, etc.
  7. Description of how a State disadvantaged community program will define a disadvantaged system and the amount of DWSRF funds that will be used for this type of loan assistance
- C. Capitalization Grant Agreement
- D. Operating Agreement

II. Allotment/Use of Funds
- A. Allotment/Reallotment/Withholding of Funds
  1. Allotment formula
  2. Period of availability and reallotment
  3. Withholding of funds
  a. The Administrator will withhold funds
  b. Reallotment of withheld funds
  c. Loss of primacy
- B. Set-asides From The National Appropriation And Ceilings on State Allotments
  1. National set-asides
  a. Indian Tribes/Alaska Native Villages
  b. Health effects studies
  c. Unregulated contaminant monitoring
  d. Small system Technical Assistance
  e. Operator training reimbursement
  2. Allotment for D.C. and other jurisdictions
  3. State set-aside activities
  a. DWSRF administrative expenses
  b. State program management
  c. Small systems technical assistance
  d. Local assistance and other State programs
  e. Movement of funds between the Fund and set-aside account after award of capitalization grant
  f. Transfer of funds
- C. Types of Financial Assistance That the Fund May Provide
  1. Loans
  a. Repayment of loan
  b. Dedicated repayment source
  c. Financial security of privately-owned systems
  d. Financial, technical, and managerial capability analysis
  e. Disadvantaged communities
  f. Project funding for small systems
  2. Buy or refinance existing debt obligations
  3. Guarantee or purchase insurance for local debt obligations
  4. A source of revenue or security for payment of Fund debt obligations
  5. Earn interest on Fund accounts

III. Eligible Systems and Projects
- A. Eligible Systems
- B. Eligible Projects
  1. Compliance and public health
  2. Loan assistance to systems that meet the definition in section 1401(4)(B)
  3. Land acquisition
  4. Planning and design of a drinking water project
  5. Restructuring of systems that are in noncompliance or that lack the technical, managerial and financial capability to maintain the system
- C. Projects not eligible for funding
  1. Lack of technical, managerial and financial capability
  2. Significant noncompliance
  3. Growth
- D. Compliance without DWSRF funding

IV. State/Project Level Authorities
- A. Cross-cutting Federal Authorities
- B. Environmental Reviews
  1. Equivalency projects
  2. Non-equivalency projects
  3. EPA approval and review process

V. Funding Process
- A. 20 Percent State Match
- B. State Match for the 1452(g)(2) Set-aside
- C. Federal Funding Process
  1. General
  2. Schedule of payments
  3. Binding commitments
  4. Cash draw
  a. Projects
  b. Set-asides

VI. Reporting/Review Responsibilities
- A. State Responsibilities
  1. Biennial Report
  2. Annual audit
  3. Information management system
- B. EPA Responsibilities
  1. Annual review of DWSRF program
  2. Evaluation
  3. Compliance assurance
  4. Dispute resolution

VII. Appendices
- A. Federal Cross-cutters
- B. Criteria for Evaluating a State's Proposed NEPA-like Process
- C. Definitions

Acknowledgements

We wish to thank the many individuals who contributed to development of the Drinking Water State Revolving Fund Program Guidelines. In particular, we thank those members of the DWSRF Guidance Advisory Group for their dedication and commitment in the development of the guidelines under a very tight time schedule. We also wish to thank those members of the public who contributed comments on the Interim Guidance.

Introduction

The Safe Drinking Water Act (SDWA) Amendments of 1996 (Pub. L. 104–182) authorize a Drinking Water State Revolving Fund (DWSRF) to assist public water systems to finance the costs of infrastructure needed to achieve or maintain compliance with SDWA requirements and to protect public health objectives of the Act. Section 1452 authorizes the Administrator of the U.S. Environmental Protection Agency (EPA) to award capitalization grants to States, which in turn can provide low cost loans and other types of assistance to eligible systems.

In addition to authorizing the infrastructure fund, the SDWA Amendments also establish a strong new emphasis on preventing contamination problems through source water protection and enhanced water systems management. That emphasis transforms the previous law from a largely after-the-fact regulatory oriented program into a statute that can provide for the sustainable use of water. Central to this emphasis is the development of State prevention programs, including source water protection, capacity development and operator certification. States may use a portion of their capitalization grants to fund these eligible activities. The success of these activities will act to safeguard the DWSRF funds that are provided for improving system compliance and public health protection and help determine whether the new law's potential as a preventive environmental statute is realized.

The DWSRF program will help ensure that the nation's drinking water supplies remain safe and affordable, that drinking water systems that receive funding will be properly operated and maintained, and that permanent institutions will exist in each State to provide financial support for drinking water needs for many years to come. Congress has placed particular emphasis on assisting smaller drinking water systems and those serving less affluent populations by providing greater funding flexibility for these systems under the DWSRF, to ensure that these systems have adequate technical, managerial, and financial resources to come into or maintain compliance and provide safe water.

Under the SDWA, a State may administer its DWSRF in combination with other State loan funds, including the wastewater SRF, hereafter known as the Clean Water State Revolving Fund (CWSRF). Beginning one year after a DWSRF program receives its first capitalization grant (Fund portion), a State may transfer up to a third of the amount of its subsequent DWSRF capitalization grant(s) to its CWSRF or an equivalent amount from its CWSRF capitalization grant to its DWSRF.

These two provisions linking the DWSRF and the CWSRF signal Congressional intent to implement and manage the two programs in a similar

manner. EPA also intends to administer the two programs in a consistent manner and to apply the principles developed for the existing CWSRF to the DWSRF program to the fullest extent possible. Like the CWSRF, the DWSRF is fundamentally a State program. Each State will have considerable flexibility to determine the design of its program and to direct funding toward its most pressing compliance and public health protection needs. Only minimal Federal requirements will be imposed.

This document provides a comprehensive description of the guidelines that will apply in the operation of the DWSRF program. In basic terms, the guidelines explain:

- What States must do to receive a DWSRF capitalization grant,
- What States may do with Federal capitalization grant funds,
- What States may do with funds the law intends for activities other than project construction (set-asides) and
- The roles of both the States and EPA in managing and administering the program.

The sources of these guidelines are the Statute itself, existing regulations and policies that apply in EPA grant programs, particularly those that apply in EPA general grant regulations (40 CFR part 31) and the CWSRF program, and the Administrator's authority to issue guidelines and regulations under SDWA. EPA will incorporate the guidelines by reference in each capitalization grant award as a grant condition. Where a specific statutory or regulatory provision is the basis for a requirement, that provision is cited. EPA will follow-up these guidelines with regulations.

The capitalization grants authorized under section 1452 for the DWSRF program are generally divided between two purposes: part of each capitalization grant is to be deposited into the DWSRF Fund for providing loans and other types of assistance for drinking water infrastructure projects; the other part is to be deposited into a set-aside account(s) for programs, projects and activities that do not receive assistance from the Fund. Throughout this document, the entire program authorized by section 1452 will be referred to as the DWSRF program, the loan account as the Fund and the account or accounts for other programs, projects and activities as the set-aside account.

I. Development of a Capitalization Grant Application/Agreement

The capitalization grant agreement process begins when the State submits a capitalization grant application. A capitalization grant cannot be awarded until after Federal funds have been appropriated for the DWSRF under section 1452 and then allotted by EPA. With its application, the State must also submit an Intended Use Plan (IUP), documentation on the institutional framework of its DWSRF program, and a proposed schedule for capitalization grant payments by the EPA.

In addition to the Fund, a State may use part of the capitalization grant to encourage the development of source water protection and State prevention programs and to enhance water systems management. All DWSRF funds will be awarded through the capitalization grant process. Before applying for a capitalization grant, a State must prepare an IUP that identifies how it intends to distribute the grant among the set-aside account(s) and the Fund and includes the list of projects expected to be funded.

A State may, however, prepare this IUP in two parts. The first part would present the State's overall framework for allocation of the grant among the set-asides and the Fund, but need not include the project priority list. The second part would be the IUP for the Fund only. This two-part process will allow a State to proceed with a partial capitalization grant application (e.g., a set-aside) before it completes all of the activities required to obtain a full capitalization grant.

The State must seek meaningful public review and comment on its funding decisions in the IUP. If a State applies for the project funds and set-aside funds separately, the State must seek public review on each separate component of the IUP.

In addition to identifying the distribution of funds, the capitalization grant application outlines the State's planned DWSRF program activities, provides assurances and specific proposals for meeting requirements of the SDWA and Federal general grant regulations, and serves as the basis for negotiations between the Regional Administrator (RA) and the State on the proposed payment schedule. The IUP and the payment schedule are then incorporated into the capitalization grant agreement, which also defines the State program and operating methods. Material in these documents that does not change from year-to-year may be incorporated by reference in subsequent grant agreements or in an operating agreement (OA), which remains in effect unless the RA and the State agree to amend it.

For DWSRF program grant applications, States must submit EPA's standard application for non-construction grant assistance (EPA Form SF–424). States should submit grant applications no later than ninety days prior to the end of the period of funds availability. By so doing, EPA has adequate time to properly review the application and, as necessary, request additional information from the State. States that submit applications after this date run the risk of losing funds due to the provisions governing reallotment.

EPA Headquarters will concur on one State capitalization grant award in each Region and retains the flexibility to review additional capitalization grant applications. Headquarters may also review applications of States with more complex funding programs (e.g. leveraging). EPA Headquarters will work with the Regions to determine which State(s) will be reviewed.

A. Items Necessary To Establish a Loan Fund That Complies With Federal Requirements

The State must provide assurances in the capitalization grant application on how it will comply with the fifteen specifications discussed below for all DWSRF program funding (some apply only to the Fund). In some cases, the State must simply agree or certify in the grant application that it will comply with the specifications. In other cases, documentation on the procedures by which the State plans to ensure compliance with the specifications must be furnished. The State must include this documentation with its capitalization grant application or the Operating Agreement (OA) (see Table 1).

1. Assurance That the State Has the Authority To Establish a Fund and To Operate the DWSRF Program In Accordance With the SDWA

The State must establish a Fund and comply with section 1452 before it can receive a capitalization grant award (section 1452(a)(1)(B)).

With each capitalization grant application, the State's Attorney General (AG), or someone designated by the AG, must sign or concur in a certification that the authority establishing the DWSRF program and the powers it confers are consistent with State law and that the State may legally bind itself to the terms of the capitalization grant agreement. The AG must also provide written assurance that the DWSRF program will be administered by an instrumentality of the State that is authorized to (1) enter into capitalization grant agreements with the EPA, (2) accept capitalization grant awards made under section 1452(a)(1)(A) of the SDWA and (3) otherwise manage the Fund in accordance with the requirements and the objectives of the SDWA. Documentation supporting the AG's certification, such as copies of statutes, executive orders, or administrative orders, must be furnished with the application or reference must be made to documentation submitted with previous DWSRF capitalization grant applications. Where waiting for this certification would significantly delay awarding the first capitalization grant, the head or chief legal officer of the State agency primarily responsible for administering the DWSRF program may sign or concur in the certification at the time of the grant award. In this case the capitalization grant agreement will contain the condition requiring the State to submit the AG's or designee's concurrence within 120 days of the grant award. If the AG opinion is not received within the 120-day period, EPA will not process further payments until the certification is received.

If more than one State Agency is involved in the DWSRF program, the roles and responsibilities of each agency must be described in the application, and a copy of any Memoranda of Understanding or interagency agreement(s) that describes the roles and responsibilities between agencies, must be included with the application. However, the agency that is awarded the capitalization grant must remain accountable for the use of the funds provided in the grant agreement under EPA's general grant regulations (40 CFR 31.3).

A State may (as a convenience and to avoid unnecessary administrative costs) combine, in accordance with State law, the financial administration of the Fund with the financial administration of any other revolving fund established by the State if otherwise not prohibited by the law under which the Fund was established and if the State certifies that:

(A) All monies in the Fund, including capitalization grants, State match, bond proceeds, loan repayments and interest, must be separately accounted for and used solely for the purposes specified in section 1452(a); and

(B) The authority to establish assistance priorities and carry out oversight and related activities (other than financial administration) with respect to assistance remains with the State agency having primary responsibility for administration of the State's public water supply supervision program (primacy agency), after consultation with other appropriate State agencies (section 1452(g)(1)).

If a State is eligible to receive a capitalization grant but does not have primacy, the Governor shall determine which State agency will have the authority to establish priorities for financial assistance from the State loan fund (section 1452(g)(1)(B)). Evidence of the Governor's determination must be furnished with the application.

2. Assurance That the State Will Comply With State Statutes and Regulations

The State must agree to comply with all State statutes and regulations that are applicable to DWSRF funds, including Federal capitalization grant funds, State match, interest earnings, bond proceeds and repayments, and funds used for set-aside account activities.

3. Assurance That the State Has the Technical Capability To Operate the Program

The State must provide documentation demonstrating that it has adequate personnel and resources to establish and manage the DWSRF program (for example, current and future staffing plan, background/qualifications statements, schedule for planned training).

4. Assurance That the State Will Accept Capitalization Grant Funds in Accordance With a Payment Schedule

The State must agree to accept Federal grant payments in accordance with the negotiated payment schedule and use those payments for the activities of the DWSRF program under section 1452. As part of its capitalization grant application, the State must submit a proposed schedule of grant payments that is consistent with its proposed binding commitments outlined in its IUP, and its plan for expending set-aside funds. The payment schedule will become part of the capitalization grant agreement. The State will receive Federal funds in accordance with the provisions of the EPA-Automated Clearing House (formerly known as Letter-of-Credit). (See V.C. below)

5. Assurance That the State Will Deposit All Capitalization Grant Funds in the Fund or Set-Aside Account

The State must agree to deposit the capitalization grant in the Fund except for those portions of the grant that the State intends to use for set-aside purposes authorized under the SDWA (section 1452(a)(1)(B)). The State must maintain an identifiable and separate account(s) for the portion, or portions, of the capitalization grant to be used for set-aside activities (see II.B.3. below).

Once funds are deposited into the Fund, such monies may be used only as authorized under section 1452(f). Under some circumstances, funds may be moved after the award of the capitalization grant among authorized activities (see II.B).

6. Assurance That the State Will Provide an Amount at Least Equal to 20 Percent of the Capitalization Grant (State Match) in the Fund

The State must agree to provide an amount into the Fund equaling at least 20 percent of the amount of each capitalization grant. Except for Federal payments made from Fiscal Year (FY) 1997 appropriations, the State match must be deposited into the Fund on or before the date that each Federal capitalization grant payment is made to the State (section 1452(e)). States have until September 30, 1999 to provide the State match for grant payments already received from FY 1997 appropriations. (See V.A. for additional details.)

The State may provide its match in a form that is similar to the form of the Federal payment. For example, the Federal payment is made in the form of an increase to the level of funds available to the State through the Automated Clearing House (ACH). The State may establish a similar mechanism to provide its match.

7. Assurance That the State Will Deposit Net Bond Proceeds, Interest Earnings, and Repayments Into the Fund

The State must agree to credit net bond proceeds, interest earnings and repayments into the Fund. Fund assets may be used as a source of revenue or security for bonds, as long as the net proceeds of the sale of bonds will be deposited into the Fund (section 1452(f)(4)).

Loans for land acquisition and source water protection, made pursuant to section 1452(k)(1)(A) must be repaid. A State may deposit these repayments, including principal and interest, in the Fund, or the State may choose to deposit the repayments into a separate account dedicated to 1452(k)(1) activities. This separate account is subject to the same management oversight requirements as the Fund.

8. Assurance That the State Will Match Capitalization Grant Funds the State Uses for 1452(g)(2) Set-Asides

The State may use up to 10% of its capitalization grant for 1452(g)(2) activities. The State must match use of these funds with an equivalent amount of state expenditures or provide documentation of in-kind services. A State cannot use any of the 20% match required under section 1452(e) to also match the 10% set-aside.

9. Assurance That the State Will Use Generally Accepted Accounting Principles

The State must agree to establish fiscal controls and accounting systems, according to Generally Accepted Accounting Principles (GAAP) as promulgated by the Governmental Accounting Standards Board, that are sufficient to account for and report DWSRF Program activities. The accounting system used for the DWSRF Program must allow for proper measurement of (1) revenues earned by the DWSRF Program and other receipts, including, but not limited to, loan repayments, capitalization grants, interest earnings, State match deposits and bond proceeds; (2) expenses incurred by the DWSRF Program and other disbursements, including but not limited to, loan disbursements, repayment of DWSRF bonds, and other expenditures allowed under section 1452; (3) the assets, liabilities and capital contributions in the DWSRF Program; (4) the maintenance of the corpus of the Federal and State capital contributions made to the DWSRF Program; and (5) the DWSRF's performance in relation to its short- and long-term goals as identified in the previous IUP.

10. Assurance That the State Will Have the Fund and Set-Aside Account Audited Annually in Accordance With Generally Accepted Government Auditing Standards

The State must agree to conduct an annual audit (with separate opinion for project funds) on the Fund and set-aside account activities funded in the DWSRF program. The contents of the annual audit are discussed in more detail under Part VI of these guidelines.

The State DWSRF program shall provide an audit on an annual basis. Such audits shall be conducted in accordance with Generally Accepted Government Auditing Standards (GAGAS) issued by the Comptroller General of the United States.

The Administrator is relying on the annual audit of the DWSRF program to minimize the risk of waste, fraud and abuse and increase the chance that such occurrences will be detected and reported. As called for under GAGAS, audits should be designed to provide reasonable assurance of detecting material misstatements resulting from noncompliance with applicable laws, regulations, contracts and grant agreements and which have a direct and material effect on the determination of financial statement amounts and be developed in accordance with State audit practices established in State law. If specific information comes to the auditor's attention that provides evidence concerning the existence of possible noncompliance, auditors should apply procedures specifically directed to ascertaining whether noncompliance has occurred.

11. Assurance That the State Will Adopt Policies and Procedures to Assure That Borrowers Have a Dedicated Source of Revenue for Repayments (Or in the Case of a Privately Owned System, Demonstrate That There is Adequate Security)

The State must adopt policies and procedures to assure that borrowers have a dedicated source of revenue for the repayment of loans and must apply these policies and procedures to the portion of the loan that must be repaid. States must submit and receive EPA approval for the policies prior to the award of the first project loan. States must develop criteria to evaluate an applicant's financial ability to repay the loan, in addition to paying for operation and maintenance costs and other necessary expenses.

12. Assurance That the State Will Commit and Expend Funds as Efficiently as Possible, and in an Expeditious and Timely Manner

The State must agree to commit and expend all funds allotted under Section 1452 "as efficiently as possible" (section 1452(g)(3)), and in a timely and expeditious manner. The State must enter into binding commitments with recipients of Fund assistance equal to the total amount of each grant payment and required State match deposited in the Fund within one year of the grant payment. States need to work with loan recipients to make sure that projects are funded and completed in a timely and expeditious manner. (See V.C.3. for additional details.)

13. Assurance That funds Will Be Used in Accordance With the Intended Use Plan

The State must agree to expend DWSRF funds in accordance with an Intended Use Plan (section 1452(b)) that has undergone public review and comment. (See I.B. for additional details)

14. Assurance That the State Will Provide EPA With a Biennial Report

The State must agree to complete and submit a Biennial Report on the uses of the DWSRF program. The scope of the report covers both the Fund and set-aside account activities. The contents of the Biennial Report are discussed in more detail under Part VI of these guidelines.

States which jointly administer DWSRF and CWSRF programs, in accordance with section 1452(g)(1), may submit a report which covers both programs. If the State elects to prepare a joint report, it may either (1) submit a joint report in alternate years and an annual CWSRF report in the other years or (2) submit a joint report annually.

Even though the report covers both programs, financial information must be reported separately for each program. For example, the DWSRF and CWSRF should be reported in separate columns in audited balance sheets, income statements, and other financial statements.

15. Assurance That the State Will Comply With All Federal Cross-Cutting Authorities

The State must agree to ensure that all applicable Federal cross-cutting authorities will be complied with. (See IV.A for additional details.)

B. Intended Use Plan

The central component of the capitalization grant application is an IUP (section 1452(b)), which describes how the State intends to use available DWSRF program funds for the year to meet the objectives of the SDWA and further the goal of protecting public health.

The State must prepare the IUP, and provide it to the public for review and comment prior to submitting it to the RA as part of its capitalization grant application. EPA expects that the public review and comment process that a State uses to discuss the IUP will be open and that it will provide the public with adequate opportunity to comment on how the State plans to use capitalization grant funds. States should also respond to substantial comments received. The State must include in the capitalization grant application a description of the public review process and how it responded to major comments and concerns.

For efficient planning and to maintain consistency in calculating set-asides, scheduling payments and other matters, each IUP must conform to the fiscal year adopted by the State for the DWSRF program (e.g., the State's fiscal year or the Federal fiscal year).

In the IUP, the State must describe how it will use all funds available to the capitalization grant, including funds that will be allocated to the set-asides. Specifically, the IUP must describe how all available funds, including capitalization grants, State match, loan repayments, interest earnings, bond proceeds, and other monies deposited into the DWSRF program, are intended to be expended. States may, as an alternative, develop the IUP in a two part process, one part that identifies the distribution and uses of the funds among the various set-asides and the Fund and the other part dealing only with project funding in the Fund. The two-part process would allow a State to submit a capitalization grant application for a portion of the DWSRF program funds before they complete all of the specific funding decisions. In this situation, a State would have to conduct two rounds of public review and comment—one for the overall distribution of funds and specific details on particular set-aside uses and the other for the priority project list(s).

For example, assume that a State has decided to allocate 76% of its funds to the DWSRF Fund, 10% of its funds to the source water delineation set-aside, 4% for DWSRF administration, and 10% for the Public Water System Supervision (PWSS) program set-aside, but the State has not yet developed its project priority list(s). This State could seek public review and comment on the allocation of funds and submit a capitalization grant application for the 24% of funds that will be used for set-aside purposes. As with all grant applications, the State would have to include a detailed description of what the set-aside funds would be used for. The State would then, at a later date, develop the Fund component, including the project priority list, seek public review and comment on this list, and then submit an amendment to the capitalization grant application for the additional funds.

Because the Fund can only provide those types of assistance described in section 1452(f), funds that the State will use for set-aside activities must be placed in an account that is separate (outside) from the Fund account.

The State must prepare an IUP as long as the Fund account and/or set-aside account funds remain in operation, not just in those years in which the State submits an application for a Federal capitalization grant.

States must provide information regarding the IUP in a format and a manner that are consistent with the needs of the RA.

1. Priority List of Projects, Including Description and Size of Community

In accordance with Section 1452(b), States must develop a list of projects that will receive funding in the first year after the grant award and a comprehensive priority list of eligible projects for funding in future years. In determining the priority of funding, a States' "intended use plan shall provide, to the maximum extent practicable, that priority for the use of funds be given to projects that:

i. Address the most serious risk to human health;

ii. Are necessary to ensure compliance with the requirements of this Title [SDWA] (including requirements of filtration); and

iii. Assist systems most in need, on a per household basis, according to State "affordability criteria" (section 1452(b)(3)).

Section 1452(a)(2) of the Act identifies eligible projects as those projects "which the Administrator has determined, through guidelines, will facilitate compliance with national primary drinking water regulations* * * or otherwise significantly further the health protection objectives of this title."

Taken together, these two sections clearly signal Congressional intent that States *must give maximum priority* to projects needed for SDWA compliance, projects that provide the greatest protection to public health, and those projects which assist systems most in need on a per household basis. States *must* develop a priority list that reflects this intent and fund projects in this order, to the maximum extent practicable. The priority system must provide sufficient detail to permit the public and EPA to readily understand how the system has been established and the basis for ranking individual systems. A State that does not adhere to the above stated criteria must detail why they were unable to do so.

This is clearly different from the provisions in the CWSRF under which States can fund any project on the priority list regardless of its position on the list. To comply with this Congressional directive, EPA will annually review a States actions to see how closely the State adheres to the priority list.

Although "readiness to proceed" is not an appropriate factor in ranking projects based on their compliance and public health needs, EPA does recognize that States will need to consider this when deciding which projects to fund. This will be especially critical in the first two years, because many highly-ranked projects may not be ready to apply for assistance. Consequently, EPA will approve priority systems that take readiness to proceed into account only for the first two fiscal years.

The IUP list of projects to receive funding (project priority list) must include the name of the public water system, the priority assigned to the project, and a description of the project (including the type of project), the expected terms of financial assistance based on the best information available at the time the IUP is developed, and the population of the system's service area at the time of the loan application.

The comprehensive IUP priority list must include the priority assigned to each project and, to the extent known, the expected funding schedule for each project (section 1452(b)(3)(B)). A State may combine these two lists into one list by identifying which projects on the single list will receive funding in that year.

The State must seek public review and comment on its IUP. The IUP project list may be amended during the year under provisions established in the IUP as long as the project has been previously identified through the public participation process. The IUP may also allow for the addition of projects on an emergency basis. Such projects would include those where some type of failure was unanticipated and requires immediate attention to protect public health.

A State may bypass a project on the priority project list if the State's bypass procedures have undergone public review and comment. These bypass procedures should clearly identify the conditions which would allow a project to be bypassed and the way the State will identify which projects would receive the bypassed funds. If a State elects to bypass a project for reasons other than fiscal capacity or readiness to proceed, the State must provide a justification for this bypass and, in each specific instance, describe why it was not practicable to fund projects that were ranked higher on the priority list than the funded project. In all such cases, the State must describe its efforts to adhere to the priority list, as required by the Act, "to the maximum extent practicable". States must work with bypassed projects to ensure that the project will be eligible for funding in the following fiscal year, to the maximum extent possible.

A State must annually use at least 15% of all funds credited to the Fund account to provide loan assistance to systems serving fewer than 10,000 persons (section 1452(a)(2)), to the extent that there are a sufficient number of eligible projects to fund. States must determine the amount to be used for this provision based on the level of available funds that the State expects to have for funding DWSRF projects during the period covered by the IUP. A State that does not use at least 15% of the available funds for small systems must describe in the next IUP the steps it is

taking to ensure that a sufficient number of projects are identified to meet this requirement in future years. States that exceed the prescribed percentage of assistance to these systems in one year may bank the excess toward future years.

2. Description of Criteria and Method Used for Distribution of Funds

The IUP must describe the criteria and method that the State will use to distribute all funds. This description shall include: (1) The process and rationale for distribution of funds between the Fund and the set-aside account, (2) the process for selection of systems to receive assistance, (3) the priority and allocation of assistance the State gives to different eligible categories of projects, (4) the rationale for providing different types of assistance and terms (e.g., length of repayment, interest rate), including a description of the financial planning process undertaken by the Fund, and (5) the impact of all funding decisions (e.g., set-aside, disadvantaged communities) on the long term financial health of the Fund.

3. Description of the financial status of the DWSRF Program

The IUP must include a description of the financial status of the DWSRF Program. This description should detail: The total dollar amount in the Fund; the total dollar amount used as set-asides, including the level of funds banked; the types of projects to be funded; and the amount of the capitalization grants that will be used for disadvantaged community assistance. The IUP should include factors such as expected estimated loan demand, whether the State will leverage, and other factors that determine the short-term and long-term focus and health of the program.

4. Description of the short- and long-term goals of the DWSRF Program

The IUP must describe the short term goals of the DWSRF program, including how the capitalization grant funds will be utilized to ensure compliance and protect public health goals of the Act.

The IUP must also describe the objectives of the DWSRF program over the long-term, and how these objectives can be realized. These objectives include public health, compliance with the Act, assisting systems to ensure affordable water and maintaining the long-term viability of the Fund. The IUP should include a description of how the DWSRF program funds will be used to support other components of the State drinking water and ground water programs, including water system restructuring, capacity building, operator certification, source water protection, and wellhead protection.

5. Description of amounts transferred between the DWSRF and the CWSRF

The Governor of a State may transfer up to 33% of the DWSRF capitalization grant to the CWSRF or an equivalent amount from the CWSRF to the Fund, starting a year after the State has received its first DWSRF capitalization grant (project funds), but no later than the beginning of FY 2002 (section 302 of Pub. L. 104–182). EPA will provide additional guidelines concerning these fund transfers at a later date.

6. Description of the set-aside activities, and percentage of funds, that will be funded from the DWSRF capitalization grant, including DWSRF administrative expenses allowance, PWSS program support, technical assistance, etc.

The IUP must identify what portion of the capitalization grant a State is electing to use for set-aside activities (e.g., section 1452(g)(2), section 1452(k)), and place those funds in a set-aside account. The set-aside account must be dedicated to supporting the other activities authorized in section 1452. The IUP must describe how the funds in the separate account(s) will be used and provide a schedule for their expected use. A State must describe how it intends to use the funds and the expected accomplishments that will result from use of the funds for a given purpose. For project set-aside funds, the State must describe, at a minimum, the process by which projects will be selected and how the funds will be distributed.

Recipients of 1452(k) land acquisition or source water protection loans are required to repay the loans in the same manner as loans from the Fund. The State may place the repayments in the Fund or it may set up a separate account to continue funding eligible 1452(k) loan activities. Subsequent loans from this separate account must meet the same requirements as loans from the Fund.

7. Description of how a State disadvantaged community program will define a disadvantaged system and the amount of DWSRF funds that will be used for this type of loan assistance

A State may provide additional loan subsidies, including forgiveness of principal, to disadvantaged communities receiving Fund loans (section 1452(d)). If the State establishes a disadvantaged community program it must describe in the IUP how the program will operate. Using the best information available at the time of the IUP, this description must include: (1) A definition of disadvantaged community, (2) the total amount of the capitalization grant that may be used for providing additional subsidies, (3) to the maximum extent practicable, an identification of systems that will receive additional subsidies and the amount and (4) a description of affordability criteria that the State will use to determine the level of principal forgiveness.

The value of loan subsidies a Fund provides during the fiscal year adopted by the IUP under this provision cannot exceed 30 percent of the amount of the capitalization grant for that year (1452(d)(2)). Loan subsidies under this provision cannot be banked for future use.

C. Capitalization Grant Agreement

The Capitalization Grant Agreement (CGA) is the principal instrument by which the State commits to manage its DWSRF program, and to ensure that it conforms with the requirements of the SDWA Amendments of 1996. The CGA contains, or incorporates by reference, the following parts of the agreement: the application; the IUP; the agreed upon payment schedule; certifications or other agreement requirements discussed in the first section; the operating agreement, if used, and other documentation required by the RA. In addition to these requirements, the CGA must also define the types of performance measures, reporting requirements, and oversight responsibilities that will be required to determine compliance with section 1452. Agreement is also needed on the contents of the Biennial Report, annual audit, and the EPA review. Table 1 describes how each of the following assurances and CGA requirements must be addressed.

The capitalization grant agreement must also describe the process a State will use to ensure that systems have the technical, financial, and management capacity to operate the system before receiving a loan. If a system in non-compliance is going to receive a loan, the State must describe how the system has changed or will change its operation over the long-term.

A State may also place into a separate, non-project administration account, loan application fees or other program fees or assessments that a DWSRF program collects from loan recipients to help offset the cost of running the DWSRF program. Because these fees and assessments would be considered program income under the Agency's general grant regulations (40 CFR 31.25), the grant agreement must specify that they will be used for purposes directly related to the DWSRF program, that they will not be made available for other purposes and that they will be properly accounted for in the annual audit. The IUP must identify the amount of any fees that are placed in the non-project administration account and describe how they are used.

D. Operating Agreement

The framework and procedures of the DWSRF program that are not expected to change annually may be described in an Operating Agreement (OA) that can be included as part of the Capitalization Grant Agreement. The grant application and subsequent grant agreement may incorporate by reference relevant portions of the previous year's application. If there are proposed changes to the OA, the State will need to negotiate changes with the Region that may be necessary prior to submitting the next capitalization grant application.

The decision to prepare an OA does not entail additional program requirements, demonstrations or documentation. The OA simply describes the structure of the State's program, explains its goals and objectives, and includes review, overview, accounting, auditing and sanction provisions. Upon the successful completion of negotiations, the OA must be signed by the State signatory to the CGA and the Regional Administrator. On an annual basis, the OA must be supplemented with an Intended Use Plan that identifies the projects and activities that the State plans to support with financial assistance from the fund. Based on the OA and the Intended Use Plan, the Region will award a capitalization grant to the State. Regions and States that choose this alternative method of program implementation may find that it facilitates their program management capability.

II. Allotment/Use of Funds

Section 1452(m) authorizes a total of $9.6 billion for the DWSRF program from FY 1994 through FY 2003. This section describes allotment, reallotment, and withholding of these funds; national and State set-asides; and types of financial assistance available from the Fund.

A. Allotment/Reallotment/Withholding of Funds

1. Allotment Formula

Funds available to States from FY 1997 appropriations will be allotted according to the formula used for distributing Public Water System Supervision (PWSS) grants under section 1443 in FY 1995. Funds available to States from FY 1998 appropriations and beyond will be allotted according to a formula that reflects the needs identified in the most recent Needs Survey conducted pursuant to section 1452(h). In each case, the minimum proportional share established in the formula that each State will receive will be one percent of the funds available for allotment to all the States. The District of Columbia will also receive a one-percent share of available funds (section 1452(a)(1)(D)). The Virgin Islands and the Pacific Island territories will together receive an allotment of 0.33 percent (section 1452(j)).

2. Period of Availability and Reallotment

Funds are available to the States during the fiscal year in which they are authorized and during the following fiscal year (section 1452(a)(1)(C)). The amount of any allotment not obligated to the State at the end of this period of availability will be reallotted among other States according to the original formula used to allot these funds (FY 1997 funds: PWSS formula; FY 1998 funds and beyond: appropriate Needs Survey). Any State that has not obligated all of the funds allotted to it in the period of availability shall not be eligible to participate in the reallotment of funds for that particular fiscal year. The Administrator may reserve up to 10 percent of the funds available for reallotment to provide additional assistance to Indian tribes (section 1452(a)(1)(E)).

3. Withholding of Funds

a. The Administrator will withhold funds under the following provisions:

i. Capacity Development Authority—The Administrator will withhold 20% of a State's allotment unless the State has obtained the legal authority or other means to ensure that all new community water systems and new nontransient, noncommunity water systems commencing operation after October 1, 1999, demonstrate technical, managerial, and financial capacity with respect to each drinking water regulation in effect. This withholding provision becomes effective in FY 1999, which begins October 1, 1998. For any capitalization grant applications awarded after October 1, 1998, but before October 1, 1999 (FY 1999 funds), EPA will not obligate 20 percent of capitalization grant funds allotted to a State that does not have adequate authority in place. If a State documents by September 30, 1999, that the authority is in place to ensure that new systems demonstrate adequate capacity, then EPA will award the unobligated FY 1999 funds. If a State does not have the authority in place by September 30, 1999, it will lose the 20 percent of FY 1999 funds that were not awarded originally. EPA will withhold 20% of each successive capitalization grant allotted to a State and the withheld funds *will* be reallotted. The withholding provision will cease to apply to federal funds appropriated starting the next fiscal year after a State obtains the required authority.

ii. Capacity Development Strategy—The Administrator will withhold funds from any States that are not developing and implementing a strategy to assist public water systems in acquiring and maintaining technical, managerial, and financial capacity. The amount of a State's allotment under section 1452 that will be withheld on October 1 of each fiscal year is 10 percent of FY 2001 allotments, 15 percent of FY 2002 allotments, and 20 percent of each subsequent year's allotments. The determination of when the State meets the requirement will occur on October 1 of each year. States not meeting the requirement for that fiscal year's federal appropriation will lose funds to reallotment regardless of when the State submits the capitalization grant application. Funds will no longer be withheld once a State develops and implements its capacity development strategy. The withholding provision will cease to apply to federal funds appropriated starting the next fiscal year after a State obtains the required authority. EPA plans to issue separate guidelines for States to use in developing these strategies.

The total amount of funding that will be withheld if a State fails to meet the requirements of both of the capacity development provisions is 20 percent of the capitalization grant (section 1452(a)(1)(G)(i)).

iii. Operator Certification Program—The Administrator will withhold 20% of a State's funds unless the State has adopted and is implementing a program for certifying operators of community and nontransient, noncommunity public water systems. This withholding provision will begin two years after the Administrator publishes guidelines for certification of operators. The Administrator is required to publish guidelines no later than February 6, 1999. The withholding provision will cease to apply to federal funds appropriated the next fiscal year after a

State complies with the requirement (section 1452(a)(1)(G)(ii)).

b. Reallotment of withheld funds.

All funds withheld from a State because the State does not have the capacity development authority, does not develop and implement a capacity development strategy, and/or does not develop and implement an operator certification program, will be reallotted, using the same formula that was originally used to allot those funds. A State that has funds withheld for any one of these three activities is not eligible to receive reallotted funds for that activity. Thus, if a State does not develop an operator certification program but does have a capacity development strategy, the State would be eligible to receive a reallotment from withheld funds from States without capacity development programs but would not be eligible for reallotted funds under the operator certification provision. A State would also have to be eligible to receive reallotted funds in accordance with the reallotment provisions in section 1452(a)(1)(E) prior to being eligible to receive reallotted funds under the specified withholding provisions. This section limits reallotment to those States that have obligated all of their allotment during the period of availability.

c. Loss of primacy.

A State may not receive capitalization grant funds if the State had primary enforcement authority (primacy) for drinking water pursuant to section 1443 (section 1452(a)(1)(F)) on the date of enactment of the Safe Drinking Water Amendments of 1996 (August 6, 1996) and the State subsequently loses primacy. A State would not be eligible for future capitalization grants until primacy is restored. Wyoming and the District of Columbia did not have primacy prior to August 6, 1996. However, the law provides that they are eligible to receive DWSRF funds. The Administrator may reserve funds from the allotment of a State that loses primacy for use by EPA to administer primary enforcement responsibilities in that State. The balance of the funds not used by EPA to administer primacy will be reallotted to other States pursuant to section 1452(a)(1)(E).

B. Set-asides From the National Appropriation and Ceilings on State Allotments

Section 1452 authorizes numerous national set-sides from the appropriation for that section and allows States to use certain percentages of their allotment for various purposes other than project construction. Table 2 provides an overview of the available set-asides. Table 3 presents a flow chart for calculating these set-asides and Table 4 gives a numerical example of the set-asides. States need to determine the level of funds necessary to evaluate short-term program needs to protect public health and prevent contamination versus the long-term need to maintain an adequate level of infrastructure to address system needs over the long-term.

1. National Set-Asides

The National set-asides are reserved from the funds annually appropriated by Congress to carry out section 1452. These set-asides are:

a. Indian Tribes/Alaska Native Villages. The Administrator may reserve (the Administrator will provide these funds) 1.5% from annually appropriated funds for grants to Indian Tribes and Alaska Native Villages (section 1452(i)). EPA will provide separate guidelines regarding the selection of projects, project management, and program oversight for these grants. Indian Tribes and Alaska Native Villages that have not otherwise received either grants or DWSRF assistance under 1452 for a specific project are eligible to receive grants under this provision.

b. Health effects studies. Section 1452 requires the Administrator to reserve $10 million from annually appropriated funds to conduct health effects studies on drinking water contaminants (section 1452(n)).

c. Unregulated contaminant monitoring. Starting in FY 1998, section 1452 requires the Administrator to reserve $2 million from annually appropriated funds (section 1452(o)) to pay for the costs of monitoring unregulated contaminants under section 1445(a)(2)(C).

d. Small system technical assistance. The Administrator may reserve up to 2% of the funds annually appropriated in FYs 1997–2003 to carry out the technical assistance provisions of section 1442(e) to the extent that the total amount of funding appropriated under section 1442 is not sufficient. The set-aside from section 1452(q) plus the appropriation in 1442(e) cannot exceed $15 million per year (section 1452(q)).

e. Operator training reimbursement. The Administrator will reimburse States for the costs of training and certifying operators of drinking water systems serving 3,300 persons or fewer to meet the requirements of guidelines that the Administrator must publish by February 6, 1999 (section 1419(a) and (d)). The Congress has authorized to be appropriated $30 million annually from FY 1997 through FY 2003 for these reimbursement costs (section 1419(d)(3)). If the appropriation is not sufficient to meet these requirements, the Administrator, prior to allocating funds to the States, shall reserve such sums from 1452(m) as are necessary to provide grants to States. Funds under this provision are set-aside prior to the allotment of funds to the States, and will be provided as a separate grant.

2. Allotment for D.C. and Other Jurisdictions

The Administrator shall reserve one percent of the funds allotted to the States for the District of Columbia. The administrator shall also reserve up to 0.33% of the total funds allotted to the States for grants to the Virgin Islands, the Commonwealth of the Northern Mariana Islands, American Samoa, and Guam (section 1452(j)). The funds will be allotted according to the formula for allotting PWSS grants under section 1443(a)(4), and may be used to fund projects eligible for assistance under section 1452(a)(2). EPA will provide separate guidelines regarding the management of these set-asides.

3. State Set-aside Activities

Section 1452 authorizes States to provide funding for certain set-aside activities, described below, provided that the amount of that funding does not exceed ceilings specified in the Statute. A State must describe in the IUP the amount of funds that it will use for these activities. A set-aside account must be set up to accept these funds. Before cash can be drawn down from the federal ACH, a State must provide a workplan to EPA describing how the funds will be expended.

When set-asides are used to fund program (non-project) activities, the State and EPA must negotiate a workplan indicating how funds will be spent. No cash draws will be authorized from the federal ACH until the workplan(s) have been approved by EPA. While EPA reserves the right to require additional information from the States, the workplan should at a minimum include:

- The funding amount in dollars and as a percentage of the State DWSRF allocation;
- The number of FTEs projected for implementing each set-aside;
- The goals and objectives, outputs, and deliverables for each set-aside;
- A schedule for completing activities under each set-aside;
- The responsibilities of the agencies involved in implementing each set-aside;
- A description of the evaluation process to assess the success of work funded under each set-aside.

If a State does not expend all of its set-aside funds, a State may redirect the monies to the Fund, or it may redirect the funds to another set-aside activity as long as the maximum allowed for that activity has not been reached for the Fiscal Year from which the funds were derived. Set-aside funds may not be used to subsidize water system operation and maintenance expenses or for project activities eligible for funding from the Fund or those projects specifically not eligible for assistance from the Fund.

a. DWSRF administrotive expenses. A State may use up to four percent of the funds allotted to it for the reasonable costs of administering the programs under section 1452 and providing technical assistance (section 1452(g)(2)). These costs may include such activities as issuing debt; DWSRF program start-up costs; audit costs; financial, management and legal consulting fees; development of IUP and priority ranking system; development of affordability criteria; and cost of support services provided by other State agencies.

Expenses incurred issuing bonds guaranteed by the Fund may be absorbed by the proceeds of the bonds and need not be charged against the four percent administrative costs allowance, if done so prior to depositing the proceeds into the Fund. The net proceeds of those issues must be deposited in the Fund.

Funds that a State chooses to use for administrative purposes cannot be deposited into the Fund. Instead, these funds must be deposited into a separate account, or with other non-project funds.

The State may charge an application fee to process, manage or review an application for Fund assistance. Such fees may be collected in an account outside the Fund and used to supplement administrative expenses. Monies in this non-project fee account must be dedicated to the administrative purposes associated with the DWSRF program. If fees are collected and deposited into the Fund account, they are subject to the stipulated uses of the Fund, which does not include the use of funds for administrative purposes.

States may recover reasonable costs associated with the development of the DWSRF program, if the costs were incurred between August 6, 1996, the date of enactment of the SDWA Amendments of 1996, and the date on which the first capitalization grant for a State was awarded. Documented reimbursement costs will be counted as part of the amount, up to four percent, that a State can set aside for administrative purposes.

If the State does not obligate the entire four percent for administrative costs in one year, it can bank the excess balance and use it for administrative costs in later years.

b. State program management. A State may use up to a total of 10 percent of its allotment to:

- Administer the State PWSS program;
- Administer or provide technical assistance through source water protection programs, which includes the Class V portion of the Underground Injection Control Program;
- Develop and implement a capacity development strategy; and
- Develop and implement an operator certification program (section 1452(g)(2)).

The State must provide a dollar for dollar match (100 percent for up to 10 percent of the capitalization grant) for capitalization grant funds used for these purposes. This match is separate, and in addition to, the 20 percent match for the capitalization grant. At least one-half of the State match funds provided by the State must be in addition to the amount the State expended for the PWSS program in FY 1993 (see example on following page). Federal grant regulations preclude a State from using the same State funds to meet match requirements for two different programs. Thus, the same State dollar cannot be used to meet this match requirement and the match requirement in section 1443 of the SDWA (PWSS program grants), except that the FY 1993 match for the PWSS can offset up to one-half of the match required under section 1452 (g).

Funds used to administer or provide technical assistance for source water protection programs *shall not* be used for enforcement actions. States may credit toward the one-to-one match State dollars used for the PWSS program that are in excess of the current fiscal year State match required in section 1443. States may also credit current year expenditures on capacity development and operator certification programs toward the State's required match.

If the State does not obligate the entire 10 percent for these activities in any one year, it can bank the excess balance and use it for the same activities in later years.

c. Small systems technical assistance. A State may use up to two percent of its allotment to provide technical assistance to public water systems serving 10,000 people or fewer (section 1452(g)(2)). If the State does not use the entire 2 percent for these activities against a given allotment, it can bank the excess balance and use it for the same activities in later years. If a State chooses to use funds under this set-aside, EPA encourages States to use available funds to support small system efforts to apply for DWSRF loans. A State may use these funds to support a technical assistance team or to contract with outside organizations to provide technical assistance.

d. Local assistance and other State programs. A State may fund several other categories of activities to assist development and/or implementation of local drinking water protection initiatives (section 1452(k)). A State may use up to 15% of the capitalization grant amount for specified uses below, with the stipulation that not more than 10% of the capitalization grant amount can be used for any one activity. A State is not allowed to bank any of these funds for use in future years, with the exception of the funds used for source water delineation and assessment.

Funds loaned out under this section (i and ii) must be repaid in 20 years after completion of a project. States may place repayments in the project fund or set up a new, separate dedicated account(s) for 1452(k)(1) activities. Assistance from this separate account(s) may continue to be used for any eligible 1452(k)(1) activity.

State Program Management Match Example

Assume a State will receive a $10 million capitalization grant, and it would like to use 10% of the funds for this set-aside, which is $1 million. The State must match it with $1 million in State funds. According to the Statute, a State may receive credit for certain expenditures in FY 1993 and the current year being discussed, in lieu of having to match entirely with new appropriations. One important reminder is that at least one-half of the funds must be in addition to the amount expended by the State for the PWSS program in FY 1993.

	FY 1993	FY 1997
PWSS grant	$900,000	$1,200,000
State match for PWSS match	300,000	400,000
Additional State funds	200,000	300,000

Determination of State Credit

In lieu of providing funds for part or all of this match provision, many States may be able to credit current funds that a State is using for its PWSS program or other eligible funding. The Statute allows a State to use funds expended for

the PWSS program that are above and beyond the required PWSS State match, for both the current year ($300,000 for FY 1997 in this example) and in FY 1993 ($200,000 here). In addition, a State may credit the funds that the State is using for the State PWSS match portion in FY 1993 only ($300,000). Thus, in this example, you first look at the $300,000 from FY 1997, since the Statute requires that at least 50% of the total match come from the current year (FY 1997 in this example). The State could then potentially use up to $500,000 ($200,000 + $300,000) from FY 1993. However, in this example, the State would be limited to the use of $300,000 credit in FY 1993, due to the limitation of having only $300,000 of credit available in FY 1997. Thus, the State could use a total of $600,000 without providing new appropriations or other in-kind services. If the State wants to use the remaining $400,000 ($1 million less $600,000 already matched) in eligible set-aside funds, the State would need to provide an additional $200,000 or an equivalent amount of in-kind services. This additional $200,000 in FY 1997 would allow the State to use the additional $200,000 of unused credit from FY 1993. Thus, the State could take advantage of the full 10% set-aside with only a small amount of new funding or other in-kind contributions. In-kind services could include funds that the State currently expends on operator certification or capacity development programs. The State could also choose to simply use only $600,000 if no additional funding could be secured.

Second Example

Using the above example, if the State provided no funding for the PWSS program above the $400,000 State match in FY 1997, the allowable credit for FY 1997 would be zero. Thus, the State could not receive credit for FY 1993 allowable credits without providing State contributions in addition to the PWSS State match in FY 1997. This is due to the requirement that at least one-half of the funds be in addition to funding since 1993. For each new dollar the State provides, up to $500,000, the State could match it with eligible credits from the FY 1993 expenditures described in the example above. Thus, in order to use the full $1 million set-aside in this example, a State would have to provide $500,000 in new funding or in-kind services.

Third Example

Again using the above example, if the State provides $600,000 for the PWSS program above the State match requirement in FY 1997 (versus $300,000 as stated above), the State could use the $600,000 from FY 1997 and use $400,000 from FY 1993 as credit for the State match. In this example, the State would not have to provide any additional match in cash to take full advantage of this set-aside.

i. Assistance to a public water system to acquire land or a conservation easement for source water protection purposes:

A State may provide assistance, only in the form of a loan, to a public water system to acquire land or a conservation easement from a willing party for the purpose of protecting the system's source water(s) and ensuring compliance with national drinking water regulations.

If a State elects to use this set-aside, the State shall develop a priority setting process, or use an established priority setting process that meets the same goals, to decide what land or easements can be purchased. The process must include a requirement that public water systems demonstrate how the land or easements to be purchased will directly promote public health protection and/or compliance with national drinking water regulations. The State must seek public review and comment on this process. Furthermore, the State must identify specific parcels of land or easements purchased in the Biennial Report.

ii. Assistance to a community water system to implement voluntary, incentive-based source water quality protection measures:

A State may make a loan to assist a community water system implement voluntary, incentive-based source water protection measures in areas delineated under a source water assessment program described in section 1453 and for source water petitions. Only community (as opposed to noncommunity) water systems are eligible for this assistance. A State may establish a source water petition program and receive petitions from owners/operators or local governments requesting State assistance in the development of a voluntary, incentive-based partnership among systems, local governments, and others likely to be affected by the management measures. Only pathogenic organisms, chemicals in source water at levels above a drinking water standard, or chemicals that are not reliably and consistently below the drinking water standard can be identified as contaminants in a petition.

If a State elects to use this set-aside, the State must develop a list of systems that will receive loans, giving priority to projects that promote compliance and public health protection, and then seek public review and comment on this list.

iii. Provide funding to delineate and assess source water protection areas:

A State may use up to 10 percent of its FY 1997 capitalization grant to delineate and/or assess source water protection areas for public water systems in accordance with section 1453. Assessments include the identification of potential sources of contamination within the delineated areas. These assessment activities, which primacy States are required to undertake, are limited to the identification of contaminants regulated under the SDWA, or unregulated contaminants, selected by the State, at its discretion, when the State determines that they may pose a threat to public health. Funds set aside for this purpose shall be obligated by the State within four fiscal years after the State receives the grant from which the funds are set-aside.

Funds are available from the capitalization grant only for FY 1996 and FY 1997 to delineate and assess source water protection areas in accordance with section 1453.[1] Since there are no FY 1996 funds available for the DWSRF program, FY 1997 is the only year when funds will be available for this important activity. *EPA encourages States to determine the level of activity necessary to delineate and assess their source water protection areas, and determine the level of funding necessary to complete these activities. If needed, States should take up to 10 percent of fiscal year capitalization grant allowed by law.* EPA will review the State's determination as part of the capitalization grant application review.

iv. To support the establishment and implementation of wellhead protection programs:

The State may make expenditures from the set-aside account to establish and implement wellhead protection programs (WHP) under section 1428. Funds can be used to establish a WHP program, which a State must then submit to the EPA Region for approval. The WHP activities to be funded must be identified in the IUP.

v. To provide funding to a Public Water System to implement a technical or financial assistance under the capacity development strategy:

A State may provide assistance to a public water system as part of a capacity development strategy under section 1420(c).

e. Movement of funds between the Fund and set-aside account after award of capitalization grant. If provided for in the IUP, a State may move funds among set-aside activities or from the set-aside account(s) to the Fund after receiving an approved amendment to the capitalization grant. Once payments have been made (according to the schedule outlined in the capitalization grant award), the project funds will be considered part of the Fund and may only be used for the authorized purposes.

f. Transfer of funds. Section 302 of the SDWA Amendments of 1996 allows a State to transfer up to 33% of the capitalization grant made to a State under section 1452(m) to the CWSRF or an equivalent amount from the CWSRF to the DWSRF. This transfer is at the Governor's discretion and cannot occur until at least a year after the State has received its first DWSRF capitalization grant. EPA plans to issue guidelines at a later date concerning this transfer provision.

C. Types of Financial Assistance That the Fund May Provide

A Fund may make loans for project construction, purchase or refinance local debt obligations, guarantee or purchase insurance for local debt issues, provide revenue for or secure State bonds if the proceeds of the bonds are deposited in the Fund, and earn interest on Fund accounts (section 1452(f)).

1. Loans

A Fund may make loans with interest rates that are less than or equal to the market interest rate, including zero percent loans. The State is responsible for identifying in the IUP the method it will use to determine the "prevailing" market interest rate at the time a particular loan is executed with an assistance recipient. As part of its capitalization grant application, the State should outline its policy with respect to interest rate terms for various potential categories of assistance recipients.

A State may issue separate loans for planning, design, and construction costs. If the State had made prior loans to a recipient, the Fund may "roll over" the separate loans into a subsequent loan for construction. A State may also provide "incremental" assistance to finance a multi-year construction activity (e.g., for particularly large, expensive projects).

a. Repayment of loan. Assistance recipients (borrowers) must begin repayment of the loan(s), as provided in the loan agreement, not later than one year after completion of the project. A project is considered complete when the operations are initiated or are capable of being initiated. Recipients must complete loan repayment not later than 20 years after the completion of the project. However, States which establish a disadvantaged community loan program pursuant to section 1452(d) may provide loans to qualified recipients for up to 30 years, as long as the period of the loan does not exceed the expected design life of the project.

b. Dedicated repayment source. Each loan recipient (except for disadvantaged subsidy portion) must establish a dedicated source of revenue (or in the case of a privately owned system, demonstrate that there is adequate security) for repayment of the principal and interest due on the loan which is consistent with local ordinances and State laws. In most cases, this will be a pledge of revenues from user charges, while for privately owned systems, it could include the pledge of accounts receivable and proceeds therefrom.

c. Financial security of privately-owned systems. Eligible water systems that are privately owned must demonstrate that there is adequate security to assure repayment of the loan. In some cases a State may determine that it is appropriate to require such systems to provide credit enhancements, to pledge a variety of collateral, and/or to provide other types of security, such as corporate or personal guarantees.

d. Financial, technical, and managerial capability analysis. The State shall review the overall financial capability of the recipient to repay the loan as well as technical and managerial capability of the assistance recipient to maintain compliance with the SDWA (section 1452(a)(3)(A)(i)). Findings of the financial capability analysis may be used to determine the terms of assistance for applicants. The State may not provide assistance to any system that does not have the technical, managerial or financial capability to ensure compliance with the SDWA or is in significant non-compliance with any drinking water standard or variance. However, if assistance will ensure compliance or if the system's owner or operator agrees to take appropriate measures to ensure that the system has the necessary capability, the State may provide assistance.

e. Disadvantaged communities. A Fund may provide additional loan subsidies (e.g., principal forgiveness, negative interest rate loans) to benefit communities meeting the definition of "disadvantaged" or which the State expects to become disadvantaged as a result of the project. A "disadvantaged community" is one in which the entire service area of a public water system meets affordability criteria established by the State after public review and comment (section 1452(d)). The Administrator shall publish information, within 18 months after enactment of the SDWA amendments, to assist States in developing affordability criteria. EPA will undertake this effort in consultation with States and the Rural Utilities Service.

The State should take its affordability criteria into account when deciding the level of subsidy a disadvantaged community will receive, in order to make the loan affordable. Where capability of the system is an issue, the State must ensure that, prior to necessary funding and any other actions, the system has adequate financial, technical and managerial capability to maintain compliance.

The value of subsidies that a Fund provides during a particular fiscal year's capitalization grant cannot exceed 30 percent of the amount of the capitalization grant for that year (1452(d)(2)). Subsidies under this provision cannot be banked for future use.

f. Project funding for small systems. The Statute requires that a State use a *minimum* of 15 percent of all dollars credited to the Fund to provide loan assistance to small systems that serve fewer than 10,000 persons. The 15 percent minimum is based on the level of DWSRF funds that the State expects to have available for funding in the fiscal year addressed by the IUP.

2. Buy or Refinance Existing Debt Obligations

A Fund may buy or refinance debt obligations of municipal, intermunicipal or interstate agencies, where the initial debt was incurred and construction started after July 1, 1993 (section 1452(f)(2)). Private systems are not eligible for refinancing under section 1452(f)(2). Refinancing may entail purchasing existing municipal debt such that the proceeds of the transaction

[1] States may use funds from this set-aside for the development of Total Maximum Daily Loads (TMDL's) in limited circumstances. The State must establish a policy of allowing use of set-aside funds to develop TMDL's only if a clear cause and effect relationship can demonstrate that development of the TMDL is essential to public health protection and continuing compliance with national primary drinking water regulations. Funding TMDL's through source water set-asides is only eligible if it will prevent or reduce source water contamination or enhance the efficiency of the drinking water treatment process. In this context, TMDL activity should be weighed against other source water assessment and delineation priority activities. State source water assessment programs submitted to EPA that propose to include TMDL activity shall ensure that the development of TMDL's does not delay the completion of the source water assessments.

may be used to call the bonds. This provision is intended to encourage projects to proceed using their own means of financing in advance of the availability of Fund assistance, by offering the prospect of project refinancing at better financial terms at a later date.

Projects incurring debt and initiating construction between July 1, 1993 and the effective date of a State capitalization grant must meet the eligibility requirements of section 1452 to be eligible for refinancing. Where the original debt for a project was in the form of a multi-purpose bond incurred for purposes in addition to eligible purposes under section 1452, a Fund may provide refinancing only for eligible purposes, not for the entire debt.

If a State has credited repayments of loans made under a pre-existing State loan program as part of its State match (see V.A.), the State cannot also refinance the projects under the DWSRF. If the State has already counted certain projects toward its State match which it now wants to refinance, the State must provide replacement funds for the amounts previously credited as match.

The State should seek the advice of bond counsel or tax attorneys to ensure that these refinances do not conflict with Federal law.

3. Guarantee or Purchase Insurance for Local Debt Obligations

A Fund may provide assistance to improve the marketability of local debt obligations or to reduce interest rates to attract potential buyers of the bonds and loans (section 1452(f)(3)). These credit enhancements may take the form of guarantees or purchases of insurance, which are available from a number of insurance companies. Assistance of this type is limited to local debt obligations that are undertaken to finance projects eligible for assistance under section 1452.

4. A Source of Revenue or Security for Payment of Fund Debt Obligations

The State may use assets deposited in the Fund to "leverage" (i.e., increase) the total amount of funds available within the Fund (section 1452(f)(4)). Leveraging is accomplished by using Fund assets as a source of revenue or security for the payment of the principal and interest on revenue or general obligation bonds issued by the State. The net proceeds of the sale of the bonds secured by the Fund must be deposited into the Fund.

The security may be provided by any of the assets of the Fund, including an existing Fund balance and future revenues from loan repayments. The State may also choose to borrow against the repayment stream from outstanding loans made from an initial set of capitalization grants (or part of the capitalization grant or State match), thus increasing the financial resources of the Fund much sooner than would otherwise be possible. Bonds may be issued by an instrumentality of the State, including the State agency responsible for administering the Fund.

Note that the use of a capitalization grant to leverage does not, in and of itself, satisfy any requirements on the use of DWSRF funds. The proceeds of the bond issue must ultimately be used for providing loans and other assistance to satisfy the requirements of section 1452.

For the purposes of this section, "net proceeds" is defined as the funds raised from the sale of the bonds minus issuance costs (e.g., the underwriting discount, underwriter's legal counsel fees, bond counsel fees, financial advisor fees, rating agency fees, printing of disclosure documents/bond certificates, trustee banks' fees, various forms of credit enhancement and enhancement and other costs that may be incurred by a State agency incidental to the bond issuance).

Funds in a CWSRF cannot secure bonds issued for DWSRF assisted projects, and vice-versa, where there is the potential that assets in one Fund could be used for a purpose not authorized by the law establishing that Fund. Funds in a CWSRF cannot be used to cure a default on a project receiving DWSRF assistance because it is not an authorized type of assistance, nor is the project eligible, under title VI of the Clean Water Act. However, States may propose other leveraging methods relying on one or both Fund's assets where the potential for using those assets for an unauthorized purpose does not exist. For example, a State may use the authority to reserve one program's capitalization grant funds under section 302 of the SDWA Amendments to further secure a bond issued for one or both SRF programs. Such leveraging methods must be reviewed by the Regional Office and by EPA Headquarters before they can be implemented by the State.

5. Earn Interest on Fund Accounts

Sections 1452(c) and 1452(f)(5) authorize the State to earn interest on Fund accounts prior to disbursement of assistance (e.g., on reserve accounts used as security or guarantees). Dollars deposited must not remain in the Fund primarily to earn interest. States and municipalities should obtain the legal opinion of a bond counsel or tax attorney with respect to using the Fund to earn interest on the proceeds of a tax-exempt issue.

There are limits to the type of investments that a State can make with Fund accounts. Funds not required for current obligation or expenditure must be invested in interest bearing obligations (section 1452(c)). The authority to earn interest does not include investment methods that earn dividends or yields other than interest. Most States have laws that restrict the eligible investments of these fund accounts. Furthermore, if a State engages in a leveraged program, there may be restrictions on eligible investments in the trust indenture securing the bonds. In certain cases, the Federal tax code may limit the investments a leveraged program can make with fund accounts.

III. Eligible Systems and Projects

A. Eligible Systems

Drinking water systems that are eligible for Fund assistance are community water systems, both privately and publicly owned, and nonprofit noncommunity water systems. Federally-owned systems are not eligible to receive Fund assistance (section 1452(a)(2)).

Fund managers should seek tax advice if they plan to issue bonds, to ensure that the requirements of the Private Activity Use Rule are met, particularly with regard to funding eligible private systems.

Drinking water systems that have components of their systems in more than one State are eligible to receive funding after consultation with the regulatory agencies involved.

B. Eligible Projects

1. Compliance and Public Health

A DWSRF may provide assistance only for expenditures (not including monitoring, operation, and maintenance expenditures) of a type or category which will facilitate compliance with national primary drinking water regulations applicable to the system under section 1412 or otherwise significantly further the health protection objectives of the Act (section 1452(a)(2)).

Projects to address SDWA health standards that have been exceeded or to prevent future violations of the rules are eligible for funding. These include projects to maintain compliance with existing regulations for contaminants with acute health effects (i.e., the Surface Water Treatment Rule, the Total Coliform Rule, and nitrate standard) and

regulations for contaminants with chronic health effects (i.e., Lead and Copper Rule, Phases I, II, and V rules, and safety standards for total trihalomethanes, arsenic, barium, cadmium, chromium, fluoride, mercury, selenium, combined radium-226, -228, and gross alpha particle activity).

Projects to replace aging infrastructure are also eligible if they are needed to maintain compliance or further the public health protection goals of the Act. Examples of these include projects to:

- Rehabilitate or develop sources (excluding reservoirs, dams, dam rehabilitation and water rights) to replace contaminated sources;
- Install or upgrade treatment facilities if, in the State's opinion, the project would improve the quality of drinking water to comply with primary or secondary standards;
- Install or upgrade storage facilities, including finished water reservoirs, to prevent microbiological contaminants from entering the water system; and
- Install or replace transmission and distribution pipes to prevent contamination caused by leaks or breaks in the pipe, or improve water pressure to safe levels.

Projects to consolidate water supplies—for example, when individual homes or other public water supplies have a water supply that is contaminated, or the system is unable to maintain compliance for financial or managerial reasons—are eligible for DWSRF assistance.

The purchase of a portion of another system's capacity is eligible for a loan, if it is the most cost-effective solution.

2. Loan Assistance to Systems That Meet the Definition in Section 1401(b)

Certain entities that deliver water through constructed conveyances, other than piped water systems, are not currently considered public water supplies. The SDWA Amendments would classify such systems as public water systems unless they comply with provisions of 1401(b).

These systems are eligible for section 1452 funds for the purposes specified in 1401(b).

3. Land Acquisition

Land is eligible only if it is integral to a project that is needed to meet or maintain compliance and further public health protection. In this instance, land that is integral to a project is only the land needed to locate eligible treatment or distribution projects. In addition, the acquisition has to be from a willing seller. Land that is necessary for source water protection may be eligible to receive a loan under section 1452(k).

The cost of complying with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (the Uniform Act) is an eligible cost to be included in a DWSRF program loan. (See section on cross-cutters for a more detailed discussion of the Uniform Act.)

4. Planning and Design of a Drinking Water Project

A Fund may provide assistance for the costs of project planning, design and other related costs. The provision of assistance for design and planning costs does not guarantee a system that the DWSRF program will provide funding for the construction of the project. The State may choose to combine the loan for planning and design with a construction loan.

Costs to municipalities for preparing environmental assessment reports may be included as part of the costs of planning a project. Costs incurred by the State in reviewing the environmental assessments are considered DWSRF administrative costs.

5. Restructuring of Systems That Are in Noncompliance or That Lack the Technical, Managerial and Financial Capability to Maintain the System

A Fund may provide assistance to an eligible public water system to consolidate with other public water system(s) only if the assistance will ensure that the system returns to and maintains compliance with SDWA requirements (section 1452(a)(3)(B)).

If the system does not have the technical, managerial, and/or financial capability to ensure compliance, or is in significant noncompliance, the system may receive assistance only if (1) the assistance will ensure compliance, or (2) the owner or operator of the system agrees to undertake appropriate changes in operations. These changes include consolidation or management changes that will ensure that the system has the technical, managerial, and financial capability to ensure and maintain compliance with SDWA requirements. Costs associated with consolidation, such as legal fees and water buy-in fees, are eligible for funding.

A State should establish criteria or guidelines to help assess what types of operational or management changes may be appropriate for a water system. Further, a State should define when a system would be a good candidate for physical consolidation to solve a compliance or long-term financial issue, or when a system could consolidate by other means, such as through management consolidation.

C. Projects Not Eligible for Funding

The Fund cannot provide funding assistance for the following projects and activities:

- Dams, or rehabilitation of dams;
- Water rights, except if the water rights are owned by a system that is being purchased through consolidation as part of a capacity development strategy;
- Reservoirs, except for finished water reservoirs and those reservoirs that are part of the treatment process and are located on the property where the treatment facility is located;
- Laboratory fees for monitoring;
- Operation and maintenance expenses;
- Projects needed mainly for fire protection;
- Projects for systems that lack adequate technical, managerial and financial capability, unless assistance will ensure compliance;
- Projects for systems in significant noncompliance, unless funding will ensure compliance;
- Projects primarily intended to serve future growth.

1. Lack of Technical, Managerial and Financial Capability

A Fund may not provide any type of assistance to a system that lacks the technical, managerial or financial capability to maintain SDWA compliance, unless the owner or operator of the system agrees to undertake feasible and appropriate changes in operation or if the use of the financial assistance from the DWSRF will ensure compliance over the long-term (section 1452(a)(3)(B)(i)). The State shall develop a capacity program to evaluate each system to be funded to ensure it has adequate capacity to receive funding.

2. Significant Noncompliance

A Fund may not provide assistance to any system that is in significant noncompliance with any national drinking water regulation or variance unless the State conducts a review and determines that the project will enable the system to return to compliance and the system will maintain an adequate level of technical, managerial and financial capability to maintain compliance (section 1452(a)(3)(B)(ii)).

3. Growth

A Fund cannot provide assistance to finance the expansion of any drinking water system solely in anticipation of future population growth (section

1452(g)(3)(C)). However, assistance may be provided to address population growth expected to occur over the useful life of the facility to be funded. In determining whether or not a project is eligible for assistance, the State must determine the primary purpose of the project. If the primary purpose is to supply or attract growth, the project is not eligible to receive DWSRF funds. If the primary purpose is to solve a compliance or public health problem, the entire project, including the portion necessary to accommodate a reasonable amount of growth over its useful life, is eligible. In reviewing the proposed project, the State should review the basis for, and reasonableness of, the population projections.

A State must also consider the extent of current risk to public health in establishing funding priorities. Consequently, if a project includes substantial growth, it must be placed at the lower end of the priority list. It would be contrary to the intent of Congress, as reflected in the "anticipation of growth" provision, to fund a project with the prospect of a substantial amount of growth ahead of a project where a significant portion is attributable to rectifying a current health threat.

D. Compliance Without DWSRF Funding

The inability or failure of any public water system to receive assistance from a Fund or any other funding agency, shall not alter the obligation of a drinking water system to comply in a timely manner with all applicable drinking water standards and requirements of section 1452 (section 1452(l)).

IV. State/Project Level Authorities

A. Cross-Cutting Federal Authorities

There are a number of Federal laws, executive orders and government-wide policies that apply by their own terms to projects and activities receiving Federal financial assistance, regardless of whether the statute authorizing the assistance makes them applicable. These "cross-cutting Federal authorities" (cross-cutters) include environmental laws such as the National Historic Preservation Act and the Wild and Scenic Rivers Act, and social and economic policy authorities such as Executive Orders on Equal Employment Opportunity and government-wide debarment and suspension rules.

A few cross-cutters apply by their own terms only to the State as the grant recipient (e.g., Drug-Free Workplace Act, Pub. L. 100–692 section 5152 *et seq.*), because the authorities explicitly limit their application to grant recipients. In general, however, the cross-cutters will apply to projects and activities receiving assistance from the Fund.

The Fund may consist of funds from several sources: Federal grant dollars, State match amounts, loan repayments, and, perhaps, bond proceeds. It is therefore difficult to identify which projects are receiving Federal financial assistance and are thus, subject to the cross-cutters. Consequently, the cross-cutters will apply to an amount of funds equaling the amount of the Federal grant. Requirements imposed by the cross-cutters must be met by projects whose cumulative DWSRF funding is equivalent to the amount of the capitalization grant ("equivalency projects").

The concept of equivalency was developed for the CWSRF program, although in that program it had an additional feature. In the CWSRF program, equivalency projects were subject to a number of specific requirements listed in the Clean Water Act (section 602(b)(6)), as well as the cross-cutters. In the DWSRF program, the concept of equivalency is only used to describe which projects must comply with cross-cutters and which must undergo a tier one environmental review (see IV.B.)

Projects funded with DWSRF monies in amounts greater than the capitalization grant are not subject to these requirements, but States that apply cross-cutters to projects whose cumulative funding is greater than the amount of the Federal capitalization grant may bank this excess to meet future requirements.

All programs, projects and activities undertaken by the DWSRF program, including those undertaken as non-equivalency projects, are subject to Federal anti-discrimination laws, including the Civil Rights Act of 1964, section 504 of the Rehabilitation Act of 1973 and the Age Discrimination Act of 1975.

Because of the similarities between the DWSRF and CWSRF programs, and because the State plays a more substantial role in these two programs than in other Federal assistance programs (particularly in its relationship with assistance recipients), the method for applying cross-cutters in the DWSRF program will be the same as that used in the CWSRF program. The Agency will remain ultimately responsible for ensuring that assistance recipients comply with the cross-cutters, but will carry out this responsibility mainly through its annual oversight and approval roles. Day-to-day responsibility for overseeing funding recipients' implementation of the cross-cutters will fall upon the State. For example, where a cross-cutter requires consultation with another Federal agency, such as the U.S. Fish and Wildlife Service, the State will take this action initially. If a compliance issue cannot be resolved for a particular project through that consultation, then the State must seek the Regional Office's assistance in settling the matter. The most recent list of cross-cutters that apply is attached in Appendix A.

B. Environmentol Reviews

The environmental review principles developed for the CWSRF program will provide the basis for the development of a State environmental review process (SERP) in the DWSRF program. The SERP that applies to Fund equivalency projects must be the same as the process for CWSRF equivalency projects. Non-equivalency projects must also undergo an environmental review, but the State may elect to apply an alternative SERP to these projects.

1. Equivalency Projects

Equivalency projects are reviewed under a SERP that is functionally equivalent to the review followed by the Agency under the National Environmental Policy Act (NEPA). The State may elect to apply the procedures at 40 CFR part 6, subpart E and related subparts, or apply its own "NEPA-like" SERP for conducting environmental reviews developed for the CWSRF program. For equivalency projects, a SERP must contain the elements described below.

Legal foundation: The State must have the legal authority to conduct environmental reviews of construction projects receiving Fund assistance. The legal authority and supporting documentation must specify:

- The mechanisms to implement mitigation measures to ensure that a project is environmentally sound;
- The legal remedies available to the public to challenge environmental review determinations and enforcement actions;
- The State agency that is primarily responsible for conducting environmental reviews; and
- The extent to which environmental review responsibilities will be delegated to local recipients and will be subject to oversight by the primary State agency.

Interdisciplinary approach: The State must employ an interdisciplinary approach for identifying and mitigating adverse environmental effects including, but not limited to, those associated with cross-cutting Federal environmental authorities.

Decision documentation: The State must fully document the information, processes and premises that influence its decisions to:

- Proceed with a project contained in a finding of no significant impact (FNSI) following documentation in an environmental assessment (EA);
- Proceed or not proceed with a project contained in a record of decision (ROD) following preparation of a full environmental impact statement (EIS);
- Reaffirm or modify a decision contained in a previously issued categorical exclusion (CE), EA/FNSI or EIS/ROD following a mandatory 5 year environmental reevaluation of a proposed project; and
- If a State elects to implement processes for either partitioning an environmental review or CE from environmental review, the State must similarly document these processes in its proposed SERP.

Public Notice and Participation: The State must provide public notice when a CE is issued or rescinded, a FNSI is issued but before it becomes effective, a decision issued 5 years earlier is reaffirmed or revised, and prior to initiating an EIS. Except with respect to a public notice of a categorical exclusion or reaffirmation of a previous decision, a formal public comment period must be provided during which no action on a project will be allowed.

A public hearing or meeting must be held for all projects except for those having little or no environmental effect.

Alternatives Consideration: The State must have evaluation criteria and processes which allow for:

- Comparative evaluation among alternatives, including the beneficial and adverse consequences on the existing environment, the future environment and individual sensitive environmental issues that are identified by project management or through public participation; and
- Devising appropriate near-term and long-range measures to avoid, minimize or mitigate adverse impacts.

2. Non-equivalency projects.

The State may elect to apply an alternative SERP to non-equivalency construction projects assisted by the Fund, provided that the process:

- Is supported by a legal foundation which establishes the State's authority to review construction projects;
- Responds to other environmental objectives of the State;
- Provides for comparative evaluations among alternatives and accounts for beneficial and adverse consequences to the existing and future environment;
- Adequately documents the information, processes and premises that influence an environmental determination; and
- Provides for notice to the public of proposed projects and for the opportunity to comment on alternatives and to examine environmental review documents. For projects determined by the State to be controversial, a public hearing must be held.

3. EPA approval and Review Process

The RA must review and approve any State "NEPA-like" and alternative procedures to ensure that the requirements for both equivalency and non-equivalency projects have been met. The RA will conduct these reviews on the basis of the criteria for evaluating NEPA-like reviews contained in appendix B to these guidelines. Because these criteria are also used in the CWSRF program (appendix A to the CWSRF regulations), a State may simply adopt those for the DWSRF program. Significant changes to State environmental review procedures must be approved by the RA. The approved SERP may be incorporated in the State's operating agreement, if it elects to prepare one. (See I.D. above)

States should establish administrative procedures for monitoring, collecting and summarizing environmental review information and provide documentation of these activities in the Biennial Report. EPA's annual review will include a review of a sample of DWSRF projects to verify the application and the adequacy of the SERP.

V. Funding Process

A. 20 Percent State Match

Except for FY 1997 funds, States must deposit the 20% State match into the Fund on the date of or before receiving payments under the capitalization grant. In general, State match deposits must be in cash. When a State opts to use a "letter of credit" mechanism for its State match, payments to this letter of credit account must be made proportionally on the same schedule as the payments of Federal funds (as outlined elsewhere in these guidelines) in the capitalization grant. Monies from this State match letter of credit must be drawn into the Fund as monies are drawn on the Federal letter of credit (known as the automated clearinghouse account (ACH)).

When cash is drawn from the Federal ACH for the set-aside account only, the State may deposit its proportional share into the Fund in the form of a note receivable rather than actual cash. The note(s) must be converted to cash prior to the time when cash is drawn from the federal ACH to the project fund, in order to meet the State match requirement.

For grant payments made to the State from funds appropriated in FY 1997, the State may defer deposit of its matching amount to no later than September 30, 1999. This flexibility is provided to States which may need additional time to secure State funding for the required matching amount. Note that even if the State defers deposit of its matching amounts, it must identify the source of its matching funds in the capitalization grant application and agree to provide the State match for grant payments already received from the FY 1997 appropriations by September 30, 1999. Thus, States will have to match the funds that have been received as payments or are drawn down in cash, in order to reach the proportional match requirement of 20%, before additional funds can be expended from the federal ACH.

States may acquire the matching amount from a variety of sources, including legislative appropriations, proceeds from State issued bonds, revenues from State taxes or assessments, and funds maintained in other State accounts. Bonds issued by the State to derive the match may be retired from the interest payments made to the Fund on loans awarded by the Fund if the net proceeds from the State issued bonds are deposited in the fund. Loan repayments including principal and interest of a loan must be repaid to the Fund; with only the interest portion of repayments and interest earnings of the Fund as a source of funds to retire State bond issues that provide the State match. This flexibility to retire State debt should not be used to the extent that it endangers the long term financial goals and objectives, and financial condition of the DWSRF program, as described in the IUP. If the State provides a match in excess of the required amount, the excess balance may be banked toward match requirements associated with subsequent capitalization grants.

The State may already manage a dedicated revolving fund which provides assistance for activities consistent with section 1452(a)(2) of the SDWA. The State may credit toward its match requirement State monies deposited into this dedicated fund between July 1, 1993 and prior to the receipt of a capitalization grant under section 1452(a) of the SDWA if:

(1) The monies were deposited in an SRF that subsequently received a capitalization grant and, if the deposit

was expended, it was expended in accordance with section 1452 of the SDWA;

(2) The monies were deposited in a separate fund that has not received a capitalization grant, they were expended in accordance with section 1452 of the SDWA and an amount equal to all repayments of principal and payments of interest from these loans will be deposited in the Federally capitalized fund; or

(3) The monies were deposited in a separate fund and used as a reserve consistent with section 1452 and an amount equal to the reserve is transferred to the Federally capitalized fund as its function is satisfied.

B. State Match for the 1452(g)(2) Set-Aside

The State must agree to deposit into the set-aside account where the 1452(g)(2) funds will be deposited, a dollar for dollar match, up to 10 percent of the capitalization grant. States may acquire the matching amounts from a variety of sources, in particular, PWSS funding credits discussed in II.B.3.b. If additional funds are required, a State may use legislative appropriation or other State funds.

C. Federal Funding Process

1. General

A State will receive each capitalization grant payment in the form of an increase to the ceiling of funds available through a separate Fund account set up in the EPA-Automated Clearing House (EPA–ACH). Cash will be transferred to the State from the U.S. Treasury on a reimbursement basis, after the assistance recipient has billed the DWSRF program for work completed and the DWSRF program requests reimbursement from EPA. The State then reimburses project assistance recipients for costs incurred—a process known as the disbursement from the DWSRF.

2. Schedule of Payments

A State must include a payment schedule in its capitalization grant agreement that is based on its projection of binding commitments (see below) and use of set-asides in the State's Intended Use Plan. Increases in the ceiling of funds available in the EPA–ACH will be made in accordance with the schedule of payments. All payments will be made by the earlier of 8 quarters from the date of a capitalization grant award or 12 quarters from the date of allotment. The schedule of payments applies to all funds in the capitalization grant, including those funds that are used for set-aside activities.

3. Binding Commitments

In order to demonstrate continuing progress in project (both Fund and set-aside projects) initiation, and to further the intent of Congress to "commit(s) and expend(s) funds * * * as efficiently as possible* * *" (section 1452(g)(3)(A)), the State must agree to enter into binding commitments to provide financial assistance under the DWSRF program with assistance recipients. A binding commitment is a legal obligation by the State to a recipient of assistance that defines the terms for DWSRF assistance. The binding commitment should include a description of the project to receive financial assistance, the expected terms of the assistance, and expected date of project initiation and project completion.

Binding commitments must be made in an amount equal to the amount of each grant payment that is deposited into the Fund and State match within one year after the receipt of each grant payment.

The State must continue to make progress in providing Fund assistance by entering into binding commitments equaling the amount of the grant payment and State match within one year after it receives a grant payment. To facilitate compliance with this requirement, the State may wish to plan for binding commitments equal to the federal capitalization grant less the non-project set-asides plus the State match (Federal funds only for the FY 1997 funds). Then, if some projects are unable to proceed for unforeseen reasons, the State will still be able to comply with the requirement. The State may make binding commitments for more than the required amount, and bank the "excess" balance towards the binding commitment requirements of subsequent grant payments.

If a State is concerned about its ability to comply with the binding commitment requirement, it should notify the RA before it fails to fulfill its responsibility, and propose a revised payment schedule.

4. Cash Draw

The ACH process is structured so that neither the DWSRF program nor the assistance recipients will be required to provide interim financing on financial transactions of the DWSRF program. Transfer procedures have been established to ensure that cash will be in the DWSRF program account within two days after the Agency receives a valid request for cash draw from the State. To effect this two day transfer, the Agency will only subject requests to account verification. The Agency will not review DWSRF program documents (e.g., construction status of projects, adequacy of voucher documentation) as part of the cash draw process.

Cash draws from the DWSRF–ACH are limited by the ceiling available in the DWSRF–ACH. However, in the event of an imminent default (e.g., debt service payments to bondholders and resulting need for a cash draw from a DWSRF–ACH for use as a security or guarantee), the Agency can amend the grant agreement and payment schedule to allow the State to draw cash immediately, up to the total amount of the DWSRF–ACH committed to the guarantee or security. The DWSRF or the assistance recipient must first incur a cost in order for cash to be drawn against the DWSRF–ACH. The State may draw cash from the DWSRF–ACH for the proportionate Federal share of eligible costs at the time those costs have been incurred.

The following subsections describe the cash draw rules that apply to the different types of assistance a Fund can provide.

a. Projects

i. Loans

The State may draw cash from the DWSRF–ACH when the Fund receives a request from a loan recipient, based on incurred costs, including pre-building and building costs.

ii. Refinance or Purchase of Municipal Debt

For completed construction, cash draws will be made at a rate no greater than equal amounts over the maximum number of quarters that capitalization grant payments are made, and up to the portion of the DWSRF–ACH committed to the refinancing or purchase of the local debt. Cash draws for incurred building costs will generally be treated as refinanced costs. With the approval of the RA, the State may draw cash immediately when it is prepared to refinance for up to five percent of each fiscal year's capitalization grant or two million dollars, whichever is greater, to refinance or purchase local debt.

For projects or portions of projects that have not been constructed, the State may draw cash based on incurred construction costs according to the rule for loans.

For the purchase of incremental disbursement bonds from local governments, cash draws will be based on a schedule that coincides with the rate at which construction related costs are expected to be incurred for the project.

iii. Purchase of Insurance

The State may draw cash to purchase insurance as premiums are due.

iv. Guarantees and Security for Bonds

In the event of an imminent default in debt service payments on a guaranteed or secured debt, the State can draw cash immediately up to the total amount of the DWSRF–ACH that is dedicated to the guarantee or security. If a balance remains after the default is covered, the State must negotiate a revised schedule for the remaining amount dedicated to the guarantee or security.

In the absence of default, the State can draw cash up to the amount of the DWSRF–ACH dedicated for the guarantee or security based on actual construction cost. The amount of the cash draw would be the actual construction costs multiplied by the Federal share of the reserve multiplied by the ratio of the reserve to either the amount guaranteed or the proceeds of the bond issue.

In addition, in the case of a security, the State can identify a group of projects whose value equals approximately the total of that portion of the DWSRF–ACH and the State match dedicated as a security. The State can then draw cash based on the incurred construction costs of the selected projects only, multiplied by the ratio of the Federal portion of the security to the entire security.

Where the cash draw rules discussed immediately above would significantly frustrate a State's program, the Agency may permit an exception to these cash draw rules and provide for a more accelerated cash draw, where the State can demonstrate that:

- There are eligible projects ready to proceed in the immediate future with enough costs to justify the amount of the secured bond issue;
- The absence of cash on an accelerated basis will substantially delay these projects;
- If accelerated cash draws are allowed, the Fund will provide substantially more assistance; and
- The long term viability of the State program to meet water quality needs will be protected.

When the ACH is used for securing State issued bonds, cash draws cannot be made at a rate greater than equal amounts over the maximum number of quarters that payments can be made. Exceptions to this limitation are in cases of default and where cash draws are based on construction costs for all projects.

b. Set-Asides

States may draw down federal funds for set-aside use without the need to provide a State match in the form of cash (see V.A.). The one exception is the required one-for-one match, where a State elects to use up to 10 percent of the funds to be used for 1452(g)(2)(A–D). A State must provide the match prior to or at the time the State requests the federal funds, which is the same as the requirement for the 20 percent State match.

VI. Reporting/Review Responsibilities

Each State must submit a Biennial Report to the Administrator on the State's activities which receive funding under section 1452.

The Administrator has determined that the Agency shall conduct reviews of the DWSRF program on an annual basis. The Annual Review is necessary to carry out the Agency's Federal fiduciary responsibilities and to assure that States are implementing the program as efficiently as possible (section 1452(g)(3)(A)). Specific elements of the Agency's Annual Review are outlined below.

Several other programs may receive funding from the State's allotment, including operator certification, small systems technical assistance, source water protection, and wellhead protection. Agency review of these other programs shall generally be conducted separately in accordance with procedures described in program specific guidelines. The Agency may develop additional guidelines to reflect new components for the other eligible programs receiving funds pursuant to section 1452.

A. State Responsibilities

1. Biennial Report

The State should submit its Biennial Report to the RA according to the schedule established in the grant agreement.

The Biennial Report should contain detailed information on how the State has met the goals and objectives of the previous two fiscal years as stated in the IUP and grant agreement. The Report should provide information on loan recipients, loan amounts, loan terms, project categories of eligible cost, and similar details on other forms of assistance. This information should be provided in a format and a manner that is consistent with the needs of the Regional Office. The Report should also describe the extent to which the existing DWSRF program financial operating policies, alone or in combination with other State financial assistance programs, will provide for the long term fiscal health of the Fund, attain and maintain compliance with the Safe Drinking Water Act, and carry out other provisions specified in the legislation.

The State must submit a detailed financial report as part of the Biennial Report. At a minimum, the financial report shall include the financial statements and footnotes required under GAAP to present fairly the financial condition and results of operations.

In addition, the State must establish in its DWSRF program Biennial Report that it has:

- Reviewed all DWSRF funded projects in accordance with the approved State Environmental Review Procedures;
- Deposited its match (cash or State ACH) on or before the date on which each grant payment was made;
- Made binding commitments to provide assistance equal to the Federal capitalization grant less set-asides funds plus the State match funds within one year after receiving the grant payment, except for FY 1997 (100%);
- Managed the DWSRF program in a fiscally prudent manner and adopted policies and processes which promote the long-term financial health of the Fund(s);
- Complied with Agency grant regulations (40 CFR part 31) and specific conditions of the grant;
- Complied with Federal cross-cutting authorities that apply to the State as a Federal grantee and those which flow through to assistance recipients;
- Provided assistance only to eligible water systems and for eligible purposes under these guidelines; and
- Funded only the highest priority projects listed on the IUP, according to their priority and readiness to proceed, and have documented any procedures for by-passing priority projects on the IUP.

The State must provide, in the Biennial Report, all information necessary to demonstrate that the State remains eligible to receive its full allotment of funds provided under section 1452(m). Information on the other eligible programs provided in the State's biennial DWSRF program report shall not replace reporting requirements of other Agency program-specific guidelines. At its option, the State may wish to incorporate by reference or attach copies of the most recent copies of other reports to the Agency describing progress under the other eligible programs.

2. Annual Audit

The State must conduct an annual audit of the Fund, to be prepared by the State or an independent auditor in accordance with the standards of the

General Accounting Office (otherwise known as Generally Accepted Government Auditing Standards). Set-aside monies used for projects, in particular monies loaned out under section 1452(k)(1)(A), must also be covered by a separate audit. Programmatic set-asides may be covered by the Single Audit Act.

The audits must provide an auditor's opinion on the DWSRF financial statements, a report on internal controls and a report on compliance with laws and regulations. The audits may be conducted in conjunction with audits conducted under the Single Audit Act. However, a State's Single Audit report alone will not meet the DWSRF audit requirement.

Those set-asides that are not directly related to the revolving fund should be audited under the guidelines of the Single Audit Act, including OMB Circular A–133 and OMB's Compliance Supplement for Single Audits of State and Local Governments.

3. Information Management System

In conjunction with the States, the Agency shall develop and implement an information management system which includes regularly updated data on funds available and assistance provided by the DWSRF program. To the extent practical, this system will be coordinated with the implementation of a similar effort in the CWSRF program. Once developed, States will be required to provide information for the information system. The Agency will use this information to assess the program on a national basis and to monitor State progress in years in which Biennial Reports are not required. In particular, the Regional Offices will use the information to assist in conduct of the annual reviews.

B. EPA Responsibilities

1. Annual Review of DWSRF Program

EPA will conduct annual reviews of each DWSRF program to assess the success of each program in meeting the objectives of section 1452. The purposes of the Annual Review are to (1) assess the success of the State's performance of activities identified in the IUP, the State's Biennial Report, the Operating Agreement (if used), and the DWSRF program information management system, (2) determine how the DWSRF is achieving the intent of section 1452 and the overall goals and objectives of the SDWA as amended, (3) determine compliance with the capitalization grant agreement, and (4) assess the financial status of the Fund. The time period for conduct of Agency Annual Reviews is not connected to the period of award of Federal capitalization grants (i.e., Annual Reviews will continue even after Federal appropriations are no longer available).

EPA will complete an Annual Review of the IUP and the Biennial Report covering the same fiscal year according to the schedule established in the grant agreement (generally within 60 days of receipt of the Biennial Report in the year it is due, and approximately the same date on the year the Biennial Report is not due). After reasonable notice by EPA, the State or loan recipient shall make available to the EPA such records as the EPA reasonably requires to review and determine State compliance with the requirements of section 1452 of the SDWA as amended in 1996. EPA may conduct on-site visits as needed to provide adequate programmatic review. During years in which a State Biennial Report is not required, the Region will, to the extent practicable, obtain information necessary to conduct its Annual Review from the DWSRF Information System. If necessary, the Region will request the State to clarify information in the system or provide additional information. Requests for such supplemental information shall be kept to a minimum necessary for conduct of the Annual Review.

Upon completion of its Annual Review, the Region will prepare a Program Evaluation Report (PER). The Region shall submit the draft PER to the State for review and comment prior to preparing the final PER.

Identification and resolution of issues need not be limited to the Annual Review process. As the Region becomes aware of issues in DWSRF program operations, the Region shall consult with the State as appropriate. EPA will review the adequacy of State program management procedures and compliance with procedures as described in the State's capitalization grant application and Operating Agreement (if used).

The following is a list of review topics which may be included as part of the Annual Review:

Compliance/General Program Management

- Compliance with capitalization grant conditions and EPA grant regulations;
- Compliance with the State assurances incorporated in the capitalization grant agreement(s);
- Consistency of DWSRF program operations with the State's short and long term goals and objectives as reflected in the DWSRF capitalization grant application(s) and grant agreements;
- Coordination between the DWSRF program and other State drinking water program management activities (e.g., source water protection, wellhead protection, capacity development, assistance to small systems);
- Compliance with requirements of section 1452 (e.g., eligibility of recipients, types of projects, and types of financial assistance provided);
- Program administration costs; adequacy of staffing; and
- Adequacy of State in filing timely "UCC Financing Statements" to ensure security on loans to private systems.

Pace of Program

- Status of binding commitments and progress in initiating and completing projects;
- Compliance with projections of Federal outlays and adequacy of efforts to manage outlays, both for the current year as well as the period covered by the Annual Review; and
- Size of uncommitted fund balance.

Project Level Management

- Compliance with cross-cutting Federal authorities;
- Adequacy of State environmental review procedures (including consideration of mitigation, consultation with appropriate State and Federal environmental officials, and adequacy of project documentation);

Adequacy of State procedures for reviewing assistance applicants' financial (financial capability and credit analysis), managerial and technical capabilities;

- Adequacy of State procedures to review proposed dedicated repayment sources and financial security demonstrations;
- Adequacy of loan agreements (e.g., inclusion of assistance terms; accounting, audit, and record keeping procedures; default management provisions; and compliance with applicable State and Federal requirements);
- Adequacy of on-going State oversight of the financial, managerial and technical capability of assistance recipients and appropriateness of State actions to resolve areas of concern.
- Consistency of assistance recipients with IUP (e.g., names of recipients, assistance amounts, terms of assistance); and
- Adequacy of construction management oversight (e.g., change orders, compliance with applicable labor laws, adherence to schedule, record keeping).

Financial Management

- Adequacy of State financial management system (including documentation relating to Federal cash draws, deposit of State matching funds, posting of repayments and interest earnings);
- Timeliness of flow of funds to assistance recipients;
- Adequacy of financial statement of the DWSRF program;
- Adequacy of fund balance to meet financial responsibilities (e.g., current operating expenses, debt service payments, funding of reserves, long-term financial assistance needs);
- Comparison of actual expenditures to budget;
- Adequacy of State internal controls to prevent waste, fraud and abuse (e.g., processing of payments, financial accounting);
- Adequacy of loan portfolio management (including billing and collections, aging of accounts, actions to prevent payment default);
- Repayment record, including defaults and potential for defaults;
- Mix and relative risk of financial assistance types (e.g., various interest rates, guarantees, refinancings, disadvantaged community assistance);
- Adequacy and reasonableness of State fund investment practices;
- Appropriateness of State policies and strategies with respect to impacts on the long-term financial viability of the DWSRF program;
- Reasonableness of the disadvantaged community program and consistency of its implementation with the approved program; and
- Adequacy of the State's cash flow analysis, review of financial trends, and long term forecasting of project assistance needs.

2. Evaluation

The Administrator shall prepare an evaluation of the effectiveness of the DWSRF programs' operations through FY 2003 (section 1452(r)).

3. Compliance Assurance

The Administrator will develop guidelines necessary to assure effective program management and to prevent waste, fraud, and abuse (section 1452(g)(3)). The Agency will assist the State in achieving and maintaining compliance with program objectives and requirements. There may be cases, however, when technical support may be insufficient or where a State may be reluctant or unable to correct identified problems. This section of the guidelines outlines procedures and potential actions which may be necessary in cases of non-compliance.

If the annual review or audit reveals that the State has not complied with its capitalization grant agreement or other requirements under section 1452, or if the State does not manage the DWSRF program in a financially sound manner (e.g., allows consistent and substantial failures of loan repayments), the Agency may take action under the enforcement provisions of the general grant regulations at 40 CFR 31.43.

Before taking such action the Agency will issue a notice of non-compliance with the capitalization grant agreement and prescribe appropriate corrective action. The State's corrective action must remedy the specific instance of non-compliance and adjust program management to avoid non-compliance in the future.

If within 60 days of receipt of the non-compliance notice, a State fails to take the necessary actions to obtain the results required by the EPA, or provide an acceptable plan to achieve the results required, the Agency may suspend payments to the DWSRF until the State has taken acceptable actions (40 CFR 31.43(a)(3)). Once the State has taken the corrective action deemed necessary and adequate by the Agency, the withheld payments shall be released and scheduled payments shall recommence.

If the State fails to take the necessary corrective action deemed adequate by the Agency within twelve months of receipt of the original notice, any suspended payments may be deobligated and reallotted to other States. All future payments may be withheld from a State (40 CFR 31.43 (a)(4)), and reallotted, until such time that adequate corrective action is taken and the Administrator certifies that the State is back in compliance.

4. Dispute Resolution

Any State applicant or recipient that has been adversely affected by an Agency action or omission may request a review of such action or omission. The procedures are codified in the Agency's general grant regulations at 40 CFR part 31, subpart F.

VII. Appendices

A. Federal Cross-Cutters

Environmental Authorities

- Archeological and Historic Preservation Act of 1974, Pub. L. 86–523, as amended.
- Clean Air Act, Pub. L. 84–159, as amended.
- Coastal Barrier Resources Act, Pub. L. 97–348.
- Coastal Zone Management Act, Pub. L. 92–583, as amended.
- Endangered Species Act, Pub. L. 93–205, as amended.
- Environmental Justice, Executive Order 12898.
- Floodplain Management, Executive Order 11988 as amended by Executive Order 12148.
- Protection of Wetlands, Executive Order 11990.
- Farmland Protection Policy Act, Pub. L. 97–98.
- Fish and Wildlife Coordination Act, Pub. L. 85–624, as amended.
- National Historic Preservation Act of 1966, Pub. L. 89–665, as amended.
- Safe Drinking Water Act, Pub. L. 93–523, as amended.
- Wild and Scenic Rivers Act, Pub. L. 90–542, as amended.

Economic and Miscellaneous Authorities

- Demonstration Cities and Metropolitan Development Act of 1966, Pub. L. 89–754, as amended, Executive Order 12372.
- Procurement Prohibitions under Section 306 of the Clean Air Act and Section 508 of the Clean Water Act, including Executive Order 11738, Administration of the Clean Air Act and the Federal Water Pollution Control Act with Respect to Federal Contracts, Grants, or Loans.
- Uniform Relocation and Real Property Acquisition Policies Act, Pub. L. 91–646, as amended.
- Debarment and Suspension, Executive Order 12549.

Social Policy Authorities

- Age Discrimination Act of 1975, Pub. L. 94–135.

Title VI of the Civil Rights Act of 1964, Pub. L. 88–352.[2]

- Section 13 of the Federal Water Pollution Control Act Amendments of 1972, Pub. L. 92–500 (the Clean Water Act).
- Section 504 of the Rehabilitation Act of 1973, Pub. L. 93–112 (including Executive Orders 11914 and 11250).
- The Drug-Free Workplace Act of 1988, Pub. L. 100–690 (applies only to the capitalization grant recipient).
- Equal Employment Opportunity, Executive Order 11246.
- Women's and Minority Business Enterprise, Executive Orders 11625, 12138 and 12432.
- Section 129 of the Small Business Administration Reauthorization and Amendment Act of 1988, Pub. L. 100–590.
- Anti-Lobbying Provisions (40 CFR Part 30) (applies only to capitalization grant recipients).

[2] The Civil Rights Act and related anti-discrimination statues apply to all the operations of the SRF program.

B. Criteria for Evaluating a State's Proposed NEPA-Like Process

The following criteria will be used by the RA to evaluate a proposed SERP:

(A) *Legal foundation.* Adequate documentation of the legal authority, including legislation, regulations or executive orders and/or Attorney General certification that authority exists.

(B) *Interdisciplinary approach.* The availability of expertise, either in-house or otherwise, accessible to the State Agency.

(C) *Decision documentation.* A description of a documentation process adequate to explain the basis for decisions to the public.

(D) *Public notice and participation.*

(1) A description of the process, including routes of publication (e.g., local newspapers and project mailing list), and use of established State legal notification systems for notices of intent, and criteria for determining whether a public hearing is required.

(2) The adequacy of a rationale where the comment period differs from that under NEPA and is inconsistent with other State review periods.

(E) *Consider alternatives.* The extent to which the SERP will adequately consider:

(1) Designation of a study area comparable to the final system;

(2) A range of feasible alternatives, including the no action alternative;

(3) Direct and indirect impacts;

(4) Present and future conditions;

(5) Land use and other social parameters including recreation and open-space considerations;

(6) Consistency with population projections used to develop State implementation plans under the Clean Air Act;

(7) Cumulative impacts including anticipated community growth (residential, commercial, institutional and industrial) within the project study area; and

(8) Other anticipated public works projects including coordination with such projects.

C. Definitions

Administrative Expenses—Costs incurred in managing and operating the SRF program. A State may use up to 4% of its allotment for program administration expenses.

Annual Review—EPA's assessment of the success of a State DWSRF program.

Appropriations—Statutory authority that, after apportionment by OMB, allows Federal agencies to obligate funds and make payments from the Treasury for specified purposes.

Assurances—Certifications or pledges by the State that it will meet the requirements of the SDWA and other requirements of the program.

Automated Clearing House—A Federal payment mechanism that transfers cash to States and other recipients of Federal assistance using electronic transfers from the Treasury through the Federal Reserve System.

Biennial Report—The State's SRF Report to EPA which contains information on how the State has met the goals and objectives of the previous two fiscal years as stated in the Intended Use Plan and grant agreement.

Bank/Banking—Crediting amounts (contributed by the State to SRF eligible projects or activities) to the SRF in excess of amounts required towards meeting certain requirements of future capitalization grants.

Binding Commitment—A legal obligation by the State to a local recipient that defines the terms and the timing for assistance under the SRF.

Capitalization Grant—The assistance agreement by which EPA obligates to award funds allotted to a State for purposes of capitalizing that State's revolving fund and funds for other purposes authorized in section 1452.

Capitalization Grant Application—An application for Federal assistance submitted by a State, which in addition to the application form includes an Intended Use Plan, proposed payment schedule, and operating agreement or other documents describing how the State intends to operate its SRF.

Certification/Certify—Documentation signed by the responsible party that specific requirements or standards have been or will be met.

Community Water System—A public water system that: (a) Serves at least 15 service connections used by year-round residents of the area served by the system; or (b) regularly serves at least 25 year-round residents.

Cross-Cutting Authorities—Federal laws and authorities that apply by their own terms to projects or activities receiving Federal assistance.

Debt Obligation—A legal obligation or liability to pay something to someone else.

Default—Failure to meet a financial obligation such as a loan payment.

Disadvantaged Community—The service area of a public water system that meets affordability criteria established after public review and comment by the State in which the public water system is located.

Disbursement—The transfer of cash from the SRF to the assistance recipient.

Disbursement Schedule—A quarterly schedule of estimated disbursements from the SRF.

Eligible System—Community water systems, both privately or publicly owned, and nonprofit noncommunity water systems.

Environmental Review—An environmental review process conducted by States that complies with 40 CFR Part 6, Subpart E or an alternative "NEPA-like" State environmental review.

Equivalency Projects—Projects that must total the amount equal to the Federal capitalization grants and must comply with environmental review requirements and Federal cross-cutting authorities.

Financial Health/Integrity—The ability of the DWSRF to address SDWA needs and to be continually available to meet future needs.

Guarantee—A promise to provide municipal bondholders with full and timely payment of principal and interest on the municipal debt obligation to the limit of the guarantee, in the event of default by the municipality.

Intended Use Plan—A document prepared each year by the State, which identifies the intended uses of the funds in the SRF and describes how those uses support the goals of the SRF.

Leveraging—The use of the capitalization grant as the security for the sale of State bonds. Leveraging does not include State financing arrangements in which repayment streams, rather than capitalization grant or ACH are used as the primary security for the bond issue.

Loan—An agreement between the DWSRF and the local recipient through which the SRF provides funds for eligible assistance and the recipient promises to repay the principle sum back to the SRF over a period not to exceed 20 years, except for disadvantaged communities that may receive a loan for up to 30 years (that does not exceed the life of the project), at an interest rate established at or below market interest rates (may be interest free).

Net Bond Proceeds—The funds raised from the sale of the bonds minus issuance costs (e.g., the underwriting discount, underwriter's legal counsel fees, bond counsel fee, financial advisor fee, rating agency fees, printing of disclosure documents/bond certificates, trustee banks' fees, various forms of credit enhancement and other costs that may be incurred by a State agency incidental to the bond issuance).

Noncommunity Woter System—A public water system that is not a community system.

Noncompliance—Failure to satisfy the terms of the capitalization grant agreement, including unmet assurances, invalid certifications, or failure to manage the DWSRF in a financially sound manner.

Nonprimacy States—States that do not exercise primary enforcement responsibility for public water systems.

Operating Agreement—An optional document in which the State may establish the basic framework and procedures of the DWSRF that are not expected to change annually.

Payment/Payment Schedule—A payment is an action by EPA to increase the amount of funds available for cash draw in the Automated Clearing House. A payment is not a transfer of cash to the State, but only an authorization making funds available for transfer to the State when a cash draw request is submitted. A payment schedule, indicating the timing and size of the payments to be made, will be agreed upon by EPA and the State based on the State's projection of binding commitments.

Refinancing—Purchase of a previously executed debt obligation where initial debt was incurred and construction initiated after July 1, 1993.

Set-Aside—Use of allotted State funds for a range of specific SDWA related activities identified in section 1452, to encourage source water protection and other State drinking water program activities.

State Match—Funds equaling at least 20% of the amount of the capitalization grants which the State must deposit into the Fund. The State must also provide a 10% match if the State uses the 1452(g)(2) set-aside.

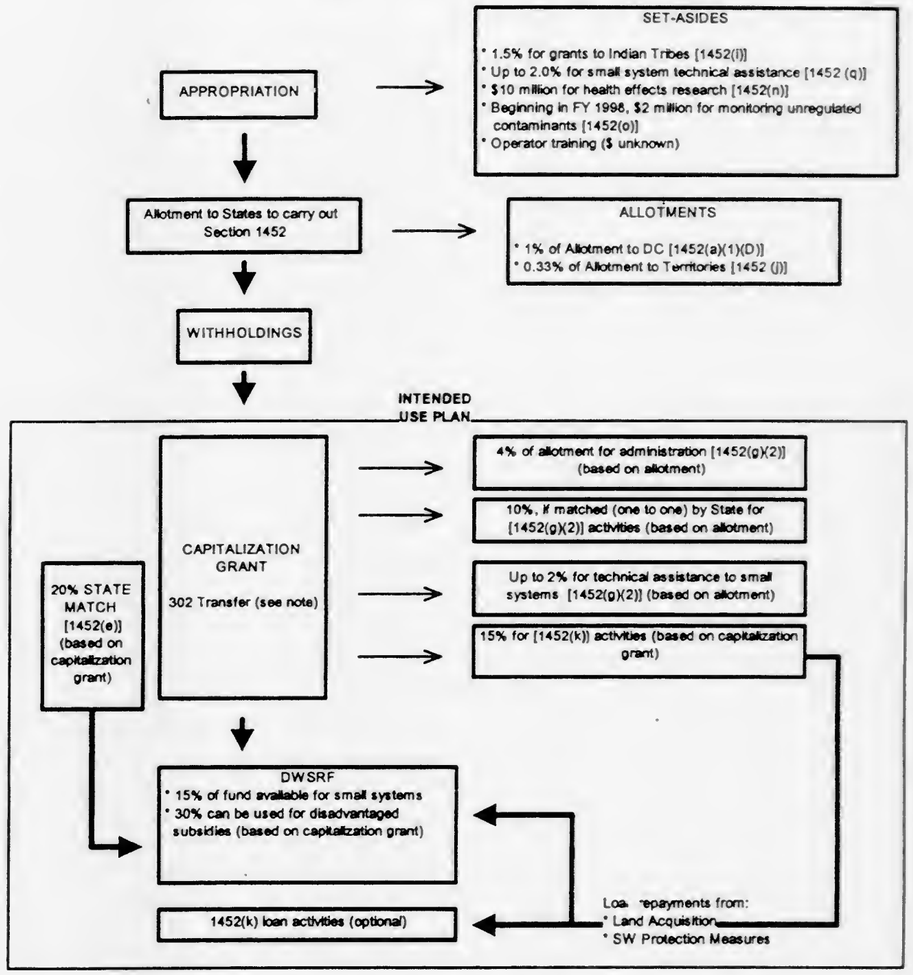
TABLE 1.—STATE REQUIREMENTS FOR THE CAPITALIZATION GRANT AGREEMENT

Requirement	How addressed
CG Application:	
Part 31 Assurances (Grant Conditions)	Agree to.
Established SRF & Instrumentality	Document (AG certif.).
Comply with State Statutes/Regulations	Agree to.
Technical Capability To Manage Program	Document.
Review Technical, Financial & Managerial Capability of Assistance Recipients	Agree to.
Intended Use Plan (IUP):	
(1) List of Projects	Propose.
(2) By-pass Procedures	Describe, if applicable.
(3) DWSRF Goals	Describe.
(4) Activities To Be Supported	Describe.
(5) Disadvantaged Communities	Describe, if applicable.
(6) Assurances and Proposals:	
—Environmental Review	Document/certify.
—Federal Cross-Cutters	Agree to.
—120% Binding Commitments	Agree to.
—Timely Expenditure	Agree to.
(7) Criteria & Method for Distributing Funds	Describe.
Payment Schedule/Schedule of Estimated DWSRF Disbursements	Agree to and Propose.
Other Activities To Be Supported by Set-Asides	Intended Use Plan.
Transfer of Funds To/From CWSRF	Describe.
Grant Agreement:	
Accept Grant payments	Certify.
Deposit Funds in DWSRF Fund	Certify.
Deposit State Match:	
—Source of the Match	Identify.
—Deposit of Match	Certify.*
120% Binding Commitments	Agree to.
Information Management System	Agree to.
Use State Laws & Procedures	Agree to.
Use GAAP (Generally Accepted Accounting Principles)	Agree to.
Use GAGAS (Generally Accepted Government Auditing Standards)	Agree to.
Recipient Accounting	Agree to.
Biennial Report	Agree to.
Annual Audit	Agree to.
Environmental Review**	Agree to.
Program Oversight	Agree to.
All changes to the agreement or OA require a formal grant amendment.	

* For payments from FY 1997 appropriations, the State must agree to provide the certification no later than September 30, 1999, of the availability of its match and provide the State match for grant payments already received from the FY 1997 appropriations. A State that fails to certify by that date may not receive further grant payments until the match is deposited.

** States required to certify environmental review process.

TABLE 2.—SET-ASIDES AND FUNDING CEILINGS IN THE DRINKING WATER SRF PROGRAM



Before Allotment to States	
Programmatic	
$10 Million	Health effects research.
$2 Million	Unregulated contaminant monitoring (starting in FY 1998).
Up to 2%	Technical assistance to small systems (optional) Capped at $15 Million when combined with funds appropriated under Section 1442.
Undecided	Reimbursement of operator training expenses projects.

TABLE 2.—SET-ASIDES AND FUNDING CEILINGS IN THE DRINKING WATER SRF PROGRAM—Continued

Projects	
1.5%	Indian Tribes/Alaska Native Villages.
Based on Allotment to States	
Projects	
1.0%	District of Columbia.
0.33%	Virgin Islands, Territories.
After Allotment to States	
Programmatic	
Up to 4%	Administration of DWSRF program and technical assistance.
Up to 2%	Technical assistance to small systems.
Up to 10%	Assistance to State programs (PWSS, SWP, capacity development, operator certification.)
Up to 15%	Combination of the following:** • Loans for public water systems to acquire land or conservation easements. • Loans for community water systems to implement SWP measures or to implement recommendations in SW petitions. • Technical and financial assistance to public water systems for capacity development. • Expenditures to delineate or assess SWP areas. • Expenditures to establish and implement wellhead protection programs. **Each activity separately can receive no more than 10% of the capitalization grant amount.
Projects	
Up to 30%	Loan subsidies for disadvantaged communities.
Based on Fund Amount	
Projects	
Minimum 15%	Loans toward small systems (population <10,000) under Section 1452.

Environmental Protection Agency

Revised Allotment Formulas for State and Interstate Monies Appropriated Under Section 106 of the Clean Water Act; Notice

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6184–9]

Revised Allotment Formulas for State and Interstate Monies Appropriated Under Section 106 of the Clean Water Act

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of revised allotment to formulas and request for comment.

SUMMARY: This notice announces revised allotment formulas for allotting funds appropriated under section 106 of the Clean Water Act (CWA) to States and to interstate agencies for use in administering specific elements of Clean Water Act programs. The notice includes FY 1999 allotments for States and interstate agencies and requests comments on the revised formulas for use in FY 2000 and beyond.

Section 106 of the CWA authorizes the Environmental Protection Agency (EPA) to provide grants to States, interstate agencies, and Indian Tribes to administer programs for the prevention, reduction, and elimination of water pollution, including the development and implementation of ground-water protection strategies. EPA has revised the CWA section 106 allotment formulas, which are based on "the extent of the pollution problem," to better reflect its current understanding of the significant sources of pollution nationwide.

The revised formula will be phased in FY 1999, with no State or interstate agency receiving less than its FY 1998 allotment. EPA is seeking comment on the revised formula for use in FY 2000 and beyond.

DATES: The revised formula for FY 1999 is effective November 5, 1998.

Comments on the revised formula for the full implementation for FY 2000 should be in writing and must be postmarked by January 4, 1999. Electronic comments should be posted by January 4, 1999.

ADDRESSES: Public Comments. All public comments regarding the revised formula shall be submitted no later than January 4, 1999, to: Water Docket, W–98–28, EB 57, USEPA Headquarters, 401 M. St., S.W., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Carol Crow, Office of Wastewater Management (4201), 401 M Street, SW, Washington, D.C. 20460, (202) 260–6742, Facsimile: (202) 260–1156, e-mail: crow.carol@epa.gov.

SUPPLEMENTARY INFORMATION: CWA section 106 provides general authority for grants to States, Tribes, and interstate agencies to support key elements of clean water programs. Grants provide States, Tribes, and interstate agencies with critical resources for the effective management of water pollution control programs including water quality monitoring, standards development, and permit issuance. The Administration proposed and Congress appropriated a significant increase in grant funds to support these activities in FY 1999.

The CWA directs the EPA Administrator to allocate section 106 grants funds "on the basis of the extent of the pollution problem." The existing section 106 formula is derived from data more than 25 years old and is based on population data from the 1960s and an estimate from the early 1970s of the number of large cattle feedlots, industrial and municipal point sources and power plants.

Reports of water quality conditions around the country provided by States under section 305(b) of the CWA indicate that the location and nature of the sources of water pollution has changed significantly since the early 1970s. In evaluating this data, EPA decided to consider whether an alternate formula would better comply with the statutory directive to allocate funds among States and interstate agencies based on the "extent of the pollution problem." (The allotment formula for the Tribal Section was revised in 1998 and it is not affected by this action.)

EPA organized a work group consisting of geographically-balanced representation from the Agency, seven States, and an interstate agency to review the existing formula and consider other approaches. The State representatives were recommended by the Environmental Council of States (ECOS), the Association of State and Interstate Water Pollution Control Administrators (ASIWPCA), and the Ground Water Protection Council (GWPC). EPA posted minutes from the work group meetings, background data, and all written comments on an Internet website and invited all States and Interstate agencies to participate in the discussion via the website and contact with work group members.

The work group evaluated a wide range of alternative approaches and ultimately developed and recommended a new allocation formula. The work group believed that the formula should largely be based on impairment, but decided not to give impairment *too much* weight because of shortcomings in data related to water quality monitoring. The work group therefore recommended other surrogates for "extent of the pollution problem," including surrogates for point and nonpoint sources of pollution.

Work group members were concerned about the impact of reductions in funding levels on clean water programs in individual States. A "safety net" was built into the new formula to provide for a gradual transition to adjusted funding amounts. The revised formula specifically provides that no State lose more than five percent compared with the previous year or more than a total of 20 percent compared with 1998. In addition, a significant increase in the section 106 grant funds appropriated in FY 1999 ensures that no State will receive less section 106 funding in FY 1999 than it did in FY 1998, while providing additional resources to [most] States. The funding set-aside for interstate agencies will be increased to its historic (FY 1976) level of 2.5 percent of the total State monies appropriated under section 106.

Since no State or interstate agency will receive less funding in FY 1999 than it did in FY 1998, the revised funding formula will be effective November 5, 1998 for use in distributing FY 1999 section 106 funds to State and interstate agencies. EPA is soliciting comments on the revised formula for use in FY 2000 and beyond. EPA is particularly interested in comments on the accuracy of the data bases used in deriving the formula and how well the components meet the statutory test of representing the "extent of the pollution problem" and associated workload. After reviewing the comments on the formula, EPA will adopt an allotment formula for FY 2000 and beyond.

Please send an original and three copies of your comments and enclosures to W–98–28, Comment Clerk, Water Docket (MC 4101), USEPA, 401 M., St. S.W. Washington, D.C., 20460. Comments must be received or post-marked by midnight January 4, 1999. Comments may also be submitted electronically to *ow-docket@epa.gov*. Electronic comments must be submitted as an ASCII file avoiding the use of special characters and form of encryption. Electronic comments must be identified by the docket number W–98–28. Comments and data will also be accepted on disks in WP 5.1, 6.1 or ASCII file format. Electronic comments on this notice may be filed online at many Federal Depository Libraries.

Dated: October 26, 1998.

J. Charles Fox,

Assistant Administrator for Water.

IV. The Revised Section 106 Interstate Allotment Formula for FY 1999

I. Definitions

As used herein, the following words and terms will have the meaning set forth below:

(a) The term "allotment" means the sum reserved for each State or interstate agency from funds appropriated by Congress under the § 106 Grant Program. The allotments for States and interstate agencies will be determined by separate formulas. However, both the § 106 State allotment formula and the § 106 interstate allotment formula are designed to reflect the extent of the water pollution problem in the several States.

(b) The term "State" means a State, the District of Columbia (DC), the Commonwealth of Puerto Rico (PR), the U.S. Virgin Islands (VI), Guam (GU), American Samoa (AS), and the Commonwealth of the Northern Mariana Islands (CNMI). [CWA § 502(3)]

(c) The term "interstate agency" means an agency of two or more States established by, or pursuant to, an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator. [CWA § 502(2)]

(d) The term "component" refers to one of the six factors selected for use in the revised § 106 State allotment formula. Each component of the revised formula was selected based on its potential contribution to the extent of water pollution problems within the several States and to the workload of State water pollution control programs.

(e) The term "element" refers to one of the constituent factors used to provide greater specificity to a component in the revised § 106 State allotment formula. Certain components are composed of two or more "elements." For example, the non-point source component of the revised § 106 State allotment formula is composed of an agricultural element, a logging element, and an abandoned mine element.

(f) The term "sub-element" refers to one of the constituent factors used to provide greater specificity to an element in the revised § 106 State allotment formula. Certain elements are composed of two or more "sub-elements." For example, the abandoned mine element of the non-point source component is composed of a soft-rock mining sub-element and a hard-rock mining sub-element.

II. Background

A. Description of the Existing Section 106 Allotment Formula

The allotment formula currently employed to allot funds appropriated under CWA § 106 was first used in FY 1974. The existing § 106 allotment formula was revised in 1976, and provided for the implementation of a separate allotment formula for interstate agencies based on the level of funding each interstate agency had received in FY 1973. The State and interstate allocation ratios were published in the **Federal Register** on April 27, 1976. These proportionate shares have been used to allocate § 106 funds ever since.

The existing § 106 State allotment formula is based on four point source factors. When the existing formula was first adopted in 1973 (for the determination of FY 1974 allotments), the understanding was that the number of point sources in a particular State adequately represented the "extent of the pollution problem" [as required by CWA § 106(b)] in that State. Thus, each of the four point source factors selected for use in the formula enumerates potential contributors to point source pollution. The four selected point source factors were:

(1) number of cattle feedlots with more than 1,000 head;
(2) number of industrial dischargers;
(3) number of municipal dischargers; and
(4) number of nuclear, oil, coal, and gas power plants.

The Agency specified that all States and interstate agencies would be guaranteed an allotment no less than their FY 1973 allotment for FY 1974 and beyond. FY 1973 allotments were distributed according to § 7 of the Federal Water Pollution Control Act (FWPCA). Two components of the FWPCA § 7 allotment formula, population and population density, drove approximately five-sixths of the FY 1974 allotments and continue to drive the existing § 106 State allotment formula.

B. Rationale for Formula Revision

The existing § 106 State allotment formula is based on point source pollution factors, and minimum levels of funding are determined largely by population and population density as established in the Federal Water Pollution Control Act, § 7 allotment. However adequate this formula was in 1974, it does not reflect the complexity of current State water pollution control programs. Also, the data used in the formula are from the 1960's and early 1970's. In the 25 years since the formula was developed, much has changed.

EPA recognized the critical need to develop a revised § 106 allotment formula which reflects the current understanding of the factors that contribute to water quality impairment and which utilizes current data. Thus, the revised formula is designed to allot funds in a manner which more accurately reflects the problems that currently confront State water pollution control programs. To achieve this objective, the revised § 106 formula is based on six components which reflect the extent of water quality impairment and associated potential workload in determining State allotments.

C. The Development Process for the Revised Section 106 Allotment Formulas

An EPA/State Work Group examined ways in which the existing § 106 State allotment formula could be updated and made responsive to the workload associated with water quality impairment. A separate Interstate Work Group, composed of EPA personnel and representatives from six interstate agencies, participated in the development of the revised § 106 interstate allotment formula.

Work Group recommendations contributed heavily to the development of the revised § 106 allotment formulas. First, to ensure that monies were directed to the areas where the greatest water quality problems and the greatest workload exists, weighting factors that reflected the individual contribution of the six different components in the revised § 106 State allotment formula were developed. Second, modulating procedures (e.g., a base level of funding, a maximum increase in annual funding, etc.) were built into both the revised § 106 State and interstate allotment formulas to prevent disruption of State and interstate programs. Third, a five-year update cycle was implemented in each revised § 106 allotment formula to ensure that supporting data for the

formulas would be updated regularly. The weights, modulating procedures, and the update cycle for the revised § 106 allotment formulas are discussed more fully in sections III and IV of this notice.

III. The Revised Section 106 State Allotment Formula

A. Components

The revised § 106 State allotment formula, as defined in this notice, is based on six components that were selected to more accurately reflect the extent of the water pollution control problems in the United States. These components reflect a shift in emphasis from point source pollution and population data to an emphasis on water quality impairment and the associated workload. The six components selected for use in the revised § 106 State allotment formula were:

(1) surface water area;
(2) ground water use;
(3) water quality impairment;
(4) point sources;
(5) non-point sources; and
(6) population of urbanized areas.

A primary reason for the development and adoption of a revised § 106 State allotment formula was the need to improve the quality and the consistency of the data used for allocating § 106 funds. The selected components for the revised § 106 formula are presented in Table 1 (below) with their associated elements, sub-elements, and supporting data sources.[1] Data sources for the components were selected on the basis of data availability, currency, quality, national consistency, and reliability.

EPA invites comments on the revised formula prior to issuing FY2000 planning targets in early 1999. Comments will be accepted until January 4, 1999.

Table 1.—Components of the Revised Section 106 State Allotment Formula

Formula component	Element	Sub-element	Data source
1. Surface Water Area.	.....	.....	U.S. Department of Commerce, Bureau of the Census, Statistical Abstract of the United States.
2. Ground Water Use.	(a) Non-agricultural withdrawals.	.....	U.S. Department of the Interior, U.S. Geological Survey, Preliminary Estimates of Water Use in the United States.
	(b) Population served by CWSs that use GW for the majority of their source water.	.....	U.S. Environmental Protection Agency, Office of Water, Safe Drinking Water Information System.
3. Water Quality Impairment.	(a) Impaired rivers and streams (miles).	.....	U.S. Environmental Protection Agency, Office of Water, National Water Quality Inventory (based on § 305(b) reports submitted by the States).
	(b) Impaired lakes, ponds, and reservoirs (acres)		
	(c) Impaired estuaries (square miles)		
	(d) Impaired wetlands (acres)		
	(e) Impaired ocean shoreline (miles)		
	(f) Impaired Great Lake shoreline (miles)		
4. Potential Point Sources.	(a) Agriculture (total animal units).	.....	U.S. Department of Commerce, Bureau of the Census, Census of Agriculture.
	(b) Industrial	(i) Manufacturers	U.S. Department of Commerce, Bureau of the Census, Economic Census, Census of Manufactures.
		(ii) Mining operations	U.S. Department of Commerce, Bureau of the Census, Economic Census, Census of Mineral Industries.
		(iii) Power plants	U.S. Department of Energy, Office of Coal, Nuclear, Electric, and Alternate Fuels, Inventory of Power Plants in the U.S.
	(c) Municipal dischargers	.....	U.S. Environmental Protection Agency, Office of Water, Wastewater Facilities Database.
5. Potential Non-Point Sources.	(a) Agriculture	.....	U.S. Department of Commerce, Bureau of the Census, Census of Agriculture.
	(b) Logging	.....	U.S. Department of Commerce, Bureau of the Census, Economic Census, Census of Manufactures.
	(c) Abandoned mines	(i) Abandoned soft-rock (coal) mining operations.	U.S. Department of the Interior, Office of Surface Mining, Abandoned Mine Land Inventory System.
		(ii) Abandoned hard-rock mining operations.	U.S. Department of the Interior, Bureau of Mines, Minerals Availability System/Mineral Inventory Location System.
6. Population of Urbanized Area.	.....	.....	U.S. Department of Commerce, Bureau of the Census, Census of Population and Housing.*

* The population living in urban areas (Census designated places with 2,500 or more residents) rather than population living in urbanized areas (one or more Census designated places and the associated urban fringe that together have 50,000 or more residents) will be used for PR and the Insular Areas (VI, AS, GU, and CNMI).

[1] Note that in the future additional elements and sub-elements may be considered for inclusion in the revised § 106 allotment formula if they are deemed appropriate and if they are reflective of the extent of water quality impairment or State workload.

To account for the fact that not all of the selected formula components contribute equally to the extent of the water pollution problem within the States, and to address concerns regarding the current consistency of some of the new data sources, each formula component will be weighted individually. Component weights will be phased-in over the course of the first and second five-year implementation periods, according to the schedule presented in Table 2 (below).

TABLE 2.—COMPONENT WEIGHTS IN THE REVISED SECTION 106 STATE ALLOTMENT FORMULA—FY 1999 AND BEYOND

Component	FY 1999 (percent)	FY 2001 (percent)	FY 2004+ (percent)
Surface Water Area	13	13	12
Ground Water Use	11	12	12
Impairment	13	25	35
Potential Point Sources	25	17	13
Potential Non-Point Sources	18	15	13
Population of Urbanized Area	20	18	15
Total	100	100	100

The increase in the weight of the impairment component will be phased in over time to allow for improvement in the consistency of its data source, the CWA § 305(b) report. This gradual transition will also provide greater fiscal stability for State and interstate water pollution control programs.

B. Minimum Level of Funding

Under the revised § 106 State allotment formula, all States will be allotted a minimum level of funding. In FY 1999, the minimum level of funding for each State will be the larger of: (1) the guaranteed base level of funding for which the State qualifies (defined below); or (2) the FY 1998 § 106 allotment for that State. This second provision allows for stability during the transition to the revised § 106 State allotment formula. In FY 2000 and all future years, the minimum level of funding for a specific State will be the largest of: (1) the guaranteed base level of funding for which the State qualifies; (2) 95 percent of the State's § 106 allotment from the previous fiscal year; or (3) 80 percent of the State's FY 1998 § 106 allotment. By limiting the maximum annual reduction in a State allotment to 5 percent of the previous fiscal year's allotment and by limiting the maximum total reduction to 20 percent of the State's FY 1998 § 106 allotment, the revised formula allows for gradual funding adjustments. These modulating procedures will serve to ease the burden that unrestricted allotment reductions might otherwise create.

The base level of funding for the fifty States, DC, PR, VI, and GU will be set at $500,000 for FY 1999, while the base level of funding for AS and CNMI will be set at $250,000 for FY 1999. The base level of funding is designed to ensure a minimum level of funding for the operation of a water quality pollution control program. Beginning in FY 2000, to protect against erosion in the real value of the base level of funding due to inflation, annual adjustments will be made to the base level of funding as determined by changes to the Consumer Price Index.

C. Maximum Annual Funding Increase

All States will be subject to a cap on the annual increase in their § 106 allotment. The maximum funding level any State can receive will be 150 percent of that State's § 106 allotment from the previous fiscal year.[2]

D. Set-Asides

A portion of the § 106 appropriation available to States will continue to be set aside for interstate agencies. For FY 1999 and every year thereafter, the size of this set-aside will be set at its historic (FY 1976) level of 2.6 percent of the total § 106 State appropriation.

Funds will be distributed to interstate agencies on the basis of a separate allotment formula. The particulars of the revised § 106 interstate allotment formula are described in detail in section IV of this notice.

EPA will provide a single allotment to each State under the § 106 Grant Program rather than separate allotments for ground water and surface water programs. Since this grant program provides one of the few sources of federal funds for State ground water protection efforts that, in turn, are critical to the maintenance of water quality, EPA strongly advises States to target at least 15 percent of their § 106 allotment for ground water protection programs and activities. Should the State agency responsible for the administration of the § 106 grant not include the State's ground water protection program, the appropriate agency should be immediately informed of the amount of funds targeted and available for ground water activities.

E. Update Cycle

The data used in the revised § 106 State allotment formula will be periodically updated. The first update will impact allotments for FY 2001, and will consist of updating the data used to support the impairment component of the revised formula. These data will be updated based on 1998 CWA § 305(b) reports. After this initial update, the data used to support all six components of the revised § 106 State allotment formula will be updated in 2003 (for use in the determination of FY 2004 allotments). Thereafter, all data will be updated every five years (i.e., in FY 2008 for FY 2009 allotments, in FY 2013 for FY 2014 allotments, etc.).

The base level of funding for all States will be updated annually to account for inflation based on the Consumer Price Index (CPI).

IV. The Revised Section 106 Interstate Allotment Formula for FY 1999

The interstate set-aside will be allocated to interstate agencies for FY 1999 and all fiscal years thereafter according to the formula defined below. The revised § 106 interstate allotment formula will consist of two parts: (1) a base portion, and (2) a variable portion.

The base portion of the formula ensures that each interstate agency will receive a minimum base level of funding equal to $125,000, to provide for coordination activities among its member States. Should the size of the interstate set-aside decrease due to a reduction in the total § 106

[2] Note that the minimum level of funding described in section III.B. takes precedence over the maximum annual funding increase. For example, since the FY 1998 allotment for CNMI ($150,251) represents less than two-thirds of its Base level of funding for FY 1999 ($250,000), CNMI will realize a 66 percent increase in its allotment for FY 1999.

appropriation, the minimum level of funding may be modified.

Funds not allocated by the base portion of the revised § 106 interstate allotment formula will be allocated based on the sum of State allocation ratios from the revised § 106 State allotment formula for the signatory States in the Compact of each eligible interstate agency. The allocation ratios for those States involved in compacts with more than one eligible interstate agency will be distributed among those interstate agencies based on the percentage of the State's territory that is situated within the drainage basin or watershed area covered by each compact.

REVISED SECTION 106 ALLOTMENTS FOR STATES, DC, PR, AND THE INSULAR AREAS

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "PLUS" (Public Laws Update Service) on 202–523–6641. This list is also available online at http://www.nara.gov/fedreg.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at http://www.access.gpo.gov/su_docs/. Some laws may not yet be available.

S. 2468/P.L. 105–307
Dante Fascell Biscayne National Park Visitor Center Designation Act (Oct. 29, 1998; 112 Stat. 2931)

H.R. 700/P.L. 105–308
To remove the restriction on the distribution of certain revenues from the Mineral Springs parcel to certain members of the Agua Caliente Band of Cahuilla Indians. (Oct. 30, 1998; 112 Stat. 2932)

H.R. 1274/P.L. 105–309
Technology Administration Act of 1998 (Oct. 30, 1998; 112 Stat. 2935)

H.R. 1756/P.L. 105–310
Money Laundering and Financial Crimes Strategy Act of 1998 (Oct. 30, 1998; 112 Stat. 2941)

H.R. 2675/P.L. 105–311
Federal Employees Life Insurance Improvement Act (Oct. 30, 1998; 112 Stat. 2950)

H.R. 2807/P.L. 105–312
To clarify restrictions under the Migratory Bird Treaty Act on baiting and to facilitate acquisition of migratory bird habitat, and for other purposes. (Oct. 30, 1998; 112 Stat. 2956)

H.R. 3055/P.L. 105–313
Miccosukee Reserved Area Act (Oct. 30, 1998; 112 Stat. 2964)

H.R. 3494/P.L. 105–314
Protection of Children From Sexual Predators Act of 1998 (Oct. 30, 1998; 112 Stat. 2974)

H.R. 3528/P.L. 105–315
Alternative Dispute Resolution Act of 1998 (Oct. 30, 1998; 112 Stat. 2993)

H.R. 3687/P.L. 105–316
Canadian River Project Prepayment Act (Oct. 30, 1998; 112 Stat. 2999)

H.R. 3903/P.L. 105–317
Glacier Bay National Park Boundary Adjustment Act of 1998 (Oct. 30, 1998; 112 Stat. 3002)

H.R. 4151/P.L. 105–318
Identity Theft and Assumption Deterrence Act of 1998 (Oct. 30, 1998; 112 Stat. 3007)

H.R. 4293/P.L. 105–319
Irish Peace Process Cultural and Training Program Act of 1998 (Oct. 30, 1998; 112 Stat. 3013)

H.R. 4309/P.L. 105–320
Torture Victims Relief Act of 1998 (Oct. 30, 1998; 112 Stat. 3016)

H.R. 4326/P.L. 105–321
Oregon Public Lands Transfer and Protection Act of 1998 (Oct. 30, 1998; 112 Stat. 3020)

H.R. 4337/P.L. 105–322
To authorize the Secretary of the Interior to provide financial assistance to the State of Maryland for a pilot program to develop measures to eradicate or control nutria and restore marshland damaged by nutria. (Oct. 30, 1998; 112 Stat. 3027)

H.R. 4660/P.L. 105–323
To amend the State Department Basic Authorities Act of 1956 to provide rewards for information leading to the arrest or conviction of any individual for the commission of an act, or conspiracy to act, of international terrorism, narcotics related offenses, or for serious violations of international humanitarian law relating to the Former Yugoslavia, and for other purposes. (Oct. 30, 1998; 112 Stat. 3029)

H.R. 4679/P.L. 105–324
Antimicrobial Regulation Technical Corrections Act of 1998 (Oct. 30, 1998; 112 Stat. 3035)

S. 231/P.L. 105–325
National Cave and Karst Research Institute Act of 1998 (Oct. 30, 1998; 112 Stat. 3038)

S. 890/P.L. 105–326
Dutch John Federal Property Disposition and Assistance Act of 1998 (Oct. 30, 1998; 112 Stat. 3040)

S. 1333/P.L. 105–327
To amend the Land and Water Conservation Fund Act of 1965 to allow national park units that cannot charge an entrance or admission fee to retain other fees and charges. (Oct. 30, 1998; 112 Stat. 3055)

S. 2094/P.L. 105–328

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, send E-mail to **listproc@lucky.fed.gov** with the text message:

subscribe PUBLAWS-L Your Name.

Note: This service is strictly for E-mail notification of new public laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.

Would you like to know...

if any changes have been made to the Code of Federal Regulations or what documents have been published in the Federal Register without reading the Federal Register every day? If so, you may wish to subscribe to the *LSA (List of CFR Sections Affected)*, the *Federal Register Index*, or both.

LSA • List of CFR Sections Affected

The LSA (List of CFR Sections Affected) is designed to lead users of the Code of Federal Regulations to amendatory actions published in the Federal Register. The LSA is issued monthly in cumulative form. Entries indicate the nature of the changes—such as revised, removed, or corrected.
$27 per year

Federal Register Index

The index, covering the contents of the daily Federal Register, is issued monthly in cumulative form. Entries are carried primarily under the names of the issuing agencies. Significant subjects are carried as cross-references.
$25 per year

A binding aid is included in each publication which lists Federal Register page numbers with the date of publication in the Federal Register

Plain Language Tools Are Now Available

The Office of the Federal Register offers Plain Language Tools on its Website to help you comply with the President's Memorandum of June 1, 1998—Plain Language in Government Writing (63 FR 31883, June 10, 1998). Our address is: http://www.nara.gov/fedreg

For more in-depth guidance on the elements of plain language, read "Writing User-Friendly Documents" on the National Partnership for Reinventing Government (NPR) Website at: http://www.plainlanguage.gov

183-247 98 - 1

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

Printed on recycled paper.

Rules and Regulations

Federal Register
Vol. 63, No. 215
Friday, November 6, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Parts 317 and 335

RIN 3206–AH92

Employment in the Senior Executive Service Promotion and Internal Placement

AGENCY: Office of Personnel Management.

ACTION: Final regulations.

SUMMARY: The Office of Personnel Management (OPM) is issuing final regulations that adopt without change interim regulations that corrected previous regulations which were inconsistent with statutory provisions that govern the 120-day moratorium on involuntary reassignments of career Senior Executive Service (SES) appointees following the appointment of a new agency head or a new noncareer immediate supervisor. These regulations also authorize agencies to reinstate SES career appointees who have competitive service reinstatement eligibility to career appointments in competitive service positions for which they qualify, including Senior Level (SL) positions.

EFFECTIVE DATE: December 7, 1998.

FOR FURTHER INFORMATION CONTACT: Mr. Bede Bender (202) 606–1784.

SUPPLEMENTARY INFORMATION:

120-Day Moratorium on Involuntary Reassignments

On June 24, 1998, the Office of Personnel Management (OPM) published interim regulations (63 FR 34257) to correct existing regulations that were inconsistent with statutory provisions governing the 120-day moratorium on involuntary reassignments of Senior Executive Service (SES) career appointees. The law in 5 U.S.C. 3395(e)(1) provides for a 120-day moratorium on involuntary reassignments of SES career appointees following the appointment of a new agency head or the career appointee's most immediate supervisor who is a noncareer appointee and who has the authority to make an initial appraisal of the career appointee's performance. The law also provides in § 3395(e)(2) for an exception to the moratorium by permitting involuntary reassignments during the 120-day period when the reassignment results from a final unsatisfactory performance rating issued prior to the appointment that triggered the moratorium. In situations which meet this criterion for exception, it does not matter if a new agency head or noncareer supervisor (with authority to make an initial performance appraisal) is appointed subsequently, i.e., after issuance of a final unsatisfactory performance rating, nor does it matter if there has been a change in the agency official responsible for taking the reassignment action (the language of the current regulation). The reassignment action may proceed if the conditions for the exception are met.

In instances where there is a change in agency head, it is possible that career appointees will be subject to more than one moratorium—which almost certainly will not run concurrently but may overlap to some degree, i.e., the appointment of a new agency head often results in some turnover among noncareer appointees. When applying the regulation in these instances, it is important to look at the starting date of each moratorium independently, in relation to the date on which the unsatisfactory rating was issued. For example, if a final rating of unsatisfactory is issued after the appointment of a new agency head, the moratorium initiated by that appointment must be allowed to run its course before any involuntary reassignment action can be effected. If a new noncareer supervisor is appointed after the new agency head, and also after the issuance of the unsatisfactory rating (i.e., when the rating is issued between the appointment of the new agency head and the new noncareer supervisor), then the second moratorium (i.e., the moratorium triggered by the appointment of the new noncareer supervisor) does not apply to an involuntary reassignment resulting from the unsatisfactory rating.

Conversion From Career SES to Career SL Appointment

The interim regulations published on June 24, 1998, also expanded the eligibility of SES career appointees for reinstatement to Senior Level (SL) positions. SL positions established under 5 CFR Part 319 are in the competitive service and are covered by OPM regulations governing the competitive service generally. Formerly, under 5 CFR 335.103(c)(1)(vi), agencies were required to follow competitive procedures in agency merit promotion plans in order to reinstate a person to a permanent or a temporary position at a higher grade or with more promotion potential than a position previously held on a permanent basis in the competitive service. This meant that career SES members could be reinstated to competitive service positions only at the same grade or pay level as the highest position they held previously in the competitive service.

By law, SES and SL positions are above the GS–15 level. In nearly all cases, career SES appointees have already competed at least Governmentwide. This regulatory change recognized that fact by permitting reinstatement of career SES appointees to competitive service positions above the GS–15 level.

The 30-day comment period expired on August 24, 1998. OPM did not receive any comments during the comment period. Therefore, the interim rule is being adopted as a final rule.

Regulatory Flexibility Act

I certify that these regulations will not have a significant impact on a substantial number of small entities because they will apply only to Federal agencies and employees.

Executive Order 12866, Regulatory Review

This rule has been reviewed by the Office of Management and Budget in accordance with Executive Order 12866.

List of Subjects in 5 CFR Parts 317 and 335

Government employees.

U.S. Office of Personnel Management.

Janice R. Lachance,

Director.

Accordingly, under the authority in 5 U.S.C. 3392, 3393, 3393a, 3395, 3397, 3593, and 3595, the interim regulations

amending 5 CFR Parts 317 and 335 (63 FR 34257) published on June 24, 1998, are adopted as final without any changes.

BILLING CODE 6325–01–P

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1499

RIN 0551–AA57

Foreign Donation of Agricultural Commodities

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: Commodity Credit Corporation (CCC) is issuing its final rule with respect to amendments to the regulations governing procedures for procuring ocean transportation for agricultural commodities provided under section 416(b) of the Agricultural Act of 1949 and the Food for Progress Act of 1985, published as an interim final rule in the **Federal Register** on February 23, 1998.

EFFECTIVE DATE: November 6, 1998.

FOR FURTHER INFORMATION CONTACT: Ira D. Branson, Director, Commodity Credit Corporation, Program Support Division, Foreign Agricultural Service, United States Department of Agriculture, 1400 Independence Avenue, S.W., Stop 1031; Washington, D.C. 20250–1031; telephone (202) 720–3573.

SUPPLEMENTARY INFORMATION: This final rule is issued in conformance with Executive Order 12866. Based on information compiled by the Department, it has been determined that this final rule:

(1) Will have an annual effect on the economy of less than $100 million;

(2) Will not adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(3) Will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(4) Will not materially alter the budgetary impact of entitlement, grants, user fees, or loan programs or rights and obligations of recipients thereof; and

(5) Will not raise novel legal or policy issues arising out of legal mandates, the President's priorities, or principles set forth in Executive Order 12866.

Regulatory Flexibility Act

It has been determined that the Regulatory Flexibility Act is not applicable to this final rule since CCC is not required by 5 U.S.C. 553 or any other provision of law to publish a notice of rulemaking with respect to the subject matter of this rule.

Paperwork Reduction Act

This final rule does not contain any information collection requirements that require OMB approval under the provisions of the Paperwork Reduction Act.

Executive Order 12372

This final rule is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with state and local officials. See the Notice related to 7 CFR part 3015, subpart V, published at 46 FR 29115 (June 24, 1983).

Executive Order 12988

This final rule has been reviewed under the Executive Order 12988, Civil Justice Reform. The final rule will have pre-emptive effect with respect to any state or local laws, regulations, or policies which conflict with such provisions or which otherwise impede their full implementation. The final rule will not have retroactive effect. Administrative proceedings are not required before parties may seek judicial review.

On February 23, 1998, CCC published an interim final rule to amend the regulations applicable to donations under section 416(b) of the Agricultural Act of 1949, and the Food for Progress Program to be consistent with the new title I, Pub. L. 480 requirements. In particular, the final interim rule deleted the prohibition in § 1499.8(b)(4) against "clarification or submission of additional information" under competitive freight invitations for bids and updated a cross reference to the title I, Pub. L. 480 regulations regarding information and certifications required from prospective shipping agents. CCC did not receive any comments regarding the interim final rule.

List of Subjects in 7 CFR part 1499

Agricultural commodities, Exports, Foreign aid.

Accordingly, the interim rule amending 7 CFR part 1499 which was published at 63 FR 8837 on February 23, 1998, is adopted as a final rule without change.

Christopher E. Goldthwait,

General Sales Manager, FAS, and Vice President, Commodity Credit Corporation.

[FR Doc. 98–29726 Filed 11–5–98; 8:45 am]
BILLING CODE 3410–10–P

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1499

RIN 0551–AA56

Foreign Donation of Agricultural Commodities

AGENCY: Commodity Credit Corporation, USDA

ACTION: Final rule.

SUMMARY: This rule amends Commodity Credit Corporation (CCC) regulations governing foreign donations of agricultural commodities. This rule contains changes, corrections and clarifications to the regulations to achieve more effective management of foreign donations of agricultural commodities.

EFFECTIVE DATE: November 6, 1998.

FOR FURTHER INFORMATION CONTACT: Mr. Ira D Branson, Director, Commodity Credit Corporation Program Support Division, Foreign Agricultural Service, United States Department of Agriculture, 1400 Independence Ave., S.W., Stop 1031; Washington, D.C. 20250–1031; telephone (202) 720–3573.

SUPPLEMENTARY INFORMATION: This rule is issued in conformance with Executive Order 12866. Based on information compiled by the Department, it has been determined that this rule:

(1) Will have an annual effect on the economy of less than $100 million;

(2) Will not adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(3) Will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(4) Will not materially alter the budgetary impact of entitlement, grants, user fees, or loan programs or rights and obligations of recipients thereof; and

(5) Will not raise novel legal or policy issues arising out of legal mandates, the President's priorities, or principles set forth in Executive Order 12866.

Regulatory Flexibility Act

It has been determined that the Regulatory Flexibility Act is not applicable to this final rule since CCC is not required by 5 U.S.C. 553 or any other provision of law to publish a notice of rulemaking with respect to the subject matter of this rule.

Paperwork Reduction Act

The information collection requirements imposed by this rule has been previously submitted to the Office of Management and Budget (OMB) under the paperwork Reduction Act of 19980 (44 U.S.C. Chapter 35). OMB has assigned control number 0551–0035 for this information collection. This final rule change does not require collection of additional information; however, the final rule includes a requirement to use new forms for the semiannual logistic and monetization reports. These report forms have been submitted to OMB for review.

Executive Order 12372

This rule is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with state and local officials. See the Notice related to 7 CFR Part 3015, subpart V, published at 46 FR 29115 (June 24, 1983).

Executive Order 12988

This rule has been reviewed under the Executive Order 12988, Civil Justice Reform. The rule will have pre-emptive effect with respect to any state or local laws, regulations, or policies which conflict with such provisions or which otherwise impede their full implementation. The rule will not have retroactive effect. Administrative proceedings are not required before parties may seek judicial review.

Background

On February 23, 1998, CCC published a notice of proposed rulemaking 63 FR 8879, regarding the donation of agricultural commodities under section 416(b) of the Agricultural Act of 1949 and the Food for Progress Act of 1985 appear at 7 CFR Part 1499. That notice proposed changes to address certain issues that have arisen since the regulations were first published on November 29, 1996, and additionally, make non-substantive corrections. CCC did not receive any comments on the proposed rule and is adopting the proposed rule without change.

List of Subjects in 7 CFR Part 1499

Agricultural commodities, Exports, Foreign aid.

Accordingly, Part 1499 of Title 7 of the Code of Federal Regulations is amended as follows:

PART 1499—FOREIGN DONATION PROGRAMS

1. The authority citation for Part 1499 continues to read as follows:

Authority: 7 U.S.C. 1431 (b); 7 U.S.C. 17360; E.O. 12752

§ 1499.1 [Amended]

2. Section 1499.1 is amended by removing—KCFMO—Kansas City Financial Management Office" and adding, in its place, "KCMO/DMD—Kansas City Management Office/Debt Management Division."

3. Section 1499.7(e) is amended by revising the third and fourth sentences to read as follows:

§ 1499.7 Apportionment of costs and advances.

* * * * *

(e) * * * The non-government Cooperating Sponsor may make adjustments between line items of an approved Program Operations Budget up to 20 percent of the total amount approved or $5,000, whichever is less without any further approval. Adjustments beyond these limits must be specifically approved by the Director, PDD.

* * * * *

§ 1499.7 [Amended]

4. Section 1499.7 (i) is amended by deleting "Director, CCCPSD" and adding in its place , "Director, PDD."

5. In section 1499.8, the introductory text of paragraph (b) and the headings of paragraph (g) and (g)(1) are revised, paragraph (g)(1)(vii) is redesignated as paragraph (g)(viii), and new paragraph (g)(1)(vii) and (g)(1)(ix) are added to read as follows:

§ 1499.8 Ocean transportation.

* * * * *

(b) *Freight procurement requirements.* When CCC is financing any portion of the ocean freight, whether on U.S.-flag or non-U.S. flag vessels, and the Cooperating Sponsor arranges ocean transportation:

* * * * *

(g) Documents required for payment of freight—(1) General rule. * * *

* * * * *

(vii) For all liner cargoes, a copy of the tariff page.

* * * * *

(ix) Each request to CCC for payment must provide a document, on letterhead and signed by an official or agent of the requester, the name of the entity to receive payment, the bank ABA number to which payment is to be made; the account number for the deposit at the bank; the requester's taxpayer identification number; and the type of the account into which funds will be deposited.

* * * * *

§ 1499.8 [Amended]

6. In section 1499.8, paragraph (g) is amended by deleting "One copy" wherever it appears and adding "One signed copy" in its place, and paragraph (g)(vi) is amended by deleting "a notice" and adding, in its place, "a signed notice."

7. Section 1499.10 is amended by adding a new paragraph (d) to read as follows:

§ 1499.10 Restrictions on commodity use and distribution.

* * * * *

(d) In the event that its participation in the program terminates, the non-government cooperating sponsor will safeguard any undistributed commodities and sales proceeds and dispose of such commodities and proceeds as directed by CCC.

§ 1499.14 [Amended]

8. Section 1499.14(b)(2) is amended by deleting "KCFMO" and adding, in its place "KCMO/DMD."

9. Section 1499.15, is amended by removing "KCFMO" wherever it appears and adding, in its place "KCMO/DMD", revising the last sentence of paragraphs § 1499.15(d)(2) and (f)(3) and adding paragraphs (d)(2)(i) through (d)(2)(vi) to read as follows:

§ 1499.15 Liability for loss, damage, or improper distribution of commodities—claims and procedures.

* * * * *

(d) * * *

(2) * * * In the event of a declaration General Average:

(i) The Cooperating Sponsor shall assign all claim rights to CCC and shall provide CCC all documentation relating to the claim, if applicable;

(ii) CCC will be responsible for settling general average and marine salvage claims;

(iii) CCC has sole authority to authorize any disposition of commodities which have not commenced ocean transit or of which the ocean transit is interrupted;

(iv) CCC will receive and retain any monetary proceeds resulting from such disposition;

(v) CCC will initiate, prosecute, and retain all proceeds of cargo loss and

damage against ocean carriers and any allowance in general average; and

(vi) CCC will pay any general average or marine salvage claims determined to be due.

* * * * *

(f) * * *

(3) * * * If the Agricultural Counselor or Attache approves a Cooperating Sponsor's decision not to take further action on the claim, the Cooperating Sponsor shall assign the claim to CCC and shall forward all documentation relating to the claim to KCMO/DMD.

* * * * *

10. In section 1499.16, the second and third sentences of paragraph (c)(1) introductory text and the second and third sentences of paragaph (c)(2) introductory text are revised to read as follows:

§ 1499.16 Records and reporting requirements.

* * * * *

(c) *Reports.* (1) * * * Cooperating sponsors must submit reports on Form CCC–620 and submit the first report by May 16 for agreements signed during the period, October 1 through March 31, or by November 16 for agreements signed during the period, April 1 through September 30. 14 CFR Part 71

[Airspace Docket No. 94–AWA–1]

RIN 2120–AA66

Modification of Phoenix Class B Airspace Area, AZ

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; correction.

SUMMARY: This action corrects a final rule published in the **Federal Register** on October 30, 1998 (Airspace Docket 94–AWA–1). In that rule, the legal description inadvertently contained an error in the longitudinal coordinates in Area D. This action corrects that error.

EFFECTIVE DATE: November 6, 1998.

FOR FURTHER INFORMATION CONTACT: William C. Nelson, Airspace and Rules Division, ATA–400, Office of Air Traffic Airspace Management, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; Telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION: **Federal Register** Document 98–29148, Airspace Docket No. 94–AWA–1, published on October 30, 1998 (63 FR 58291), modified the Phoenix Class B airspace area. However, the legal description for Area D of the Phoenix Class B airspace area inadvertently contained an error in the longitudinal coordinates. This action corrects that error.

Correction to Final Rule

Accordingly, pursuant to the authority delegated to me, the Phoenix Class B airspace area, published in the **Federal Register** on October 30, 1998 (63 FR 58296); **Federal Register** Document 98–29148, and incorporated by reference in 14 CFR 71.1, is corrected as follows:

§ 71.1 [Corrected]

On page 58296, in the third column, paragraph Area D, lines 12 and 13, correct the longitudinal coordinates for Valley Road to read: "(Lat. 33°13'10" N., long. 112°09'58" W.),"

Issued in Washington, DC, on November 2, 1998.

Nancy B. Kalinowski,

Acting Program Director for Air Traffic Airspace Management.

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAP's) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located; or

3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAP's, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes SIAP's. The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 14 CFR 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Form 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAP's, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. The SIAP's contained in this amendment are based on the criteria contained in the United States Standard for Terminal Instrument Approach Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports.

The FAA has determined through testing that current non-localizer type, non-precision instrument approaches developed using the TERPS criteria can be flown by aircraft equipped with a Global Positioning System (GPS) and or Flight Management System (FMS) equipment. In consideration of the above, the applicable SIAP's will be altered to include "or GPS or FMS" in the title without otherwise reviewing or modifying the procedure. (Once a stand alone GPS or FMS procedure is developed, the procedure title will be altered to remove "or GPS or FMS" from these non-localizer, non-precision instrument approach procedure titles.)

The FAA has determined through extensive analysis that current SIAP's intended for use by Area Navigation (RNAV) equipped aircraft can be flown by aircraft utilizing various other types of navigational equipment. In consideration of the above, those SIAP's currently designated as "RNAV" will be redesignated as "VOR/DME RNAV" without otherwise reviewing or modifying the SIAP's.

Because of the close and immediate relationship between these SIAP's and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are, impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Air Traffic Control, Airports, Navigation (Air).

Issued in Washington, DC on October 30, 1998.

Richard O. Gordon,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 continues to read:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113–40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

§§ 97.23, 97.27, 97.33, 97.35 [Amended]

2. Amend 97.23, 97.27, 97.33 and 97.35, as appropriate, by adding, revising, or removing the following SIAP's, effective at 0901 UTC on the dates specified:

* * * *Effective December 03, 1998*

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located; or

3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reverence in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260–3, 8260–4, and 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** sexpensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment stated the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (NFDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and procedures (44 FR 11035; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR part 97

Air traffic control, Airports, Navigation (air).

Issued in Washington, DC, on October 30, 1998.

Richard O. Gordon,

Acting Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120, 44701; and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [Amended]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

Federal Aviation Administration

14 CFR Part 97

[Docket No. 29380; Amdt. No. 1898]

RIN 2120–AA65

Standard Instrument Approach Procedures; Miscellaneous Amendment

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPS) for operations at certain airports. These regulatory actions are needed because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for such SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination–1, FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which affected airport is located; or

3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription— Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, US Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma, OK. 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description on each SIAP is contained in the appropriate FAA Form 8260 and the National Flight Data Center (FDC)/Permanent (P) Notices to Airman (NOTAM) which are incorporated by reference in the amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation's Regulations (FAR). Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAP's, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of

the SIAPs, but refer to their graphic depiction of charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes SIAPs. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained in the content of the following FDC/P NOTAM for each SIAP. The SIAP information in some previously designated FDC/Temporary (FDC/T) NOTAMs is of such duration as to be permanent. With conversion to FDC/P NOTAMs the respective FDC/T NOTAMs have been canceled.

The FDC/P NOTAMs for the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPS). In developing these chart changes to SIAPs by FDC/P NOTAMs, the TERPS criteria were applied to only these specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for all these SIAP amendments requires making them effective in less than 30 days.

Further, the SIAPs contained in this amendment are based on the criteria contained in the TERPS. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making these SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air traffic control, Airports, Navigation (air).

Issued in Washington, DC on October 30, 1998.

Richard O. Gordon,

Acting Director, Flight Standards Service.

Adoption of The Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120, 44701; and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33 and 97.35 [Amended]

By amending: § 97.23, VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 585

Federal Republic of Yugoslavia (Serbia & Montenegro) and Bosnian Serb–Controlled Areas of the Republic of Bosnia and Herzegovina Sanctions Regulations: Resolution of Claims Regarding Blocked Montenegrin Vessel Accounts

AGENCY: Office of Foreign Assets Control, Department of the Treasury

ACTION: Final rule; amendment.

SUMMARY: The Office of Foreign Assets Control is amending the Federal Republic of Yugoslavia (Serbia & Montenegro) and Bosnian Serb–Controlled Areas of the Republic of Bosnia and Herzegovina Sanctions Regulations to authorize all transactions on and after December 7, 1998 with respect to bank accounts representing the proceeds of the sales of the following two blocked vessels: the M/V KAPETAN MARTINOVIC and the M/V BOR. U.S. persons are generally licensed to seek, obtain and have served on these blocked accounts writs of attachment during the ten–day period prior to the accounts' unblocking if their claims are not settled with the vessels' owners or agents.

EFFECTIVE DATE: November 6, 1998.

FOR FURTHER INFORMATION: John T. Roth, Chief, Policy Planning and Program Management Division (tel.: 202/622–2500), or William B. Hoffman, Chief Counsel (tel.: 202/622–2410), Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220.

SUPPLEMENTARY INFORMATION:

Electronic Availability

This document is available as an electronic file on *The Federal Bulletin Board* the day of publication in the **Federal Register**. By modem, dial 202/512–1387 and type "/GO FAC," or call 202/512–1530 for disk or paper copies. This file is available for downloading without charge in ASCII and Adobe Acrobat® readable (*.PDF) formats. For Internet access, the address for use with the World Wide Web (Home Page),

Telnet, or FTP protocol is: fedbbs.access.gpo.gov. The document is also accessible for downloading in ASCII format without charge from Treasury's Electronic Library ("TEL") in the "Research Mall" of the FedWorld bulletin board. By modem, dial 703/321–3339, and select self–expanding file "T11FR00.EXE" in TEL. For Internet access, use one of the following protocols: Telnet = fedworld.gov (192.239.93.3); World Wide Web (Home Page) = http://www.fedworld.gov; FTP = ftp.fedworld.gov (192.239.92.205). Additional information concerning the programs of the Office of Foreign Assets Control is available for downloading from the Office's Internet Home Page: http://www.treas.gov/ofac, or in fax form through the Office's 24–hour fax–on–demand service: call 202/622–0077 using a fax machine, fax modem, or (within the United States) a touch–tone telephone.

Background

On April 18, 1997, the Office of Foreign Assets Control issued an amendment to the Federal Republic of Yugoslavia (Serbia & Montenegro) and Bosnian Serb–Controlled Areas of the Republic of Bosnia and Herzegovina Sanctions Regulations, 31 CFR part 585 (the "Regulations"), providing for the unblocking of the following five vessels: the M/V MOSLAVINA, M/V ZETA, M/V LOVCEN, M/V DURMITOR and M/V BAR (a.k.a. M/V INVIKEN) after 30 days (62 FR 19672, April 23, 1997). Two previously blocked vessels, the M/V KAPETAN MARTINOVIC and the M/V BOR, were sold pursuant to specific licenses and the proceeds of the sales placed in blocked interest–bearing accounts at U.S. financial institutions as substitute property for the blocked vessels.

The accounts representing the two vessels will also be unblocked after 30 days. During this period, U.S. persons may negotiate settlements of their outstanding claims with respect to the vessels with the vessels' owners or agents. If claims remain unresolved by November 27, 1998, U.S. persons are generally licensed to seek and obtain judicial writs of attachment against the funds during the ten–day period prior to the accounts' unblocking.

Since the Regulations involve a foreign affairs function, the provisions of Executive Order 12866 and the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rulemaking, opportunity for public participation, and delay in effective date are inapplicable. Because no notice of proposed rulemaking is required for this rule, the Regulatory Flexibility Act (5 U.S.C. 601–612) does not apply.

List of Subjects in 31 CFR Part 585

Administrative practice and procedure, Banks, banking, Blocking of assets, Bosnia and Herzegovina, Foreign investments in the United States, Foreign trade, Penalties, Reporting and recordkeeping requirements, Securities, Specially designated nationals, Transportation, Vessels, Yugoslavia.

For the reasons set forth in the preamble, 31 CFR part 585 is amended as set forth below:

1. The authority citation for part 585 is revised to read as follows:

Authority: 3 U.S.C. 301; 22 U.S.C. 287c; 31 U.S.C. 321(b); 49 U.S.C. 40106; 50 U.S.C. 1601–1651, 1701–1706; Pub.L. 101–410, 104 Stat 890 (28 U.S.C. 2461 note); E.O. 12808, 57 FR 23299, 3 CFR, 1992 Comp., p. 305; E.O. 12810, 57 FR 24347, 3 CFR, 1992 Comp., p. 307; E.O. 12831, 58 FR 5253, 3 CFR, 1993 Comp., p. 576; E.O. 12846, 58 FR 25771, 3 CFR, 1993 Comp., p. 599; E.O. 12934, 59 FR 54117, 3 CFR, 1994 Comp., p. 930.

Subpart E to Part 585—Licenses, Authorizations, and Statements of Licensing Policy

2. Section 585.528 is amended by revising the section heading and adding paragraph (d) to read as follows:

§ 585.528 Unblocking of certain vessels and accounts.

* * * * *

(d) All transactions with respect to blocked accounts held at Whitney National Bank, New Orleans, Louisiana, containing the proceeds of the sales of the M/V KAPETAN MARTINOVIC and the M/V BOR are authorized as of December 7, 1998. All transactions by U.S. persons to seek and obtain judicial writs of attachment against the blocked accounts as substitute property for these vessels are authorized as of 10:00 a.m. Eastern Standard Time, November 27, 1998.

Dated: October 7, 1998.

R. Richard Newcomb,

Director, Office of Foreign Assets Control.

Approved: October 15, 1998.

Elisabeth A. Bresee,

Assistant Secretary (Enforcement), Department of the Treasury.

BILLING CODE 4810–25–F

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[PA–4081a; FRL–6184–2]

Approval and Promulgation of Air Quality Implementation Plans; Pennsylvania; Approval of VOC and NO_X RACT Determinations for Individual Sources

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is approving a State Implementation Plan (SIP) revision submitted by the Commonwealth of Pennsylvania. This revision establishes and requires volatile organic compounds (VOC) and nitrogen oxides (NO_X) reasonably available control technology (RACT) for 16 major sources located in Pennsylvania. The intended effect of this rule is to approve source-specific plan approvals and operating permits that establish the above-mentioned RACT requirements in accordance with the Clean Air Act.

DATES: This direct final rule is effective without further notice on January 5, 1999, unless EPA receives adverse written comment by December 7, 1998. Should EPA receive such comments, it will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Comments may be mailed to David Campbell, Air Protection Division, Mailcode 3AP11, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the documents relevant to this action are available for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103; the Air and Radiation Docket and Information Center, U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460; Pennsylvania Department of Environmental Protection, Bureau of Air Quality Control, P.O. Box 8468, 400 Market Street, Harrisburg, Pennsylvania 17105.

FOR FURTHER INFORMATION CONTACT: David Campbell, (215) 814–2196, at the EPA Region III office or via e-mail at campbell.daveepamail.epa.gov. While information may be requested via e-mail, any comments must be submitted in writing to the above Region III address.

SUPPLEMENTARY INFORMATION:

I. Background

On April 20, May 29, and July 24, 1998, the Commonwealth of Pennsylvania submitted formal revisions to its State Implementation Plan (SIP). Each source subject to this rulemaking will be identified and discussed below. Any plan approvals and operating permits submitted coincidentally with those being approved in this document, and not identified below, will be addressed in a separate rulemaking action.

Pursuant to sections 182(b)(2) and 182(f) of the Clean Air Act (CAA), Pennsylvania is required to implement RACT for all major VOC and NO_X sources by no later than May 31, 1995. The major source size is determined by its location, the classification of that area and whether it is located in the ozone transport region (OTR), which is established by the CAA. The Pennsylvania portion of the Philadelphia ozone nonattainment area consists of Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties and is classified as severe. The remaining counties in Pennsylvania are classified as either moderate or marginal nonattainment areas or are designated attainment for ozone. However, under section 184 of the CAA, at a minimum, moderate ozone nonattainment area requirements (including RACT as specified in sections 182(b)(2) and 182(f)) apply throughout the OTR. Therefore, RACT is applicable statewide in Pennsylvania. The Pennsylvania submittals that are the subject of this document are meant to satisfy the RACT requirements for 16 sources in Pennsylvania.

Summary of SIP Revision

The details of the RACT requirements for the source-specific plan approvals and operating permits can be found in the docket and accompanying technical support document (TSD) and will not be reiterated in this document. Briefly, EPA is approving a revision to the Pennsylvania SIP pertaining to the determination of RACT for 16 major sources. Several of the plan approvals and operating permits contain conditions irrelevant to the determination of VOC or NO_X RACT. Consequently, these provisions are not being included in this approval for source-specific VOC or NO_X RACT.

RACT Determinations

The following table identifies the individual plan approvals and operating permits EPA is approving. The specific emission limitations and other RACT requirements for these sources are summarized in the accompanying technical support document, which is available upon further request from the EPA Region III office listed in the **ADDRESSES** section of this document.

PENNSYLVANIA—VOC AND NO_X. RACT DETERMINATIONS FOR INDIVIDUAL SOURCES

Source	County	Plan approval (PA #) operating permit (OP #)	Source type	"Major source" pollutant
Eldorado Properties Corporation	Northumberland	OP 49–0016	Petroleum storage and distribution	VOC.
Endura Products, Inc.	Bucks	OP 09–0028	Surface coating	NO_X., VOC.
Ford Electronics & Refrigeration Company	Montgomery	OP 46–0036	Electronics manufacturing	NO_X., VOC.
H&N Packaging, Inc.	Bucks	OP 09–0038	Graphic arts	VOC.
Lancaster County Solid Waste Management Authority.	Lancaster	PA 36–2013	Municipal waste combustion	NO_X.
Monsey Products Company	Chester	OP 15–0031	Protective coatings manufacturing	VOC.
Ortho-McNeil Pharmaceutical	Montgomery	OP 46–0027	Pharmaceutical manufacturing	NO_X., VOC.
Piccari Press, Inc.	Bucks	OP 09–0040	Graphic arts	VOC.
Pierce and Stevens Corporation	Chester	OP 15–0011	Coatings and adhesives manufacturing	VOC.
PQ Corporation	Delaware	OP 23–0016	Flat glass manufacturing	NO_X.
Reynolds Metals Company	Chester	OP 15–0004	Graphic arts	NO_X., VOC.
Rhone-Poulenc Rorer Pharmaceuticals, Inc.	Montgomery	OP 46–0048B	Pharmaceutical manufacturing	NO_X., VOC.
Superior Tube Company	Montgomery	OP 46–0020	Steel tubing manufacturing	NO_X., VOC.
Uniform Tubes Company	Montgomery	OP 46–0046A	Steel tubing manufacturing	VOC.
U.S. Air Force—Willow Grove Air Reserve Station.	Montgomery	OP 46–0072	Military installation	NO_X., VOC.
U.S. Navy—Willow Grove Naval Air Station Joint Reserve Base.	Montgomery	OP 46–0079	Military installation	NO_X., VOC.

EPA is approving this rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the rule should adverse comments be filed. This rule will be effective January 5, 1999 without further notice unless the Agency receives adverse comments by December 7, 1998.

If EPA receives such comments, then EPA will publish a document withdrawing the final rule and informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. EPA will not institute a second comment period. Parties interested in commenting should do so at this time. If no such comments are received, the public is advised that this rule will be effective on January 5, 1999 and no further action will be taken on the proposed rule. If adverse comments are received that do not pertain to all paragraphs subject to this rule, those paragraphs not affected by the adverse comments will be finalized in the manner described here. Only those paragraphs that receive adverse comments will be withdrawn in the manner described here.

II. Final Action

EPA is approving 1 plan approval and 15 operating permits as NO_X and/or VOC RACT for 16 individual sources.

III. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from review under E.O. 12866.

entitled "Regulatory Planning and Review."

B. Executive Order 12875

Under E.O. 12875, EPA may not issue a regulation that is not required by statute and that creates a mandate upon a state, local, or tribal government, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by those governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget a description of the extent of EPA's prior consultation with representatives of affected state, local, and tribal governments, the nature of their concerns, copies of written communications from the governments, and a statement supporting the need to issue the regulation. In addition, E.O. 12875 requires EPA to develop an effective process permitting elected officials and other representatives of state, local, and tribal governments "to provide meaningful and timely input in the development of regulatory proposals containing significant unfunded mandates." Today's rule does not create a mandate on state, local or tribal governments. The rule does not impose any enforceable duties on these entities. Accordingly, the requirements of section 1(a) of E.O. 12875 do not apply to this rule.

C. Executive Order 13045

Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997), applies to any rule that the EPA determines (1) is "economically significant," as defined under Executive Order 12866, and (2) the environmental health or safety risk addressed by the rule has a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This final rule is not subject to Executive Order 13045 because it is not an economically significant regulatory action as defined by Executive Order 12866, and it does not address an environmental health or safety risk that would have a disproportionate effect on children.

D. Executive Order 13084

Under E.O. 13084, EPA may not issue a regulation that is not required by statute, that significantly affects or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities." Today's rule does not significantly or uniquely affect the communities of Indian tribal governments. This action does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of section 3(b) of E.O. 13084 do not apply to this rule.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. This final rule will not have a significant impact on a substantial number of small entities because SIP approvals under section 110 and subchapter I, part D of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not create any new requirements, I certify that this action will not have a significant economic impact on a substantial number of small entities. Moreover, due to the nature of the Federal-State relationship under the Clean Air Act, preparation of a flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions concerning SIPs on such grounds. *Union Electric Co. v. U.S. EPA*, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

F. Unfunded Mandates

Under Section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated annual costs to State, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under Section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated annual costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

G. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. Section 804, however, exempts from section 801 the following types of rules: rules of particular applicability; rules relating to agency management or personnel; and rules of agency organization, procedure, or practice that do not substantially affect the rights or obligations of non-agency parties. 5 U.S.C. 804(3). EPA is not required to submit a rule report regarding today's action under section 801 because this is a rule of particular applicability.

H. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 5, 1999. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action to approve VOC and NO_X RACT determinations for a number of individual sources in Pennsylvania as a revision to the Commonwealth's SIP may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Hydrocarbons, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements.

Dated: October 27, 1998.

Thomas Voltaggio,

Acting Regional Administrator, Region III.

40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart NN—Pennsylvania

2. Section 52.2020 is amended by adding paragraph (c)(136) to read as follows:

§ 52.2020 Identification of plan.

* * * * *

(c) * * *

(136) Revisions to the Pennsylvania Regulations, Chapter 129.91 pertaining to VOC and NO_X RACT, submitted on April 20, May 29, and July 24, 1998, by the Pennsylvania Department of Environmental Protection.

(i) Incorporation by reference.

(A) Three letters submitted by the Pennsylvania Department of Environmental Protection transmitting source-specific VOC and/or NO_X RACT determinations in the form of plan approvals or operating permits on the following dates: April 20, May 29, and July 24, 1998.

(B) Plan approvals (PA), Operating permits (OP):

(*1*) Eldorado Properties Corporation, Northumberland County, OP 49–0016, effective May 1, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 7, 8, 9, and 10 relating to non-RACT provisions.

(*2*) Endura Products, Inc., Bucks County, OP 09–0028, effective May 13, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11A and 15 through 21 relating to non-RACT provisions.

(*3*) Ford Electronics & Refrigeration Company, Montgomery County, OP 46–0036 , effective April 30, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11 through 18, 20, and 22 through 26 relating to non-RACT provisions.

(*4*) H & N Packaging, Inc., Bucks County, OP 09–0038, effective June 8, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 4, 7, 8, and 11 through 20 relating to non-RACT provisions.

(*5*) Lancaster County Solid Waste Management Authority, Lancaster County, PA 36–2013, effective June 3, 1998; except for the plan approval expiration date and item (or portions thereof) Nos. 3 through 9, 11 through 24, 27 through 37, and 39 relating to non-RACT provisions.

(*6*) Monsey Products Company, Chester County, OP 15–0031, effective June 4, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 9 through 24 relating to non-RACT provisions.

(*7*) Ortho-McNeil Pharmaceutical, Montgomery County, OP 46–0027, effective June 4, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 4, 9, and 13 through 20 relating to non-RACT provisions.

(*8*) Piccari Press, Inc, Bucks County, OP 09–0040, effective April 29, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 14, 15, 17, and 19 through 22 relating to non-RACT provisions.

(*9*) Pierce and Stevens Corporation, Chester County, OP 15–0011, effective March 27, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11 through 15 relating to non-RACT provisions.

(*10*) PQ Corporation, Delaware County, OP 23–0016, effective June 16, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 8, 13, and 15 through 19 relating to non-RACT provisions.

(*11*) Reynolds Metals Company, Chester County, OP 15–0004, effective May 8, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 4, 5, 14, 15, 17 through 42, and 44 through 48 relating to non-RACT provisions.

(*12*) Rhone-Poulenc Rorer Pharmaceutical, Inc, Montgomery County, OP 46–0048B, effective April 2, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11 through 42 relating to non-RACT provisions.

(*13*) Superior Tube Company, Montgomery County, OP 46–0020, effective April 17, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 17 through 25 relating to non-RACT provisions.

(*14*) Uniform Tubes Inc., Montgomery County, OP 46–0046A, effective March 26, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 16, 17, and 19 through 24 relating to non-RACT provisions.

(*15*) U.S. Air Force—Willow Grove Air Reserve Station, Montgomery County, OP 46–0072, effective May 1, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11 through 15 relating to non-RACT provisions.

(*16*) U.S. Navy—Willow Grove Naval Air Station Joint Reserve Base, Montgomery County, OP 46–0079, effective May 4, 1998; except for the operating permit expiration date and item (or portions thereof) Nos. 11, 12, 15 through 26, and 28 through 33 relating to non-RACT provisions.

(ii) Additional Material.

(A) Remainder of the Commonwealth of Pennsylvania's April 20, May 29, and July 24, 1998 submittals VOC and NO_X RACT SIP submittals.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[OK–15–1–7399a: FRL–6183–5]

Approval and Promulgation of State Plans for Designated Facilities and Pollutants: Oklahoma

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The EPA is approving the State Plan submitted by the State of Oklahoma on July 10, 1998. The plan was developed in accordance with sections 111 and 129 of the Clean Air Act, and provides for implementation and enforcement of the Emissions Guidelines (EG) applicable to existing Municipal Waste Combustors (MWCs) with capacity to combust more than 250 tons per day of municipal solid waste (MSW) (see 40 CFR part 60, subpart Cb).

DATES: This direct final rule is effective January 5, 1999 without further notice, unless EPA receives adverse comment by December 7, 1998. If adverse comments are received, EPA will publish a timely withdrawal of the

direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Written comments should be addressed to: Mr. Thomas H. Diggs, Chief, Air Planning Section, EPA Region 6, 1445 Ross Avenue, Suite 1200, Dallas, TX 75202. Copies of documents relative to this action are available for public inspection during normal business hours at the following locations. The interested persons wanting to examine these documents should make an appointment with the appropriate office at least 24 hours before the visiting day.

Air Radiation Docket and Information Center (Air Docket 6102), U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460.

Environmental Protection Agency, Region 6, Air Planning Section, 1445 Ross Avenue, Suite 1200, Dallas, TX 75202, telephone (214) 665–7214.

Oklahoma Department of Environmental Quality, 707 North Robinson, Oklahoma City, OK 73101–1677, telephone (405) 702–4100.

FOR FURTHER INFORMATION CONTACT: Lt. Mick Cote, Air Planning Section, 1445 Ross Avenue, Suite 1200, Dallas, TX 75202, telephone (214) 665–7219.

SUPPLEMENTARY INFORMATION:

I. Background

On December 19, 1995, pursuant to sections 111 and 129 of the Clean Air Act (the Act), EPA promulgated New Source Performance Standards (NSPS) applicable to new MWCs and EG applicable to existing MWCs. The NSPS and EG are codified at 40 CFR part 60, subparts Eb and Cb, respectively (see 60 FR 65387). Subparts Cb and Eb regulate the following: particulate matter, opacity, sulfur dioxide, hydrogen chloride, oxides of nitrogen, carbon monoxide, lead, cadmium, mercury, and dioxins and dibenzofurans.

On April 8, 1997, the United States Court of Appeals for the District of Columbia Circuit vacated Subparts Cb and Eb as they apply to MWC units with capacity to combust less than or equal to 250 tons per day of MSW (small MWCs), consistent with their opinion in Davis County Solid Waste Management and Recovery District v. EPA, 101 F.3d 1395 (D.C. Cir. 1996), as amended, 108 F.3d 1454 (D.C. Cir. 1997). As a result, subparts Eb and Cb apply only to MWC units with individual capacity to combust more than 250 tons per day of MSW (large MWC units).

Under section 129 of the Act, EG are not Federally enforceable. Section 129(b)(2) of the Act requires states to submit to EPA for approval, plans that implement and enforce the EG. State plans must be at least as protective as the EG, and become Federally enforceable upon approval by EPA. The procedures for adoption and submittal of State Plans are codified in 40 CFR part 60, subpart B. The EPA originally promulgated the subpart B provisions on November 17, 1975. The EPA amended subpart B on December 19, 1995, to allow the subparts developed under section 129 to include specifications that supersede the general provisions in Subpart B regarding the schedule for submittal of State Plans, the stringency of the emission limitations, and the compliance schedules (see 60 FR 65414).

This action approves the plan submitted by Oklahoma to implement and enforce subpart Cb, as it applies to large MWC units.

II. Discussion

Oklahoma submitted to EPA on July 10, 1998, the following in their 111(d)/129 State Plan for implementation and enforcement of the EG for existing MWCs under their direct jurisdiction in the State of Oklahoma pursuant to 40 CFR 60.23 through 60.26: Demonstration of Legal Authority; Enforceable Mechanism; Inventory of MWC Plants/Units; MWC Emissions Inventory; Emission Limits; Compliance Schedule; Testing, Monitoring, Recordkeeping and Reporting Requirements; Demonstration that the Public had Adequate Notice and Opportunity to Submit Written Comments; Provisions for Submittal of Progress Reports to EPA; and applicable State of Oklahoma statutes. Oklahoma submitted its State Plan after the Court of Appeals vacated subpart Cb as it applies to small MWC units. Thus, the Oklahoma State Plan covers only large MWC units.

One MWC facility exists in Oklahoma with units affected by the MWC EG. This facility is owned by the City of Tulsa, and operated by Ogden-Martin Systems of Tulsa, Incorporated. The Facility has three MWC units, each with the capacity to burn more than 250 tons per day of municipal solid waste.

The approval of the Oklahoma State Plan is based on finding that: (1) The Oklahoma Department of Environmental Quality (ODEQ) provided adequate public notice of public hearings for the proposed rulemaking and State Plan which allow the ODEQ to implement and enforce the EG for large MWCs, and (2) the ODEQ also demonstrated legal authority to adopt emission standards and compliance schedules applicable to the designated facility; enforce applicable laws, regulations, standards and compliance schedules; seek injunctive relief; obtain information necessary to determine compliance; require recordkeeping; conduct inspections and tests; require the use of monitors; require emission reports of owners and operators; and make emission data publicly available. Please see the Region & Evaluation Report and the State Plan submittal, as enclosed in the official file, for the detailed technical evaluation of the Oklahoma State Plan.

III. Final Action

The EPA is approving the above referenced State Plan because it meets the Agency requirements. The EPA is publishing this rule without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in the proposed section of this **Federal Register** publication, the EPA is publishing a separate document that will serve as the proposal to approve the State Plan should relevant adverse comments be filed. This rule will be effective January 5, 1999 without further notice unless, by December 7, 1998, relevant adverse comments are received.

If EPA receives such comments, this action will be withdrawn before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. The EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. If no such comments are received, the public is advised that this action will be effective January 5, 1999.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any State Plan. Each request for revision to the State Plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

IV. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from Executive Order (E.O.) 12866, entitled "Regulatory Planning and Review."

B. Executive Order 12875

Under E.O. 12875, EPA may not issue a regulation that is not required by statute and that creates a mandate upon a state, local, or tribal government, unless the Federal Government provides the funds necessary to pay the direct compliance costs incurred by those governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget a description of the extent of EPA's prior consultation with representatives of affected state, local, and tribal governments, the nature of their concerns, copies of written communications from the governments, and a statement supporting the need to issue the regulation. In addition, E.O. 12875 requires EPA to develop an effective process permitting elected officials and other representatives of state, local, and tribal governments to provide meaningful and timely input in the development of regulatory proposals containing significant unfunded mandates. Today's rule does not create a mandate on state, local or tribal governments. The rule does not impose any enforceable duties on these entities. Accordingly, the requirements of section 1(a) of E.O. 12875 do not apply to this rule.

C. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997), applies to any rule that: (1) is determined to be "economically significant" as defined under E.O. 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045 because it does not involve decisions intended to mitigate environmental health or safety risks.

D. Executive Order 13084

Under E.O. 13084, EPA may not issue a regulation that is not required by statute, that significantly affects or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments. If the mandate is unfunded, EPA must provide the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities." Today's rule does not significantly or uniquely affect the communities of Indian tribal governments. Accordingly, the requirements of section 3(b) of E.O. 13084 do not apply to this rule.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. This final rule will not have a significant impact on a substantial number of small entities because State Plan approvals under section 111 of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal State Plan approval does not create any new requirements, I certify that this action will not have a significant economic impact on a substantial number of small entities. Moreover, due to the nature of the Federal-State relationship under the Clean Air Act, preparation of flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions on such grounds. Union Electric Co. v. U.S. EPA, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

F. Unfunded Mandates

Under section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated annual costs to State, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under section 205, EPA must select the mostly cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

The EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated annual costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local or tribal governments, or to the private sector, result from this action.

G. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register.** A major rule cannot take effect until 60 days after it is published in the **Federal Register.** This rule is not a "major" rule as defined by 5 U.S.C. 804(2).

H. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 7, 1998. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 62

Environmental protection, Air pollution control, Municipal waste combustors, Reporting and recordkeeping requirements.

Dated: October 28, 1998.

Lynda F. Carroll,

Acting Regional Administrator, Region 6.

40 CFR Part 62 of the Code of Federal Regulations is amended as follows:

PART 62—[AMENDED]

1. The authority citation for part 62 continues to read as follows:

Authority: 42 U.S.C. 7401–7671q.

Subpart LL—Oklahoma

2. Section 62.9100 is amended by adding paragraphs (b)(3) and (c)(3) as follows:

§ 62.9100 Identification of plan.

* * * * *

(b) * * *

(3) Oklahoma State Plan for Existing Large Municipal Waste Combustors, submitted on July 10, 1998, by the Oklahoma Department of Environmental Quality.

(c) * * *

(3) Existing municipal waste combustors.

3. Subpart LL is amended by adding a new § 62.9150 and a new undesignated center heading to read as follows:

Metals, Acid Gases, Organic Compounds and Nitrogen Oxide Emissions From Existing Municipal Waste Combustors with the Capacity To Combust Greater Than 250 Tons Per Day of Municipal Solid Waste

§ 62.9150 Identification of sources.

The plan applies to existing facilities with a municipal waste combustor (MWC) unit capacity greater than 250 tons per day of municipal solid waste (MSW) at the following MWC site: Ogden-Martin Systems of Tulsa, Incorporated, 2122 South Yukon Avenue, Tulsa, OK 74107.

Proposed Rules

Federal Register

Vol. 63, No. 215

Friday, November 6, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 984

[Docket No. FV99–984–1 PR]

Walnuts Grown in California; Increased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This rule would increase the assessment rate, from $0.0116 to $0.0133 per kernelweight pound of merchantable walnuts certified, established for the Walnut Marketing Board (Board) under Marketing Order No. 984 for the 1998–99 and subsequent marketing years. The Board is responsible for local administration of the marketing order which regulates the handling of walnuts grown in California. Authorization to assess walnut handlers enables the Board to incur expenses that are reasonable and necessary to administer the program. The marketing year begins August 1 and ends July 31. The assessment rate would remain in effect indefinitely unless modified, suspended, or terminated.

DATES: Comments must be received by November 23, 1998.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent to the Docket Clerk, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; Fax: (202) 205–6632; or E-mail: moabdocket_clerk@usda.gov. Comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Diane Purvis, Marketing Assistant, or Mary Kate Nelson, Marketing Specialist, California Marketing Field Office, Fruit and Vegetable Programs, AMS, USDA, 2202 Monterey Street, Suite 102B, Fresno, California 93721; telephone: (209) 487–5901; Fax: (209) 487–5906; or George Kelhart, Technical Advisor, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632. Small businesses may request information on compliance with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement and Order No. 984, both as amended (7 CFR part 984), regulating the handling of walnuts grown in California, hereinafter referred to as the "order." The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the "Act."

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the marketing order now in effect, California walnut handlers are subject to assessments. Funds to administer the order are derived from such assessments. It is intended that the assessment rate as issued herein will be applicable to all assessable walnuts beginning on August 1, 1998, and continue until amended, suspended, or terminated. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule would increase the assessment rate established for the Board for the 1998–99 and subsequent marketing years from $0.0116 to $0.0133 per kernelweight pound of certified merchantable walnuts.

The California walnut marketing order provides authority for the Board, with the approval of the Department, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The members of the Board are producers and handlers of California walnuts. They are familiar with the Board's needs and with the costs for goods and services in their local area and are thus in a position to formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in a public meeting. Thus, all directly affected persons have an opportunity to participate and provide input.

For the 1997–98 and subsequent marketing years, the Board recommended, and the Department approved, an assessment rate that would continue in effect from marketing year to marketing year unless modified, suspended, or terminated by the Secretary upon recommendation and information submitted by the Board or other information available to the Secretary.

The Board met on September 11, 1998, and unanimously recommended 1998–99 expenditures of $2,620,274 and an assessment rate of $0.0133 per kernelweight pound of merchantable walnuts certified. In comparison, last year's budgeted expenditures were $2,391,289. The assessment rate of $0.0133 is $0.0017 higher than the rate currently in effect. The quantity of assessable walnuts for 1998–99 is estimated at 198,000,000 kernelweight pounds, which is 9,000,000 kernelweight pounds less than 1997–98. With the anticipated decrease in assessable walnuts and increased budget expenditures, a higher assessment rate is needed to generate sufficient revenue

to administer the program for the 1998–99 marketing year as shown in the following table.

	Assessment income	Proposed budget	Difference
Current Rate—$0.0116	$2,296,800	$2,620,274	−$323,474
Proposed Rate—$0.0133	2,633,400	2,620,274	+13,126

The following table compares major budget expenditures recommended by the Board for the 1998–99 and 1997–98 marketing years:

Budget expense categories	1998–99	1997–98
General Expenses	$246,643	$240,326
Office Expenses	163,815	147,126
Research Expenses	2,115,016	2,128,837
Production Research Director	59,800	50,000
Reserve for Contingencies	35,000	25,000

The assessment rate recommended by the Board was derived by dividing anticipated expenses by expected merchantable certifications of California walnuts. As mentioned earlier, merchantable certifications for the year are estimated at 198,000,000 kernelweight pounds which should provide $2,663,400 in assessment income. Unexpended funds may be used temporarily to defray expenses of the subsequent marketing year, but must be made available to the handlers from whom collected within five months after the end of the year (§ 984.69.)

The proposed assessment rate would continue in effect indefinitely unless modified, suspended, or terminated by the Secretary upon recommendation and information submitted by the Board or other available information.

Although this assessment rate would be in effect for an indefinite period, the Board would continue to meet prior to or during each marketing year to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Board meetings are available from the Board or the Department. Board meetings are open to the public and interested persons may express their views at these meetings. The Department would evaluate Board recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking would be undertaken as necessary. The Board's 1998–99 budget and those for subsequent marketing years would be reviewed and, as appropriate, approved by the Department.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 5,000 producers of walnuts in the production area and approximately 48 handlers subject to regulation under the marketing order. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts less than $500,000, and small agricultural service firms are defined as those whose annual receipts are less than $5,000,000.

Last year, as a percentage, 33 percent of the handlers shipped over 2.4 million kernelweight pounds of walnuts, and 67 percent of the handlers shipped under 2.4 million kernelweight pounds. Based on an average price of $2.10 per kernelweight pound at point of first sale, the majority of handlers of California walnuts may be classified as small entities.

This rule would increase the assessment rate established for the Board and collected from handlers for the 1998–99 and subsequent marketing years from $0.0116 to $0.0133 per kernelweight pound of merchantable walnuts certified. The Board unanimously recommended 1998–99 expenditures of $2,620,274 and an assessment rate of $0.0133 per kernelweight pound of merchantable walnuts certified. The proposed assessment rate of $0.0133 is $0.0017 higher than the 1997–98 rate. The quantity of assessable walnuts for the 1998–99 marketing year is estimated at 198,000,000 kernelweight pounds. Thus, the $0.0133 rate should provide $2,633,400 in assessment income and be adequate to meet this year's expenses. Unexpended funds may be used temporarily to defray expenses of the subsequent marketing year, but must be made available to the handlers from whom collected within five months after the end of the year (§ 984.69).

The following table compares major budget expenditures recommended by the Board for the 1998–99 and 1997–98 marketing years:

Budget expense categories	1998–99	1997–98
General Expenses	$246,643	$240,326
Office Expenses	163,815	147,126
Research Expenses	2,115,016	2,128,837
Production Research Director	59,800	50,000
Reserve for Contingencies	35,000	25,000

The higher assessment rate is needed to provide sufficient revenue to administer the program for the 1998–99 marketing year as shown in the following table.

	Assessment income	Proposed budget	Difference
Current Rate—$0.0116	$2,296,800	$2,620,274	−$323,474
Proposed Rate—$0.0133	2,633,400	2,620,274	+13,126

The Board reviewed and unanimously recommended 1998–99 expenditures of $2,620,274 which included increases in administrative and office expenses, and production research salary, and a decrease for research programs. Prior to arriving at this budget, the Board considered information and recommendations from various sources, such as the Board's Budget and Personnel Committee, the Research Committee, and the Market Development Committee. Alternative expenditure levels were discussed by these groups, based upon the relative value of various research projects to the walnut industry. After a desired expenditure level was determined, the assessment rate of $0.0133 per kernelweight pound of assessable walnuts was determined by dividing the total recommended budget by the quantity of assessable walnuts, estimated at 198,000,000 kernelweight pounds for the 1998–99 marketing year. This is approximately $13,000 above the anticipated expenses, which the Board determined to be acceptable.

A review of historical information and preliminary information pertaining to the upcoming marketing year indicates that the grower price for the 1998–99 season could range between $1.45 and $1.58 per kernelweight pound of walnuts. Therefore, the assessment revenue for the 1998–99 marketing year as a percentage of total grower revenue should be less than one percent.

This action would increase the assessment obligation imposed on handlers. While assessments impose some additional costs on handlers, the costs are minimal and uniform on all handlers. Some of the additional costs may be passed on to producers. However, these costs are offset by the benefits derived by the operation of the marketing order. In addition, the Board's meeting was widely publicized throughout the California walnut industry, and all interested persons were invited to attend the meeting and participate in Board deliberations on all issues. Like all Board meetings, the September 11, 1998, meeting was a public meeting and all entities, both large and small, were able to express views on this issue. Finally, interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

This proposed rule would impose no additional reporting or recordkeeping requirements on either small or large California walnut handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

The Department has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

A 15-day comment period is provided to allow interested persons to respond to this proposed rule. Fifteen days is deemed appropriate because: (1) The Board needs to have sufficient funds to pay its expenses which are incurred on a continuous basis; (2) the 1998–99 marketing year began on August 1, 1998, and the marketing order requires that the rate of assessment for each marketing year apply to all assessable walnuts handled during such marketing year; and (3) handlers are aware of this action which was unanimously recommended by the Board at a public meeting and is similar to other assessment rate actions issued in past years.

List of Subjects in 7 CFR Part 984

Marketing agreements, Nuts, Reporting and recordkeeping requirements, Walnuts.

For the reasons set forth in the preamble, 7 CFR part 984 is proposed to be amended as follows:

PART 984—WALNUTS GROWN IN CALIFORNIA

1. The authority citation for 7 CFR part 984 continues to read as follows:

Authority: 7 U.S.C. 601–674.

2. Section 984.347 is proposed to be revised to read as follows:

§ 984.347 Assessment rate.

On and after August 1, 1998, an assessment rate of $0.0133 per kernelweight pound is established for California merchantable walnuts.

Dated: October 21, 1998.

Larry B. Lace,

Acting Deputy Administrator, Fruit and Vegetable Programs.

[FR Doc. 98–29727 Filed 11–5–98; 8:45 am]

BILLING CODE 3410–02–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1216

[FV–98–702–PR]

Proposed Peanut Promotion, Research, and Information Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: The U.S. Department of Agriculture (the Department or USDA) is seeking comments regarding the establishment of an industry-funded promotion, research, and information program for peanuts. A proposed program—the Peanut Promotion, Research, and Information Order (Order)—was submitted to USDA by the American Farm Bureau Federation. Under the Order, peanut producers would pay an assessment of 1 percent of the price of farmers stock peanuts sold to first handlers. First handlers and marketing associations would remit the assessments to the proposed National Peanut Board (Board). The proposed program would be implemented under the Commodity Promotion, Research, and Information Act of 1996 (Act).

DATES: Comments must be received by January 5, 1999.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule to the Docket Clerk, Research and Promotion Branch, Fruit and Vegetable Programs, Agricultural Marketing Service, USDA, Stop 0244, Room 2535–S, 1400 Independence Avenue, S.W., Washington, D.C. 20250–0244. Comments should be submitted in triplicate and will be made available for public inspection at the above address during regular business hours. Comments may also be submitted electronically to: malinda__e__farmer@usda.gov. All comments should reference the docket number and the date and page number of this issue of the **Federal Register**. A copy of this rule may be found at: www.ams.usda.gov/fv/rpdocketlist.htm. Pursuant to the PRA, send comments regarding the merits of the burden estimate, ways to minimize the burden, including the use of automated collection techniques or other forms of

information technology, or any other aspect of this collection of information to the above address. Comments concerning the information collection under the PRA should also be sent to the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, D.C. 20503.

FOR FURTHER INFORMATION CONTACT: Angela C. Snyder, Research and Promotion Branch, Fruit and Vegetable Programs, AMS, USDA, Stop 0244, 1400 Independence Avenue, S.W., Room 2535–S, Washington, D.C. 20250–0244; telephone (910) 860–4689 or fax (202) 205–2800.

SUPPLEMENTARY INFORMATION: This proposed Order is issued pursuant to the Commodity Promotion, Research, and Information Act of 1996, 7 U.S.C. 7401–7425; Public Law 104–127, enacted April 4, 1996, hereinafter referred to as the Act.

Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. It is not intended to have retroactive effect. Section 524 of the Act provides that the Act shall not affect or preempt any other Federal or state law authorizing promotion or research relating to an agricultural commodity.

Under Section 519 of the Act, a person subject to the Order may file a petition with the Secretary stating that the Order, any provision of the Order, or any obligation imposed in connection with the Order, is not established in accordance with the law, and requesting a modification of the Order or an exemption from the Order. Any petition filed challenging the Order, any provision of the Order, or any obligation imposed in connection with the Order, shall be filed within 2 years after the effective date of the Order, provision, or obligation subject to challenge in the petition. The petitioner will have the opportunity for a hearing on the petition. Thereafter, the Secretary of Agriculture (Secretary) will issue a ruling on a petition. The Act provides that the district court of the United States for any district in which the petitioner resides or conducts business shall have the jurisdiction to review a final ruling on the petition, if the petitioner files a complaint for that purpose not later than 20 days after the date of the entry of the Secretary's final ruling.

Executive Order 12866

This proposed rule has been determined not significant for purposes of Executive Order 12866 and therefore has not been reviewed by the Office of Management and Budget (OMB).

Regulatory Flexibility Act

In accordance with the Regulatory Flexibility Act (RFA) [5 U.S.C. 601 *et seq.*], the Agency is required to examine the impact of the proposed rule on small entities. The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions so that small businesses will not be disproportionately burdened.

The Act authorizes generic programs of promotion, research, and information for agricultural commodities. Congress found that it is in the national public interest and vital to the welfare of the agricultural economy of the United States to maintain and expand existing markets and develop new markets and uses for agricultural commodities through industry-funded, government-supervised, generic commodity promotion programs.

This program is intended to develop and finance an effective and coordinated program of promotion, research, and consumer information to maintain and expand the markets for peanuts. A proposal was submitted by the American Farm Bureau Federation (proponent), working in cooperation with 20 state and regional peanut grower organizations representing the nine primary peanut-producing states. The proponent has proposed that peanut producers approve the program in a referendum in advance of its implementation, and producer members would serve on the 1-member Board that would administer the program under USDA's supervision. In addition, any person subject to the program may file with the Secretary a petition stating that the Order or any provision is not in accordance with law and requesting a modification of the Order or an exemption from the Order.

While the proposed Order would impose certain recordkeeping requirements on first handlers, information required under the proposed Order could be compiled from records currently maintained. First handlers and area marketing associations—for peanuts placed under loan with the Commodity Credit Corporation (CCC) in the price support program administered for CCC by USDA's Farm Service Agency (FSA)—would collect and remit all assessments to the Board. Their responsibilities would include accurate recordkeeping and accounting of all peanuts purchased or contracted for, including the number of pounds handled, price paid to the producer, and when peanuts are purchased. The forms require the minimum information necessary to effectively carry out the requirements of the program, and their use is necessary to fulfill the intent of the Act. Such records shall be retained for at least two years. These requirements are either already being conducted as a normal business practice or are required by other USDA peanut regulations. The added burden to first handlers and area marketing associations for a peanut promotion, research, and information program is therefore expected to be minimal.

There is also a minimal burden on producers. The burden relates to those producers who would seek nomination to serve on the Board and those who vote in referenda. In addition, the proposed Order would require producers to keep records and to provide information to the Board or the Secretary when requested. However, it is not anticipated that producers would be required to submit forms to the Board. Most likely, the information would be obtained through an audit of a producer's records to confirm information provided by a first handler or if a first handler did not file the required reports as part of the Board's compliance operation.

The estimated annual cost of providing the information to the Board by an estimated 98 respondents (21 producers, 57 first handlers, and 20 producer organizations) would be $4,059.85 or $5.00 per producer, $66.05 per first handler, and $9.50 per producer organization.

The Department would oversee program operations and, if the program is implemented, would conduct a referendum (1) every five years to determine whether peanut producers support continuation of the program, (2) at the request of the Board established under the Order, or (3) at the request of 10 percent or more of the number of persons eligible to vote in referenda. Additionally, the Secretary may conduct a referendum at any time to determine whether the continuation, suspension, or termination of the Order or a provision of the Order is favored by those eligible to vote in referenda.

There are approximately 25,000 producers and 57 first handlers of peanuts that would be subject to the program. Most of the producers would be classified as small businesses under the criteria established by the Small Business Administration (SBA) [13 CFR 121.601]. Most first handlers would not be classified as small businesses. The SBA defines small agricultural handlers as those whose annual receipts are less than $5 million, and small agricultural producers are defined as those having annual receipts of not more than $500,000 annually.

According to USDA's National Agricultural Statistics Service (NASS), the nine major peanut-producing states in the United States account for 99 percent of the peanuts grown in this country. The combined production from these states totaled 3.5 billion pounds in 1997. NASS reports that Georgia was the largest producer (38 percent of the total), followed by Texas (23 percent), Alabama (11 percent), North Carolina (9 percent), Florida (6 percent), Virginia (5 percent), Oklahoma (5 percent), New Mexico (1 percent), and South Carolina (1 percent). The farm value of peanuts in 1997 reached $932 million. According to 1992 Census of Agriculture (Census) data, small amounts of peanuts were also grown in seven other states.

According to the proponent, based on Census for these nine states, 36 percent of the peanut-producing counties in the United States had 35 percent or more of their total crop income from peanuts. Twenty-four percent of the counties had 50 percent or more of their crop income from peanuts. From a state perspective, 70 percent of the crop income in Alabama's peanut-producing counties is generated from peanuts. For Virginia, the percentage is 48 percent. In addition, 16,194 farms harvested peanuts in 1992. Of these, 15,914 were located in the nine primary peanut-producing states.

Three main types of peanuts are grown in the United States: Florunners, Virginia, and Spanish. The southeast growing region grows mostly the medium-kernel Runner peanuts. The southwest growing region used to grow two-thirds Spanish and one-third Runner peanuts, but now more Runners than Spanish are grown. Virtually all of the Spanish peanut production is in Oklahoma and Texas. In the Virginia-Carolina region, mainly large-kernel Virginia peanuts are grown. New Mexico grows a fourth type of peanut, the Valencia.

Peanut manufacturers produce three principal peanut products: peanut butter, packaged nuts (including salted, unsalted, flavored, and honey-roasted nuts), and peanut candies. In most years, half of all peanuts produced in the United States for edible purposes are used to manufacture peanut butter. Packaged nuts account for almost one-third of all processed peanuts. Some of these (commonly referred to as "ballpark" peanuts) are roasted in the shell, while a much larger quantity is used as shelled peanuts packed as dry-roasted peanuts, salted peanuts, and salted mixed nuts. Some peanuts are ground to produce peanut granules and flour. Other peanuts are crushed to produce oil.

According to USDA's Foreign Agricultural Service, U.S. exports of peanuts (including peanut meal, oil, and peanut butter) totaled 880 million inshell equivalent pounds in 1997, with a value of $285 million (U.S. point of departure for the foreign country). Of the total quantity, 60 percent was shelled peanuts used as nuts, 11 percent was blanched or otherwise prepared or preserved peanuts, 10 percent was inshell peanuts, 7 percent was peanut butter, 4 percent was shelled oil stock peanuts, 4 percent was crude peanut oil, and 3 percent was refined peanut oil.

The major destinations for domestic shelled peanuts for use as nuts are Canada, Mexico, the United Kingdom, and the Netherlands. Blanched or otherwise prepared peanuts are sent mainly to Western Europe, especially the Netherlands, France, and Spain. Inshell peanuts are mainly exported to Canada and various countries in Western Europe. Peanut butter is sent to many countries, with the largest amounts going to Canada and Saudi Arabia. Peanut oil and oil stock peanuts are exported world-wide, but major destinations can vary from year to year.

Approximately 250 million inshell equivalent pounds of peanuts and processed peanuts (including oil and peanut butter) were imported in 1997 with a combined value (f.o.b. country of origin) of $73 million. Most of the imports (45 percent) were shelled peanuts for use as nuts. The major U.S. supplier is Argentina, but several other countries export shelled peanuts to the United States, including Mexico, Nicaragua, and South Africa.

Peanut butter imports are also significant and accounted for about 32 percent of the total quantity of nuts (inshell basis) imported in 1997. Most peanut butter imports come from Canada and Argentina. The other major import category—crude and refined peanut oil—are shipped mainly from Argentina and Nicaragua and account for approximately 18 percent of total imports (inshell equivalent basis). Inshell peanuts, primarily from Mexico, accounted for nearly 3 percent of total imports in 1997. About 3 percent of total imports consisted of blanched or other processed peanuts, mainly from China. Imports of oil stock shelled peanuts were negligible.

Most peanuts produced in other countries are crushed for oil and protein meal. The United States is the main producer of peanuts used in such edible products as peanut butter, roasted peanuts, and peanut candies. Peanuts are one of the world's principal oilseeds, ranking fourth behind soybeans, cottonseed, and rapeseed. India and China usually account for half of the world's peanut production.

According to The Agriculture Statistics Report published by USDA, during the 1995–96 season, the average annual production per U.S. producer was approximately 144,228 pounds of peanuts. Peanuts produced during these growing seasons provided average annual gross sales of $42,222 per peanut producer. The value of the 1995–96 crop was approximately $1.013 billion. During the same period, per capita consumption in the United States was 5.7 pounds of peanuts.

The proposed Order would authorize a fixed assessment paid by producers (to be collected by first handlers) at a rate of 1 percent of the price paid for all farmers stock peanuts, regardless of whether the peanuts are sold commercially or placed under loan with CCC in the price support program administered for CCC by FSA.

Section 516(a)(1) of the Act provides authority to the Secretary to exempt from the Order any de minimis quantity of an agricultural commodity otherwise covered by the Order. The proponent has elected not to provide for exemptions for a de minimis amount regarding peanuts. Therefore, the term de minimis is not defined in the proposed Order, and a de minimis exemption is not included.

At the proposed rate of assessment of 1 percent of farm value, the Board would collect approximately $10 million annually, assuming 1 billion pounds of peanuts are produced. It is expected that the 1 percent rate of assessment would represent approximately 1 percent of producers' average return. In 1995–96, the average price for peanuts was $0.293 per pound.

USDA will keep all individuals informed throughout the referendum process to ensure that they are aware of and are able to participate in the referendum. USDA will publicize information regarding the referendum process so that trade associations and related industry media can be kept informed. If the program is implemented, the newly established Board would recommend to USDA regulations for the program.

In addition, the peanut industry would nominate producers to serve as members on the Board. The Board would recommend the assessment rate, programs and projects, a budget, and any other rules and regulations that might be necessary for the administration of the program. USDA

would ensure that the nominees represent the peanut industry in accordance with the Act. Primary peanut-producing states are defined in the Order as Alabama, Florida, Georgia, New Mexico, North Carolina, Oklahoma, South Carolina, Texas, and Virginia, provided that these states maintain 3-year average production of at least 10,000 tons of peanuts each. Minor peanut-producing states are defined in the Order as all peanut-producing states other than the primary peanut-producing states. Currently, the following states would be considered minor states: Arizona, California, Louisiana, Mississippi, and Tennessee.

Each primary producing state would have one member on the Board, and the minor peanut-producing states would be represented collectively by one member on the Board. Each member would have an alternate. Therefore, the Board would have 10 members and 10 alternates.

Proposed recordkeeping and reporting requirements for the peanut promotion, research, and information program would be designed to minimize the burden on first handlers. It is USDA's goal to collect information from forms already submitted to another USDA agency. Any information collection that could not occur through forms already in use would pose minimal additional burden. The peanut promotion program would be designed to strengthen the position of peanuts in the marketplace, maintain and expand existing domestic and foreign markets, and develop new uses and markets for peanuts.

The estimated annual cost of providing the information to the proposed Board by an estimated 98 respondents (21 producers, 57 first handlers, and 20 producer organizations) would be $4,059.85, or $5.00 per producer, $66.05 per first handler, and $9.50 per producer organization.

With regard to alternatives to this proposed rule, the Act itself does provide for authority to tailor a program according to the individual needs of an industry. Provision is made for permissive terms in an order in Section 516 of the Act, and other sections provide for alternatives. For example, Section 514 of the Act provides for orders applicable to (1) producers, (2) first handlers and other persons in the marketing chain as appropriate, and (3) importers (if imports are subject to assessment). Section 516 authorizes an order to provide for exemption of de minimis quantities of an agricultural commodity; different payment and reporting schedules; coverage of research, promotion, and information activities to expand, improve, or make more efficient the marketing or use of an agricultural commodity in both domestic and foreign markets; provision for reserve funds; provision for credits for generic and branded activities; and assessment of imports. In addition, Section 518 of the Act provides for referenda to ascertain approval of an order to be conducted either prior to its going into effect or within 3 years after assessments first begin under the order. An order also may provide for its approval in a referendum to be based upon (1) a majority of those persons voting; (2) persons voting for approval who represent a majority of the volume of the agricultural commodity; or (3) a majority of those persons voting for approval who also represent a majority of the volume of the agricultural commodity. Section 515 of the Act provides for establishment of a board from among producers, first handlers, and others in the marketing chain as appropriate and importers, if importers are subject to assessment.

This proposal includes provisions for both domestic and foreign market expansion and improvement; reserve funds; and an initial referendum to be conducted prior to the Order going into effect and with approval based upon a majority of those persons voting in a referendum.

While we have performed this Initial Regulatory Flexibility Analysis regarding the impact of this proposed Order on small entities, in order to obtain all the data necessary for a comprehensive analysis, we invite comments concerning potential effects of the proposed Order. In particular, we are interested in obtaining more information on the number and kind of small entities that may incur benefits or costs from implementation of the proposed Order and information on the expected benefits or costs.

Paperwork Reduction Act

In accordance with the Office of Management and Budget (OMB) regulation [5 CFR Part 1320] which implements the Paperwork Reduction Act of 1995 [44 U.S.C. Chapter 35], the information collection and recordkeeping requirements that may be imposed by this Order have been submitted to OMB for approval.

Title: National Research, Promotion, and Consumer Information Programs.

OMB Number for background form (number 1 below): 0505–0001.

Expiration Date of Approval: November 30, 1998.

OMB Number for other information collections: 0581–0093.

Expiration Date of Approval: November 30, 2000.

Type of Request: Revision of currently approved information collections for advisory committees and boards and for research and promotion programs.

Abstract: The information collection requirements in the request are essential to carry out the intent of the Act.

In addition, there will be the additional burden on producers of voting in referenda. The referendum ballot, which represents the information collection requirement relating to referenda, is addressed in a proposed rule on referendum procedures which is published separately in this issue of the **Federal Register**.

Under the proposed program, first handlers would be required to collect assessments from producers and file reports with and submit assessments to the Board. While the proposed Order would impose certain recordkeeping requirements on first handlers, information required under the proposed Order could be compiled from records currently maintained. Such records shall be retained for at least two years beyond the marketing year of their applicability. The estimated annual cost of providing the information to the Board by an estimated 98 respondents (21 producers, 57 first handlers, and 20 producer organizations) would be $4,059.85, or $5.00 per producer, $66.05 per first handler, and $9.50 per producer organization.

The proposed Order's provisions have been carefully reviewed, and every effort has been made to minimize any unnecessary recordkeeping costs or requirements, including efforts to utilize information already submitted under other peanut programs administered by the Department. The Department is exploring ways to obtain some of the information needed from forms already in use.

The proposed forms would require the minimum information necessary to effectively carry out the requirements of the program, and their use is necessary to fulfill the intent of the Act. Such information can be supplied without data processing equipment or outside technical expertise. In addition, there are no additional training requirements for individuals filling out reports and remitting assessments to the Board. The forms would be simple, easy to understand, and place as small a burden as possible on the person required to file the information.

Collecting information monthly would coincide with normal industry business practices. Reporting other than monthly would impose an additional and unnecessary recordkeeping burden on first handlers. The timing and frequency of collecting information is intended to meet the needs of the industry while minimizing the amount of work necessary to fill out the required reports. In addition, the information to be included on these forms is not available from other sources because such information relates specifically to individual producers and first handlers who are subject to the provisions of the Act.

Therefore, there is no practical method for collecting the required information without the use of these forms.

Information collection requirements that are included in this proposal include:

(1) *A background information form to be completed by candidates nominated by certified producer organizations for appointment to the Board.*

Estimate of Burden: Public reporting for this collection of information is estimated to average 0.5 hours per response for each producer.

Respondents: Producers.

Estimated number of Respondents: 21 (average of 40 for initial nominations to the Board and approximately 12 respondents annually thereafter for each 3-year period).

Estimated number of Responses per Respondent: 1 every 3 years.

Estimated Total Annual Burden on Respondents: 20 hours for the initial nominations to the promotion board and 6 hours annually thereafter.

(2) *A monthly report by each first handler of peanuts.*

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 0.5 hours per each first handler reporting on peanuts handled.

Respondents: First handlers.

Estimated number of Respondents: 57.

Estimated number of Responses per Respondent: 12.

Estimated Total Annual Burden on Respondents: 342 hours.

(3) *A nomination form by which certified producer organizations would nominate producers for membership on the Board.*

Estimate of Burden: Public reporting burden for this collecting of information is estimated to average 0.5 hours per response.

Respondents: Certified producer organizations.

Estimated number of Respondents: 20.

Estimated number of Responses per Respondent: 1 per year.

Estimated Total Annual Burden on Respondents: 10 hours.

(4) *A request of peanut producer organizations for certification of eligibility to nominate Board members.*

Estimate of Burden: Public reporting for this collection of information is estimated to average 0.5 hours per response for each organization.

Respondents: Peanut producer organizations.

Estimated number of Respondents: 9.

Estimated number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 9 hours.

(5) *A requirement to maintain records sufficient to verify reports submitted under the Order.*

Estimate of Burden: Public recordkeeping burden for keeping this information is estimated to average 0.5 hours per recordkeeper maintaining such records.

Recordkeepers: First handlers.

Estimated number of recordkeepers: 57.

Estimated total recordkeeping hours: 28.5 hours.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of functions of the Order and the Department's oversight of the program, including whether the information will have practical utility; (b) the accuracy of USDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumption used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

The Act provides for the submission of proposals for a peanut promotion, research, and information order by industry organizations or any other interested person affected by the Act.

Comments concerning the information collection requirements contained in this action should reference OMB No. 0581–0093. Comments addressing the nomination background information form should reference OMB No. 0505–0001. In addition, the docket number, date, and page number of this issue of the **Federal Register** also should be referenced. Comments should be sent to the USDA Docket Clerk and the OMB Desk Officer for Agriculture at the addresses and within the time-frames listed above. All responses to this notice will be summarized and included in the request for OMB approval.

OMB is required to make a decision concerning the collection of information contained in this rule between 30 and 60 days after publication. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

Background

The Act authorizes the Secretary, under a generic authority, to establish agricultural commodity research and promotion orders. Section 516 of the Act provides permissive terms for orders, and other sections provide for alternatives. For example, Section 514 of the Act provides for orders applicable to (1) producers, (2) first handlers and others in the marketing chain as appropriate, and (3) importers (if importers are subject to assessment). Section 516 authorizes an order to provide for exemption of de minimis quantities of an agricultural commodity; different payment and reporting schedules; coverage of research, promotion, and information activities to expand, improve, or make more efficient the marketing or use of an agricultural commodity in both domestic and foreign markets; provision for reserve funds; provision for credits for generic and branded activities; and assessment of imports. In addition, Section 518 of the Act provides for referenda to ascertain approval of an order to be conducted either prior to its going into effect or within 3 years after assessments first begin under the order. The order also may provide for its approval in a referendum based upon different voting patterns. Section 515 provides for establishment of a board from among producers, first handlers and others in the marketing chain as appropriate, and importers, if imports are subject to assessment.

This proposed Order includes provisions for both domestic and foreign market expansion and improvement, reserve funds, and an initial referendum to be conducted prior to the Order going into effect and with approval based upon a majority of those persons voting in the referendum.

The Act provides for a number of optional provisions that allow the tailoring of orders for different commodities.

The proponent, working in cooperation with 20 state and regional peanut industry organizations representing the nine primary peanut-producing states, has requested the establishment of a national peanut promotion, research, and information order pursuant to the Act. The Act authorizes the establishment and operation of generic promotion programs which may include a combination of promotion, research, industry information, and consumer

information activities funded by mandatory assessments. These programs are designed to maintain and expand markets and uses for agricultural commodities. This proposal would provide for the development and financing of an effective and coordinated program of research, promotion, and information for peanuts. The purpose of the program would be to strengthen the position of peanuts in domestic and foreign markets, and to develop, maintain, and expand markets for peanuts.

The program would not become effective until approved by peanut producers in a referendum to be conducted by USDA. Section 518 of the Act provides for the Department (1) to conduct an initial referendum, preceding a proposed order's effective date, among persons who would pay assessments under the program or (2) to implement a proposed order, pending the conduct of a referendum, among persons subject to assessments, within 3 years after assessments first begin.

In accordance with Section 518(e) of the Act, the results of the referendum must be determined one of three ways: (1) Approval by a majority of those persons voting; (2) approval by persons voting who represent a majority of the volume of the commodity covered by the program; or (3) approval by a majority of the persons voting who also represent a majority of the volume of the commodity produced, handled, or imported by the persons voting.

The proponent proposes that the Department conduct an initial referendum preceding the proposed Order's effective date and that approval of the Order be determined by a simple majority of the producers voting.

In accordance with the Act, the Department would oversee the program's operations. In addition, the Act requires the Secretary to conduct subsequent referenda: (1) not later than 7 years after assessments first begin under the Order; or (2) at the request of the board established under the Order; or (3) at the request of 10 percent or more of the number of persons eligible to vote. The proponent group has requested that a referendum be conducted every 5 years to determine if producers want the program to continue.

In addition to these criteria, the Act provides that the Secretary may conduct a referendum at any time to determine whether the continuation, suspension, or termination of the Order or a provision of the Order is favored by persons eligible to vote.

The proponent states that the United States Congress has established a number of programs since the early 1930's to support and stabilize farm prices and income and to adjust production in 1934. In 1949, a revised system of marketing quotas and acreage allotments for peanuts began. Since then, Congress has amended and changed the peanut program a number of times, with the latest changes made to the peanut title in 1996 with the passage of the Federal Agriculture Improvement and Reform (FAIR) Act. The new program retains its price support and supply management elements while operating at no cost to the government other than administrative expenses common to all price support programs. The new program also lowers the loan rate for quota peanuts from $678 per ton to $610 per ton and freezes that price for the life of the program, through 2002. In addition, the quota level, which the Secretary could not set below 1.35 million tons prior to passage of the FAIR Act, has been reduced to equal the anticipated domestic demand for peanuts.

The proponent has identified a number of market and production factors that suggest the need for a national research, promotion, and information program for peanuts. The most basic problem affecting peanut marketing is a drop in demand caused by negative health perceptions of peanuts' fat content, competition from other snack foods, and lack of awareness among young people.

In addition, the proponent cites other factors. Government purchases of peanut butter is down. If purchases return to historic heights, purchases will still not be enough to reverse supply/demand trends. Also, a 1997 Gallup survey revealed that 87 percent of all consumers are peanut users, while 13 percent did not consume any peanuts in the past year. Per capita consumption of peanuts has been decreasing. It appears now that demand trends have bottomed out and are starting to rise. National promotion could bolster this trend.

The same survey indicated that the percent of peanut non-users is increasing, as is the percent of young people not consuming peanuts or peanut products. Thirty-five percent of all consumers surveyed indicated they did not consume any snack peanuts, and more than 40 percent thought peanuts contained cholesterol when, in fact, peanuts contain none.

The proponent also states that 26 percent of all consumers did not consume any peanut butter last year. Peanut butter could be an affordable alternative for low-income consumers in comparison to other sandwich options, but fewer and fewer low income consumers are using peanut butter as an alternative.

In addition, in 1996, the farm value of U.S. peanuts fell below $1 billion to $970 million for the first time since 1982.

Further, the domestic industry is facing increased competition in the United States and abroad from lower-priced peanuts produced in other countries. The value of peanuts and peanut products imported into the United States exceeded $100 million in 1996.

All of these factors have led the domestic peanut industry to seek a national promotion program to find ways to further increase the consumption of U.S. peanuts.

Section 516(f) of the Act allows an order to authorize the levying of assessments on imports of the commodity covered by the program or on products containing that commodity, at a rate comparable to the rate determined for the domestic agricultural commodity covered by the order. The proponent has elected in its proposal not to assess imports.

The assessment levied on domestically produced peanuts would be used to pay for promotion, research, and consumer and industry information as well as administration, maintenance, and functioning of the Board. Expenses incurred by the Secretary in implementing and administering the Order, including referenda costs, also would be paid from assessments.

Sections 516(e)(1) and (2) of the Act state that the Secretary may provide credits of assessments for generic and branded activities. The proponent has elected not to propose credits for generic or branded activities. Therefore, the terms "generic activities" and "branded activities" are not defined in the Order, and credits for assessments would not be made.

First handlers would be responsible for the collection of assessments from the producer and payment to the promotion Board. First handlers would be required to maintain records for each producer for whom peanuts are handled, including peanuts produced by the first handler. In addition, first handlers would be required to file reports regarding the collection, payment, or remittance of the assessments.

All information obtained from persons subject to this Order as a result of recordkeeping and reporting requirements will be kept confidential by all officers, employees, and agents of the Department and of the Board. However, this information may be disclosed only if the Secretary considers the information relevant, and the information is revealed in a judicial proceeding or administrative hearing brought at the direction or on the request of the Secretary or to which the Secretary or any officer of the Department is a party. Other exceptions for disclosure of confidential information would include the issuance of general statements based on reports or on information relating to a number of persons subject to an order if the statements do not identify the information furnished by any person or the publication, by direction of the Secretary of the name of any person violating the Order and a statement of the particular provisions of the Order violated by the person.

The proposed Order provides for the Department to conduct an initial referendum preceding the proposed Order's effective date. Therefore, the proposed Order must be approved by a majority of the producers voting for approval. The proposed Order also provides for subsequent referenda to be conducted (1) every 5 years after the program is in effect, (2) at the request of the Board established under the Order, or (3) when requested by 10 percent or more of peanut producers covered by the Order. In addition, the Secretary may conduct a referendum at any time.

The Act requires that such a proposed order provide for the establishment of a board to administer the program under USDA supervision. The proponent's proposal provides for a 10-member National Peanut Board, as stated earlier.

To ensure fair and equitable representation of the peanut industry on the Board, the Act requires membership on the Board to reflect the geographical distribution of the production of peanuts. To that end, this proposal provides that each primary peanut-producing state would be represented on the Board by one producer member and alternate and that the minor peanut-producing states would be represented collectively by one at-large producer member and alternate. Based on current information on production in the various states, the Order defines the primary peanut-producing states as Alabama, Florida, Georgia, New Mexico, North Carolina, Oklahoma, South Carolina, Texas, and Virginia, provided that these states maintain three-year average production of at least 10,000 tons of peanuts.

Upon implementation of the Order and pursuant to the Act, the Board would at least once in each five-year period, but not more frequently than once in each three-year period, review the geographical distribution of peanuts in the United States and make a recommendation to the Secretary after considering the results of its review and other information it deems relevant regarding the reapportionment of the Board.

Members and alternates would serve for three-year terms, except that the members and alternates appointed to the initial Board would serve proportionately for two-, three-, and four-year terms. No member or alternate would serve more than two consecutive three-year terms.

The proposed Order submitted by the proponent is summarized as follows:

Sections 1216.01 through 1216.31 of the proposed Order define certain terms, such as peanuts, minor peanut-producing states, primary peanut-producing states, producer, and quota peanuts, which are used in the proposed Order.

Sections 1216.40 through 1216.49 include provisions relating to the Board establishment and membership, nominations, selections and acceptance, term of office, vacancies, alternate members, and compensation and reimbursement; procedures for conducting Board business; and powers and duties of the Board, which is the governing body authorized to administer the Order through the implementation of programs, plans, projects, budgets, and contracts to promote and disseminate information about peanuts, subject to oversight of the Secretary. These sections also include maintenance of books and records by the Board and prohibited activities of the Board, its employees, and agents.

In order to ensure support throughout the production area for all Board votes, § 1216.46(b) provides that all Board members' votes would be weighted by the value of production represented by each member. The votes of members from primary peanut-producing states would represent their respective states' three-year running average of total gross farm income derived from all peanut sales. The votes of the at-large Board member would equal the collective value of production from all minor peanut-producing states' three year running average of total gross farm income from all peanut sales. Any Board action would require the concurring votes of members collectively representing more than 50 percent of the total U.S. gross farm income derived from all peanut sales plus an additional two votes from other Board members, provided a minimum of five members concur. Therefore, regardless of the volume voted by the members, no Board action would be approved unless at least five members voted in favor of it. Similarly, if five members vote in favor of a motion and those five members do not represent more than 50 percent of the total U.S. gross farm income derived from all peanut sales, the motion would not be approved.

Sections 1216.50 through 1216.55 would cover budget review and approval; authorize the collection of assessments; use of assessments, including reimbursement of necessary expenses incurred by the Board for the performance of its duties, including expenses incurred for the Department's oversight responsibilities; specify who pays the assessment and how; authorize the imposition of a late-payment charge on past-due assessments; address programs, plans, and projects; require the Board to conduct periodically an independent review of its overall program; specify a program operating reserve; and cover the investment of assessment funds.

The proponent recommends a proposed assessment rate of 1 percent of the price paid for all farmers stock peanuts sold. Peanut producers may sell their peanuts commercially or put them in a government loan program. For peanuts sold commercially, the first handler would remit the assessment to the Board. The assessment would be 1 percent of the price paid for the peanuts.

Under a loan program administered by FSA, a peanut producer also has the option of delivering the peanuts to an area marketing association and receiving payment for the peanuts from CCC. If the peanut promotion program is implemented, the area association would deduct 1 percent of the payment from the producer's proceeds and remit that amount to the Board as the producer's initial assessment payment on the peanuts. After the association sells the peanuts, the area association reimburses CCC the amount of the payment to the producer and deducts its expenses from the selling price. If the peanut promotion program is implemented and if there is any profit from the sale of the peanuts, the association would deduct 1 percent of the profit, remit that amount to the Board to pay the producer's assessment, and pay the balance to the producer.

The Board may raise or lower the rate of assessment with approval of the Secretary.

The federal debt collection procedures referenced in § 1216.51(g) include those set forth in 7 CFR 3.1 through 3.36 for all research and promotion programs administered by AMS (60 FR 12533, March 7, 1995).

Sections 1216.60 through 1206.62 concern reporting and recordkeeping requirements for persons subject to the Order and protect the confidentiality of information from such books, records, or reports.

Section 1216.70 describes the certification requirements for peanut-producer organizations to be eligible to nominate Board members and submit requests for funds from the Board.

Sections 1216.80 through 1216.87 describe the rights of the Secretary; authorize the Secretary to suspend or terminate the Order when deemed appropriate; prescribe proceedings after suspension or termination; address personal liability, separability, and amendments; and address patents, copyrights, trademarks, information, publications, and product formulations developed through the use of assessment funds.

The Department has modified the proponent's proposal to make it consistent with the Act, other similar national research and promotion programs, and other Federal peanut programs administered by the Department; for consistency throughout the text; and for clarity.

In the definitions and throughout the text of the Order, "farmer stock peanuts" was changed to "farmers stock peanuts" for consistency with industry use and existing regulations.

A definition for "first handler" was added for consistency with similar national research and promotion programs, and subsequent sections were renumbered accordingly.

The definition of "information" was rewritten to include activities designed to enhance peanuts' image, to add definitions of "consumer information" and "producer information," and to conform with the Act.

The definition of "quota peanuts" was rewritten to reference 7 CFR Part 729.

In § 1216.41 (Nominations), the phrase "qualified nominating organizations" was changed to read "certified nominating organizations" for consistency with the text.

In addition, § 1216.50(h) has been revised to be consistent with the Act. Paragraph (e)(5) *Limitation on spending* of § 515 of the Act states that a board "may not expend for administration (except for reimbursements to the Secretary * * *)" an amount that exceeds 15 percent of the board's income during any fiscal year. The proposal submitted set a more stringent limitation of 10 percent and stated that administrative expenses included reimbursement to the Secretary. The Order may set the more stringent limitation of 10 percent because that amount is less than the 15 percent provided in the Act. However, the Order may not provide that reimbursements to the Secretary are covered by the limitation on spending.

Other minor changes which do not materially affect the text were made for consistency. For instance, in the definitions, "additional peanuts are * * *" was changed to read "additional peanuts means * * *" As another example, in sections containing only one paragraph, the paragraph designation was removed. Minor grammatical changes also were made.

The proponent submitted "Subpart B—Voting Procedures and Approval of the Peanut Promotion, Research, and Information Order." This proposed subpart has been revised and included as § 1216.80 of the proposed Order.

The Department has determined that this proposed Order is consistent with and will effectuate the purposes of the Act.

The proposal set forth below has not received the approval of the Secretary.

List of Subjects in 7 CFR Part 1216

Administrative practice and procedure, Advertising, Consumer information, Marketing agreements, Peanut promotion, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, it is proposed that Title 7 of Chapter XI of the Code of Federal Regulations be amended as follows:

1. Part 1216 is added to read as follows:

PART 1216—PEANUT PROMOTION, RESEARCH, AND INFORMATION ORDER

Subpart A—Peanut Promotion, Research, and Information Order

Definitions

Sec.

1216.01 Act.

1216.84 Personal liability.
1216.85 Separability.
1216.86 Amendments.
1216.87 Patents, copyrights, trademarks, information, publications, and product formulations.

Authority: 7 U.S.C. 7401–7425.

Subpart A—Peanut Promotion, Research, and Information Order

Definitions

§ 1216.01 Act.

Act means the Commodity Promotion, Research, and Information Act of 1996 (7 U.S.C. 7401–7425; Public Law 104–127; 110 Stat. 1029), or any amendments thereto.

§ 1216.02 Additional peanuts.

Additional peanuts means peanuts which are marketed from a farm other than peanuts marketed or considered marketed as quota peanuts.

§ 1216.03 Area marketing association.

Area marketing association means an association selected and approved by the Secretary to conduct activities under regulations of the Department's Farm Service Agency. Under an inter-agency agreement, area marketing associations will assist in the collection of assessments under this subpart. The approved area marketing associations and the areas served by such associations are as follows:

(a) *GFA Peanut Association of Comilla, Georgia (GFA).* GFA serves the southeastern area consisting of Puerto Rico, the U.S. Virgin Islands, and the states of Alabama, Florida, Georgia, Mississippi, and that part of South Carolina south and west of the Santee-Congaree-Broad Rivers;

(b) *Peanut Growers Cooperative Marketing Association of Franklin, Virginia (PGCMA).* PGCMA serves the Virginia-Carolina area consisting of the District of Columbia, and the states of Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, West Virginia, Wisconsin, and that part of South Carolina north and east of the Santee-Congaree-Broad Rivers; and

(c) *Southwestern Peanut Growers Association of Gorman, Texas (SWPGA).* SWPGA serves the southwestern area consisting of the states of Alaska, Arizona, Arkansas, California, Colorado, Hawaii, Idaho, Kansas, Louisiana, Montana, Nebraska, New Mexico, Nevada, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington, and Wyoming, and all other territories of the United States not listed in paragraph (a) or (b) of this section.

§ 1216.04 Board.

Board means the administrative body referred to as the National Peanut Board established pursuant to § 1216.40 of this subpart.

§ 1216.05 Conflict of interest.

Conflict of interest means a situation in which a member or employee of the Board has a direct or indirect financial interest in a person who performs a service for, or enters into a contract with, the Board for anything of economic value.

§ 1216.06 Contract export additional peanuts.

Contract export additional peanuts are additional peanuts for exportation, including peanuts for crushing for exportation, for which a contract has been entered into between a first handler and a producer.

§ 1216.07 Department.

Department means the U.S. Department of Agriculture.

§ 1216.08 Farmers stock peanuts.

Farmers stock peanuts means picked or threshed peanuts produced in the United States which have not been changed (except for removal of foreign material, loose shelled kernels and excess moisture) from the condition in which picked or threshed peanuts are customarily marketed by producers, plus any loose shelled kernels that are removed from farmers stock peanuts before such farmers stock peanuts are marketed.

§ 1216.09 First handler.

First handler means any person who handles peanuts in a capacity other than that of a custom cleaner or dryer, an assembler, a warehouseman, or other intermediary between the producer and the person handling.

§ 1216.10 Fiscal year.

Fiscal year is synonymous with crop year and means the 12-month period beginning with August 1 of any year and ending with July 31 of the following year, or such other period as determined by the Board and approved by the Secretary.

§ 1216.11 Handle.

Handle means to engage in the receiving or acquiring, cleaning and shelling, cleaning inshell, or crushing of peanuts and in the shipment (except as a common or contract carrier of peanuts owned by another) or sale of cleaned inshell or shelled peanuts, or other activity causing peanuts to enter the current of commerce: *Provided*, That this term does not include sales or deliveries of peanuts by a producer to a handler or to an intermediary person engaged in delivering peanuts to handler(s) and *Provided further*, That this term does not include sales or deliveries of peanuts by such intermediary person(s) to a handler.

§ 1216.12 Information.

Information means information and programs that are designed to increase efficiency in processing and to develop new markets, marketing strategies, increased market efficiency, and activities that are designed to enhance the image of peanuts on a national or international basis. These include:

(a) *Consumer information*, which means any action taken to provide information to, and broaden the understanding of, the general public regarding the consumption, use, nutritional attributes, and care of peanuts; and

(b) *Producer information*, which means information and programs that will lead to the development of new markets, new marketing strategies, or increased efficiency for the peanut industry, and activities to enhance the image of the peanut industry.

§ 1216.13 Market.

Market means to sell or otherwise dispose of peanuts into interstate, foreign, or intrastate commerce by buying, marketing, distributing, or otherwise placing peanuts into commerce.

§ 1216.14 Minor peanut-producing states.

Minor peanut-producing states means all peanut-producing states with the exception of Alabama, Florida, Georgia, New Mexico, North Carolina, Oklahoma, South Carolina, Texas, and Virginia.

§ 1216.15 Order.

Order means an order issued by the Secretary under section 514 of the Act that provides for a program of generic promotion, research, and information regarding agricultural commodities authorized under the Act.

§ 1216.16 Part and subpart.

Part means the Peanut Promotion, Research, and Information Order and all rules, regulations, and supplemental orders issued pursuant to the Act and the Order. The Order shall be a "subpart" of such part.

§ 1216.17 Peanuts.

Peanuts means the seeds of the legume *arachis hypogaea* and includes both inshell and shelled peanuts other than those marketed by the producer in green form for consumption as boiled peanuts.

§ 1216.18 Peanut producer organization.

Peanut producer organization means a state-legislated peanut promotion, research, and education commission or organization. For states without a state-legislated peanut promotion, research, and education commission or organization, "peanut producer organization" means any organization which has the primary purpose of representing peanut producers and has peanut producers as members.

§ 1216.19 Person.

Person means any individual, group of individuals, partnership, corporation, association, cooperative, or any other legal entity.

§ 1216.20 Primary peanut-producing states.

Primary peanut-producing states means Alabama, Florida, Georgia, New

Mexico, North Carolina, Oklahoma, South Carolina, Texas, and Virginia, *Provided*, these states maintain three-year average production of at least 10,000 tons of peanuts.

§ 1216.21 Producer.

Producer means any person engaged in the production and sale of peanuts and who owns, or shares the ownership and risk of loss of, the crop. This does not include quota holders who do not share in the risk of loss of the crop.

§ 1216.22 Promotion.

Promotion means any action taken by the National Peanut Board under this Order, including paid advertising, to present a favorable image of peanuts to the public to improve the competitive position of peanuts in the marketplace, including domestic and international markets, and to stimulate sales of peanuts.

§ 1216.23 Quota peanuts.

Quota peanuts means peanuts which are:

(a) Eligible for domestic edible uses; and

(b) Marketed or considered marketed from a farm as quota peanuts pursuant to the provisions of 7 CFR Part 729 and are not in excess of the effective farm poundage quota established for the farm on which such peanuts were produced.

§ 1216.24 Research.

Research means any type of test, study, or analysis designed to advance the image, desirability, use, marketability, production, product development, or quality of peanuts, including research relating to nutritional value and cost of production.

§ 1216.25 Secretary.

Secretary means the Secretary of Agriculture of the United States, or any officer or employee of the U.S. Department of Agriculture to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in the Secretary's stead.

§ 1216.26 Suspend.

Suspend means to issue a rule under section 553 of title 5, United States Code, to temporarily prevent the operation of an order during a particular period of time specified in the rule.

§ 1216.27 State.

State means any of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States.

§ 1216.28 Terminate.

Terminate means to issue a rule under section 553 of title 5, United States Code, to cancel permanently the operation of an order beginning on a date certain specified in the rule.

§ 1216.29 United States.

United States means collectively the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, and the territories and possessions of the United States.

National Peanut Board

§ 1216.40 Establishment and membership.

(a) Establishment of a National Peanut Board. There is hereby established a National Peanut Board, hereinafter called the Board, composed of no more than 10 peanut producers and alternates, appointed by the Secretary from nominations as follows:

(1) Nine members and alternates. One member and one alternate shall be appointed from each primary peanut-producing state, who are producers and whose nominations have been submitted by certified peanut producer organizations within a primary peanut-producing state.

(2) The minor peanut-producing states shall collectively have one at-large member and one alternate, who are producers, to be appointed by the Secretary from nominations submitted by certified peanut producer organizations within minor peanut-producing states or from other certified farm organizations that include peanut producers as part of their membership.

(b) Adjustment of membership. At least once in each five-year period, but not more frequently than once in each three-year period, the Board, or a person or agency designated by the Board, shall review the geographical distribution of peanuts in the United States and make recommendation(s) to the Secretary to continue without change, or whether changes should be made in the number of representatives on the Board to reflect changes in the geographical distribution of the production of peanuts.

§ 1216.41 Nominations.

(a) All nominations authorized under § 1216.40 shall be made within such a period of time as the Secretary shall prescribe. Eligible peanut producer organizations within each state as certified pursuant to § 1216.70 shall nominate two qualified persons for each member and each alternate member. The nominees shall be chosen at an open meeting by election among the general membership. Any certified peanut producer organization representing a minor peanut-producing state may nominate two eligible persons for each member and two eligible persons for each alternate member.

(b) As soon as practicable after this subpart becomes effective, the Secretary shall obtain nominations for appointment to the initial promotion Board from certified nominating organizations. In any subsequent year in which an appointment to the Board is to be made, nominations for positions whose terms will expire shall be obtained from certified nominating organizations by the Board's staff and submitted to the Secretary by May 1 of such year, or other such date as approved by the Secretary.

(c) Except for initial Board members, whose nomination process will be initiated by the Secretary, the Board shall issue call for nominations by March 1 of each year.

§ 1216.42 Selection.

From the nominations, the Secretary shall select the members of the Board and alternates for each primary peanut-producing state. The Secretary shall select one member and one alternate from all nominations submitted by certified peanut producer organizations representing minor peanut-producing states.

§ 1216.43 Term of office.

(a) All members and alternates of the Board shall each serve for terms of three years, except that the members and alternates appointed to the initial Board shall serve proportionately for two-, three-, and four-year terms, with the length of the terms determined at random. No member or alternate may serve more than two consecutive three-year terms. An alternate, after serving two consecutive three-year terms, may serve as a member for an additional two consecutive three-year terms. A member, after serving two consecutive three-year terms, may serve as an alternate for an additional two consecutive three-year terms. Each member and alternate shall continue to serve until a successor is selected and has qualified.

(1) Those members serving initial terms of two or four years may serve one successive three-year term.

(2) Any successor serving one year or less may serve two consecutive three-year terms.

§ 1216.44 Vacancies.

To fill any vacancy resulting from the failure to qualify of any person selected as a member or as an alternate member of the Board, or in the event of death, removal, resignation, or disqualification of any member or alternate member of the Board, a successor for the unexpired term of such member or alternate member of the Board shall be nominated and selected in the manner specified in § 1216.40 of this Order.

§ 1216.45 Alternate members.

An alternate member of the Board, during the absence of the member for the primary peanut-producing state or at-large member for whom the person is the alternate, shall act in the place and stead of such member and perform such duties as assigned. In the event of death, removal, resignation, or disqualification of any member, the alternate for that state or at-large member shall act for the member until a successor for such member is selected and qualified. In the event that both a producer member of the Board and the alternate are unable to attend a meeting, the Board may not designate any other alternate to serve in such member's or alternate's place and stead for such a meeting.

§ 1216.46 Procedure.

(a) A majority of the members of the Board, including alternate members acting for members, shall constitute a quorum.

(b) At assembled meetings, all votes shall be cast in person. Board actions shall be weighted by value of production as determined by a primary peanut-producing state's three-year running average of total gross farm income derived from all peanut sales. The at-large Board member's vote shall be weighted by the collective value of production from all minor peanut-producing states' three-year running average of total gross farm income derived from all peanut sales. Any Board action shall require the concurring votes of members or alternates from states representing more than 50 percent of total U.S. gross farm income derived from all peanut sales, plus an additional two votes from any other Board members, provided a minimum of five votes concur.

(c) For routine and noncontroversial matters which do not require deliberation and the exchange of views, and in matters of an emergency nature when there is not time to call an assembled meeting of the Board, the Board may also take action as prescribed in this section by mail, facsimile, telephone, or any telecommunication method appropriate for the conduct of business, but any such action shall be confirmed in writing within 30 days.

(d) There shall be no voting by proxy.

(e) The chairperson shall be a voting member.

§ 1216.47 Compensation and reimbursement.

The members of the Board, and alternates when acting as members, shall serve without compensation but shall be reimbursed for reasonable travel expenses, as approved by the Board, incurred by them in the performance of their duties as Board members.

§ 1216.48 Powers and duties of the National Peanut Board.

The Board shall have the following powers and duties:

(a) To administer the Order in accordance with its terms and conditions and to collect assessments;

(b) To develop and recommend to the Secretary for approval such bylaws as may be necessary for the functioning of the Board, and such rules as may be necessary to administer the Order, including activities authorized to be carried out under the Order;

(c) To meet, organize, and select from among the members of the Board a chairperson, other officers, committees, and subcommittees, as the Board determines to be appropriate;

(d) To employ persons, other than the members, as the Board considers necessary to assist the Board in carrying out its duties and to determine the compensation and specify the duties of such persons;

(e) To develop programs and projects, and enter into contracts or agreements, which must be approved by the Secretary before becoming effective, for the development and carrying out of programs or projects of research, information, or promotion, and the payment of costs thereof with funds collected pursuant to this subpart. Each contract or agreement shall provide that any person who enters into a contract or agreement with the Board shall develop and submit to the Board a proposed activity; keep accurate records of all of its transactions relating to the contract or agreement; account for funds received and expended in connection with the contract or agreement; make periodic reports to the Board of activities conducted under the contract or agreement; and make such other reports available as the Board or the Secretary considers relevant. Any contract or agreement shall provide that:

(1) The contractor or agreeing party shall develop and submit to the Board a program, plan, or project together with a budget or budgets that shall show the estimated cost to be incurred for such program, plan, or project;

(2) The contractor or agreeing party shall keep accurate records of all its transactions and make periodic reports to the Board of activities conducted, submit accounting for funds received and expended, and make such other reports as the Secretary or the Board may require;

(3) The Secretary may audit the records of the contracting or agreeing party periodically; and

(4) Any subcontractor who enters into a contract with a Board contractor and who receives or otherwise uses funds allocated by the Board shall be subject to the same provisions as the contractor.

(f) To prepare and submit for approval of the Secretary fiscal year budgets in accordance with § 1216.50;

(g) To maintain such records and books and prepare and submit such reports and records from time to time to the Secretary as the Secretary may prescribe; to make appropriate accounting with respect to the receipt and disbursement of all funds entrusted to it; and to keep records that accurately reflect the actions and transactions of the Board;

(h) To cause its books to be audited by a competent auditor at the end of each fiscal year and at such other times as the Secretary may request, and to submit a report of the audit directly to the Secretary;

(i) To give the Secretary the same notice of meetings of the Board as is given to members in order that the Secretary's representative(s) may attend such meetings, and to keep and report minutes of each meeting of the Board to the Secretary;

(j) To act as intermediary between the Secretary and any producer or first handler;

(k) To furnish to the Secretary any information or records that the Secretary may request;

(l) To receive, investigate, and report to the Secretary complaints of violations of the Order;

(m) To recommend to the Secretary such amendments to the Order as the Board considers appropriate; and

(n) To work to achieve an effective, continuous, and coordinated program of promotion, research, consumer information, evaluation, and industry information designed to strengthen the peanut industry's position in the marketplace; maintain and expand existing markets and uses for peanuts; and to carry out programs, plans, and projects designed to provide maximum benefits to the peanut industry.

§ 1216.49 Prohibited activities.

The Board may not engage in, and shall prohibit the employees and agents of the Board from engaging in:

(a) Any action that would be a conflict of interest;

(b) Using funds collected by the Board under the Order to undertake any action

for the purpose of influencing legislation or governmental action or policy, including local, state, national, and international, other than recommending to the Secretary amendments to the Order; and

(c) Any advertising, including promotion, research, and information activities authorized to be carried out under the Order, that is false or misleading or disparaging to another agricultural commodity.

Expenses and Assessments

§ 1216.50 Budget and expenses.

(a) At least 60 days prior to the beginning of each fiscal year, and as may be necessary thereafter, the Board shall prepare and submit to the Secretary a budget for the fiscal year covering its anticipated expenses and disbursements in administering this subpart. Each such budget shall include:

(1) A statement of objectives and strategy for each program, plan, or project;

(2) A summary of anticipated revenue, with comparative data for at least one preceding year (except for the initial budget);

(3) A summary of proposed expenditures for each program, plan, or project; and

(4) Staff and administrative expense breakdowns, with comparative data for at least one preceding year (except for the initial budget).

(b) Each budget shall provide adequate funds to defray its proposed expenditures and to provide for a reserve as set forth in this subpart.

(c) Subject to this section, any amendment or addition to an approved budget must be approved by the Secretary, including shifting funds from one program, plan, or project to another. Shifts of funds which do not cause an increase in the Board's approved budget and which are consistent with governing bylaws need not have prior approval by the Secretary.

(d) The Board is authorized to incur such expenses, including provision for a reasonable reserve, as the Secretary finds are reasonable and likely to be incurred by the Board for its maintenance and functioning, and to enable it to exercise its powers and perform its duties in accordance with the provisions of this subpart. Such expenses shall be paid from funds received by the Board.

(e) With approval of the Secretary, the Board may borrow money for the payment of administrative expenses, subject to the same fiscal, budget, and audit controls as other funds of the Board. Any funds borrowed by the Board shall be expended only for startup costs and capital outlays and are limited to the first year of operation of the Board.

(f) The Board may accept voluntary contributions, but these shall only be used to pay expenses incurred in the conduct of programs, plans, and projects. Such contributions shall be free from any encumbrance by the donor and the Board shall retain complete control of their use.

(g) The Board shall reimburse the Secretary for all expenses incurred by the Secretary in the implementation, administration, and supervision of the Order, including all referendum costs in connection with the Order.

(h) The Board may not expend for administration, maintenance, and functioning of the Board in any fiscal year an amount that exceeds 10 percent of the assessments and other income received by the Board for that fiscal year. Reimbursements to the Secretary required under paragraph (g) are excluded from this limitation on spending.

(i) The Board shall allocate, to the extent practicable, 80 percent of the assessments collected on quota peanuts for any fiscal year on national and regional promotion, research, and information activities. The Board shall allocate, to the extent practicable, 20 percent of assessments collected on quota peanuts for any fiscal year for use in state or regional research programs. Specific percentages and amounts shall be determined annually by the Board, with the approval of the Secretary.

(j) Certified peanut producer organizations may submit requests for funding for research and/or generic promotion projects. Amounts approved for each state shall not exceed the pro rata share of funds available for that state as determined by the Board and approved by the Secretary. Amounts allocated by the Board for state research or promotion activities will be based on requests submitted to the Board and approved when it is determined that they meet the goals and objectives stated in the Order.

(k) Assessments collected, less pro rata administrative expenses, from the gross sales of contract export additional peanuts shall be provided by the Board to an appropriate organization approved by the Secretary as the primary contractor for the promotion and related research of export peanuts.

(l) The Board shall determine annually how total funds shall be allocated pursuant to paragraph (i), (j), and (k) of this section, with the approval of the Secretary.

§ 1216.51 Assessments.

(a) The funds to cover the Board's expenses shall be acquired by the levying of assessments upon producers as prescribed in regulations issued by the Secretary.

(b) Each first handler, at such times and in such manner as prescribed by regulations issued by the Secretary, shall collect from each producer and pay assessments to the Board on all peanuts handled, including peanuts owned by the first handler: *Provided*, that the deadline prescribed in the regulations for remittance of assessments shall be no more than 60 days after the last day of the month in which the peanuts were marketed.

(c) Such assessments shall be levied at a rate of 1 percent of the price paid for all farmers stock peanuts sold.

(d) For peanuts placed under loan with the Department's Commodity Credit Corporation, each area marketing association shall remit to the Board the following:

(1) One (1) percent of the initial price paid for either quota or additional peanuts no more than 60 days after the last day of the month in which the peanuts were placed under loan; and

(2) One (1) percent of the profit from the sale of the peanuts within 60 days after the final day of the area association's fiscal year.

(e) All assessments collected under this section are to be used for expenses and expenditures pursuant to this Order and for the establishment of an operating reserve as prescribed in the Order.

(f) The Board shall impose a late payment charge on any person who fails to remit to the Board the total amount for which the person is liable on or before the payment due date established under this section. The late payment charge will be in the form of interest on the outstanding portion of any amount for which the person is liable. The rate of interest shall be prescribed in regulations issued by the Secretary.

(g) Persons failing to remit total assessments due in a timely manner may also be subject to actions under federal debt collection procedures.

(h) The Board may authorize other organizations to collect assessments on its behalf with the approval of the Secretary.

§ 1216.52 Programs, plans, and projects.

(a) The Board shall receive and evaluate, or on its own initiative develop, and submit to the Secretary for approval any program, plan, or project authorized under this subpart. Such programs, plans, or projects shall provide for:

(1) The establishment, issuance, effectuation, and administration of appropriate programs for promotion, research, and information, including producer and consumer information, with respect to peanuts; and

(2) The establishment and conduct of research with respect to the use, nutritional value, sale, distribution, and marketing of peanuts and peanut products, and the creation of new products thereof, to the end that marketing and use of peanuts may be encouraged, expanded, improved, or made more acceptable and to advance the image, desirability, or quality of peanuts.

(b) No program, plan, or project shall be implemented prior to its approval by the Secretary. Once a program, plan, or project is so approved, the Board shall take appropriate steps to implement it.

(c) Each program, plan, or project implemented under this subpart shall be reviewed or evaluated periodically by the Board to ensure that it contributes to an effective program of promotion, research, or consumer information. If it is found by the Board that any such program, plan, or project does not contribute to an effective program of promotion, research, or consumer information, then the Board shall terminate such program, plan, or project.

(d) No program, plan, or project shall make any false claims on behalf of peanuts or use unfair or deceptive acts or practices with respect to the quality, value, or use of any competing product. Peanuts of all domestic origins shall be treated equally.

§ 1216.53 Independent evaluation.

The Board shall, not less often than every five years, authorize and fund, from funds otherwise available to the Board, an independent evaluation of the effectiveness of the Order and other programs conducted by the Board pursuant to the Act. The Board shall submit to the Secretary, and make available to the public, the results of each periodic independent evaluation conducted under this paragraph.

§ 1216.54 Operating reserve.

The Board shall establish an operating monetary reserve and may carry over to subsequent fiscal years excess funds in a reserve so established; *Provided*, that funds in the reserve shall not exceed any fiscal year's anticipated expenses.

§ 1216.55 Investment of funds.

The Board may invest, pending disbursement, funds it receives under this subpart, only in obligations of the United States or any agency of the United States; general obligations of any state or any political subdivision of a state; interest bearing accounts or certificates of deposit of financial institutions that are members of the Federal Reserve system; or obligations that are fully guaranteed as to principal and interest by the United States.

Reports, Books, and Records

§ 1216.60 Reports.

Each first handler and producer subject to this subpart may be required to provide to the Board periodically such information as is required by regulations, which may include but not be limited to the following:

(a) Number of pounds handled and the price paid to the producer;

(b) Number of pounds on which an assessment was collected;

(c) Name and address of person from whom the first handler has collected the assessments on each pound handled; and

(d) Date collection was made on each pound handled.

§ 1216.61 Books and records.

Each first handler and producer subject to this subpart shall maintain and make available for inspection by the Secretary such books and records as are necessary to carry out the provisions of this subpart and the regulations issued thereunder, including such records as are necessary to verify any reports required. Such records shall be retained for at least two years beyond the marketing year of their applicability.

§ 1216.62 Confidential treatment.

All information obtained from books, records, or reports under the Act, this subpart, and the regulations issued thereunder shall be kept confidential by all persons, including all employees and former employees of the Board, all officers and employees and former officers and employees of contracting and subcontracting agencies or agreeing parties having access to such information. Such information shall not be available to Board members, producers, importers, exporters, or handlers. Only those persons having a specific need for such information to effectively administer the provisions of this subpart shall have access to such information. Only such information so obtained as the Secretary deems relevant shall be disclosed by them, and then only in a judicial proceeding or administrative hearing brought at the direction, or on the request, of the Secretary, or to which the Secretary or any officer of the United States is a party, and involving this subpart. Nothing in this section shall be deemed to prohibit:

(a) The issuance of general statements based upon the reports of the number of persons subject to this subpart or statistical data collected therefrom, which statements do not identify the information furnished by any person; and

(b) The publication, by direction of the Secretary, of the name of any person who has been adjudged to have violated this subpart, together with a statement of the particular provisions of this subpart violated by such person.

Certification of Peanut Producer Organizations

§ 1216.70 Certification.

(a) Organizations receiving certification from the Secretary will be entitled to submit nominations for Board membership to Secretary for appointment and to submit requests for funding to the Board.

(b) For major peanut-producing states, state-legislated peanut promotion, research, and information organizations may request certification, provided the state-legislated promotion program submits a factual report that shall contain information deemed relevant and specified by the Secretary for the making of such determination pursuant to paragraph (e) of this section.

(c) If a state-legislated peanut promotion, research and information organization in a major peanut-producing state does not elect to seek certification from the Secretary within a specified time period as determined by the Secretary, or does not meet eligibility requirements as specified by the Secretary, then any peanut producer organization whose primary purpose is to represent peanut producers within a primary peanut-producing state, or any other organization which has peanut producers as part of its membership, may request certification. Certification shall be based, in addition to other available information, upon a factual report submitted by the organization that shall contain information deemed relevant and specified by the Secretary for the making of such determination pursuant to paragraph (e) of this section.

(d) For minor peanut-producing states, any organization that has peanut producers as part of its membership may request certification.

(e) The information required for certification by the Secretary may include, but is not limited to, the following:

(1) The geographic distribution within the state covered by the organization's active membership;

(2) The nature and size of the organization's active membership in the state, proportion of total such active membership accounted for by producers, a map showing the peanut-producing counties in such state in which the organization has members, the volume of peanuts produced in each such county, the number of peanut producers in each such county, and the size of the organization's active peanut producer membership in each such county;

(3) The extent to which the peanut producer membership of such organization is represented in setting the organization's policies;

(4) Evidence of stability and permanency of the organization;

(5) Sources from which the organization's operating funds are derived;

(6) Functions of the organization;

(7) The organization's ability and willingness to further the aims and objectives of the Act and Order; and,

(8) Demonstrated experience administering generic state promotion and research programs.

(f) The Secretary's determination as to eligibility or certification of an organization shall be final.

Miscellaneous

§ 1216.80 Implementation of the Order.

The Order shall not become effective unless:

(a) The Secretary determines that the Order is consistent with and will effectuate the purposes of the Act; and

(b) The Order is approved by a simple majority of the peanut producers voting in a referendum who, during a representative period determined by the Secretary, have been engaged in the production of peanuts.

§ 1216.81 Suspension and termination.

(a) The Secretary shall suspend or terminate this subpart or a provision thereof if the Secretary finds that the subpart or a provision thereof obstructs or does not tend to effectuate the purposes of the Act, or if the Secretary determines that this subpart or a provision thereof is not favored by persons voting in a referendum conducted pursuant to the Act.

(b) Every five years, the Secretary shall hold a referendum to determine whether peanut producers favor the continuation of the Order. The Secretary will also conduct a referendum if 10 percent or more of all eligible peanut producers request the Secretary to hold a referendum. In addition, the Secretary may hold a referendum at any time.

(c) The Secretary shall suspend or terminate this subpart at the end of the marketing year whenever the Secretary determines that its suspension or termination is approved or favored by a simple majority of the producers voting in a referendum who, during a representative period determined by the Secretary, have been engaged in the production of peanuts.

(d) If, as a result of the referendum conducted under paragraph (b) of this section, the Secretary determines that this subpart is not approved, the Secretary shall:

(1) Not later than 180 days after making the determination, suspend or terminate, as the case may be, collection of assessments under this subpart; and

(2) As soon as practical, suspend or terminate, as the case may be, activities under this subpart in an orderly manner.

§ 1216.82 Proceedings after termination.

(a) Upon the termination of this subpart, the Board shall recommend not more than three of its members to the Secretary to serve as trustees for the purpose of liquidating the affairs of the Board. Such persons, upon designation by the Secretary, shall become trustees of all of the funds and property then in the possession or under control of the Board, including claims for any funds unpaid or property not delivered, or any other claim existing at the time of such termination.

(b) The said trustees shall:

(1) Continue in such capacity until discharged by the Secretary;

(2) Carry out the obligations of the Board under any contracts or agreements entered into pursuant to the Order;

(3) From time to time account for all receipts and disbursements and deliver all property on hand, together with all books and records of the Board and the trustees, to such person or persons as the Secretary may direct; and

(4) Upon request of the Secretary execute such assignments or other instruments necessary and appropriate to vest in such persons title and right to all funds, property and claims vested in the Board or the trustees pursuant to the Order.

(c) Any person to whom funds, property or claims have been transferred or delivered pursuant to the Order shall be subject to the same obligations imposed upon the Board and upon the trustees.

(d) Any residual funds not required to defray the necessary expenses of liquidation shall be turned over to the Secretary to be disposed of, to the extent practical, to the peanut producer organizations, certified pursuant to § 1216.70, in the interest of continuing peanut promotion, research, and information programs.

§ 1216.83 Effect of termination or amendment.

Unless otherwise expressly provided by the Secretary, the termination of this subpart or of any regulation issued pursuant thereto, or the issuance of any amendment to either thereof, shall not:

(a) Affect or waive any right, duty, obligation or liability which shall have arisen or which may thereafter arise in connection with any provision of this subpart or any regulation issued thereunder; or

(b) Release or extinguish any violation of this subpart or any regulation issued thereunder; or

(c) Affect or impair any rights or remedies of the United States, or of the Secretary or of any other persons, with respect to any such violation.

§ 1216.84 Personal liability.

No member or alternate member of the Board shall be held personally responsible, either individually or jointly with others, in any way whatsoever, to any person for errors in judgment, mistakes, or other acts, either of commission or omission, as such member or alternate, except for acts of dishonesty or willful misconduct.

§ 1216.85 Separability.

If any provision of this subpart is declared invalid or the applicability thereof to any person or circumstances is held invalid, the validity of the remainder of this subpart or the applicability thereof to other persons or circumstances shall not be affected thereby.

§ 1216.86 Amendments.

Amendments to this subpart may be proposed from time to time by the Board or by any interested person affected by the provisions of the Act, including the Secretary.

§ 1216.87 Patents, copyrights, trademarks, information, publications, and product formulations.

Patents, copyrights, trademarks, information, publications, and product formulations developed through the use of funds received by the Board under this subpart shall be the property of the U.S. Government as represented by the Board and shall, along with any rents, royalties, residual payments, or other income from the rental, sales, leasing, franchising, or other uses of such patents, copyrights, trademarks, information, publications, or product formulations, inure to the benefit of the Board; shall be considered income subject to the same fiscal, budget, and audit controls as other funds of the Board; and may be licensed subject to approval by the Secretary. Upon termination of this subpart, § 1216.82 shall apply to determine disposition of all such property.

Dated: November 2, 1998.

Enrique E. Figueroa,

Administrator, Agricultural Marketing Service.

[FR Doc. 98–29729 Filed 11–5–98; 8:45 am]

BILLING CODE 3410–02–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1216

[FV–98–703–PR]

Peanut Promotion, Research, and Information Order; Referendum Procedures

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule with request for comments.

SUMMARY: The purpose of this rule is to establish procedures which the Department of Agriculture (USDA or the Department) will use in conducting a referendum to determine whether the issuance of the proposed Peanut Promotion, Research, and Information Order (Order) is favored by a majority of the producers voting in the referendum. These procedures would also be used for any subsequent referendum under the Order, if it is approved in the initial referendum. The proposed Order is being published in a separate document. This proposed program would be implemented under the Commodity Promotion, Research, and Information Act of 1996 (Act). In addition, in accordance with the Paperwork Reduction Act of 1995 (PRA), this proposed rule specifies the public reporting burden for the collection of information involved in conducting the referendum.

DATES: Comments must be received by January 5, 1999.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule to: Docket Clerk, Research and Promotion Branch, Fruit and Vegetable Programs (FV), Agricultural Marketing Service (AMS), USDA, Stop 0244, Room 2535–S, 1400 Independence Avenue, S.W., Washington, D.C. 20250–0244. Comments should be submitted in triplicate and will be made available for public inspection at the above address during regular business hours. Comments may also be submitted electronically to: malinda__e__farmer@usda.gov. All comments should reference the docket number and the date and page number of this issue of the **Federal Register**. A copy of this rule may be found at: www.ams.usda.gov/fv/rpdocketlist.htm. Pursuant to the Paperwork Reduction Act of 1995 (PRA), also send comments regarding the accuracy of the burden estimate, ways to minimize the burden, including through the use of automated collection techniques or other forms of information technology, or any other aspect of this collection of information, to the above address. Comments concerning the information collection under the PRA should also be sent to the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, D.C. 20503.

FOR FURTHER INFORMATION CONTACT: Angela C. Snyder, Research and Promotion Branch, FV, AMS, USDA, Stop 0244, Room 2535–S, 1400 Independence Avenue, S.W., Washington, D.C. 20250–0244; telephone (910) 860–4689 or facsimile (202) 205–2800.

SUPPLEMENTARY INFORMATION: A referendum would be conducted among eligible peanut producers to determine whether the issuance of the proposed Peanut Promotion, Research, and Information Order (Order) (7 CFR Part 1216) is favored by a majority of persons voting in the referendum. The Order is authorized under the Commodity Promotion, Research, and Information Act of 1996 (Act) (Pub. L. 104–427, 7 U.S.C. 7401–7425). A proposed Order is being published separately in the **Federal Register**.

Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. It is not intended to have retroactive effect. Section 524 of the Act provides that the Act shall not affect or preempt any other Federal or State law authorizing promotion or research relating to an agricultural commodity.

Under Section 519 of the Act, a person subject to the order may file a petition with the Secretary of Agriculture (Secretary) stating that the order, any provision of the order, or any obligation imposed in connection with the order, is not established in accordance with the law, and requesting a modification of the order or an exemption from the order. Any petition filed challenging the order, any provision of the order or any obligation imposed in connection with the order, shall be filed within two years after the effective date of the order, provision or obligation subject to challenge in the petition. The petitioner will have the opportunity for a hearing on the petition. The Act provides that the district court of the United States for any district in which the petitioner resides or conducts business shall the jurisdiction to review a final ruling on the petition, if the petitioner files a complaint for that purpose not later than 20 days after the date of the entry of the Secretary's final ruling.

Executive Order 12866

This rule has been determined not significant for purposes of Executive Order 12866 and therefore has not been reviewed by the Office of Management and Budget.

Regulatory Flexibility Act

In accordance with the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), the Agency is required to examine the impact of the proposed rule on small entities. The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such action so that small businesses will not be disproportionately burdened.

The Act, which authorizes the Secretary to consider industry proposals for generic programs of promotion, research, and information for agricultural commodities, became effective on April 4, 1996. The Act provides for alternatives within the terms of a variety of provisions.

Paragraph (e) of Section 518 of the Act provides three options for determining industry approval of a new research and promotion program: (1) by a majority of those voting; (2) by a majority of the volume of the agricultural commodity voted in the referendum; or (3) by a majority of those persons voting who also represent a majority of the volume of the agricultural commodity voted in the referendum. In addition, section 518 of the Act provides for referenda to ascertain approval of an order to be conducted either prior to its going into effect or within three years after assessments first begin under the order. The American Farm Bureau Federation (proponent) has recommended that the Secretary conduct a referendum in which the Order must be approved by a majority of those persons voting. The proponent also has recommended that a referendum be conducted prior to the proposed Order going into effect.

This proposed rule would establish the procedures under which producers may vote on whether they want a

peanut promotion, research, and information program to be implemented. This proposal would add a new subpart which establishes procedures to conduct an initial and future referenda. The proposed subpart covers definitions, voting instructions, use of subagents, ballots, the referendum report, and confidentiality of information.

There are approximately 25,000 producers and 57 handlers of peanuts who would be subject to the program. Most producers would be classified as small businesses under the criteria established by the Small Business Administration (SBA) [13 CFR § 121.601), and most of the handlers would not be classified as small businesses. The SBA defines small agricultural handlers as those whose annual receipts are less than $5 million, and small agricultural producers are defined as those having annual receipts of not more than $500,000 annually.

According to USDA's National Agricultural Statistics Service (NASS), the nine major peanut-producing states in the United States account for 99 percent of the peanuts grown in this country. The combined production from these states totaled 3.5 billion pounds in 1997. NASS reports that Georgia was the largest producer (38 percent of the total), followed by Texas (23 percent), Alabama (11 percent), North Carolina (9 percent), Florida (6 percent), Virginia (5 percent), Oklahoma (5 percent), New Mexico (1 percent), and South Carolina (1 percent). The farm value of peanuts in 1997 reached $932 million. According to 1992 Census of Agriculture (Census) data, small amounts of peanuts were also grown in seven other states.

According to the proponent, and based on the Census for these nine states, 36 percent of the peanut-producing counties in the United States had 35 percent or more of their total crop income from peanuts. Twenty-four percent of the counties had 50 percent or more of their crop income from peanuts. From a state perspective, 70 percent of the crop income in Alabama's peanut-producing counties is generated from peanuts. For Virginia, the percentage is 48 percent. In addition, 16,194 farms harvested peanuts in 1992. Of these, 15,914 were located in the nine primary peanut-producing states.

Three main types of peanuts are grown in the United States: Florunners, Virginia, and Spanish. The southeast growing region grows mostly the medium-kernel Runner peanuts. The southwest growing region used to grow two-thirds Spanish and one-third Runner peanuts, but now more Runners than Spanish are grown. Virtually all of the Spanish peanut production is in Oklahoma and Texas. In the Virginia-Carolina region, mainly large-kernel Virginia peanuts are grown. New Mexico grows a fourth type of peanut, the Valencia.

Peanut manufacturers produce three principal peanut products: peanut butter, packaged nuts (including salted, unsalted, flavored, and honey-roasted nuts), and peanut candies. In most years, half of all peanuts produced in the United States for edible purposes are used to manufacture peanut butter. Packaged nuts account for almost one-third of all processed peanuts. Some of these (commonly referred to as "ballpark" peanuts) are roasted in the shell, while a much larger quantity is used as shelled peanuts packed as dry-roasted peanuts, salted peanuts, and salted mixed nuts. Some peanuts are ground to produce peanut granules and flour. Other peanuts are crushed to produce oil.

According to USDA's Foreign Agricultural Service, exports of U.S. peanuts (including peanut meal, oil, and peanut butter) totaled 880 million inshell equivalent pounds in 1997, with a value of $285 million (U.S. point of departure for the foreign country). Of the total quantity, 60 percent was shelled peanuts used as nuts, 11 percent was blanched or otherwise prepared or preserved peanuts, 10 percent was inshell peanuts, 7 percent was peanut butter, 4 percent was shelled oil stock peanuts, 4 percent was crude peanut oil, and 3 percent was refined peanut oil.

The major destinations for domestic shelled peanuts for use as nuts are Canada, Mexico, the United Kingdom, and the Netherlands. Blanched or otherwise prepared peanuts are sent mainly to Western Europe, especially the Netherlands, France, and Spain. Inshell peanuts are mainly exported to Canada and various countries in Western Europe. Peanut butter is sent to many countries, with the largest amounts going to Canada and Saudi Arabia. Peanut oil and oil stock peanuts are exported world-wide, but major destinations can vary from year to year.

Approximately 250 million inshell equivalent pounds of peanuts and processed peanuts (including oil and peanut butter) were imported in 1997 with a combined value (f.o.b. country of origin) of $73 million. Most of the imports (45 percent) were shelled peanuts for use as nuts. The major U.S. supplier is Argentina, but several other countries export shelled peanuts to the United States, including Mexico, Nicaragua, and South Africa.

Peanut butter imports are also significant and accounted for about 32 percent of the total quantity of nuts (inshell basis) imported in 1997. Most peanut butter imports come from Canada and Argentina. The other major import category—crude and refined peanut oil—are shipped mainly from Argentina and Nicaragua and account for approximately 18 percent of total imports (inshell equivalent basis). Inshell peanuts, primarily from Mexico, accounted for nearly 3 percent of total imports in 1997. About 3 percent of total imports consisted of blanched or other processed peanuts, mainly from China. Imports of oil stock shelled peanuts were negligible.

Most peanuts produced in other countries are crushed for oil and protein meal. The United States is the main producer of peanuts used in such edible products as peanut butter, roasted peanuts, and peanut candies. Peanuts are one of the world's principal oilseeds, ranking fourth behind soybeans, cottonseed, and rapeseed. India and China usually account for half of the world's peanut production.

According to "The Agriculture Statistics Report" published by USDA, during the 1995–96 season, the average annual production per domestic producer was approximately 144,228 pounds of peanuts. Peanuts produced during these growing seasons provided average annual gross sales of $42,222 per peanut producer. The value of the 1995–96 crop was approximately $1.013 billion. During the same period, per capita consumption in the United States was 5.7 pounds of peanuts.

This proposed rule provides the procedures under which peanut producers may vote on whether they want the Order to be implemented. In accordance with the provisions of the Act, subsequent referenda may be conducted, and it is anticipated that the proposed procedures would apply. There are approximately 25,000 producers who will be eligible to vote in the first referendum.

USDA will keep these individuals informed throughout the program implementation and referendum process to ensure that they are aware of and are able to participate in the program implementation process. USDA will also publicize information regarding the referendum process, so that trade associations and related industry media can be kept informed.

Voting in the referendum is optional. However, if producers choose to vote, the burden of voting would be offset by the benefits of having the opportunity to vote on whether or not they want to be covered by the program.

The information collection requirements contained in this proposed rule are designed to minimize the burden on producers. This rule provides for a ballot to be used by eligible producers in voting in the referendum. The estimated annual cost of providing the information by an estimated 25,000 producers would be $12,500 or $0.50 per producer.

The Secretary considered requiring eligible voters to vote in person at various USDA offices across the country. The Secretary also considered electronic voting, but the use of computers is not universal, current technology is not reliable enough to ensure that electronic ballots would be received in a readable format, and technology is insufficient at this time to provide sufficient safeguards of voters' confidentiality. Conducting the referendum from one central location by mail ballot would be more cost-effective and reliable. The Department will also accept ballots sent by facsimile (fax) machine. A pilot of this method was conducted during a recent referendum for another program. A fax machine was dedicated to the receipt of ballots. All ballots received in this manner were stored in the memory of the machine until the end of the voting period. Due to the large number of voters expected in the referendum on the proposed peanut program, USDA may use more than one such machine, providing voters in different states with different fax numbers in order to avoid exceeding the memory of the machine. Further, the Department would provide easy access to information for potential voters through a toll-free telephone line.

While other peanut programs have been implemented by the government, USDA has not identified any relevant federal rules that duplicate, overlap, or conflict with this rule.

We have preformed this Initial Regulatory Flexibility Analysis regarding the impact of this proposed rule on small entities. However, in order to obtain all of the data necessary for a comprehensive analysis, we invite comments concerning the potential effects of this proposed rule. In particular, we are interested in obtaining more information on the number of small entities that may incur benefits or costs from the implementation of this proposed rule and information on the expected benefits or costs.

Paperwork Reduction Act

In accordance with the Office of Management and Budget (OMB) regulations (5 CFR 1320) which implements the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the referendum ballot, which represents the information collection and recordkeeping requirements that may be imposed by this rule, has been submitted to OMB for approval.

Title: National Research, Promotion, and Consumer Information Programs.

OMB Number: 0581–0093.

Expiration Date of Approval: November 30, 2000.

Type of Request: Revision of a currently approved information collection for research and promotion programs.

Abstract: The information collection requirements in this request are essential to carry out the intent of the Act. The burden associated with the ballot is as follows:

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 0.25 hours per response for each producer.

Respondents: Producers.

Estimated Number of Respondents: 25,000.

Estimated Number of Responses per Respondent: 1 every 5 years (0.2).

Estimated Total Annual Burden on Respondents: 1,250 hours.

The estimated annual cost of providing the information by an estimated 25,000 producers would be $12,500 or $0.50 per producer.

The ballot will be added to the other information collections approved for use under OMB Number 0581–0093.

Comments are invited on: (a) Whether the proposed collection of information is necessary and whether it will have practical utility; (b) the accuracy of USDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumption used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments concerning the information collection requirements contained in this action should reference OMB No. 0581–0093, the docket number, and the date and page number of this issue of the **Federal Register.** Comments should be sent to the USDA Docket Clerk and the OMB Desk Officer for Agriculture at the addresses and within the time frames specified above. All comments received will be available for public inspection during regular business hours at the same address. All responses to this notice will be summarized and included in the request for OMB approval.

OMB is required to make a decision concerning the collection of information contained in this rule between 30 and 60 days after publication. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

Background

The Act authorizes the Secretary, under generic authority, to establish agricultural commodity research and promotion orders. The American Farm Bureau Federation (proponent), working in cooperation with 20 state and regional industry organizations from the peanut-producing states, has requested the establishment of a Peanut Promotion, Research, and Information Order (Order) pursuant to the Act. The proposed Order would provide for the development and financing of an effective and coordinated program of promotion, research, and information for peanuts. The program would be funded by an assessment levied on producers (to be collected by handlers) at a rate of 1 percent of the total value of all farmers stock peanuts. When peanuts are placed under loan, a deduction from the producer's loan draft equal to 1 percent of the price support value would be made and submitted to the Board by an area marketing association. Once peanuts are sold for disposition from a loan, the association would remit the balance of the assessment to the Board. In the proposed Order, peanuts are defined as the seeds of the legume *arachis hypogaea*, including both inshell and shelled peanuts other than those marketed by the producer in green form for consumption as boiled peanuts.

Assessments would be used to pay for promotion, research, and consumer information; administration, maintenance, and functioning of the Board; and expenses incurred by the Secretary in implementing and administering the Order, including referendum costs.

Section 518 of the Act requires that a referendum be conducted among eligible peanut producers to determine whether they favor the Order. In addition, section 518 of the Act provides for referenda to ascertain approval of an order to be conducted either prior to its going into effect or within three years after assessments first begin under the order. According to a proposed rule that is published separately in this issue of the **Federal Register**, the Order would become effective if it is approved by a majority of producers voting in the referendum,

which will be held before the program is implemented.

This proposed rule establishes the procedures under which producers may vote on whether they want the peanut promotion, research, and information program to be implemented. There are approximately 25,000 eligible voters.

This proposed rule would add a new subpart which would establish procedures to be used in this and future referenda. The subpart covers definitions, voting, instructions, use of subagents, ballots, the referendum report, and confidentiality of information.

All written comments received in response to this rule by the date specified will be considered prior to finalizing this action. We encourage the industry to pay particular attention to the definitions to be sure that they are appropriate for the peanut industry. We also encourage the industry to comment on whether it has considered the impact of disaster transfers on the assessment process, whether peanuts under those transfers would be considered quota or additional peanuts.

List of Subjects in 7 CFR Part 1216

Administrative practice and procedure, Advertising, Consumer information, Marketing agreements, Peanut promotion, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, it is proposed that Title 7, Chapter XI of the Code of Federal Regulations be amended as follows:

1. Subpart B is added to proposed Part 1216 to read as follows:

PART 1216—PEANUT PROMOTION, RESEARCH, AND INFORMATION ORDER

* * * * *

Subpart B—Procedure for the Conduct of Referenda in Connection with the Peanut Promotion, Research, and Information Order

Sec.

1216.100 General.
1216.101 Definitions.
1216.102 Voting.
1216.103 Instructions.
1216.104 Subagents.
1216.105 Ballots.
1216.106 Referendum report.
1216.107 Confidential information.

Authority: 7 U.S.C. 7401–7425.

Subpart B—Procedure for the Conduct of Referenda in Connection With the Peanut Promotion, Research, and Information Order

§ 1216.100 General.

Referenda to determine whether eligible peanut producers favor the issuance, amendment, suspension, or termination of the proposed Peanut Promotion, Research, and Information Order shall be conducted in accordance with this subpart.

§ 1216.101 Definitions.

Unless otherwise defined in this section, the definition of terms used in these procedures shall have the same meaning as the definitions in the Order.

(a) *Administrator* means the Administrator of the Agricultural Marketing Service, with power to redelegate, or any officer or employee of the Department to whom authority has been delegated or may hereafter be delegated to act in the Administrator's stead.

(b) *Order* means the Peanut Promotion, Research, and Information Order.

(c) *Referendum agent* or *agent* means the individual or individuals designated by the Secretary to conduct the referendum.

(d) *Representative period* means the period designated by the Secretary.

(e) *Person* means any individual, group of individuals, partnership, corporation, association, cooperative, or any other legal entity. For the purpose of this definition, the term "partnership" includes, but is not limited to:

(1) A husband and a wife who have title to, or leasehold interest in, a peanut farm as tenants in common, joint tenants, tenants by the entirety, or, under community property laws, as community property; and

(2) So-called "joint ventures" wherein one or more parties to an agreement, informal or otherwise, contributed land and others contributed capital, labor, management, or other services, or any variation of such contributions by two or more parties.

(f) *Eligible producer* means any person who is engaged in the production and sale of peanuts in the United States and who:

(1) Owns, or shares the ownership and risk of loss of, the crop. This does not include quota holders who do not share in the risk of loss of the crop;

(2) Rents peanut production facilities and equipment resulting in the ownership of all or a portion of the peanuts produced;

(3) Owns peanut production facilities and equipment but does not manage them and, as compensation, obtains the ownership of a portion of the peanuts produced; or

(4) Is a party in a landlord-tenant relationship or a divided ownership arrangement involving totally independent entities cooperating only to produce peanuts who share the risk of loss and receive a share of the peanuts produced. No other acquisition of legal title to peanuts shall be deemed to result in persons becoming eligible producers.

§ 1216.102 Voting.

(a) Each person who is an eligible producer, as defined in this subpart, at the time of the referendum and during the representative period, shall be entitled to cast only one ballot in the referendum. However, each producer in a landlord-tenant relationship or a divided ownership arrangement involving totally independent entities cooperating only to produce peanuts, in which more than one of the parties is a producer, shall be entitled to cast one ballot in the referendum covering only such producer's share of the ownership.

(b) Proxy voting is not authorized, but an officer or employee of an eligible corporate producer, or an administrator, executor, or trustee or an eligible producing entity may cast a ballot on behalf of such producer. Any individual so voting in a referendum shall certify that such individual is an officer or employee of the eligible producer, or an administrator, executive, or trustee of an eligible producing entity and that such individual has the authority to take such action. Upon request of the referendum agent, the individual shall submit adequate evidence of such authority.

(c) All ballots are to be cast by mail or by facsimile, as instructed by the Secretary.

§ 1216.103 Instructions.

The referendum agent shall conduct the referendum, in the manner herein provided, under the supervision of the Administrator. The Administrator may prescribe additional instructions, not inconsistent with the provisions hereof, to govern the procedure to be followed by the referendum agent. Such agent shall:

(a) Determine the period during which ballots may be cast.

(b) Provide ballots and related material to be used in the referendum. The ballot shall provide for recording essential information, including that needed for ascertaining whether the person voting, or on whose behalf the vote is cast, is an eligible voter.

(c) Give reasonable public notice of the referendum:

(1) By utilizing available media or public information sources, without incurring advertising expense, to publicize the dates, places, method of voting, eligibility requirements, and other pertinent information. Such sources of publicity may include, but are not limited to, print and radio; and

(2) By such other means as the agent may deem advisable.

(d) Mail to eligible producers whose names and addresses are known to the referendum agent, the instructions on voting, a ballot, and a summary of the terms and conditions of the proposed Order. No person who claims to be eligible to vote shall be refused a ballot.

(e) At the end of the voting period, collect, open, number, and review the ballots and tabulate the results in the presence of an agent of a third party authorized to monitor the referendum process.

(f) Prepare a report on the referendum.

(g) Announce the results to the public.

§ 1216.104 Subagents.

The referendum agent may appoint any individual or individuals necessary or desirable to assist the agent in performing such agent's functions hereunder. Each individual so appointed may be authorized by the agent to perform any or all of the functions which, in the absence of such appointment, shall be performed by the agent.

§ 1216.105 Ballots.

The referendum agent and subagents shall accept all ballots cast. However, if an agent or subagent deems that a ballot should be challenged for any reason, the agent or subagent shall endorse above their signature, on the ballot, a statement to the effect that such ballot was challenged, by whom challenged, the reasons therefore, the results of any investigations made with respect thereto, and the disposition thereof. Ballots invalid under this subpart shall not be counted.

§ 1216.106 Referendum report.

Except as otherwise directed, the referendum agent shall prepare and submit to the Administrator a report on results of the referendum, the manner in which it was conducted, the extent and kind of public notice given, and other information pertinent to analysis of the referendum and its results.

§ 1216.107 Confidential information.

The ballots and other information or reports that reveal, or tend to reveal, the vote of any person covered under the Act and the voting list shall be held confidential and shall not be disclosed.

Dated: November 2, 1998.

Robert C. Keeney,

Deputy Administrator, Fruit and Vegetable Programs.

[FR Doc.98–29728 Filed 11–5–98; 8:45 am]

BILLING CODE 3410–02–P

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 240

[Release No. 34–40617; File No. S7–27–98]

RIN: 3235–AH48

Purchases of Certain Equity Securities by the Issuer and Others

AGENCY: Securities and Exchange Commission.

ACTION: Proposed rule.

SUMMARY: The Securities and Exchange Commission (Commission) ("Commission") today is proposing for public comment an amendment to Rule 10b–18 (Rule) under the Securities Exchange Act of 1934 (Exchange Act). Rule 10b–18 provides a "safe harbor" from liability for manipulation under Sections 9(a)(2) and 10(b) of the Exchange Act, and Rule 10b–5 thereunder, when an issuer or affiliated purchaser of the issuer bids for or buys shares of its common stock in compliance with the Rule's conditions. In order to improve liquidity during severe market downturns, the proposal would amend the Rule's timing condition during the trading session immediately following a market-wide trading suspension. In particular, the safe harbor now would be available to an issuer that bids for or purchases its common stock either: from the reopening of trading until the close of trading on the same day as the imposition of the market-wide trading suspension; or at the next day's opening, if the market-wide trading suspension was in effect at the scheduled close of trading. The proposed safe harbor requires that the issuer continue to comply with the Rule 10b–18 conditions governing the manner, price and volume of market purchases of its common stock.

DATES: Comments should be submitted on or before December 7, 1998.

ADDRESSES: Interested persons should submit three copies of their written data, views and opinions to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, NW, Washington, DC 20549. Comments also may be submitted electronically at the following E-mail address: rule-comments@sec.gov. All comment letters should refer to File No. S7–27–98. All submissions will be made available for public inspection and copying at the Commission's Public Reference Room, Room 1024, 450 Fifth Street, NW, Washington DC 20549. Electronically submitted comment letters will be posted on the Commission's Internet web site (http://www.sec.gov).

FOR FURTHER INFORMATION CONTACT: James A. Brigagliano, Assistant Director; Denise Landers, Attorney; and Jerome Roche, Attorney; Office of Risk Management and Control, Division of Market Regulation, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549, or at (202) 942–0772.

SUPPLEMENTARY INFORMATION:

I. Introduction

In response to a petition for rulemaking (Petition) [1] filed by the New York Stock Exchange, Inc. (NYSE), the Commission is proposing to amend Rule 10b–18 [2] to modify the timing condition during the trading session immediately following a market-wide trading suspension.[3] The proposal extends the safe harbor to Rule 10b–18 bids or Rule 10b–18 purchases [4] effected either: (i) from the reopening of trading until the close of trading immediately following, and on the same day as, a market-wide trading suspension; or (ii) at the next day's opening, if the market-wide trading suspension was in effect at the scheduled close of trading. At such times, an issuer or an affiliated purchaser of the issuer (affiliated

[1] The Petition was filed with the Commission on January 9, 1998 and is publicly available in File No. 4–409 in the Commission's Public Reference Room.

[2] 17 CFR 240.10b–18.

[3] The proposed amendment defines market-wide trading suspension as either: (i) A market-wide trading halt imposed pursuant to the rules of a national securities exchange or a registered national securities association in response to a market-wide decline during a single trading session; or (ii) a market-wide trading halt ordered by the Commission pursuant to section 12(k) of the Exchange Act. Proposed Rule 10b–18(e)(15). For example, the proposed alternative safe harbor would apply in the trading session following a trading halt pursuant to NYSE exchange rule 80B or Market Closing Policy of the National Association of Securities Dealers, Inc. (NASD). The Commission approved the NASD's market closing policy statement, codified in IM–4120–3. Securities Exchange Act Release No. 39846 (April 9, 1998), 63 FR 18477 (April 15, 1998) (Circuit Breaker Approval Order). The Commission notes that it has a standing request with the NASD that the NASD halt trading as quickly as practicable whenever the NYSE and other markets have suspended trading, which the NASD continues to honor. See Letter to Howard L. Kramer, Senior Associate Director, Office of Market Supervision, Division of Market Regulation, Commission, from Richard Ketchum, Chief Operating Officer and Executive Vice President, NASD, dated January 23, 1998.

[4] Rule 10b–18 bid is defined as a bid for securities that, if accepted, or a limit order to purchase securities, that if executed, would result in a Rule 10b–18 purchase. 17 CFR 240.10b–18(a)(4). A Rule 10b–18 purchase is defined as a purchase of common stock of an issuer by or for the issuer, with certain exceptions. 17 CFR 240.10b–18(a)(3).

purchaser)[5] would still also have to comply with the manner, price and volume conditions in Rule 10b–18 to satisfy the requirements of the safe harbor.

The NYSE Petition stated that it had surveyed floor brokers, upstairs traders and listed-company representatives. Those groups agreed that expanding the Rule 10b–18 safe harbor to issuer repurchases effected during the trading session following a severe market decline could offer an important source of liquidity and provide balance to selling activity. The Commission has previously noted that issuers repurchase their securities for many legitimate reasons and that those repurchases benefit shareholders and the marketplace by providing additional liquidity.[6] Based on these considerations, the Commission is publishing for public comment this proposed amendment to Rule 10b–18.

II. Rule 10b–18 Safe Harbor

Before Rule 10b–18 was adopted, issuers effecting repurchase programs were uncertain about their potential liability under the anti-manipulation provisions of the Exchange Act. Those provisions offer little practical guidance with respect to the scope of permissible issuer market activity.[7] Since 1967, the Commission has considered periodically whether, and how, to regulate an issuer's market repurchases of its securities.[8] The Commission determined that a safe harbor rule would prevent fraudulent, manipulative, and deceptive acts or practices by issuers and others without imposing unnecessarily complex and intrusive restrictions on issuer market repurchases.[9] Rule 10b–18 grants a safe harbor from liability for manipulation under Sections 9(a)(2) and 10(b), and Rule 10b–5, of the Exchange Act to an issuer in connection with bids for or purchases of its common stock that comply with the Rule's conditions. Because Rule 10b–18 is a safe harbor, compliance with the Rule's conditions is voluntary. Thus, issuer bids for or purchases of its common stock that do not comply with Rule 10b–18 are not necessarily manipulative.[10]

The Commission adopted safe harbor provisions both to ensure that the price of an issuer's repurchases would be set by independent market forces and to offer clear guidance concerning the scope of non-manipulative issuer repurchasing.[11] Rule 10b–18, therefore, sets out specific conditions that issuers must comply with while conducting stock repurchases.

- The *manner of purchase condition* requires an issuer to use a single broker or dealer on any given day to bid for or purchase its common stock.[12] The goal of this provision is to prevent an issuer from creating the appearance of widespread broker-dealer interest and trading activity in its security.
- The *timing condition* specifies that an issuer's purchase may not be the opening transaction reported to the consolidated transaction reporting system nor may purchases be made during the last half-hour before the scheduled close of trading.[13] Because they tend to forecast the direction of trading and suggest the strength of demand, purchases effected at the opening or close of trading are generally considered to be a significant indication of the current market value of the security. The Rule excludes opening bids and purchases to prevent the issuer from setting the character of the day's trading. The Rule similarly excludes bids and purchases near or at the close of trading to prevent the issuer from influencing the closing price for its security.
- The *price condition* specifies the highest price an issuer may bid or pay for its common stock.[14] Because the price condition generally limits the issuer to bidding for or buying its security at a price that is no higher than the current independent published bid or last independent transaction price, it ensures that the issuer would not lead the market for its security through its repurchases.
- The *volume condition* is designed to prevent an issuer from dominating the market for its securities through substantial purchasing activity. Generally, the issuer may effect daily purchases up to 25 percent of the trading volume in its shares.[15] Block purchases are excepted from the volume condition, although all other Rule 10b–18 conditions apply to block purchases.[16] Therefore, an issuer may purchase one or more blocks as long as its non-block purchases amount to no more than 25 percent of the security's trading volume.

III. NYSE Petition and Proposed Amendment to Rule 10b–18

The Commission recently approved a NYSE proposal to amend its rule establishing "circuit breakers."[17] Circuit breakers are coordinated market-wide trading halts that are intended to avoid systemic breakdown when a severe one-day market drop interferes with the orderly operation of the financial markets.[18] The new circuit breaker rule sets trigger values representing a one-day decline in the Dow Jones Industrial Average (DJIA) of 10%, 20%, and 30%. It also modifies the duration of the market-wide trading halt depending on when the circuit breaker is triggered.[19] Given the new trigger values, these circuit breakers would rarely be triggered, and only during significant market declines when liquidity may evaporate. In conjunction with the new circuit breaker rules, the NYSE asked the Commission to expand the Rule 10b–18 timing condition to permit issuers to bid for or purchase its security either: (1) At the reopening of trading on the same day as the trading halt, and during the half hour prior to the scheduled close of trading of such trading session; or (2) at the next day's opening, if the market-wide trading halt is in effect at the scheduled close of trading. The Petition did not propose to change the other Rule 10b–18 conditions.[20]

The NYSE acknowledged that Rule 10b–18 is neither mandatory nor the exclusive means for an issuer to make repurchases without manipulating the market price of its securities. However, it noted that in practice many issuers are reluctant to undertake repurchases without the certainty that their bids or purchases fall within the Rule 10b–18 safe harbor. The NYSE highlighted the need for liquidity in the period following a significant market decline, and suggested that issuer repurchases offer a source of liquidity that could ease the stress of volatile markets. In October 1987 and October 1997, the markets experienced severe declines. At those times, numerous issuers sought our guidance on the applicability of Rule 10b–18 in the following trading session. The events following those market breaks underscore the significant role of issuer repurchases in enhancing liquidity during extreme market downturns and the need to clearly communicate the applicability of Rule 10b–18 during such periods.[21]

When the Commission adopted Rule 10b–18, it recognized that issuers rarely buy back their securities with improper intent, but rather generally conduct repurchase programs for legitimate business reasons. The Commission also acknowledged the benefit of offering clear guidance and certainty to issuers and broker-dealers concerning permissible market activity when repurchasing their stock. The Rule 10b–18 safe harbor allows issuers and their broker-dealer agents to bid for and purchase their common stock within the Rule's conditions and thereby avoid the substantial and unpredictable risks of liability under the general anti-manipulation provisions of the Exchange Act. With an expanded safe harbor during the trading session following a market break, issuers may be encouraged to participate in reestablishing equilibrium between buying and selling interests. Under the proposal, the safe harbor would also be available in the trading session following a market-wide trading suspension declared pursuant to a Commission emergency order.[22]

The Commission weighed its concerns about potential manipulative activity by issuers against the benefits of facilitating short-term liquidity during periods of severe market turbulence. We found that the balance tips in favor of enhanced liquidity. Thus, we are publishing for public comment the amendment to Rule 10b–18 substantially as proposed by the NYSE. Rule 10b–18 would continue to state that no presumption of manipulation arises for issuer purchases of its securities made outside the Rule 10b–18 conditions.[23]

IV. Request for Public Comment

The Commission seeks comment generally on adopting the proposal. The Commission asks commenters to address whether the proposed amendment provides appropriate safe harbor conditions for issuers and affiliated purchasers in times of severe market downturns. The Commission seeks comment on whether there are any risks of manipulation that this proposal may raise. Commenters may also wish to discuss whether there are any legal or policy reasons why the Commission should consider a different approach.[24] For instance, should volume limits also be relaxed and/or should specific disclosure of issuer repurchases be required? Further, should the time of purchase condition under the proposed safe harbor be broader, narrower, or include different parameters? The Commission encourages commenters to provide information regarding the functioning of secondary markets during periods of market volatility, the roles of market participants, and the advantages and disadvantages of the proposed amendments. For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996, the Commission also requests information regarding the potential impact of the proposed amendment on the economy on an annual basis. If possible, commenters should provide empirical data to support their views. Comments should be submitted by December 7, 1998.

V. Costs and Benefits of the Proposed Amendments

The Commission has identified certain costs and benefits relating to the proposals, which are discussed below, and encourages commenters to discuss any additional costs or benefits. In particular, the Commission requests comment on the potential costs for any necessary modifications to information gathering, management, and record-keeping systems or procedures, as well as any potential benefits resulting from the proposals for issuers, investors, broker-dealers, securities industry professionals, regulators or others. Commenters should provide analysis and data to support their views on the costs and benefits associated with the proposals.

A. Benefits

The Commission preliminarily believes that the proposed amendments generally would help improve the liquidity of markets for equity securities following a market-wide trading suspension. Securities sellers would benefit from improved liquidity while issuers could buy shares at relatively low prices. We preliminarily believe that the specific benefits set forth below

---

[5] The safe harbor is also available for affiliates of the issuer (affiliated purchasers). References to "issuer" in this release include affiliated purchasers.

[6] Securities Exchange Act Release No. 19244 (Nov. 17, 1982), 47 FR 53333 (Nov. 26, 1982) (Adopting Release).

[7] *Id.*

[8] The Commission first proposed Rule 10b–10 to govern issuer repurchases in connection with proposed legislation that became the Williams Act Amendments of 1968. Pub. L. No. 90–439, 82 Stat. 454 (July 29, 1968), reprinted in Hearings on S. 510 before Senate Committee on Banking and Currency, 90th Cong., 1st Sess. 214–216 (1967). The Commission then published for public comment proposed Rule 13e–2 in 1970, 1973 and 1980, a proscriptive rule that would have imposed disclosure requirements, purchasing limitations and general antifraud liability. Securities Exchange Act Release Nos. 8930 (July 13, 1970), 35 FR 11410 (July 16, 1970); 10539 (Dec. 6, 1973), 38 FR 34341 (Dec. 13, 1973); and 17222 (Oct. 17, 1980), 45 FR 70890 (Oct. 27, 1980).

[9] Adopting Release, *supra* note 6, at 53334.

[10] 17 CFR 240.10b–18(c).

[11] Adopting Release, *supra* note 6, at 53334. Some conduct that meets the safe harbor requirement of Rule 10b–18 may still violate the anti-fraud provisions of the Exchange Act. For example, as the Commission noted in 1982 when adopting Rule 10b–18, "Rule 10b–18 confers no immunity from possible Rule 10b–5 liability where the issuer engages in repurchases while in possession of favorable, material nonpublic information concerning its securities." *Id.*, n. 5.

[12] 17 CFR 240.10b–18(b)(1). This manner condition applies only to Rule 10b–18 bids or Rule 10b–18 purchases solicited by or on behalf of the issuer.

[13] 17 CFR 240.10b–18(b)(2).

[14] 17 CFR 240.10b–18(b)(3). The price limitation varies on whether the security is a reported, exchange-traded, Nasdaq or other security, and whether the bid or purchase is effected on an exchange. *Id.*

[15] For nonreported securities, volume may not exceed one round lot on a single day or on such day plus the five preceding days, ½oth of the percent of outside shares. 17 CFR 240.10b–18(b)(4). Trading volume is defined generally as the average daily trading volume reported to the consolidated transaction reporting system or to the NASD for the security in the four calendar weeks preceding the week that the Rule 10b–18 purchase or bid is to be effected. 17 CFR 240.10b–18(a)(11).

[16] Block is defined as a quantity of stock that either: (i) has a purchase price of $200,000 or more; or (ii) is at least 5,000 shares and has a purchase price of at least $50,000; or (iii) is at least 20 round lots of the security and totals 150 percent or more of the trading volume for that security or, in the event that trading volume data are unavailable, is at least 20 round lots of the security and totals at least one-tenth of one percent (0.001) of the outstanding shares of the security, exclusive of any shares owned by any affiliate. Block does not include any amount a broker or dealer, acting as principal, has accumulated for the purpose of selling to the issuer or affiliated purchaser, if the issuer or affiliated purchaser knows or has reason to know that such amount was accumulated for such purpose, nor does it include any amount that a broker or dealer has sold short to the issuer, if the issuer or affiliated purchaser knows or has reason to know that the sale was a short sale. 17 CFR 240.10b–18(a)(14).

[17] *See* Circuit Breaker Approval Order *supra* note 3. (Order approving circuit breakers for rules governing market-wide trading halts on the NYSE, American Stock Exchange, Boston Stock Exchange, Chicago Stock Exchange, NASD, and Philadelphia Stock Exchange.

[18] *Id.*

[19] *Id.* NYSE Rule 80B governs the imposition of trading halts on the NYSE due to extraordinary market volatility. Rule 80B provides both the trigger values (circuit breakers) for trading halts on the NYSE, which are expressed as a decline in the DJIA from the closing value on the previous trading day, and the duration of the trading halt for each circuit breaker. The circuit breakers contained in Rule 80B have been coordinated with: (i) All other U.S. stock exchanges and the National Association of Securities Dealers with respect to trading of stocks, stock options, and stock index options; and (ii) all U.S. futures exchanges with respect to the trading of stock index futures and options on such futures, so that all such markets would cease trading when a circuit breaker is triggered by a decline in the DJIA.

[20] *See* Petition, *supra* note 1.

[21] *See*, "Bargain-Shopping Through Buybacks", *New York Times*, August 6, 1998, p. D 6.

[22] Section 12(k) of the Exchange Act gives the Commission special authority to respond to market disruptions and extreme market volatility that could result from a variety of contingencies. Section 12(k)(1)(B) authorizes the Commission summarily to suspend all trading in the markets, for up to ninety calendar days when such suspension is required by the public interest and for the protection of investors. The Commission has never invoked this provision of section 12(k).

[23] The proposed alternative safe harbor conditions would be codified in Rule 10b–18(c); and current paragraph (c) would be amended and redesignated as paragraph (d).

[24] Additionally, the Commission expects to consider broad revisions to Rule 10b–18 in the near future, covering the manner, timing, price and volume conditions in Rule 10b–18 and seeks comment on Rule 10b–18 generally.

would flow from the proposed amendments.

The Commission preliminarily believes that the proposal will facilitate trading in the issuer's securities by reducing issuer reluctance to purchase in response to sell-side order imbalances that may occur during periods of severe market declines. The proposed amendments, by extending the safe harbor, may encourage issuers to purchase their securities at a time when other market participants may be unable or unwilling to do so. We preliminarily believe that extending the safe harbor to issuers under the conditions following a market-wide trading suspension will improve the liquidity of markets in the issuer's securities. The Commission requests data and analysis on what effect the proposed changes may have on the liquidity of these markets.

The proposed safe harbor also provides clarity as to the scope of permissible market activity for issuers and the broker-dealers that assist issuers in their stock repurchases. If an issuer effects its repurchases in compliance with the conditions of Rule 10b-18, it will avoid what might otherwise be substantial and unpredictable risks of liability under the anti-manipulative provisions of the Exchange Act.

The Commission does not have data to quantify the value of the benefits described above. The Commission seeks comments on how it may quantify these benefits and any other benefits, not already identified, that may result from the adoption of these proposed amendments.

B. Costs

The Commission notes that the costs related to complying with Rule 10b-18, and the proposed amendment, are assumed voluntarily because the rule provides an optional rather than mandatory safe harbor that issuers may use for purchasing their securities.

The Rule implicitly requires an issuer seeking to avail itself of the safe harbor to collect information regarding the manner, timing, price, and volume of its purchases of the issuer's common stock, on a transaction by transaction basis, in order to verify compliance with the Rule's safe harbor conditions. We estimate that each year there are approximately 1,455 issuers effecting 1,730 share repurchase programs; or, on average, 1.2 repurchase programs per issuer, in accordance with Rule 10b-18.[25] For each such repurchase program, an issuer spends an average of approximately 8 hours collecting the requisite information, for a total burden of 13,840 burden hours. We estimate that each issuer spends $670 per repurchase program to comply with the safe harbor requirements.[26] We have no way of estimating the average number of market-wide trading halts per year or the number of issuers that would avail themselves of the safe harbor in the subsequent trading session. With regard to issuer repurchases permitted under the proposed amendment to Rule 10b-18, the Commission anticipates that the triggering of a market-wide trading suspension would occur infrequently. However, the Commission estimates that, if one market-wide trading suspension occurs each year, each issuer would incur an additional burden of 1 hour for a cost, per issuer, of approximately $83.75.[27]

The Commission seeks comments, data and analysis on the cost estimates identified in this section and comments on any cost, not already identified, on the proposed amendment.

VI. Effects on Efficiency, Competition, and Capital Formation

In adopting rules under the Exchange Act, section 23(a)(2) requires the Commission to consider the impact any rule would have on competition. Further, the law requires that the Commission not adopt any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act. Section 3(f) of the Exchange Act requires the Commission, when engaged in rulemaking, and when considering the public interest, to consider whether the action would promote efficiency, competition, and capital formation.[28]

The Commission preliminarily believes that the safe harbor should improve market efficiency by providing additional purchasers, namely issuers, during a time of selling order imbalance. That effect could enhance market liquidity following a market-wide trading suspension.

The Commission's preliminary view is that the proposed amendment to the Rule 10b-18 would not have any anticompetitive effect because it would apply equally to all issuers and the safe harbor would only be triggered in extremely rare circumstances. Further, an issuer currently is able to purchase its shares outside the Rule 10b-18 safe harbor conditions without raising a presumption of manipulation.

The Commission requests comments on the effect on competition that may result to issuers under the proposed amendments to the Rule. Finally, the Commission seeks comment on what impact the proposals, if adopted, would have on efficiency and capital formation.

VII. Initial Regulatory Flexibility Analysis

The Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA)[29] regarding the proposed amendments to Rule 10b-18.

A. Reasons for the Proposed Action

On January 9, 1998, the NYSE filed a petition for rulemaking with the Commission pursuant to Rule 192 of the Commission's Rules of Practice.[30] The NYSE requested that the Commission initiate rulemaking proceedings to amend Rule 10b-18 to include in its safe harbor bids and purchases made following a market-wide trading suspension: (1) at the reopening on the day of the market-wide trading suspension; (2) during the half-hour prior to the scheduled close of trading on the day of the trading suspension; and (3) at the next day's opening if the market-wide trading suspension is in effect at the scheduled close of trading. The proposed conditions adjust the Rule's time of purchase condition but also provide that the issuer must continue to comply with the other Rule 10b-18 conditions governing the manner, price and volume of market purchases of its common stock.

B. Objectives

The proposed amendments will allow issuers who otherwise comply with the current Rule 10b-18 safe harbor conditions governing manner, price and volume to use the proposed timing condition during the trading session following an emergency market-wide trading suspension. The events following the market breaks in October 1987 and October 1997 have underscored the significant role of issuer repurchases during market downturns and the need for clarity as to the applicability of Rule 10b-18 in periods of extreme market downturns. On those occasions, issuer repurchases provided an important source of liquidity that helped ease market stress. The proposal, by modifying the safe harbor's timing condition during the trading session following a market break, may improve liquidity and facilitate market participants' ability to reestablish equilibrium between buying and selling interests.

C. Legal Basis

The amendments to Rule 10b-18 are proposed pursuant to the authority set forth in Sections 9(a)(2) and 10(b) of the Securities Exchange Act of 1934.[31]

D. Small Entities Subject to the Rule

The proposed amendments may affect those small entity issuers and affiliated purchasers that wish to avail themselves of the safe harbor provisions with the conditions following a market-wide trading suspension. Based on Exchange Act Rule 0–10(a), a small issuer is one that on the last day of its most recent fiscal year had total assets of $5,000,000 or less. The Commission estimates that approximately 1,450 issuers will avail themselves of the safe harbor each year, of which about 10 may be considered small entities. The Commission seeks comment on the number of issuers engaged in market repurchases of its stock and the number of such issuers that are small entities.

E. Reporting, Recordkeeping and Other Compliance Requirements

The proposed amendments would not impose any new reporting, recordkeeping, or other compliance requirements.

F. Duplicative, Overlapping or Conflicting Federal Rules

The Commission believes that there are no rules that duplicate, overlap, or conflict with, the proposed amendments.

G. Significant Alternatives

The Regulatory Flexibility Act directs the Commission to consider significant alternatives that would accomplish the stated objective, while minimizing any significant adverse impact on small issuers and broker-dealers. In connection with the proposed rule, the Commission considered the following alternatives: (a) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (b) the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for small entities; (c) the use of performance rather than design standards; and (d) an exemption from coverage of the rule, or any part thereof, for small entities.

With respect to the proposed amendments, the Commission believes that the establishment of different requirements for small entities is neither necessary nor practicable, because the proposal provides voluntary safe harbor from liability for manipulation under the Exchange Act. The proposed rule should not adversely affect small entities because it does not impose any new reporting, recordkeeping or compliance requirements. Therefore, it is not feasible to further clarify, consolidate or simplify the rule for small entities.

H. Solicitation of Comments

The Commission encourages the submission of comments with respect to any aspect of this IRFA. The Commission specifically requests comments on the number of issuers conducting repurchase programs and the number of such issuers that are small entities. Such comments will be considered in the preparation of the Final Regulatory Flexibility Analysis, if the proposed amendments are adopted, and will be placed in the same public file as comments on the proposed amendments themselves. Comments should be submitted in triplicate to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Stop 6–9, Washington, D.C. 20549. Comments also may be submitted electronically at the following E-mail address: rule-comments@sec.gov. All comment letters should refer to File No. S7–27–98; this file number should be included on the subject line if E-mail is used. Comment letters will be available for public inspection and copying in the Commission's Public Reference Room, 450 Fifth Street, N.W., Washington, D.C. 20549. Electronically submitted letters also will be posted on the Commission's Internet web site (http://www.sec.gov).

VIII. Paperwork Reduction Act

Certain provisions of the proposed amendments contain "collection of information" requirements within the meaning of the Paperwork Reduction Act of 1995 (PRA);[32] the Commission has submitted them to the Office of Management and Budget for review in accordance with 44 U.S.C. 3507(d) and 5 CFR 1320.11. The title for the collection of information is: "Purchases of certain equity securities by the issuer and others." This collection of information has previously been assigned OMB Control No. 3235–0474.

Rule 10b–18 provides that an issuer or any affiliated purchaser of an issuer will not incur liability under Sections 9(a)(2) and 10(b) of the Exchange Act, or Rule 10b–5 under the Exchange Act if its purchases of the issuer's common stock are made in compliance with the manner, timing, price, and volume limitations of the rule. The proposed amendments to the Rule provide conditions to the safe harbor applicable during the trading session following a market-wide trading suspension. An agency may not sponsor, conduct, or require response to an information collection unless a currently valid OMB control number is displayed.

The Rule implicitly requires an issuer or an affiliated purchaser seeking to avail itself of the safe harbor to collect information regarding the manner, time, price and volume of its purchases of the issuer's common stock, on a transaction by transaction basis, in order to verify compliance with the rule's safe harbor conditions. The Commission estimates that each year there are approximately 1,455 issuers effecting 1,730 share repurchase programs, or on average 1.2 repurchase programs per issuer per year, in accordance with Rule 10b–18 safe harbor. For each such repurchase program, an issuer spends an average of approximately 8 hours collecting the requisite information, for a total burden of 13,840 burden hours.[33] With regard to issuer repurchases permitted under the proposed amendment to Rule 10b–18, the Commission anticipates that the triggering of a market-wide trading suspension would occur infrequently. However, for purposes of the PRA, if we assume that, at most, one market-wide trading suspension occurs each year, each issuer would incur an additional burden of 1 hour for a cost per issuer of approximately $83.75.[34] If 1,455 issuers engage in repurchases following a market-wide trading halt and comply with the safe harbor, then collectively these issuers would incur an additional 1,455 burden hours.

The issuer's decision to effect purchases of its common stock within the safe harbor is voluntary. All records required to be preserved are considered confidential and are not available to the

[25] The Commission estimates that 1,225 issuers effect single repurchase programs while 230 issuers effect multiple repurchase programs.

[26] The estimated average cost of $670 to comply with the requirements of the safe harbor is composed of $96 for collection of information by an issuer (4 hours at $24 per hour), $400 for review of the information (4 hours at $100 per hour), and $174 for printing, supplies, and copying (approximately 35% of the total labor costs). The Commission estimates overhead based on 35% of total labor costs based on the *GSA Guide to Estimating Reporting Costs* (1973).

[27] The estimated total average burden per issuer is 8 burden hours per repurchase program. The estimated additional cost of $83.75 per issuer is calculated from each issuer effecting an average of 1 repurchase program per year at a cost of $670 per repurchase program divided by 8 hours.

[28] 15 U.S.C. 78c(f).

[29] 5 U.S.C. § 603.

[30] *See* Petition, *supra* note 1.

[31] 15 U.S.C. §§ 78i(a)(2), 78j(b).

[32] 44 U.S.C. § 3501 *et seq.*

[33] This represents 1,730 repurchase programs requiring 8 burden hours for compliance.

[34] This number was dervied by dividing the estimated average cost of $670 per issuer per repurchase program to comply with the safe harbor requirements by 8 hours. *See, supra* note 26.

public. All records required under the proposed amendments to Rule 10b–18 would be preserved for not less than 3 years, the first 2 years in an easily accessible place.

Pursuant to 44 U.S.C. 3506(c)(2)(B), the Commission solicits comments to:

(i) Evaluate whether the proposed information collection is necessary for the proper performance of the agency's functions, including whether the information shall have practical utility;

(ii) Evaluate the accuracy of the agency's estimate of the burden of the proposed collections of information;

(iii) Enhance the quality, utility, and clarity of the information to be collected;

(iv) Minimize the burden of the collections of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology.

Persons desiring to submit comments on the collection of information requirements should direct them to the Office of Management and Budget, Attention: Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Washington, D.C. 20503, and should also send a copy of their comments to Jonathan G. Katz, Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Stop 6–9, Washington, D.C. 20549 with reference to File No. S7–27–98. OMB is required to make a decision concerning the collections of information between 30 and 60 days after publication, so a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

IX. Statutory Basis and Text of Proposed Amendment

The rule amendment is being proposed pursuant to Sections 2, 3, 9(a)(6), 10(b), 13(e), 15(c) and 23(a), 15 U.S.C. 78b, 78c, 78i(a)(6), 78j(b), 78m(e), 78o(c) and 78w(a).

List of Subjects in 17 CFR Part 240

Broker-dealers, Issuers, Securities.

For the reasons set forth in the preamble, Title 17, Chapter II of the Code of Federal Regulations is proposed to be amended as follows:

PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

1. The authority citation to Part 240 continues to read in part as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z–2, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78d, 78f, 78i, 78j, 78j–1, 78k, 78k–1, 78*l*, 78m, 78n, 78o, 78p, 78q, 78s, 78u–5, 78w, 78x, 78*ll*(d), 78mm, 79q, 79t, 80a–20, 80a–23, 80a–29, 80a–37, 80b–3, 80b–4 and 80b–11, unless otherwise noted.

* * * * *

2. Section 240.10b–18 is amended by adding paragraphs (a)(15) and (d) and revising paragraph (c) to read as follows:

§ 240.10b–18 Purchases of certain equity securities by the issuer and others.

(a) *Definitions.* * * *

(15) The term *market-wide trading suspension* means either:

(i) A market-wide trading halt imposed pursuant to the rules of a national securities exchange or a registered national securities association, in response to a market-wide decline during a single trading session; or

(ii) A market-wide trading suspension ordered by the Commission pursuant to Section 12(k) of the Act, 15 U.S.C. 78*l*(k).

* * * * *

(c) *Conditions following a market-wide trading suspension.*

(1) The conditions of paragraph (b) of this section shall apply in connection with a Rule 10b–18 bid or a Rule 10b–18 purchase effected during a trading session following the termination of a market-wide trading suspension, except that the time of purchase condition in paragraph (b)(2) of this section shall not apply, either:

(i) From the reopening of trading until the scheduled close of trading; or

(ii) At the opening of trading on the next trading day, if a market-wide trading suspension is in effect at the scheduled close of a trading session.

(d) No presumption shall arise that an issuer or affiliated purchaser of an issuer has violated the anti-manipulation provisions of sections 9(a)(2) or 10(b) of the Act, 15 U.S.C. 78i(a)(2) or 78j(b), or § 240.10b–5, if the Rule 10b–18 bids or Rule 10b–18 purchases of such issuer or affiliated purchaser do not meet the conditions specified in paragraph (b) or (c) of this section.

* * * * *

By the Commission.

Dated: October 29, 1998.

Margaret H. McFarland,

Deputy Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Parts 4, 153, 157, and 375

[Docket No. RM98–16–000]

Collaborative Procedures for Energy Facilities Applications; Notice of Technical Conferences

October 30, 1998.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of Technical Conferences.

SUMMARY: The Federal Energy Regulatory Commission (Commission) intends to hold staff technical conferences to discuss the proposed pre-filing collaborative process.

DATES: Conference will be held at 9:00 a.m. on November 10, 1998, in Houston, Texas and at 9:00 a.m. on November 18, 1998, in Chicago, Illinois.

ADDRESSES: Conference locations are as follows:

Houston Airport Marriott, 18700 Kennedy Boulevard, Houston, Texas

Chicago Marriott Downtown, 540 North Michigan Avenue, Chicago, Illinois

FOR FURTHER INFORMATION CONTACT:

Thomas Russo, Office of Pipeline Regulation, Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, (202) 219–2792

Berne Mosley, Office of Pipeline Regulation, Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, (202) 208–2256

Gordon Wagner, Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, (202) 219–0122

Merrill Hathaway, Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, (202) 208–0825

SUPPLEMENTARY INFORMATION: In addition to publishing the full text of this document in the **Federal Register**, the Commission also provides all interested persons an opportunity to inspect or copy the contents of this document during normal business hours in the Public Reference Room at 888 First Street, N.E., Room 2A, Washhington, D.C. 20426.

The Commission Issuance Posting System (CIPS) provides access to the texts of formal documents issued by the Commission. CIPS can be accessed via Internet through FERC's Homepage (http://www.ferc.fed.us) using the CIPS Link or the Energy Information Online icon. The full text of this document will be available on CIPS in ASCII and WordPerfect 6.1 format. CIPS is also available through the Commission's electronic bulletin board service at no charge to the user and may be accessed using a personal computer with a modem by dialing 202–208–1397, if dialing locally, or 1–800–856–3920, if dialing long distance. To access CIPS, set your communications software to 19200, 14400, 12000, 9600, 7200, 4800, 2400, or 1200 bps, full duplex, no parity, 8 data bits and 1 stop bit. User assistance is available at 202–208–2474 or by E-mail to CipsMaster@FERC.fed.us.

This document is also available through the Commission's Records and Information Management System (RIMS), an electronic storage and retrieval system of documents submitted to and issued by the Commission after November 16, 1981. Documents from November 1995 to the present can be viewed and printed. RIMS is available in the Public Reference Room or remotely via Internet through FERC's Homepage using the RIMS link or the Energy Information Online icon. User assistance is available at 202–208–2222, or by E-mail to RimsMaster@FERC.fed.us.

Finally, the complete text on diskette in WordPerfect format may be purchased from the Commission's copy contractor, RVJ International, Inc. RVJ International, Inc., is located in the Public Reference Room at 888 First Street, N.E., Washington, D.C. 20426.

The Federal Energy Regulatory Commission (Commission) is proposing to expand its procedural regulations governing the authorization of natural gas facilities and services, and is considering revising its procedural regulations governing applications for licenses for hydroelectric projects.[1] The proposed regulations are intended to offer prospective applicants seeking to construct, operate or abandon natural gas facilities or services the option, in appropriate circumstances and prior to filing an application, of using a collaborative process to resolve significant issues. In addition, a significant portion of the environmental review process could be completed as part of the pre-filing collaborative process. This pre-filing collaborative process is comparable to the process the Commission recently adopted with respect to applications for hydroelectric licenses, amendments and exemptions and, like those regulations, is optional and is designed to be adaptable to the facts and circumstances of the particular case. The proposed regulations would not delete or replace any existing regulations. Finally, the Commission is considering whether the existing collaborative process for hydroelectric license and exemption applications, as well as the proposed collaborative process for natural gas facilities and services, should be made mandatory.

Staff technical conferences will be held to provide an overview of the proposed pre-filing collaborative process and to respond to questions. Conferences will be held at 9:00 a.m. on November 10, 1998, at the Houston Airport Marriott, 18700 Kennedy Boulevard, Houston, Texas, and on November 18, 1998, at the Chicago Marriott Downtown, 540 North Michigan Avenue, Chicago, Illinois. These conferences are designed as workshops in which Commission staff will present information and respond to questions concerning the proposed collaborative process as an aid to assist participants in developing comments in response to and as requested in the September 30, 1998 Notice of Proposed Rulemaking. Accordingly, there will be no transcript and statements made in the context of the workshops will not become part of the record in this proceeding. All parties—particularly those with experience with collaborative processes, whether at this agency or in another context—are invited to attend.

David P. Boergers,

Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 880

[Docket No. 98N–0786]

General Hospital and Personal Use Devices: Proposed Classification of Liquid Chemical Sterilants and General Purpose Disinfectants

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to classify both liquid chemical sterilants intended for use as the terminal step in processing critical and semicritical medical devices prior to patient use, and general purpose disinfectants intended to process noncritical medical devices and equipment surfaces. Under the proposal, liquid chemical sterilants would be classified into class II (special controls) and general purpose disinfectants would be classified into class I (general controls). FDA also proposes to exempt general purpose disinfectants from the premarket notification requirements. The agency is publishing in this document the recommendations of the General Hospital and Personal Use Devices Panel (the Panel) regarding the classification of these devices. After considering public comments on the proposed classification, FDA will publish a final regulation classifying these devices. This action is being taken to establish sufficient regulatory controls that will provide reasonable assurance of the safety and effectiveness of these devices.

DATES: Written comments by February 4, 1999.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

SUPPLEMENTARY INFORMATION:

I. Background

The Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 301 *et seq.*), as amended by the Medical Devices Amendments of 1976 (the 1976 amendments) (Pub. L. 94–295), the Safe Medical Devices Act of 1990 (the SMDA) (Pub. L. 101–629), and the Food and Drug Administration Modernization Act of 1997 (the FDAMA) (Pub. L. 105–115), established a comprehensive system for the regulation of medical devices intended for human use. Section 513 of the act (21 U.S.C. 360c) established three categories (classes) of devices, depending on the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories of devices are class I (general controls), class II (special controls), and class III (premarket approval).

Under section 513 of the act, devices that were in commercial distribution before May 28, 1976 (the date of enactment of the 1976 amendments), generally referred to as preamendments devices, are classified after FDA has: (1)

Received a recommendation from a device classification panel (an FDA advisory committee); (2) published the panel's recommendation for comment, along with a proposed regulation classifying the device; and (3) published a final regulation classifying the device. FDA has classified most preamendments devices under these procedures.

Devices that were not in commercial distribution prior to May 28, 1976, generally referred to as postamendments devices, are classified automatically by statute (section 513(f) of the act) into class III without any FDA rulemaking process. Those devices remain in class III and require premarket approval, unless and until: (1) The device is reclassified into class I or II; (2) FDA issues an order classifying the device into class I or II in accordance with new section 513(f)(2) of the act, as amended by the FDAMA; or (3) FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(I) of the act, to a predicate device that does not require premarket approval. The agency determines whether new devices are substantially equivalent to previously offered devices by means of premarket notification procedures in section 510(k) of the act (21 U.S.C. 360(k)) and part 807 (21 CFR part 807) of the regulations.

A preamendments device that has been classified into class III may be marketed, by means of premarket notification procedures, without submission of a premarket approval application (PMA) until FDA issues a final regulation under section 515(b) of the act (21 U.S.C. 360e(b)) requiring premarket approval. Consistent with the act and the regulations, FDA consulted the Panel, regarding the classification of the device.

The FDAMA added a new section 510(l) to the act (21 U.S.C. 360(l)). New section 510(l) of the act provides that a class I device is exempt from the premarket notification requirements under section 510(k) of the act, unless the device is intended for a use which is of substantial importance in preventing impairment of human health or it presents a potential unreasonable risk of illness or injury. Hereafter, these are referred to as "reserved criteria." FDA has considered the general purpose disinfectants in accordance with the reserved criteria and determine that the devices do not require premarket notification. Such an exemption permits manufacturers to introduce into commercial distribution generic types of devices without first submitting a premarket notification to FDA.

In 1980, when other general hospital and personal use devices were classified (45 FR 69678 to 69737, October 21, 1980), FDA inadvertently omitted liquid chemical germicides, such as liquid chemical sterilants and general purpose disinfectants from the classification process. In subsequent years, FDA actively regulated only liquid chemical germicides that were used as accessories to specific class II devices, such as hemodialyzers. FDA began actively regulating all liquid chemical germicides in the early 1990's following efficacy testing by FDA for the Environmental Protection Agency (EPA) and publication of the 1993 General Accounting Office (GAO) report on Hospital Sterilants (Ref. 1). Liquid chemical germicides were regulated as accessories to other devices with the level of regulation applicable coinciding with the classification of the other devices. FDA also determined that two categories of liquid chemical germicides existed, liquid chemical sterilants and general purpose disinfectants.

The first category consists of liquid chemical sterilants which are intended for use as the terminal step in processing critical and semicritical medical devices prior to patient use. Semicritical medical devices contact mucous membranes or nonintact skin during use, while critical devices contact normally sterile tissue or body spaces.

The second category of liquid chemical germicides consists of general purpose disinfectants which are intended to process noncritical medical devices and medical equipment surfaces, and can be used to preclean or decontaminate critical or semicritical medical devices prior to terminal sterilization or high level disinfection. Noncritical medical devices only make topical contact with intact skin of the body.

In addition to being regulated by FDA, certain liquid chemical germicides are regulated by EPA as pesticides under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). On June 4, 1993, a memorandum of understanding (MOU) was signed between FDA and EPA (Refs. 3 and 4). The purpose of the MOU was to resolve the confusion and burden of dual regulation and, at the same time, ensure that the safety and efficacy requirements of both statutes are met.

In 1996, liquid chemical sterilants used for processing critical and semicritical medical devices were exempted from the definition of a pesticide under FIFRA with passage of the Food Quality Protection Act of 1996 (FQPA) and are no longer regulated by EPA. FDA now has sole regulatory jurisdiction over liquid chemical sterilants and high level disinfectants used to process reusable critical and semicritical medical devices. Regulatory authority over general purpose disinfectants was not affected by FQPA. Therefore, the MOU remains in effect for general purpose disinfectants, and the dual regulatory requirements for these germicides continue until the rulemaking process for classification of the germicides is completed.

II. Recommendations of the Panel

During a public meeting which was held on July 18, 1995, the Panel made the following recommendations regarding the classification of liquid chemical sterilants and general purpose disinfectants.

A. Identification

The Panel recommended that the devices be identified as follows:

A liquid chemical sterilant is a germicide intended for use as the terminal step in processing critical and semicritical medical devices prior to patient use. Semicritical devices make contact with mucous membranes or nonintact skin during use. Critical devices contact normally sterile tissue or body spaces during use (Refs. 5 and 6).

A general purpose disinfectant is a germicide intended to process noncritical medical devices and medical equipment surfaces. A general purpose disinfectant can be used to preclean or decontaminate critical or semicritical medical devices prior to terminal sterilization or high level disinfection. Noncritical medical devices only make topical contact with intact skin of the body (Refs. 5 and 6).

B. Recommended Classification of the Panel

The Panel unanimously recommended that liquid chemical sterilants be classified into class II. The Panel believed that class II with the special controls (the 510(k) guidance document (Ref. 2), voluntary standards, and user information and training) would provide reasonable assurance of the safety and effectiveness of the devices.

The Panel recommended that general purpose disinfectants be classified into class I and that the devices should be exempt from the premarket notification procedures.

C. Summary of Reasons for Recommendation

After reviewing the information provided by FDA, and after consideration of the open discussions during the Panel meeting and the Panel members' personal knowledge of and clinical experience with the device systems, the Panel gave the following reasons in support of its recommendations to classify the generic type of liquid chemical sterilants for use as the terminal step in processing critical and semicritical medical devices prior to patient use into class II, and general purpose disinfectants for use in processing noncritical medical devices and medical equipment surfaces into class I:

1. The Panel believes that liquid chemical sterilants should be classified into class II because special controls, in addition to general controls, would be necessary to provide reasonable assurance of the safety and effectiveness of the devices, and there is sufficient information to establish special controls to provide such assurance.

2. The Panel believes that general purpose disinfectants should be classified into class I because general controls would provide reasonable assurance of the safety and effectiveness of the devices. In addition to the Panel's recommendation, FDA has considered general purpose disinfectants in accordance with the reserved criteria of new section 510(l) of the act and determined that the general purpose disinfectants do not require premarket notification.

D. Summary of Data Upon Which the Recommendation is Based

The Panel noted that liquid chemical sterilants include peracetic acid, hydrogen peroxide, chlorine dioxide, and glutaraldehyde. These substances are used to sterilize or high level disinfect heat sensitive medical devices such as flexible endoscopes. Toxicity studies have shown hydrogen peroxide and peracetic acid to be nontoxic, nonsensitizing and, at most, minimally irritating. In addition, these chemicals, as well as chlorine dioxide, are used at low concentrations and readily degrade to nontoxic compounds, such as water and molecular oxygen (Refs. 7, 8, and 9).

Toxicity studies have shown glutaraldehyde to be a skin, eye, and respiratory system irritant and a skin sensitizer. Since glutaraldehyde does not readily degrade, long-term effects of its residue as a skin or eye irritant are of concern (Refs. 10 and 11). Although some injuries and deaths have been reported following the use of these chemicals as sterilants and disinfectants, they have been primarily associated with failure of the user to follow the manufacturer's directions for use (Ref. 12).

The Panel noted that general purpose disinfectants include alcohols, chlorines, iodophors, phenolics, and quaternary ammonium compounds. The hazards and adverse effects of these substances are well known (Ref. 8). Toxicity is minimal because these substances are used at low concentrations on equipment surfaces and noncritical devices that only contact intact skin during use.

The use of liquid chemical sterilants and general purpose disinfectants on medical devices is based on the infection control classification system devised by E. H. Spaulding (Refs. 13 and 14), and adopted by infection control practitioners, FDA, and the Centers for Disease Control and Prevention. Spaulding's system is predicated on the relative risks associated with the use of medical devices. According to Spaulding's system, devices that contact normally sterile tissues or body spaces during use are termed critical devices. Critical devices should be sterilized prior to use.

Devices that contact mucous membranes, which can provide a barrier to many, but not all microorganisms, are termed semicritical devices. Semicritical devices should be sterilized prior to use when practical, or should undergo high level disinfection (a high level disinfectant is a sterilant used for a shorter contact time and that kills all microbial pathogens except large numbers of bacterial endospores). General purpose disinfectants can be used to clean or decontaminate critical and semicritical devices prior to a terminal sterilization or high level disinfection process.

E. Risks to Health

The following three risks are associated with the use of germicides such as liquid chemical sterilants and general purpose disinfectants: (1) Nosocomial infection, (2) toxicity associated with chemical exposure, and (3) damage to medical devices.

The formulation of a germicide plays an important role in the effectiveness of the germicide on the device. If the formulation is inadequate for its intended use or if the germicide is improperly used, the sterilization or disinfection process will be ineffective. As a result, the processed device may serve as a potential vector for the transmission of infectious microorganisms to the next patient.

In the **Federal Register** of December 6, 1996 (61 FR 64755), FDA announced the availability of a draft guidance document entitled "Draft Guidance on the Content and Format of Premarket Notification (510(k)) Submissions for Liquid Chemical Germicides" (Ref. 2). In the **Federal Register** of May 22, 1997 (62 FR 28055), FDA extended the period to comment on the draft guidance until August 20, 1997.

The guidance document suggests that manufacturers of these devices are to submit, for review and evaluation, microbiological studies supporting all germicidal claims, and adequate instructions for use. EPA registration for general purpose disinfectants requires similar information.

With regard to chemical exposure, health-care workers who process medical devices with either liquid chemical sterilants or general purpose disinfectants are potentially exposed to toxic substances during use of the germicides. In addition, the patient may be exposed to germicide residues if the device is inadequately rinsed.

Labeling recommendations in the guidance document include warnings and precautions regarding the proper use and handling of liquid chemical sterilants and other toxic substances. Additionally, the guidance document recommends a toxicological assessment of germicide residues remaining following rinsing. EPA registration of general purpose disinfectants requires similar information.

Lastly, both liquid chemical sterilants and general purpose disinfectants may damage medical devices causing them to function improperly or create areas that cannot be effectively cleaned, disinfected or sterilized. The guidance document recommends that data demonstrating device materials compatibility with the liquid chemical germicides be included in the 510(k).

F. Special Controls

Based on the available information, FDA believes that, in addition to general controls, the special controls discussed as follows are adequate to address the risks to health which were identified previously.

1. The 510(k) guidance document;
2. Voluntary standards; and
3. User information and training.

The guidance document provides 510(k) applicants with specific directions regarding data and information that should be submitted to FDA in a 510(k) submission for liquid chemical germicides. The document incorporates voluntary standards and guidelines from professional organizations as part of its recommendation for performance testing. Compliance with the recommendations made in the document for liquid chemical sterilants is important in preventing nosocomial infections.

Voluntary standards provide assurance of consistency and uniformity in germicide effectiveness.

User information and training programs are critical to ensure that users have full knowledge and assume responsibility for the safe and effective use of the liquid chemical sterilants.

Adherence to these special controls can provide the user community a greater assurance of effectiveness and appropriate use in order to minimize nosocomial infection through improperly sterilized or disinfected reusable medical devices.

III. Proposed Classification

FDA believes that liquid chemical sterilants should be classified into class II because special controls, in addition to general controls, would provide reasonable assurance of the safety and effectiveness of the devices, and there is sufficient information to establish special controls to provide such assurance.

FDA believes that general purpose disinfectants should be classified into class I because general controls under the act and the EPA registration requirements would provide reasonable assurance of safety and effectiveness of these products. FDA also believes that these devices do not meet the reserved criteria of new section 510(l) of the act and should be exempt from premarket notification requirements.

V. Environmental Impact

The agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VI. Analysis of Impacts

FDA has examined the impacts of the proposed rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612) (as amended by subtitle D of the Small Business Regulatory Fairness Act of 1996 (Pub. L. 104–121), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4)). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this proposed rule is consistent with the regulatory philosophy and principles identified in the Executive Order. In addition, the proposed rule is not a significant regulatory action as defined by the Executive Order and so is not subject to review under the Executive Order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because the proposed rule classifying these devices eliminates duplicative registration, and may enable additional small competitors to enter the marketplace by eliminating the cost of complying with two sets of requirements, it will impose no significant economic impact on any small entities. The agency therefore certifies that this proposed rule, if issued, will not have a significant economic impact on a substantial number of small entities. In addition, this proposed rule will not impose costs of $100 million or more on either the private sector or State, local, and tribal governments in the aggregate, and therefore a summary statement or analysis under section 202(a) of the Unfunded Mandates Reform Act of 1995 is not required.

VII. Paperwork Reduction Act of 1995

FDA tentatively concludes that this proposed rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

VIII. Submission of Comments and Proposed Dates

Interested persons may, on or before February 4, 1999, submit to the Dockets Management Branch (address above) written comments regarding this proposal. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

FDA proposes that any final regulation that may issue based on this proposal become effective 30 days after its date of publication in the **Federal Register**.

List of Subjects in 21 CFR Part 880

Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR part 880 be amended to read as follows:

PART 880—GENERAL HOSPITAL AND PERSONAL USE DEVICES

1. The authority citation for 21 CFR part 880 continues to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

2. Sections 880.6885 and 880.6890 are added to subpart G to read as follows:

§ 880.6885 Liquid chemical sterilants.

(a) *Identification.* A liquid chemical sterilant is a germicide that is intended for use as the terminal step in processing critical and semicritical medical devices prior to patient use. Critical devices make contact with normally sterile tissue or body spaces during use. Semicritical devices make contact with mucous membranes or nonintact skin during use.

(b) *Classification.* Class II (special controls). (Guidance on the Content and Format of Premarket Notification (510(k)) Submissions for Liquid Chemical Germicides, voluntary standards, and user information and training.)

§ 880.6890 General purpose disinfectants.

(a) *Identification.* A general purpose disinfectant is a germicide intended to process noncritical medical devices and equipment surfaces. A general purpose disinfectant can be used to preclean or decontaminate critical or semicritical medical devices prior to terminal sterilization or high level disinfection. Noncritical medical devices make only topical contact with intact skin of the body.

(b) *Classification.* Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in § 880.9.

Dated: October 2, 1998.

D.B. Burlington,

Director, Center for Devices and Radiological Health.

[Notice No. 869; Ref: Notice No. 859]

RIN 1512–AB71

Implementation of Public Law 105–34, Sections 908, 910 and 1415, Related to Hard Cider, Semi-generic Wine Designations, and Wholesale Liquor Dealers' Signs (97–2523)

AGENCY: Bureau of Alcohol, Tobacco and Firearms (ATF), Department of the Treasury.

ACTION: Notice of proposed rulemaking; reopening of comment period.

SUMMARY: This notice reopens the comment period for Notice No. 859, a notice of proposed rulemaking, published in the **Federal Register** on August 21, 1998. ATF has received requests to extend the comment period in order to provide sufficient time for all interested parties to respond to the issues raised in the notice.

DATES: Written comments must be received on or before December 7, 1998.

ADDRESSES: Send written comments to: Chief, Regulations Division; Bureau of Alcohol, Tobacco and Firearms; P.O. Box 50221; Washington, DC 20091–0221; *ATTN: Notice No. 859.* See the Public Participation section of this notice for alternative means of commenting.

FOR FURTHER INFORMATION CONTACT: Marjorie D. Ruhf, Regulations Division, Bureau of Alcohol, Tobacco and Firearms, 650 Massachusetts Avenue, NW., Washington, DC 20226 (202–927–8230), mdruhf@atfhq.atf.treas.gov.

SUPPLEMENTARY INFORMATION:

Background

On August 21, 1998, ATF published a temporary rule and an associated notice of proposed rulemaking in the **Federal Register** soliciting comments from the public and industry on three sections of the Taxpayer Relief Act of 1997, (Treasury Decision ATF–398, 63 FR 44779, and Notice No. 859, 63 FR 44819).

The comment period for Notice No. 859 closed on October 20, 1998. Prior to the close of the comment period ATF received requests from Ms. Cheryl A. Lau, a cider industry representative, Mr. Kirk Seggie, Winery Manager of Andrés Wines (B.C.) Ltd., Mr. Kenton E. Kidd, of the California Apple Commission, and Mr. Thomas E. Dalldorf, Sr., Publisher of *Celebrator Beer News*, to extend the comment period for a short time. All these writers stated that potential commenters in the apple industry were in the middle of the apple harvest and would not be able to take time to provide the sort of historical and technical information requested in the notice. They suggested an extension until late November to afford these interested persons an opportunity to comment. In consideration of the above, ATF finds that a reopening of the comment period is warranted.

Public Participation

ATF requests comments on the temporary regulations published in Treasury decision ATF–398 (63 FR 44779) from all interested persons. Comments received on or before the closing date will be carefully considered. Comments received after that date will be given the same consideration if it is practicable to do so, but assurance of consideration cannot be given except as to comments received on or before the closing date.

Comments may be submitted by facsimile transmission (FAX) to (202) 927–8602, provided the comments: (1) Are legible, (2) are 8½″×11″ in size, (3) contain a written signature, and (4) are three pages or less in length. This limitation is necessary to assure reasonable access to the equipment. Comments sent by FAX in excess of three pages will not be accepted. Facsimile transmitted comments will be treated as originals.

Comments may also be sent by electronic mail (e-mail) to nprm@atfhq.atf.treas.gov, provided (1) the message is entitled "Comment on Notice No. 859; (2) the name and company affiliation, if any, of the commenter is contained in the body of the message; and (3) the message contains no attachments, special characters or encryption. E-mail comments will be printed and filed with comments submitted on paper and by facsimile transmission.

Receipt of comments will not be acknowledged. ATF will not recognize any material in comments as confidential. Comments may be disclosed to the public. Any material which the commenter considers to be confidential or inappropriate for disclosure to the public should not be included in the comment. The name of the person submitting the comment is not exempt from disclosure. During the comment period, any person may request an opportunity to present oral testimony at a public hearing. However, the Director reserves the right, in light

of all circumstances, to determine if a public hearing is necessary.

Disclosure

Copies of this notice, Notice No. 859, and the written comments will be available for public inspection during normal business hours at: ATF Public Reading Room, Room 6480, 650 Massachusetts Avenue, NW, Washington, DC.

BILLING CODE 4810–31–U

DEPARTMENT OF EDUCATION

34 CFR Ch. VI

Office of Postsecondary Education, Student Assistance

AGENCY: Department of Education.

ACTION: Request for advice and recommendations on regulatory issues under Title IV of the Higher Education Amendments of 1998, "Student Assistance."

SUMMARY: The Secretary of Education (Secretary) solicits advice and recommendations from the public prior to publishing proposed regulations to implement student assistance programs under Title IV of the Higher Education Act of 1965, as recently amended by the Higher Education Amendments of 1998.

DATES: We request that you send written comments by December 15, 1998. You may also submit comments at regional hearings to be held on December 4–12, 1998. (See dates, times and locations of regional hearings under the **SUPPLEMENTARY INFORMATION** section of this notice.)

ADDRESSES: Please send your comments to Brian Kerrigan, U.S. Department of Education, 400 Maryland Avenue, SW, ROB-3, Washington D.C. 20202–5257, or fax them to Brian Kerrigan at (202) 205–0786. You may also E-mail your comments to:

hea98negotiated__rulemaking@ed.gov

FOR FURTHER INFORMATION CONTACT: Brian Kerrigan, U.S. Department of Education, 400 Maryland Avenue, SW, Rob-3, Washington, DC 20202–5257. Telephone: (202) 708–5217. If you use a telecommunications device for the deaf (TDD) you may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

Individuals with disabilities may obtain this document in an alternate format (e.g., Braille, large print, audiotape, or computer diskette) on request to the contact person listed in the preceding paragraph.

SUPPLEMENTARY INFORMATION:

Background

On October 7, President Clinton signed into law Public

Law 105–244, the Higher Education Amendments of 1998 (Amendments), amending the Higher Education Act of 1965 (HEA). Section 492 of the HEA, as amended, requires that, before publishing any proposed regulations to implement programs under Title IV, the Secretary obtain public involvement in the development of the proposed regulations. The Secretary must obtain advice and recommendations from individuals and groups involved in student financial assistance, such as students, legal assistance organizations that represent students, institutions of higher education, guaranty agencies, lenders, secondary markets, loan servicers, guaranty agency servicers, and collection agencies, and must provide for a comprehensive discussion and exchange of information concerning the implementation of Title IV of the HEA. After obtaining advice and recommendations, the Secretary will conduct a negotiated rulemaking process to develop proposed regulations. All published proposed regulations must conform to any agreements resulting from the negotiated rulemaking process unless the Secretary reopens the negotiated rulemaking process, or provides a written explanation to the participants in that process why the Secretary has decided to depart from the agreements.

Participants in the negotiation process will be selected by the Secretary from individuals nominated by the groups mentioned above, and will include both representatives of those groups from Washington, D.C., and industry participants. To the extent possible, the Secretary will select individuals reflecting the diversity in the industry, representing both large and small participants, and serving both local areas and national markets. The Secretary intends to include in the negotiation sessions those groups that participated in the 1992 and 1994 higher education negotiation sessions. Any additional groups that did not participate in the 1992 and 1994 negotiation sessions that would like to participate in these negotiation sessions should inform the Department of their interest in participating, either by submitting a written comment, or by attending one of the regional hearings.

The negotiation process must be conducted in a timely manner so that the Secretary can issue the final regulations within 360 days of the date of enactment of the Amendments. Additionally, the Secretary must publish any final regulations under Title IV by November 1, 1999, as any final regulations not published by that date would not take effect until July 1, 2001, at the earliest. As a result of these time constraints, the Secretary anticipates a highly expedited process in the development of any proposed regulations.

The Secretary therefore invites advice and recommendations from interested parties concerning what regulations may be necessary to implement Title IV of the HEA. The Secretary also invites advice and recommendations concerning which regulated issues should be subjected to a negotiated rulemaking process. The Secretary further requests advice and recommendations concerning ways to prioritize the numerous issues in Title IV, in order to meet the statutory deadlines mentioned above. Additionally, the Secretary would like advice and recommendations concerning how the negotiated rulemaking process should be conducted, given the time available and the number of regulations that may need to be developed.

Under its principles for regulating, the Department of Education (Department) will regulate only when it improves the quality and equality of services to its customers—learners of all ages. The Department will regulate only when absolutely necessary, and then in the most flexible, most equitable, and least burdensome way possible. The Department will regulate if a demonstrated problem exists and cannot be resolved without regulation or if necessary to provide legally binding interpretation to resolve an ambiguity. The Department will not regulate if entities or situations to be regulated are so diverse that a uniform approach does more harm than good.

Regional Hearings

Participants are welcome to address issues relating to the implementation of Title IV of the HEA, either by attending the regional hearings or submitting written comments. Comments will be used to help develop any proposed regulations, and will not result in any statutory changes. Individuals desiring to present comments at the hearings are encouraged to do so. It is likely that each participant choosing to make a statement will be limited to five minutes. Individuals interested in making oral statements will be able to sign up to make a statement beginning at 8:30 a.m. on the day of the hearing at the Department's regional hearing on-site registration table on a first-come, first-served basis. If additional time slots remain, individuals may be given additional time to speak. If no time slots remain, the Department has reserved one additional hour at the end of the first day, and one-half hour at the end of the second day for people who were not able to register to speak. The amount of time available will depend upon the number of individuals who request reservations. Speakers may also submit written comments. The dates, times, and locations of the regional hearings are listed below.

In addition, for anyone unable to attend any of the regional hearings, the Department will also accept, and strongly encourages, written comments. You should send your comments to Brian Kerrigan at the above address by December 15, 1998. If possible, please try to provide a copy of any written comments on a disk.

The Department has reserved a limited number of rooms at each of the following hotels at a special government per diem room rate. To reserve these rates, be certain to inform the hotel that you are attending the regional hearings with the Department of Education.

The hearing sites are accessible to individuals with disabilities. The Department will provide a sign language interpreter at each of the scheduled hearings. An individual with a disability who will need an auxiliary aid or service other than an interpreter to participate in the meeting (e.g., assistive listening device, or materials in an alternate format) should notify the contact person listed in this notice at least two weeks before the scheduled meeting date. Although the Department will attempt to meet a request received after that date, the requested auxiliary aid or service may not be available because of insufficient time to arrange it.

Dates, Times, and Locations of Regional Hearings

1. December 4, 1998, 9:00–5:00 p.m., December 5, 1998, 9:00 a.m.–12:00 p.m., Holiday Inn on the Hill, 415 New Jersey Ave., N.W., Washington, D.C.; 1–202–638–1616, and ask for reservations. Sleeping Room rate: $126.00 (inclusive of all taxes). Reservations must be made by November 13.

2. December 8, 1998, 9:00–5:00 p.m., December 9, 1998, 9:00 a.m.–12:00 p.m., The Regal Knickerbocker, Walton Place at North Michigan Avenue, Chicago, Illinois; 1–312–751–8100, and ask for reservations. Sleeping room rate: $120.00 (inclusive of all taxes). Reservations must be made by November 16.

3. December 11, 1998, 9:00 a.m.–5:00 p.m., December 12, 1998, 9:00 a.m.–12:00 p.m., Hyatt Regency Los Angeles, 711 South Hope Street, Los Angeles, California; 1–213–683-1234, and ask for reservations. Sleeping room rate: $124.26 (inclusive of all taxes). Reservations must be made by November 27.

Approval and Promulgation of Air Quality Implementation Plans; Pennsylvania; Approval of VOC and NO_X RACT Determinations for Individual Sources

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes to approve the State Implementation Plan (SIP) revision submitted by the Commonwealth of Pennsylvania for the

purpose of establishing volatile organic compound (VOC) and nitrogen oxides (NO_X) reasonably available control technology (RACT) for 16 major sources located in Pennsylvania. In the Final Rules section of this **Federal Register**, EPA is approving the Commonwealth's SIP submittal on as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule and the accompanying technical support document. If no adverse comments are received in response to this action, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. If adverse comments are received that do not pertain to all paragraphs subject to this rulemaking action, those paragraphs not affected by the adverse comments will be finalized in the manner described here. Only those paragraphs that receive adverse comments will be withdrawn in the manner described here.

DATES: Written comments must be received by December 7, 1998.

ADDRESSES: Written comments on this action should be addressed to David Campbell, Air Protection Division, Mailcode 3AP11, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the documents relevant to this action are available for public inspection during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103; and the Pennsylvania Department of Environmental Protection, Bureau of Air Quality Control, P.O. Box 8468, 400 Market Street, Harrisburg, Pennsylvania 17105.

FOR FURTHER INFORMATION CONTACT: David Campbell, (215) 814–2196, at the EPA Region III office or via e-mail at campbell.dave@epamail. epa.gov. While information may be requested via e-mail, comments must be submitted in writing to the above Region III address.

SUPPLEMENTARY INFORMATION: For additional information pertaining VOC and NO_X RACT determinations for individual sources located in Pennsylvania, see the Direct Final rule located in the Rules and Regulations Section of this **Federal Register**.

Dated: October 27, 1998.

Thomas Voltaggio,

Acting Regional Administrator, Region III.

Approval and Promulgation of Implementation Plans; California State Implementation Plan Revision, Bay Area Air Quality Management District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing a limited approval and limited disapproval of revisions to the California State Implementation Plan (SIP). This revision concerns Rules 1, 2 and 4 of Regulation 2—Permits, for the Bay Area Air Quality Management District (BAAQMD or the "District"). This State Implementation Plan (SIP) revision was submitted by the State of California for the purpose of meeting the requirements of the Clean Air Act (CAA), as amended in 1990, with regard to new source review (NSR) in areas that have not attained the national ambient air quality standards (NAAQS). This SIP revision was submitted by the State to satisfy Federal requirements for an approvable nonattainment area NSR SIP for the District.

The intended effect of proposing a limited approval and limited disapproval of these rules is to strengthen the federally approved SIP by incorporating these updated provisions. EPA's final action on this proposal will incorporate the rules into the SIP. EPA is proposing a simultaneous limited approval and limited disapproval under provisions of the Act regarding EPA action on SIP submittals and general rulemaking authority. While strengthening the SIP, this revision contains deficiencies which the BAAQMD must address before EPA can grant full approval under Section 110(k)(3).

DATES: Comments must be received on or before December 7, 1998.

ADDRESSES: Comments may be mailed to: John Walser, Permits Office [AIR–3], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901.

Copies of the state submittal and rules are available for public inspection at EPA's Region IX office during normal business hours and at the following locations: Bay Area Air Quality Management District, 939 Ellis Street, San Francisco, CA 94109. California Air Resources Board, Stationary Source Division, Rule Evaluation Section, 2020 "L" Street, Sacramento, CA 95812.

FOR FURTHER INFORMATION CONTACT: John Walser, Permits Office, [AIR–3], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901, Telephone: (415) 744–1257.

SUPPLEMENTARY INFORMATION:

I. Applicability

The rules proposed for limited approval and limited disapproval into the California SIP are the District's Regulation 2 Permits, Rule 1 General Requirements, Rule 2 New Source Review, and Rule 4 Emissions Banking. These rules were submitted by the California Air Resources Board on behalf of the District to EPA on September 28, 1994.

II. Background

The air quality planning requirements for nonattainment NSR are set out in part D of title 1 of the Clean Air Act. EPA has issued a "General Preamble" describing EPA's preliminary views on how EPA intends to review SIPs and SIP revisions submitted under part D, including those State submittals containing nonattainment NSR SIP requirements [see 57 FR 13498 (April 16, 1992) and 57 FR 18070 (April 28, 1992)]. Because EPA is describing its interpretations here only in broad terms, the reader should refer to the General Preamble for a more detailed discussion. EPA has also proposed regulations to implement the changes under the 1990 Amendments in the NSR provisions in parts C and D of title 1 of the Act. [See 61 FR 38249 (July 23, 1996)]. Upon final promulgation of those regulations, EPA will review those NSR SIP submittals on which it has already taken final action to determine whether additional SIP revisions are necessary.

Part D of the Clean Air Act (CAA), Sections 171 to 173, Section 182, Section 187, and Section 189, requires that States incorporate in their State Implementation Plans an acceptable permitting program for the construction and operation of new or modified major stationary sources in nonattainment areas. The statutory permit requirements for ozone nonattainment areas are generally contained in Section 173, and in subpart 2 of part D. These are the minimum requirements that States must include in an approvable

implementation plan. EPA's requirements are contained in 40 CFR 51.165, revised as of July 1, 1992, and the Emissions Trading Policy Statement, published December 4, 1986 under 51 FR 43814. EPA relied upon the following materials in its review of the District's NSR rules: CAA, as amended, 40 CFR 51.160 through 51.165, Emissions Trading Policy Statement, General Preamble to Title 1, and the December 15, 1992, draft comprehensive SIP checklist for all Part D NSR requirements.

On March 3, 1978, EPA promulgated a list of ozone nonattainment areas under the provisions of the 1977 Clean Air Act (1977 CAA or pre-amended Act), that included the San Francisco Bay Area (43 FR 8964). On May 26, 1988, EPA notified the Governor of California, pursuant to section 110(a)(2)(H) of the pre-amended Act, that the Bay Area Air Quality Management District's portion of the SIP was inadequate to attain and maintain the ozone standard and requested that deficiencies in the existing SIP be corrected (EPA's SIP-Call). On November 15, 1990, amendments to the 1977 CAA were enacted. Pub. L. 101–549, 104 Stat. 2399, codified at 42 U.S.C. 7401–7671q.

On November 12, 1993, BAAQMD submitted a request for redesignation to attainment of the ozone standard. Subsequently, EPA approved BAAQMD's request and the San Francisco Bay Area was reclassified as an attainment area. 40 CFR 81.305. Subsequently, on July 10, 1998, EPA revoked the Bay Area's attainment status and reclassified the area back to nonattainment for ozone. 63 FR 37258. The Bay Area was redesignated under Subpart 1 of Part D of the Act, and for this reason does not have a classification. However, for purposes of the new source review and Title V programs, moderate area requirements apply to the Bay Area based on its design value of .138 ppm. *See* 62 FR 66581, December 19, 1997. Because the District is currently designated as nonattainment for ozone and attainment or unclassifiable for NO_2, PM–10, Pb, CO, and SO_2, the District's nonattainment rules must be applied to all major new or modified stationary sources proposing to emit ozone precursors, namely VOC and NO_X.

This document addresses EPA's proposed action for BAAQMD Regulation 2 Permits, Rules 1, 2 and 4. The BAAQMD adopted these rules on June 15, 1994. These submitted rules were found to be complete on November 22, 1994, pursuant to EPA's completeness criteria that are set forth in 40 CFR Part 51, Appendix V;[1] and are being proposed for limited approval and limited disapproval.

BAAQMD Regulation 2 clarifies the terms and requirements that apply to the District's NSR regulation and emissions banking program. BAAQMD Regulation 2 was originally adopted as part of BAAQMD's effort to achieve the National Ambient Air Quality Standard (NAAQS) for ozone. The following is EPA's evaluation and proposed action for BAAQMD Regulation 2, Rules 1, 2 and 4.

III. EPA Evaluation and Proposed Action

In determining the approvability of a rule submittal, EPA must evaluate the rule for consistency with the requirements of the CAA and EPA regulations, as found in section 110 of the CAA and 40 CFR Part 51 (Requirements for Preparation, Adoption, and Submittal of Implementation Plans).

The statutory requirements for nonattainment NSR SIPs and permitting are found in sections 172 and 173 of the Act. The Act requires States to address a number of nonattainment NSR provisions in a SIP submittal to meet the requirements of part D of title 1 of the Act.

EPA has evaluated District Rules 1, 2 and 4 of Regulation 2 and has determined that the rules contain deficiencies and are not fully consistent with CAA requirements, EPA regulations and EPA policy. A more detailed analysis is contained in the Technical Support Document for this submittal which is available for inspection at the Region IX address listed above.

The following six items are issues that EPA has identified as significant deficiencies (approvability issues) in BAAQMD Regulation 2.

1. Interpollutant Trading

Regulation 2, Rule 2 Sections 302.1, 302.2 and 303.1

Section 302.1 states that emission reduction credits (ERCs) of nitrogen oxides (NO_X) may be used to offset increased emissions of precursor organic compounds (POC) at the offset ratio specified in Section 2–2–302 (generally 1.15 to 1.0). Section 302.2 allows for emission reduction credits of POC to be used to offset increased emissions of NO_X at the offset ratio specified in Section 302.2, and Section 303.1 allows ERCs of NO_X and/or sulfur dioxide (SO_2) to be used to offset increased emissions of particulate matter (PM10) at ratios deemed appropriate by the Air Pollution Control Officer.

These sections of Regulation 2, Rule 2 are not approvable in their current form because they do not contain adequate safeguards to ensure an overall air quality benefit from this type of trading. For example, as currently drafted, the rule allows for the same trading ratio for POC to POC trades as it does for POC for NO_X trades, without any demonstration that such trades will result in an equal air quality benefit. EPA continues to discourage interpollutant trading due to the scientific uncertainty of acceptable pollutant trading ratios. However, if the District wishes to allow interpollutant trading, the rule must be consistent with EPA guidance.[2] For instance, the rule must restrict interpollutant trading to precursor pollutants contributing to the same secondary non-attainment pollutant (such as trading POC for NO_X). The District must either perform adequate modelling studies to include a scientifically determined pollutant trading ratio and define that ratio in the rule, or perform a case-by-case analysis of the ratio, and state in the rule that the ratio will be determined after adequate modelling, public notice, and EPA concurrence.

Additionally, the District's interpollutant trading provisions may allow inter-District trading without regard to the attainment status of the District where the ERCs are created and used, because the rule is silent on this issue. Therefore, the rule must be revised to prohibit this type of trading, or be revised to explicitly include the provisions of 173(c)(1) of the Clean Air Act.

2. Exemption List

Regulation 2 Permits, Rule 1 General Requirements

Sections 2–1–114 to 128, provide that "any equipment that produces air contaminants in excess of 150 lb/day of any single pollutant is not exempt" from permit review. EPA is concerned that the District interprets this language to apply on an individual emissions unit basis, rather than a facility-wide basis.

EPA's fundamental requirements with respect to permit exemptions are threefold. First, the exemptions must not keep a major source from appearing to be major. That is, emissions from

[1] EPA adopted completeness criteria on February 16, 1990 (55 FR 5830) and, pursuant to section 110(k)(1)(A) of the CAA, revised the criteria on August 26, 1991 (56 FR 42216).

[2] *See* letter from Dave Howekamp to Dan Speer of the San Diego Air Pollution Control District dated April 13, 1995.

exempt equipment must be included in the determination of whether a source is major (or whether a modification is major), whether for NSR or Title V purposes. Second, emissions from exempt equipment must be included in determining the offset liability for a source. Third, substantive requirements, such as BACT, must generally apply to all emissions units.

EPA continues to believe that if the 150 lb/day cap on exemptions applies to any group of emissions units or pieces of equipment, and not just to a single piece of equipment, the District is likely to be able to satisfy the above requirements. For example, the District may be able to argue that 150 pounds a day is de minimus from a BACT standpoint. Also, a maximum 150 pound per day facility wide exemption could be factored into offset requirements.

In addition, Regulation 2, Rule 1 exempts equipment such as internal combustion engines or gas turbines of less than 250 horsepower rating (Section 2–1–115.2) from authority to construct and permit to operate requirements, and exempts certain other sources subject to generally applicable requirements. These sources may have high emissions and a greater likelihood of violating emission standards and for these reasons should not be included on an exemptions list.

3. Functionally Identical Replacement

Regulation 2, Rule 2–NSR, Dated 6/15/94, Sections 2–2–225.4, 2–2–313, 2–2–241 and 2–2–608: Replacement Sources

EPA does believe that the sections in Regulation 2, Rule 2 concerning functionally identical replacement may not fully meet the federal requirements found at 40 CFR 51.165. Specifically, section 51.165(a)(1)(v)(A) defines "major modification" as any physical change in or change in the method of operation of a major stationary source that would result in a significant net emissions increase of any pollutant subject to regulation under the Act. Section 51.165 (a)(1)(v)(C)(1) excludes "routine maintenance, repair and replacement" from the definition of physical or operational change. Such assessments should be made on a case-by-case basis, but would generally not include replacement of emissions units ("sources" in BAAQMD's nomenclature), or life extension projects.

Additionally, Section 2–2–313 of Regulation 2 states that offset requirements for replacement sources of POC and NO_X shall be met either in accordance with Section 2–2–302 Offset Requirements, or 2–2–608 Alternate Emission Calculation Procedures, Replacement Sources, which is an alternative to the calculation procedures outlined in Section 2–2–605. EPA believes that the alternate emission calculation procedures outlined in Section 2–2–608 may allow replacement sources to construct without fully applying offsets that would be required by Section 2–2–605, and by the federal regulations at 40 CFR 51.165. As drafted, the rule does not require the replacement source to consider the operating history of the replaced source, which could have been operating at a capacity well below its maximum allowable limits (e.g., actual emissions 50 percent of potential emissions). Therefore, the calculation appears to use a potential to potential emissions test, and as a result no offsets would be needed. EPA's regulations and policy (Emission Trading Policy Statement, FR 51 43838 and 40 CFR 51.165) require an actual to potential test for determining emission changes, and, consequently, offset requirements.

4. Ensuring Offsets Are Surplus When Used

Both Regulation 2, Rule 2 and Regulation 2, Rule 4 are silent regarding the requirement to ensure that ERCs are surplus at the time of use. All ERCs must be adjusted at the time of use pursuant to the requirements of Sections 173 (a), 173 (c)(1) and 173 (c)(2) of the Clean Air Act ("Act"). EPA has provided flexibility in the implementation of these requirements in the August 26, 1994 memo from John Seitz to David Howekamp entitled, "Response to Request for Guidance on Use of Pre-1990 ERCs and Adjusting for RACT at Time of Use." For example, if an ERC is created and approved this year, but the District subsequently proposes, passes and includes (implicitly or explicitly) in its plan a control measure related to the source category of the creator of the ERC, the District must, upon use of the ERC, evaluate the effect the control measure would have had on the source that created the reduction, and reduce the amount of the ERC appropriately. Section 173 (a) of the Act requires that offsetting emission reductions be federally enforceable at the time an NSR permit is issued, and in effect by the time the source commences operation (Section 173 (c)(1)). In addition, Section 173 (c)(2) requires that offsets be surplus of all other requirements of the Act. The District must adjust all emission reductions to ensure that the surplus requirement of Section 173(c)(2) is met at the time that the reductions are used to meet the offset requirements of Section 173 (a) and (c).

5. Exemption, Emissions From Abatement Equipment

Section 2–2–112 in Regulation 2, Rule 2

This section states that BACT requirements shall not apply to emissions of secondary pollutants which are the direct result of the use of an abatement device which complies with the BACT or BARCT requirements for control of another pollutant. On July 1, 1994, EPA issued guidance from John Seitz, Director of the Office of Air Quality Planning and Standards, entitled "Pollution Control Projects and New Source Review (NSR) Applicability", which states that a source must secure offsetting reductions in the case of a pollution control project which will result in a significant increase in nonattainment pollutants.

Section 2–2–112 in Regulation 2, Rule 2 must be revised to make it clear that significant emissions of secondary pollutants which result from control devices or requirements are subject to the requirement to obtain offsets.

6. Prevention of Significant Deterioration

EPA suggests that the District add lead to the PSD pollutant list in Regulation 2, Rule 2, Sections 2–2–304, 2–2–305 and 2–2–306. The rule lists CO, PM_{10}, SO_2, POC and NO_X as PSD pollutants, but excludes lead. EPA realizes that the District has a 0.6 ton/yr BACT threshold for lead, and in Regulation 2, Rule 1, Section 111.1 a 0.3 lb/day lead exemption threshold for authorities to construct or permits to operate. However, the PSD pollutant list must include all criteria pollutants, including lead.

Because the rule deficiencies described above are inappropriate for inclusion in the SIP, EPA cannot grant full approval of this rule under section 110(k)(3). Also, because the submitted rule is not composed of separable parts which meet all the applicable requirements of the CAA, EPA cannot grant partial approval of the rule under section 110(k)(3). However, EPA may grant a limited approval of the submitted rule under section 110(k)(3) in light of EPA's authority pursuant to section 301(a) to adopt regulations necessary to further air quality by strengthening the SIP. The approval is limited because EPA's action also contains a simultaneous limited disapproval. In order to strengthen the SIP, EPA is proposing a limited approval of BAAQMD's submitted Regulation 2 under sections 110(k)(3) and 301(a) of the CAA.

It should be noted that the rules covered by this proposed rulemaking have been adopted by the BAAQMD, subsequently revised, and are currently in effect in the BAAQMD. EPA's final limited disapproval action will not prevent the BAAQMD or EPA from enforcing this rule.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any state implementation plan. Each request for revision to the state implementation plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

IV. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from Executive Order (E.O.) 12866, entitled "Regulatory Planning and Review."

B. Executive Order 12875

Under E.O. 12875, EPA may not issue a regulation that is not required by statute and that creates a mandate upon a state, local, or tribal government, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by those governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget a description of the extent of EPA's prior consultation with representatives of affected state, local, and tribal governments, the nature of their concerns, copies of written communications from the governments, and a statement supporting the need to issue the regulation. In addition, E.O. 12875 requires EPA to develop an effective process permitting elected officials and other representatives of state, local, and tribal governments "to provide meaningful and timely input in the development of regulatory proposals containing significant unfunded mandates."

Today's rule does not create a mandate on state, local or tribal governments. The rule does not impose any enforceable duties on these entities. Accordingly, the requirements of section 1(a) of E.O. 12875 do not apply to this rule.

C. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997), applies to any rule that: (1) Is determined to be "economically significant" as defined under E.O. 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045 because it does not involve decisions intended to mitigate environmental health or safety risks.

D. Executive Order 13084

Under E.O. 13084, EPA may not issue a regulation that is not required by statute, that significantly affects or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments. If the mandate is unfunded, EPA must provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

Today's rule does not significantly or uniquely affect the communities of Indian tribal governments. This action does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of section 3(b) of E.O. 13084 do not apply to this rule.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. This final rule will not have a significant impact on a substantial number of small entities because SIP approvals under section 110 and subchapter I, part D of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not create any new requirements, I certify that this action will not have a significant economic impact on a substantial number of small entities. Moreover, due to the nature of the Federal-State relationship under the Clean Air Act, preparation of flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions concerning SIPs on such grounds. *Union Electric Co., v. U.S. EPA*, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

F. Unfunded Mandates

Under Section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated annual costs to State, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under Section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated annual costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[OK–15–1–7399b; FRL–6183–6]

Approval and Promulgation of State Plans for Designated Facilities and Pollutants: Oklahoma

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA is approving the Oklahoma State Plan for control of air emissions from existing municipal waste combustors. The plan provides for implementation and enforcement of the Emissions Guidelines applicable to existing Municipal Waste Combustors with capacity to combust more than 250 tons per day of municipal solid waste. In the final rules section of this **Federal Register**, EPA is approving the State Plan as a direct final rule without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action, no further activity is contemplated in relation to this rule. If EPA receives adverse comments, the direct final rule will be withdrawn, and all public comments received will be addressed in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time. Please see the direct final rule located elsewhere in today's **Federal Register** for a detailed description of the Oklahoma State Plan.

DATES: Comments must be received by December 7, 1998. If no adverse comments are received, then the direct final rule is effective on January 5, 1999.

ADDRESSES: Written comments on this action should be addressed to Mr. Thomas H. Diggs, Chief, Air Planning Section (6PD-L), at the EPA Regional Office listed below. Copies of the documents relevant to this proposed rule are available for public inspection during normal business hours at the following locations. Interested persons wanting to examine these documents should make an appointment with the appropriate office at least 24 hours before the visiting day.

Environmental Protection Agency, Region 6, Multimedia Planning and Permitting Division, 1445 Ross Avenue, Suite 700, Dallas, Texas 75202-2733, telephone (214) 665–7214.

Oklahoma Department of Environmental Quality, 707 North Robinson, Oklahoma City, OK 73101–1677, telephone (405) 702–4100.

FOR FURTHER INFORMATION CONTACT: Lt. Mick Cote, Region 6, Air Planning Section, at the above address, telephone (214) 665–7219.

SUPPLEMENTARY INFORMATION: See the information provided in the direct final action of the same title which is published in the Rules and Regulations section of this **Federal Register**.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MM Docket No. 98–190, RM–9317]

Radio Broadcasting Services; Cross City, FL

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document requests comments on a petition filed by Tony Downes proposing the allotment of Channel 249A at Cross City, Florida. Channel 249A can be allotted to Cross City with a site restriction 2 kilometers (1.3 miles) west of the community at coordinates 29–38–35 and 83–08–28.

DATES: Comments must be filed on or before December 14, 1998, and reply comments on or before December 29, 1998.

ADDRESSES: Federal Communications Commission, Washington, DC. 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner, as follows: Tony Downes, 3029 Harbor Hills Road, Dunnellon, Florida 34431.

FOR FURTHER INFORMATION CONTACT: Kathleen Scheuerle, Mass Media Bureau, (202) 418–2180.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Notice of Proposed Rule Making, MM Docket No. 98–190, adopted October 14, 1998, and released October 23, 1998. The full text of this Commission decision is available for inspection and copying during normal business hours in the Commission's Reference Center (Room 239), 1919 M Street, NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Services, Inc., 1231 20th Street, NW., Washington, DC. 20036, (202) 857–3800, facsimile (202) 857–3805.

Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

Members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel allotments. See 47 CFR 1.1204(b) for rules governing permissible *ex parte* contact.

For information regarding proper filing procedures for comments, see 47 CFR 1.415 and 1.420.

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

49 CFR Part 243

[FRA Docket No. HST–1; Notice No. 2]

RIN 2130–AB14

FOX High Speed Rail Safety Standards

AGENCY: Federal Railroad Administration (FRA), DOT.

ACTION: Notice of Public Regulatory Conference.

SUMMARY: By notice of proposed rulemaking (NPRM) published on December 12, 1997 (62 FR 65478), FRA proposed safety standards for the Florida Overland eXpress (FOX), a high speed rail system planned for development in Florida. This document announces a public regulatory conference to address specific issues, set forth below, that are related the NPRM and comments FRA has received in response to the NPRM.

DATES: FRA will host a public regulatory conference on November 23, 1998 at 10:00 a.m. Any interested party who desires to attend or participate in the conference must notify FRA's Docket Clerk in writing on or before November 17, 1998.

ADDRESSES: *Regulatory Conference:* The regulatory conference will take place in Conference Area 1, Seventh Floor, 1120 Vermont Avenue, NW, Washington, D.C.

Docket Clerk: Written notification to FRA's Docket Clerk must identify the docket number, the participant's or attendee's name, address, and phone number. Each notification must be submitted in triplicate to the Docket Clerk, Office of Chief Counsel, Federal Railroad Administration, RCC–10, 400 Seventh Street, S.W., Stop 10, Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT: Christine Beyer, Trial Attorney, Office of the Chief Counsel, RCC–11, 400 Seventh Street, S.W., Stop 10, Washington, D.C. 20950 (telephone 202–493–6027).

SUPPLEMENTARY INFORMATION: FRA published its NPRM for the proposed FOX high speed rail system on December 12, 1997. At that time, FRA provided all interested parties the opportunity to request a public hearing to discuss the NPRM. However, FRA did not receive any requests for a public hearing, and so none was held. FRA received written comments from the Florida Department of Transportation (FDOT) and FOX (filed jointly and referred to hereafter FDOT/FOX), the Brotherhood of Maintenance of Way Employes, Simula Technologies, Inc., the Association of American Railroads, GE Plastics, Atohaas Americas, Inc., and the American Public Transit Association.

FRA is in the process of analyzing all comments received to determine how the agency should proceed with final standards in this matter. As part of that analysis, FRA has determined that additional information is necessary in order for the agency to respond fully and accurately to all commenters. In particular, FRA believes it is necessary to explore the basis on which FDOT/FOX claim that the standards proposed in the NPRM are unduly costly. FRA's mission is to provide a very high level of safety without imposing needless financial burden, and so this claim is one the agency intends to investigate thoroughly. FRA requested detailed information from FOX in this regard, by letter dated October 23, 1998, and FOX responded to the requests in two letters, dated November 2 and 3, 1998. (Copies of these letters are in the docket of this matter.) FRA plans to discuss these areas further at the regulatory conference.

The conference will be conducted on the record, with a stenographer present, in question and answer format. While the format will be conversational to some degree, it is important to note that the conference will not be an opportunity for participants to question FRA staff on the reasoning behind all standards proposed in the NPRM, or to issue broad opinions about the NPRM. FRA provided rationale for the proposed standards in the preamble and section-by-section analysis of the NPRM, and that document speaks for itself. In addition, a public hearing is the appropriate forum for presenting broad opinions about the proposed rule, and interested parties chose not to avail themselves of the opportunity for a public hearing. It is also important to note that FRA has reviewed all comments received, and so there is no need for participants to restate what they have already submitted in written comments. FRA is hosting the regulatory conference in order to focus narrowly on particular aspects of the NPRM and comments received. The FOX representatives should be prepared to discuss the following topics:

- All assumptions made in the calculation of each cost estimate listed in the chart on page 9 of Section 3.0 of the FDOT/FOX comments, and the error factor built into these assumptions and costs; and
- All assumptions made in the project revenue model and the error factor incorporated in the model.

In addition, FRA may have additional questions about specific aspects of the FDOT/FOX comments.

Public Participation Procedures

Any person wishing to participate or attend the public regulatory conference should notify the Docket Clerk by mail at the address provided in the **ADDRESSES** section on or before November 17, 1998. The notification should identify the participant's and attendee's name, and the party the participant represents (if any). The notification must provide the Docket Clerk with the participant's and attendee's mailing address and phone number. FRA reserves the right to limit the participation of individuals who fail to provide such notification.

Issued in Washington, D.C., on November 3, 1998.

S. Mark Lindsey,

Chief Counsel.

DEPARTMENT OF AGRICULTURE

Risk Management Agency

RIN 0563–AB61

Dairy Options Pilot Program

AGENCY: Risk Management Agency, USDA.

ACTION: Notice of Availability.

SUMMARY: This notice announces the availability of a new Dairy Options Pilot Program (DOPP) to be administered by the Risk Management Agency (RMA) in conjunction with the private sector. The objective of DOPP is to provide education, training and assistance to producers to ascertain whether put options can provide producers with reasonable protection from the price risk.

EFFECTIVE DATE: December 14, 1998.

FOR FURTHER INFORMATION CONTACT: For further information and a copy of the cost-benefit analysis to the DOPP, contact Joe Connor, Financial Analyst, Reinsurance Services Division, Risk Management Agency, United States Department of Agriculture, 1400 Independence Avenue, S.W., Stop 0804, Room 6739–S, Washingon, DC., 20250–0804.

SUPPLEMENTARY INFORMATION:

Executive Order 12866

The Office of Management and Budget (OMB) has determined this rule to be significant for the purposes of Executive Order 12866 and, therefore, has been reviewed by OMB.

Cost-Benefit Analysis

The program is designed to increase the level of understanding of options contracts as risk management tools among dairy producers and to explore their specific applicability to the dairy industry. The costs to the Government of options premium under the program are estimated to be about $10 million annually. If successful, the program will help create liquid markets in basic formula price (BFP) futures and options contracts which would be sustained, in part, by the on-going hedging of output price risk by dairy producers who have benefited from the educational aspect of the program. Under that scenario, the benefits of the program would include furnishing producers with a viable price risk management alternative, exerting a stabilizing influence on the dairy industry, and contributing to the Department's goals of supporting market oriented reforms in the agricultural sector.

Paperwork Reduction Act of 1995

Pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the collections of information for this notice have been approved by the Office of Management and Budget (OMB) under control number 0563–0054 through February 28, 2001.

Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Pub. L. 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. This notice contains no Federal mandates (under the regulatory provisions of title II of UMRA) for State, local, and tribal governments or the private sector. Therefore, this notice is not subject to the requirements of sections 202 and 205 of UMRA.

Executive Order 12612

It has been determined under section 6(a) of Executive Order 12612, Federalism, that this notice does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. The provisions contained in this notice will not have a substantial direct effect on States or their political subdivisions, or on the distribution of power and responsibilities among the various levels of government.

Regulatory Flexibility Act

This notice will not have a significant impact on a substantial number of small entities. The provisions included in this notice will not impact small entities to a greater extent than large entities. The amount of work required of brokers will only increase slightly because the information to determine the eligibility of producers and trading activities is already collected by brokers specializing in hedge positions and the only additional burden is the electronic transmittal of this information. Therefore, this action is determined to be exempt from the provisions of the Regulatory Flexibility Act (5 U.S.C. 605) and no Regulatory Flexibility Analysis was prepared.

Federal Assistance Program

This program is listed in the Catalog of Federal Domestic Assistance under No.10.450.

Executive Order 12372

This program is not subject to the provisions of Executive Order 12372 which require intergovernmental consultation with State and local officials. See the Notice related to 7 CFR part 3015, subpart V, published at 48 FR 29115, June 24, 1983.

Executive Order 12988

This notice has been reviewed in accordance with Executive Order 12988 on civil justice reform. The provisions of this notice will not have a retroactive effect. The provisions of this notice will preempt State and local laws to the extent such State and local laws are inconsistent herewith. The administrative appeal provisions published at 7 CFR part 11 must be exhausted before any action for judicial review of any determination made by RMA may be brought.

Environmental Evaluation

This action is not expected to have any significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

Background

Section 191 of the Federal Agriculture Improvement and Reform Act of 1996 authorizes the Secretary of Agriculture (Secretary) to conduct a pilot program for one or more agricultural commodities to determine the feasibility of the use of futures and options as risk management tools to protect producers from fluctuations in price, yield and income. Accordingly, the Secretary directed RMA to develop DOPP

The purpose of this notice is to announce the implementation of DOPP. DOPP will not be published as a proposed or final rule unless the program is authorized to be and is offered on a wider basis. DOPP will be in effect when applications and contracts are made available by RMA and producers in selected counties are provided actual notice through the mail of the program's availability.

DOPP is intended to offer an educational experience to dairy producers whose need for risk management tools has risen sharply as a result of unprecedented price volatility, the elimination of price supports, and the current unavailability of production insurance. DOPP will be offered on a pilot basis to determine the usefulness of commodity futures and options markets to manage risk in the dairy industry.

The program represents a joint initiative between RMA and the private sector. DOPP procedures were first proposed to RMA by the Coffee, Sugar & Cocoa Exchange (CSCE). During the development of this program, the Chicago Mercantile Exchange (CME) provided additional recommendations. If successful, the educational benefits of DOPP will prepare producers to manage their price risk independently through the milk futures and options markets.

The program will be available in the following States and counties: Stanislaus, Merced, Tulare, San Bernadino, San Joaquin, and Kings counties, California; Stearns, Otter Tail, Todd, Morrison, Winona, and Goodhue counties, Minnesota; St. Lawrence, Oneida, Steuben, Chautaugua, Jefferson, and Lewis counties, New York; Lancaster, Bradford, Franklin, Crawford, Berks, and Chester counties, Pennsylvania; Hopkins, Wood, Van Zandt, Erath, Johnson, and Comanche counties, Texas; Marathon, Clark, Grant, Vernon, and Chippewa counties, Wisconsin; and Franklin, Addison, Orleans, Orange, Rutland, and Caledonia counties, Vermont. At the discretion of the Secretary, States and counties are subject to change throughout the duration of this pilot program.

The participation limit per county is set at 100 producers, subject to adjustments as described below. Counties with a higher number of participants signing-up will have participants selected through a lottery. Applicants who miss the opportunity to participate in the first round of the program will obtain preference in the next round offered in their county. When a county has fewer than the maximum number of participants, the excess program vacancies will be pooled and distributed among counties where more than the maximum number has signed up. Producers wishing to participate in the program must fill out and sign an application (Form CCC–320) and a release of information from their broker to RMA (CCC–321).

The program will last a maximum of 8 months for each participating producer commencing at the date of training through the close-out of DOPP options positions. After registration and training, producers will have up to 2 months to purchase DOPP options and all DOPP options must expire within 6 months from the date of purchase. Producers are required to buy "put options" at least two months in the future in order to allow time for the educational benefits of the program to be realized. For the same reason, producers will be required to hold their options until the four week period immediately prior to the expiration date.

In order to introduce the new trading volume onto the markets slowly, each round of participants will commence trading at different times by state.

The two exchanges where the BFP futures and put options are currently available are CSCE and CME. The contracts on the two exchanges differ with regard to quantity. Under the program, a participating producer will be permitted to purchase contracts to hedge between 100,000 and 600,000 pounds of milk over a six-month period. Producers will be required to submit documentation supporting their farm's production of at least 100,000 pounds of milk over a six-month period.

Discussion of Comments and Changes to the Program

On Friday, January 2, 1998, RMA published an Advance Notice of Availability and Request for Comments in the **Federal Register** at 63 FR 51 to seek input from the public on a new DOPP to be administered by the RMA in conjunction with the private sector. The public was afforded 30 days to submit written comments and opinions.

Approximately one-hundred comments were received from dairy producers, cooperatives, industry associations, milk processors, members of Congress, commodities exchanges, academics, state representatives, and the general public. Over 95 percent of the comments were in favor of the concept of the program, though many suggested ways to improve the program's design features.

Comments received generally revolve around 4 major issues: (1) what states and counties would be first implemented; (2) what exchange or exchanges would be used to trade DOPP options; (3) whether cooperatives should be able to participate as eligible producers; and (4) various modifications to the constraints on trading behavior placed on DOPP participants. The comments received and RMA's responses are as follows:.

Comments: Seventy comments were solicitations by producers, agricultural extension agents, brokers, futures exchanges, association of dairy cooperatives, state and Federal government representatives, and legislators to implement DOPP in their states and counties or congressional districts. One cooperative suggested that the county selection criteria should be: (1) the majority of farms (but not all) should be family operations; (2) states should be representative of the industry as a whole; (3) states should not be selected if they are dominated by just one or two cooperatives; and (4) favor should be given to states with strong pre-existing support structures such as active university extension, marketing clubs, etc. An extension agent suggested selecting states and counties from the several regions of milk production, and makes a point of selecting one state from the west and from the southeast.

Response: Selection of the counties where the DOPP is to be implemented first was based on the concentration of production and the geographical proximity of selected counties to one another. The former criterion is relatively objective and was based on 1992 agricultural census data. The latter criterion is more subjective but is necessary to enable RMA to increase operational efficiency with regard to training and compliance. The selected counties contain a diverse mixture of family farms and corporate farms of all sizes, as well as regions where many cooperatives are active, not just one or two dominant cooperatives. Extension support and marketing clubs are also found in many of these areas.

Comments: Fifty-one comments from cooperatives, futures exchanges, legislators, association of dairy cooperatives, brokers and industry associations suggested the use of a single exchange or a single contract in the program. They can be summarized as follows:

(A) DOPP options should be traded solely on the Coffee Sugar & Cocoa Exchange (CSC) because: (1) Trading on two exchanges diffuses liquidity the program could be expected to build; (2) it makes the program less confusing to the new trader; (3) it makes data collection and analysis easier; (4) it recognizes CSC's longer commitment to

the project and innovative contribution to the program's design; and (5) CSC has an excellent track record on aggressive efforts to present educational seminars.

(B) DOPP options should be traded using any single contract and exchange but not more than one of either to make the program less complicated.

(C) DOPP options should be traded on any eligible exchange as established by the language of the statute and the Advance Notice of Availability and let the market decide where DOPP options should be traded and inform the producers of the different contracts available on the market.

Response: Dairy producers should be able to choose the options product that best fits their needs both in terms of contract size and in the exchange used. The market alone should dictate where options are traded and it would be inappropriate for RMA to intervene in that process. Further, the complexity of these markets is not something the producer should be sheltered from under the program. Rather, the program is intended to be an educational opportunity for the producer to become familiar with this complexity.

Comments: Two cooperatives and one association suggested DOPP should allow cooperatives to be DOPP participants, thus making the program less time consuming to the producer and bringing their key partner, the cooperative, up to speed on futures and options as well as indirectly encouraging cooperatives to expand their forward contracting programs.

Response: Based on the language in section 191 of the Federal Agriculture Improvement and Reform Act of 1996 (1996 Act), there is no authority to allow other than those producers who are eligible for a production flexibility contract, a marketing assistance loan, or other assistance under title I of the 1996 Act. Cooperatives are not eligible for any of the programs listed. Therefore, no change has been made.

Comment: One exchange suggested that RMA should clarify restrictions on the timing of purchases.

Response: RMA has clarified the provisions regarding the date by which all purchases must be complete. RMA has also added a provision to clarify for what months the options can be purchased.

Comment: One broker and one crop insurance company suggested that RMA should remove the 600,000 pound maximum production that can be hedged under the program.

Response: This program is experimental and intended to determine the feasibility of such a risk management tool. The 600,000 pound maximum is intended to allow sufficient use of the market while protecting taxpayers from larger outlays than necessary to achieve the educational objective of the program. Therefore, no change has been made.

Comment: One association and one broker commented that RMA should change the maximum strike price of 25 cents out-of-the-money to the first strike price that is "at" or "in" the money.

Response: This change would also be too expensive to implement and, potentially, less relevant educationally because producers wishing to hedge production might be less inclined to choose an expensive "in" the money option. However, the 25 cent requirement has been reduced to 10 cents.

Comment: One legislator and one producer suggested that DOPP should be implemented in the statutorily allowed 100 counties.

Response: As RMA's first options pilot program, it has been determined that a smaller scale of operation will allow greater opportunity to observe and make adjustments to the program before expanding it. Further, implementing the program at its full capacity would increase the likelihood that a proposed and final rule be published prior to implementation, instead of a Notice of Availability. This would eliminate RMA's ability to modify the program expeditiously in its early stages. Therefore, no change has been made.

Comment: One broker suggested that the separate billing scheme would detract from the realism of the producer's experience.

Response: In any subsidized program, the producer will not receive a perfectly realistic free-market experience. By using a billing scheme that bills RMA for the subsidized portion of the transaction, RMA has enhanced the speed and efficiency of the payment system. A 72 hour turn around time is required by brokers under their industry regulations. Other alternatives such as asking producers to put up the money and be reimbursed later, or advancing funds to the producer to conduct DOPP trades were considered. However, the former alternative was rejected on the grounds that it would negatively impact participation due to the limited working capital of many small dairy producers. The latter was deemed to subject the program to increased risk of misuse of funds while significantly complicating the compliance audit process. Further, timeliness of trading and compliance information will play a critical role as RMA evaluates the program for program expansion and relocation. Therefore, no change has been made.

Comment: One cooperative suggested that 6 months is too short a period for the program to last for each participant and stated that 12 months is better.

Response: The program can actually last as long as 8 months from the date of the producer's attendance at the required training class. RMA determined that an 8 month time period encompasses enough of the dairy marketing cycle to enable the producer to implement and complete a useful price risk hedge and allow the producer to decide whether to continue utilizing this risk management strategy. Therefore, no change has been made.

Comment: One state government employee commented that RMA should clarify that producers cannot buy options on more milk than they produce over six months.

Response: RMA has added a provision that specifies that producers cannot purchase put options for more production than the producer has documents to prove was produced during the 6 month period.

Comment: Two brokers suggested that RMA should clarify the flow of funds.

Response: RMA has clarified that RMA and the producer will make their respective required payments directly to the broker.

Comment: One broker suggested that funds should be committed to subsidize additional floor brokers (market makers) to ensure continued viability of the program.

Response: New floor brokers should naturally gravitate toward the BFP contracts in response to the new volume the program will provide. Therefore, no change has been made.

Comment: One association of dairy cooperatives suggested that DOPP should be funded for three years to allow a diverse group of producers to participate.

Response: RMA has received funding approval to operate the program for three years.

Comment: One association suggested that the requirement that producers cannot exercise or sell an option until the four weeks prior to expiration should be eliminated or modified.

Response: Previous options pilot programs administered by USDA were criticized for failing to educate producers by permitting them to sell their options the same day they obtained them. In order to maximize the educational experience in hedging strategies, the producer should hold a position until the month they are actually hedging. To allow the sale of the option before that time may re-expose the producer to price risk for the rest of time before the expiration date.

RMA will take this into consideration as it conducts its ongoing evaluation of the program and make such changes as are necessary. Therefore, no change has been made.

Comment: One association suggested that RMA should clarify the reporting requirement for participation.

Response: The only reporting requirements for eligibility is that producers must report their milk production history for 6 months to establish that they meet the 100,000 pounds of production during a consecutive 6 month period within the previous 12 month period and maintaining the record of each transaction to ensure that the maximum amount of production for which options may be purchased under the program is not exceeded. These requirements are clearly stated. Therefore, no change has been made.

Comment: One producer perceived the program as Federally sponsored gambling and suggested the program be abolished prior to implementation.

Response: Futures and options contracts are widely recognized risk management tools. The intent of DOPP is simply to educate producers on the use of these tools. While there is some risk involved, the value of these risk management tools, which after DOPP expires is at no cost to the taxpayers, outweighs the risks. Therefore, no change has been made.

In addition to the changes described above, and minor reformatting and word changes for clarity, RMA has made the following changes to DOPP:

1. In section 1 of the producer contract, RMA added definitions of "hedge," "round turn," "Secretary," "strike month," and "USDA" for clarification.

2. In section 2(a)(4) of the producer contract, RMA reduced the minimum production in a consecutive 6 month period to be eligible for the program from 200,000 pounds to 100,000. This change will ensure that smaller producers are not excluded from the program.

3. In section 2 of the producer contract, RMA added a provision that requires the producer to execute the DOPP contract and comply with all its terms and conditions in order to permit enforcement of program requirements.

4. In section 3(a)(2) of the producer contract and broker agreement, RMA reduced the amount of milk upon which producers must purchase put options from 200,000 pounds to 100,000 to allow smaller producers to participate. RMA also added a provision that specifically states that options on no more than 600,000 pounds of milk production can be purchased by any producer. This requirement is intended to limit the potential costs of the program until such a time that its viability can be assessed.

5. In section 3 of the producer contract and broker agreement, RMA clarified when put options may be sold or exercised and has included an example.

6. In section 3(b) of the producer contract, RMA added a provision requiring the producer to submit the application to RMA within 30 days after receiving notification and application materials from RMA through the mail so that RMA can timely select producers to participate in the program and reallocate any unfilled slots.

7. In section 5(a) of the producer contract, RMA reduced the number of producers allowed to participate in each county from 150 to 100. This change was based on information indicating that it is unlikely that any county will have more than 100 producers interested in participating. A reduction in the number of participants per county will also allow RMA to increase the number of states participating from 6 to 7, which will allow for a greater geographic representation of milk producers in the program without increasing budget outlays.

8. In section 5(d) of the producer contract and broker agreement, RMA deleted the requirement that no put option could be purchased at a premium that was more than 160 percent of the previous day's settlement premium because such limits could routinely be exceeded under normal trading situations.

9. In section 6(d) of the producer contract, RMA added a new provision that authorized the Chicago Mercantile Exchange and Coffee, Sugar, and Cocoa Exchange to replace BFP options contracts with options contracts based on a milk price index other than the BFP in order to provide greater flexibility into the program. This change is necessary because USDA may stop publishing the BFP at some point in the future.

10. In section 1 of the broker agreement, RMA added definitions of "hedge," "Secretary," "strike month," and "USDA" for clarification.

11. In section 2 of the broker agreement, RMA added provisions that require the broker to attend at least one DOPP training session and have specified hardware and software to electronically receive and transmit data to RMA to be eligible to participate.

12. In section 3 of the broker agreement, RMA added provisions specifying that brokers cannot allow producers to purchase a DOPP option that expires during a month that is more than 6 months after the month of purchase for that option in order to protect the integrity of the program.

13. In section 3 of the broker agreement, RMA also added a provision specifying the applicable sanctions if the broker fails to comply with the terms and conditions of the broker agreement.

14. In section 3 of the broker agreement, RMA deleted the provision mandating that brokers cannot accept an application unless the producer's marketing receipts show the requisite production since RMA will be accepting the applications.

RMA will enter into contracts with producers and brokers who elect to participate in DOPP.

Notice: The terms and provisions for the DOPP Producer Contract are as follows:

United States Department of Agriculture

Risk Management Agency

Dairy Options Pilot Program Contract

Participation in the Dairy Options Pilot Program is voluntary. Neither the United States, the Commodity Credit Corporation, the Risk Management Agency, the Department of Agriculture, nor any other Federal agency is authorized to guarantee that participants in this pilot program will be better or worse off financially as a result of participation in the pilot program than the producer would have been if the producer had not participated in the pilot program.

1. Definitions.

Application. Form CCC–320 that is required to be completed and signed by the producer before the producer is eligible to participate in this program.

Basic formula price (BFP). The price established by USDA, and provided to the USDA marketing order administrators to be used to set regional minimum prices.

Broker. A broker or brokerage firm registered under the Commodities Exchange Act that has entered into an agreement with RMA to participate in the program.

CME. Chicago Mercantile Exchange.

CSCE. Coffee, Sugar, and Cocoa Exchange.

DOPP. Dairy Options Pilot Program.

Eligible markets. Commodity futures and options markets designated as contract markets under the Commodity Exchange Act (7 U.S.C. 1 *et seq.*).

Exercise. The action taken by the holders of a put option on a futures contract if they wish to sell the underlying futures contract.

Expiration date. The last date on which the put option may be exercised.

Futures contract. A contract to buy or sell a commodity on an eligible market at some point in the future.

Hedge. To take compensatory measures to counter a possible loss.

Open outcry. Method of public auction required to make bids and offers in the trading pits, or rings, of commodity exchanges.

Out-of-the-money. Put option whose strike price is less than the underlying futures contract price.

Premium. The price of a put option determined by open outcry. The premium does not include related brokerage commission fees.

Producer. An individual, entity, or joint operation, which as owner, operator, landlord, tenant, or sharecropper, is entitled to share in the production available for marketing from the farm, or share in the proceeds thereof.

Program. The Dairy Options Pilot Program.

Put option. A contract traded on eligible markets that gives the buyer the right to sell the underlying futures contract at the strike price on or before the expiration date.

RMA. Risk Management Agency, an agency of the United States Department of Agriculture.

Round turn. The broker's service in transacting a single put option consisting of consultation services and the purchase and liquidation (sale or exercise) of a put option, including the subsequent sale of the underlying futures position if the put option is exercised.

Sale. Transfer of title through the selling of the value of the put option.

Secretary. The Secretary of Agriculture.

Settlement price. The price of a specific put option as published by the exchange on which that contract trades at the end of each day's trading.

Strike month. The month preceding the month in which a DOPP options contract expires, *e.g.*, the strike month for a DOPP option contract that expires in March would be February.

Strike price. The price at which the holder of a put option may sell the underlying futures contract.

USDA. The United States Department of Agriculture.

2. Eligibility.

(a) To be eligible for any benefits under this contract, a producer must:

(1) Be eligible for a production flexibility contract, a marketing assistance loan or any other assistance under title I of the Federal Agriculture Improvement and Reform Act of 1996;

(2) Volunteer to participate in this program;

(3) Operate a farm located in a county selected for the pilot program; and

(4) Have documented production history of at least 100,000 pounds of production over any consecutive six month period during the most recent 12 months.

(b) This program is available to producers in states and counties designated.

(c) Execute this contract and comply with its terms and conditions.

3. Responsibilities.

(a) Producers who elect to participate in the program agree:

(1) To attend not less than one training session conducted by RMA to educate the producer on the use of put options and the program's operations;

(2) To buy all put options on a minimum of 100,000, and a maximum of 600,000, pounds of milk on an eligible market, through an eligible broker, within 2 months after the date the producer attends the required training session;

(3) That put options on no more than 200,000 pounds of milk will be purchased for any one strike month under this program;

(4) That put options on no more than the producer's total average production over the 6-month period used to establish the producer's eligibility shall be purchased under this program (For example, if a producer has provided copies of marketing receipts for 245,000 pounds of milk production eligible for the program, only 200,000 pounds can be hedged under the program because there are no 45,000 pound contracts or less currently available on the market);

(5) That the producer shall not purchase a DOPP option that expires on a date that is less than 2 months after the date the DOPP option was purchased (For example, assume the producer wants to hedge August 1998 production with BFP put options. The last date on which he or she shall be able to purchase an August option is Friday, July 3, because the August options expire exactly two months later, September 3. On July 4, the earliest option the producer could purchase is the September contract);

(6) That the put options will be purchased at a strike price that is at least 10 cents out of the money;

(7) That no put options will be sold or exercised before four weeks prior to the expiration date (For example, the BFP is announced by the USDA on the fifth of the month following the strike month, which is not on a weekend or Federal holiday. The September BFP will be announced by USDA on Monday, October 5, 1998. The September BFP option expires on the last day of trading of the September BFP futures contract, which is the day before the date of the BFP's announcement, or in this case, October 2, 1998 (October 4 is a Sunday). For purposes of DOPP, the four week period leading up to October 2, 1998, will begin on September 4, 1998. Therefore, a DOPP participant holding a September BFP put option would be free to sell or exercise that option at his or her discretion between September 4, 1998, and the expiration date. If the producer exercises the put option and holds the futures contract, the producer assumes the risk of any loss); and

(8) That all options purchased shall expire during the month that is not more than 6 months after the month of purchase. For example, assume a producer is trained on June 4, 1998, and makes all purchases in the months of June and July. The latest option contract the producer is permitted to buy is the December 1998 contract, which expires in January, 1999.

(b) The producer must open an account with an eligible broker in order to participate in the program and must do so before making any purchases.

(c) The producer must submit a properly completed and executed application and a copy of the marketing receipts for 6 consecutive months in the previous 12 months showing production in excess of 100,000 pounds to RMA within 14 days after receiving notification and application materials from RMA through the mail.

4. Costs.

(a) The producer will pay 20 percent of the premium of each put option to the broker.

(b) RMA shall pay transactions costs not to exceed $30 per round turn and 80 percent of the premium to the broker on behalf of the producer. The producer is free to deal with brokers who charge more than $30 per round turn, but the producer will be responsible for any amount that exceeds $30.

5. Restrictions and limitations.

(a) Except as stated herein, total program participation will be limited to 100 producers per county. If more participants are enrolled than the county limit, a lottery will be held by RMA to determine participants within a county. If fewer than 100 participants are enrolled in a county, the number of unfilled participation slots will be pooled and redistributed over counties where enrollment exceeds 100.

(b) The producer will be able to order put options from a broker after the broker has obtained verification from RMA of the producer's selection as a program participant and the date the producer received training. Verification will take place electronically after the producer selects an eligible broker.

(c) No producer may participate in the program more than once.

(d) If a producer who has participated in the program is not in compliance with the provisions of this contract, the producer will be required to repay any premiums and broker fees paid by RMA on behalf of the producer.

(e) This agreement is not effective until the producer executes and returns forms CCC–320, with supporting documentation of milk marketing, and CCC–321, and the producer receives written notice from RMA that the producer has been accepted into the program.

6. Other.

(a) The National Futures Association, on behalf of the Commodity Futures Trading Commission, maintains a current listing of brokers and brokerage firms who are licensed to conduct futures-related business. However, only those brokers who have entered into an agreement with RMA will be eligible to trade put options under this program.

(b) To assist in the evaluation of the program, producers participating in the program may be asked to complete entry and exit surveys by RMA. While completion of these surveys is voluntary, producers are encouraged to do so in order that an accurate assessment may be made of this program's overall effectiveness.

(c) There may be tax consequences with respect to participation in this program. Producers interested in participating in the program who have questions regarding the tax issues associated with this program should seek the advice of a tax advisor.

(d) The CME or the CSCE could replace BFP options contracts with options contracts on another milk price index. The program will permit the trading of options contracts on another milk price index selected by the CME or the CSCE.

Notice: The terms and conditions for the DOPP broker agreement are as follows:

United States Department of Agriculture

Risk Management Agency

Broker Agreement for the Dairy Options Pilot Program

1. Definitions.

Application. Form CCC–320 that is required to be completed and signed by the producer before the producer is eligible to participate in this program.

Basic formula price. The price established by USDA, and provided to USDA's marketing order administrators to be used to set regional minimum prices.

Broker. A broker or brokerage firm registered under the Commodities Exchange Act that has entered into an agreement with RMA to participate in the program.

CME. Chicago Mercantile Exchange.

CSCE. Coffee, Sugar, and Cocoa Exchange.

DOPP. Dairy Options Pilot Program.

Eligible markets. Commodity futures and options markets designated as contract markets under the Commodity Exchange Act (7 U.S.C. 1 *et seq.*).

Exercise. The action taken by the holders of a put option on a futures contract if they wish to sell the underlying futures contract.

Expiration date. The last date on which the put option may be exercised.

Futures contract. A contract to buy or sell a commodity on an eligible market at some point in the future.

Hedge. To take compensatory measures to counter a possible loss.

Open outcry. Method of public auction required to make bids and offers in the trading pits, or rings, of commodity exchanges.

Out-of-the-money. Put option whose strike price is less than the underlying futures contract price.

Premium. The price of a put option determined by open outcry. The premium does not include related brokerage commission fees.

Producer. An individual, entity, or joint operation, which as owner, landlord, tenant, or sharecropper, is entitled to share in the production available for marketing from the dairy farm, or share in the proceeds thereof.

Program. The Dairy Options Pilot Program.

Put option. A contract traded on eligible markets that gives the buyer the right to sell the underlying futures contract at the strike price on or before the expiration date.

RMA. Risk Management Agency, an agency of the United States Department of Agriculture.

Round turn. The broker's service in transacting a single put option consisting of consultation services and the purchase and liquidation (sale or exercise) of a put option, including the subsequent sale of the underlying futures position if the put option is exercised.

Sale. Transfer of title through the selling of the value of the put option.

Secretary. The Secretary of Agriculture.

Settlement price. The price of a specific put option as published by the exchange on which that contract trades at the end of each day's trading.

Strike month. The month preceding the month in which a DOPP options contract expires, *e.g.*, the strike month for a DOPP options contract that expires in March would be February.

Strike Price. The price at which the holders of a put option may choose to sell the underlying futures contract.

USDA. The United States Department of Agriculture.

2. Eligibility.

(a) To be eligible to trade options under this agreement a broker must:

(1) Be properly licensed and in good standing with the National Futures Association;

(2) Volunteer to participate in this program;

(3) Attend at least one DOPP training session;

(4) Have the following hardware and software and service in order to operate the DOPP communications software: Internet Service Provider; Internet E-mail address; a Windows 95 PC; Internet Browser, either Microsoft Internet Explorer or Netscape; minimum 28.8 modem; minimum 8 meg RAM, (16 meg recommended); and

(5) Execute this agreement and comply with all its terms and conditions.

3. Responsibilities.

(a) Brokers who elect to participate in the program agree to enforce the following program requirements with respect to any producer participating in the program who might use the broker's services:

(1) To buy all put options on a minimum of 100,000 and a maximum of 600,000, pounds of milk on an eligible market within 2 months after the date the producer attends the required training session;

(2) That put options on no more than 200,000 pounds of milk will be purchased for any one strike month under this program;

(3) That put options on no more than the producer's total production over the 6-month period used to establish the producer's eligibility of production shall be purchased under this program;

(4) That the producer shall not purchase a DOPP option that expires on a date that is less 2 months after the date the DOPP options contract was purchased (For example, assume the producer wants to hedge August 1998 production. The last date on which he or she shall be able to purchase an August option is Friday, July 3, because the August options expire exactly two months later, September 3. After July 3, the earliest option the producer could purchase is the September contract);

(5) That the put options will be purchased at a strike price that is at least 10 cents out of the money;

(6) That no put options will be sold or exercised before four weeks prior to the expiration date (For example, the BFP is announced by the USDA on the fifth of the month following the strike month, which is not on a weekend or Federal holiday. The September BFP will be announced by USDA on Monday, October 5, 1998. The September BFP option expires on the last day of trading of the September BFP futures contract which is the day before the date of the BFP's announcement, or in this case, October 2, 1998 (October 4 is a Sunday). For purposes of DOPP, the four week period leading up to October 2, 1998, will begin on September 4, 1998. Therefore, a DOPP participant holding a September BFP put option would be free to sell or exercise that option at his or her discretion between September 4, 1998, and the expiration date. If the producer exercises the put option and holds the futures contract, the producer assumes the risk of any loss); and

(7) That all options purchased shall expire during the month that is not more than 6 months after the month of purchase (For example, assume a producer is trained on June 4, 1998, and makes all purchases in the months of June and July. The latest option contract the producer is permitted to buy is the December 1998 contract, which expires in January, 1999).

(b) The broker must keep detailed records on each transaction and transmit that information to RMA through electronic data transmission. The broker will be provided with communications software for this purpose by RMA. Records required include:

(1) The purchase date, time, and premium for each put option;

(2) The expiration date and strike month for each put option; and

(3) Whether the options are sold or exercised and, if sold or exercised, the date, and price of the futures contract on the date of sale or exercise and the time of the transaction.

(c) Brokers certify that systems used to transmit data will be year 2000 compliant, i.e., be able to accurately process date and time data (including, but not limited to, calculating, comparing, and sequencing) from, into, and between the years 1999 and 2000 and leap year calculations, and to properly exchange date and time data with other information technology. Data transmission requirements and year 2000 compliance guidelines are available upon request.

(d) The broker cannot permit a producer to purchase a DOPP option until RMA has electronically notified the broker that the producer has been accepted into the program, the amount of milk for which the producer has provided production records, and the date on which the producer fulfilled the training requirements.

(e) If a broker participating in the program through this agreement is not in compliance with the provisions of this agreement, the broker will be required to repay any broker fees and premiums paid by RMA on options contracts traded by the broker under the program.

4. Costs.

(a) Up to $30 per round turn in broker fees will be paid by RMA. Any transactions costs agreed upon between the broker and a producer in excess of $30 will be the sole responsibility of the producer and not of RMA.

(b) The broker will charge the producer's account for 20 percent of the premium per put option. The 20 percent of the transaction for which the producer is responsible is the sole responsibility of the producer and not of RMA.

(c) The broker will bill transaction costs not to exceed $30 and the balance of the premium, 80 percent, to RMA. RMA will pay these amounts via the automated clearing

house (ACH) payments process within three banking days after RMA's acceptance of the transaction. Transactions will be considered accepted after RMA systems verify that the broker and participant have been selected for participation in the program, and that the transaction does not violate the trading limitations of the program itemized in Section 3 above.

5. Program changes.

(a) The broker acknowledges that, due to the pilot nature of this program, on-going modifications may be necessary. The broker agrees to abide by reasonable changes in the program by RMA.

(b) The CME or the CSCE could replace BFP options contracts with options contracts on another milk price index. The program will permit the trading of options contracts on a new milk price index selected by the futures exchanges at that time.

Signed in Washington, D.C., on November 2, 1998.

Kenneth D. Ackerman,

Administrator, Risk Management Agency.

BILLING CODE 3410–08–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from Procurement List.

SUMMARY: The Committee has received proposals to add to the Procurement List services to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and to delete commodities previously furnished by such agencies.

COMMENTS MUST BE RECEIVED ON OR BEFORE: December 7, 1998.

ADDRESS: Committee for Purchase From People Who Are Blind or Severely Disabled, Crystal Gateway 3, Suite 310, 1215 Jefferson Davis Highway, Arlington, Virginia 22202–4302.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 603–7740.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 47(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the possible impact of the proposed actions.

Additions

If the Committee approves the proposed addition, all entities of the Federal Government (except as otherwise indicated) will be required to procure the services listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the services to the Government.

2. The action will result in authorizing small entities to furnish the services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the services proposed for addition to the Procurement List. Comments on this certification are invited. Commenters should identify the statement(s) underlying the certification on which they are providing additional information.

The following services have been proposed for addition to Procurement List for production by the nonprofit agencies listed:

Janitorial/Custodial, Federal Bureau of Prisons HOLC Federal Building, 320 First Street, NW, Washington, DC, NPA: The Chimes, Inc., Baltimore, Maryland.

Janitorial/Grounds Maintenance, U.S. Courthouse and Federal Building, Carleton Avenue & North Spur Drive, Central Islip, Long Island, New York, NPA: The Corporate Source, Inc., New York, New York.

Microfilming, Department of Treasury, Financial Management Services, Hyattsville, Maryland, NPA: Didlake, Inc., Manassas, Virginia.

Deletions

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action will result in authorizing small entities to furnish the services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the services proposed for deletion from the Procurement List.

The following commodities have been proposed for deletion from the Procurement List:

Block, Currency Packing

BEP Stock #L–1391

Cover, Mattress

7210–00–171–1091
7210–00–998–7745

Beverly L. Milkman,

Executive Director.

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions and deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Additions to and deletions from the Procurement List.

SUMMARY: This action adds to the Procurement List commodities and a service to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes from the Procurement List commodities previously furnished by such agencies.

EFFECTIVE DATE: December 7, 1998.

ADDRESS: Committee for Purchase From People Who Are Blind or Severely Disabled, Crystal Gateway 3, Suite 310, 1215 Jefferson Davis Highway, Arlington, Virginia 22202–4302.

FOR FURTHER INFORMATION CONTACT: Beverly Milkman (703) 603–7740.

SUPPLEMENTARY INFORMATION: On August 14 and September 25, 1998, the Committee for Purchase From People Who Are Blind or Severely Disabled published notices (63 F.R. 43660, 51336 and 51337) of proposed additions to and deletions from the Procurement List:

Additions

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the commodities and service and impact of the additions on the current or most recent contractors, the Committee has determined that the commodities and service listed below are suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.4.

I certify that the following action will not have a significant impact on a substantial number of small entities.

The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the commodities and service to the Government.

2. The action will not have a severe economic impact on current contractors for the commodities and service.

3. The action will result in authorizing small entities to furnish the commodities and service to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the commodities and service proposed for addition to the Procurement List.

Accordingly, the following commodities and service are hereby added to the Procurement List:

Commodities

Tape, Measuring

5210–00–086–4988
5210–00–182–4797
5210–00–150–2920

Services

Janitorial/Custodial, Army Research Laboratory (ARL), Adelphi Laboratory Center (ALC), 2800 Powder Mill Road, Adelphi, Maryland

This action does not affect current contracts awarded prior to the effective date of this addition or options that may be exercised under those contracts.

Deletions

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action will not have a severe economic impact on future contractors for the commodities.

3. The action will result in authorizing small entities to furnish the commodities to the Government.

4. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the commodities deleted from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the commodities listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 46–48c and 41 CFR 51–2.4.

Accordingly, the following commodities are hereby deleted from the Procurement List:

Cleaner, Tobacco Pipe

M.R. 204

Stool

P.S. #127–A
P.S. #127–B
P.S. #127–C
P.S. #127–D

BILLING CODE 6353–01–P

DEPARTMENT OF COMMERCE

Bureau of Export Administration

Survey of U.S. Chemical Industry To Assist in Compliance Activities Regarding Certain Provisions of the Chemical Weapons Convention

ACTION: Proposed Collection; Comment Request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before January 5, 1999.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Dawn Battle, Department of Commerce, 14th & Constitution Ave., NW, room 6877, Washington, DC, 20230 (telephone number (202) 482–0637).

SUPPLEMENTARY INFORMATION:

I. Abstract

The Chemical Weapons Convention (CWC) is a multilateral arms control treaty that seeks to achieve an international ban on chemical weapons (CW). The CWC was signed by the United States in Paris on January 13, 1993, and was submitted by President Clinton to the United States Senate on November 23, 1993, for its advice and consent to ratification. The CWC prohibits, *inter alia*, the use, development, production, acquisition, stockpiling, retention, and direct or indirect transfer of chemical weapons.

The information that will be collected by this survey is necessary in order to assist efforts by U.S. government officials to ensure that the U.S. is and will be in compliance with certain provisions of the Chemical Weapons Convention (CWC) Treaty.

The CWC, after enactment of U.S. implementing legislation and promulgation of appropriate agency regulations, prohibits all individuals and legal entities (e.g. corporations) within the U.S., as well as all individuals outside the U.S. possessing U.S. citizenship, from engaging in activities prohibited under the Convention.

The proposed new information collection by BXA will attempt to survey, by telephone, private companies either known or suspected to have activities involving Schedule 1 chemicals. The additional data obtained from the proposed survey will enable BXA to determine whether the information collection activities already approved by OMB are all that are needed, for the time being, to monitor U.S. compliance with the 1 metric ton limit.

BXA intends to use the CWC Schedule 1 chemical survey to obtain data from those U.S. facilities that are believed to be engaged in the production, acquisition, stockpiling, transfer, or use of chemicals listed in Schedule 1 of the CWC. The facilities that are asked to participate in the survey will be requested to respond, regardless of the amount of Schedule 1 chemicals that they produce, acquire, stockpile, transfer, or use.

BXA will use the data obtained from the survey, as well as data obtained from other sources, in order to determine whether or not it needs to impose additional information collection burdens on the U.S. chemical industry in order to accurately determine U.S. compliance with Part VI.A.2 of the Annex on Implementation and Verification of the CWC, which limits the aggregate amount of Schedule

1 chemicals that may be produced, acquired, retained, transferred, or used by any state party in a single calendar year to 1 metric ton (i.e. 1 million grams).

II. Method of Collection

Telephone survey.

III. Data

OMB Number: None.
Form Number: N/A.
Type of Review: Submission for new collection.
Affected Public: Individuals, businesses or other for-profit and not-for-profit institutions.
Estimated Number of Respondents: 100.
Estimated Time Per Response: 30 minutes per response.
Estimated Total Annual Burden Hours: 50.
Estimated Total Annual Cost: $1,800 for respondents time (no capital expenditures required).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they will also become a matter of public record.

Dated: October 30, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of the Chief Information Officer.

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

International Trade Administration

[Docket No. 980930252–8252–01]

Special American Business Internship Training Program (SABIT)

AGENCY: International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: This Notice announces availability of funds for the Special American Business Internship Training Program (SABIT), for training business executives and scientists (also referred to as "interns") from the NIS. The Department of Commerce, International Trade Administration (ITA) established the SABIT program in September 1990 to assist the former Soviet Union's transition to a market economy. Since that time, SABIT has been matching business executives and scientists from the NIS with U.S. firms which provide them with three to six months of hands-on training in a U.S. market economy.

Under the SABIT program, qualified U.S. firms will receive funds through a cooperative agreement with ITA to help defray the cost of hosting interns. ITA will interview and recommend eligible interns to participating companies. Interns may be from any of the following Independent States: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan. The U.S. firms will be expected to provide the interns with a hands-on, non-academic, executive training program designed to maximize their exposure to management or commercially-oriented scientific operations. At the end of the training program, interns must return to the NIS.

DATES: The closing date for applications is January 29, 1999. An original and two copies of the application (Standard Form 424 (Rev. 4–92) and supplemental material) are to be sent to the address designated in the Application Kit and postmarked no later than the closing date. Applications will be considered on a "rolling" basis as they are received, subject to the availability of funds. If available funds are depleted prior to the closing date, a notice to that effect will be published in the **Federal Register**. Processing of complete applications takes approximately two to three months. All awards are expected to be made by May 1, 1999.

ADDRESSES: Request for Applications: Competitive Application kits will be available from ITA starting on the day this notice is published. To obtain a copy of the Application Kit please E-mail: sabitapply@usita.gov (please state which format, e.g. WordPerfect© 6.1), telephone (202) 482–0073, facsimile (202) 482–2443 (these are not toll free numbers), or send a written request with two self-addressed mailing labels to Application Request, The SABIT Program, HCHB Room 3319, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC, 20230. Only one copy of the Application Kit will be provided to each organization requesting it, but it may be reproduced by the requester.

FOR FURTHER INFORMATION CONTACT: Liesel C. Duhon, Director, SABIT Program, U.S. Department of Commerce, phone—(202) 482–0073, facsimile—(202) 482–2443. These are not toll free numbers.

SUPPLEMENTARY INFORMATION: SABIT exposes NIS business managers and scientists to a completely new way of thinking in which demand, consumer satisfaction, and profits drive production. Senior-level interns visiting the U.S. for internship programs with public or private sector companies will be exposed to an environment which will provide them with practical knowledge for transforming their countries' enterprises and economies to the free market. The program provides first-hand, eye-opening experience to managers and scientists which cannot be duplicated by American managers traveling to their territories.

Managers: SABIT assists economic restructuring in the NIS by providing top-level business managers with practical training in American methods of innovation and management in such areas as strategic planning, financing, production, distribution, marketing, accounting, wholesaling, and labor relations. This first-hand experience in the U.S. economy enables interns to become leaders in establishing and operating a market economy in the NIS, and creates a unique opportunity for U.S. firms to familiarize key executives from the NIS with their products and services. Sponsoring U.S. firms will benefit by establishing relationships with key managers in similar industries who are uniquely positioned to assist their U.S. sponsors do business in the Independent States.

Scientists: SABIT provides opportunities for gifted scientists to apply their skills to peaceful research and development in the civilian sector, in areas such as defense conversion, medical research, and the environment, and exposes them to the role of scientific research in a market economy where applicability of research relates to business success. Sponsoring firms in the U.S. scientific community also benefit from exchanging information and ideas, and different approaches to new technologies.

The Special American Business Internship Training program's Catalog of Federal Domestic Assistance (CFA) number is 11.114.

Funding Availability: Pursuant to section 632(a) of the Foreign Assistance Act of 1961, as amended (the "Act")

funding for the program will be provided by the United States Agency for International Development (A.I.D). ITA will award financial assistance and administer the program pursuant to the authority contained in section 635(b) of the Act and other applicable Grant rules. The estimated amount of financial assistance available for the program is $ 2 million. At least $800,000 of that amount is reserved for U.S. organizations which host scientists. Additional funding may become available at a future date.

Funding Instrument and Project Duration: Federal assistance will be awarded pursuant to a cooperative agreement between ITA and the recipient firm. All internships are three to six months; however, ITA reserves the right to allow an intern to stay for a shorter period of time (no less than one month) if the U.S. company agrees and the intern demonstrates a need for a shorter internship based on his or her management responsibilities. ITA will reimburse companies for the round trip international travel of each intern from the intern's home city in the NIS to the U.S. internship site, upon submission to ITA of the paid travel invoice, payment receipt, or other evidence of payment and the form SF–270, "Request for Advance or Reimbursement." Travel under the program is subject to the Fly America Act. Recipient firms provide $30 per day directly to interns; ITA will reimburse recipient firms for this stipend of $30 per day per intern, for up to six months, upon submission by company of an end-of-internship report and form SF–270. Recipient firms provide housing for the interns; ITA will reimburse recipient firms for up to $500 per month for housing costs, at the same time as the stipend, and upon submission by company of an end-of-internship report and form SF–270. In general, each award will have a cap of $10,500 per intern for total cost of airline travel, stipend and housing costs. ITA reserves the right to allow an award to exceed this amount in cases of unusually high costs, such as airfare from remote regions of the NIS. However, the total payment cannot exceed the award amount. There are no specific matching requirements for the awards. Host firms, however, are expected to bear the costs beyond those covered by the award, including: visa fees, insurance, any food and incidentals costs beyond $30 per day, any training-related travel within the U.S., and provision of the hands-on training for the interns.

U.S. firms wishing to utilize SABIT in order to be matched with an intern without applying for financial assistance may do so. Such firms will be responsible for all costs, including travel expenses, related to sponsoring the intern. However, prior to acceptance as a SABIT intern, work plans and candidates must be approved by the SABIT Program. Furthermore, program training will be monitored by SABIT staff and evaluated upon completion of training.

Eligibility: Eligible applicants for the SABIT program will include all for profit or non-profit U.S. corporations, associations, organizations or other public or private entities. Agencies or divisions of the federal government are not eligible.

Project Funding Priorities: Applicant proposal must provide an explanation, including description and extent of involvement, in priority business sector(s). While Applicants involved in any industry sector may apply to the program, priority consideration is given to those operating in the following sectors: (a). Agribusiness (including food processing and distribution, and agricultural equipment), (b). Defense conversion, (c). Energy, (d). Environment (including environmental clean-up), (e). Financial services (including banking and accounting), (f). Housing, construction and infrastructure, (g). Medical equipment, supplies, pharmaceuticals, and health care management, (h). Product standards and quality control, (i). Telecommunications, (j). Transportation and (k) Biotechnology.

Evaluation Criteria: Consideration for financial assistance will be given to those SABIT proposals which:

(1). Demonstrate a commitment to the intent and goals of the program to provide practical, on-the-job, non-academic, non-classroom, training: in the case of manager interns, an appropriate management training experience, or, in the case of scientist interns, a practical, commercially-oriented scientific training experience. Include a brief objectives section indicating why the Applicant wishes to provide an internship to a manager(s) or scientist(s) from the NIS, and how the proposed internship would further the purpose of the SABIT program as described above. Also, the Applicant should note how the internship to be provided will respond to the priority needs of senior business managers and scientists in the NIS, as determined by ITA.

(2). Present a realistic work plan describing in detail the training program to be provided to the SABIT intern(s). Work plans must include the proposed internship training activities. The components of the training activities must be described in as much detail as possible, preferably on a week-by-week basis. The description of the training activities should include an account of what the intern's(s') duties and responsibilities will be during the training.

(3). The application should also have a section noting: (a). Whether Applicant is applying to host managers or scientists, or both (and the number of each); (b). the duration of the internship; (c). the location(s) of the internship; (d). the name, address, and telephone number of the designated internship coordinator; (e). name(s) of division(s) in which the intern(s) will be placed; (f). the individual(s) in the U.S. company under whose supervision the intern will train; (g). the anticipated housing arrangements to be provided for the intern(s). Note that housing arrangements should be suitable for mid-and senior-level professionals, and that each intern must be provided with a private room; (h). a statement that the host firm is solidly committed to interns' return to their own countries upon completion of the internships.

(4). Provide a general description of the profile of the intern(s) the Applicant would like to host, including: educational background; occupational/professional background (including number of years and areas of experience); size and nature of organization at which the intern(s) is/are presently employed; preference for the region of the NIS where the intern(s) is/are employed; and whether Applicant is open to sponsoring interns from a variety of NIS countries.

Evaluation criteria 1–4 will be weighted equally.

ITA does not guarantee that it will match Applicant with the profile provided to SABIT.

Selection Procedures: Each application will receive an independent, objective review by one or more three or four-member ITA review panels qualified to evaluate applications submitted under the program. Applications will be evaluated on a competitive, "rolling" basis as they are received in accordance with the selection evaluation set forth above. Awards will be made to those applications which successfully meet the selection criteria. If funds are not available for all those applications which successfully meet the criteria, awards will be made to the first applications received which successfully do so. ITA reserves the right to reject any application; to limit the number of interns per applicant; and to waive informalities and minor irregularities in applications received.

The final selecting official reserves the right to make awards based on U.S. geographic and organization size diversity among applicants, as well as to consider priority business sectors (listed in Project Funding Priorities, above) when making awards. Recipients may be eligible, pursuant to approval of an amendment of an active award, to host additional interns under the program. ITA reserves the right to evaluate applicants based on past performance. The Director of the SABIT Program is the final selecting official for each award.

Additional Information: Applicants must submit: (1). Evidence of adequate financial resources of Applicant organization to cover the costs involved in providing an internship(s). As evidence of such resources, Applicant should submit financial statements audited by an outside organization or an annual report including such statements. If these are not available, a letter should be provided from the Applicant's bank or outside accountant attesting to the financial capability of the firm to undertake the scope of work involved in training an intern under the SABIT program. (2). Evidence of a satisfactory record of performance in grants, contracts and/or cooperative agreements with the Federal Government, if applicable. (Applicants who are or have been deficient in current or recent performance in their grants, contracts, and/or cooperative agreements with the Federal Government shall be presumed to be unable to meet this requirement). (3). A statement that the Applicant will provide medical insurance coverage for interns during their internships. Recipients will be required to submit proof of the interns' medical insurance coverage to the Federal Program Officer, before the interns' arrivals. The insurance coverage must include an accident and comprehensive medical insurance program as well as coverage for accidental death, emergency medical evacuation, and repatriation.

Other Requirements: All applicants are advised of the following:

1. No award of Federal funds shall be made to an Applicant who has an outstanding delinquent Federal debt until either the delinquent account is paid in full, a negotiated repayment schedule is established and at least one payment is received, or other arrangements satisfactory to the Department of Commerce (DOC) are made.

2. A false statement on the application is grounds for denial or termination of funds and grounds for possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001.

3. Recipients and subrecipients are subject to all Federal laws and Federal and Departmental regulations, policies and procedures applicable to financial assistance awards.

4. Participating companies will be required to comply with all relevant U.S. tax and export regulations. Export controls may relate not only to licensing of products for export, but also to technical data transfer.

5. Applications under this program are not subject to Executive Order 12372, "Intergovernmental Review of Federal Programs."

6. If applicants incur any costs prior to an award being made, they do solely at their own risk of not being reimbursed by the Government. Notwithstanding any verbal or written assurance that may have been received, there is no obligation on the part of DOC to cover pre-award costs.

7. Past performance: Unsatisfactory performance by an applicant under prior Federal awards may result in an application not being considered for funding.

8. No obligation for future funding: If an application is selected for funding, DOC has no obligation to provide any additional future funding in connection with that award. Renewal of an award to increase funding or extend the period of performance is at the total discretion of DOC.

9. Primary Applicant Certifications: All primary applicants must submit a completed Form CD–511, "Certifications Regarding Debarment, Suspension and Other Responsibility Matters; Drug-Free Workplace Requirements and Lobbying," and the following explanations are hereby provided:

(a) Nonprocurement Debarment and Suspension: Prospective participants (as defined at 15 CFR Part 26, Section 105) are subject to 15 CFR Part 26, "Nonprocurement Debarment and Suspension" and the related section of the certification form prescribed above applies.

(b) Drug Free Workplace: Grantees (as defined at 15 CFR Part 26, Section 605) are subject to 15 CFR Part 26, Subpart F, "Government wide Requirements for Drug-Free Workplace (Grants)" and the related section of the certification form prescribed above applies.

(c) Anti-Lobbying: Funds provided under the SABIT program may not be used for lobbying activities. Persons (as defined at 15 CFR Part 28, Section 105) are subject to the lobbying provisions of 31 U.S.C. 1352, "Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions," and the lobbying section of the certification form prescribed above applies to applications/bids for grants, cooperative agreements, and contracts for more than $100,000, and loans and loan guarantees for more than $150,000, or the single family maximum mortgage limit for affected programs, whichever is greater.

(d) Anti-Lobbying Disclosures: Any applicant that has paid or will pay for lobbying in connection with this award using any funds must submit an SF-LLL, "Disclosure of Lobbying Activities," as required under 15 CFR Part 28, Appendix B.

10. All primary applicants must also submit a completed Standard Form 424, "Application for Federal Assistance" and a Standard Form 424B, "Assurances—Non-Construction Programs." Form CD–511 and Standard Forms 424 and 424B are included in the Application Kit supplied by the SABIT office.

11. Lower Tier Certifications: Recipients shall require applicants/bidders for subgrants, contracts, subcontracts, or other lower tier covered transactions at any tier under the award to submit, if applicable, a completed Form CD–512, "Certifications Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions and Lobbying" and disclosure form, SF-LLL, "Disclosure of Lobbying Activities." Form CD–512 is intended for the use of recipients and should not be transmitted to DOC. SF-LLL submitted by any tier recipient or subrecipient should be submitted to DOC in accordance with the instructions contained in the award document.

12. Indirect Costs: Indirect costs are not allowed under the SABIT program.

13. Applicants are hereby notified that any equipment or products authorized to be purchased with funding provided under this program must be American-made to the greatest extent practicable.

14. The following statutes apply to this program: Section 907 of the FREEDOM Support Act, Public Law 102–511, 22 U.S.C. 5812 note (Restriction on Assistance to the Government of Azerbaijan); 7 U.S.C. § 5201 et seq. (Agricultural Competitiveness and Trade—the Bumpers Amendment); The Foreign Assistance Act of 1961, as amended, including Chapter 11 of Part I, section 498A (b) Public Law 102–511, 22 U.S.C. 2295a(b), (regarding ineligibility for assistance); 22 U.S. C. 2420(a), Section 660(a) of The Foreign Assistance Act of 1961, as amended (Police Training Prohibition); and provisions in the annual Foreign Operations, Export Financing, and Related Programs Appropriations Acts, concerning Use of American Resources, Impact on Jobs in the United States and Commerce and Trade (see, e.g., §§ 546, 538 and 513 respectively of the Foreign Operations, Export Financing, and Related Appropriations Act, 1998, Public Law 105–118).

15. *Audit Requirements:* The DOC Office of Inspector General has authority under the Inspector General Act of 1978, as amended, to conduct an audit of any DOC award at any time.

16. *Payments.* As required by the Debt Collections Improvement Act of 1996, all Federal payments to award recipients pursuant to this announcement will be made by electronic funds transfer.

17. The collection of information is approved by the Office of Management and Budget, OMB Control Number 0625–0225. Public reporting for this collection of information is estimated to be three hours per response, including the time for reviewing instructions, and completing and reviewing the collection of information. All responses to this collection of information are voluntary, and will be protected from disclosure to the extent allowed under the Freedom of Information Act. Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Reports Clearance Officer, International Trade Administration, Department of Commerce, Room 4001, 14th and Constitution Ave., N.W., Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Special American Business Internship Training, International Trade Administration, at (202)482–0073. This is not a toll free-number.

Dated: November 3, 1998.

Liesel C. Duhon,

Director, SABIT Program.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

Title: Coastal Services Center (CSC): Coastal Resource Management Opportunities, Capabilities, and Needs.

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Pub. L. 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before January 5, 1999.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Forms Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington DC 20230.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Nina Petrovich, South Carolina's Sea Grant Coastal Program Coordinator, NOAA Coastal Services Center, 2234 South Hobson Avenue, Charleston SC 29405. Phone (843) 740–1203, Email: *npetrovich@csc.noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

Three years ago, the Coastal Services Center (CSC) surveyed the coastal resource management community to assess its information management needs and capabilities. CSC has used the results to deliver products in formats that the greatest proportion of the community can use. CSC proposes to repeat this survey every three years (the next one to be conducted in 1999) to assess changes in the community's management capabilities and needs.

The overall objectives of the survey are: to receive feedback from the coastal management community on the relevance, importance, and need of specific proposed products; to give coastal resource managers the opportunity to describe their priority problems and management needs; and to obtain information on the hardware and software platforms and capabilities of the coastal information management community. Results will be used to evaluate the effectiveness and most useful format for delivery of CSC products and services and to set priorities for future programming.

The survey will be conducted in two parts to differentiate between resource management needs and information management needs. Both sections will be sent to the coastal manager, who would be asked to forward the second section to the data/information manager.

(1) Section one will contain general questions about information management problems and opportunities, and about communication pathways and management services.

(2) Section two will ask questions about information management for coastal problems, data/information exchange, and computer-based tools and techniques.

The survey is targeted for release to the coastal community in February 1999, and results will be compiled during the summer months of that year.

II. Method of Collection

The survey will be mailed to clients with an option to respond electronically or by mail.

III. Data

OMB Number: 0648–0308.

Form Number: None.

Type of Review: Regular submission.

Affected Public: Not-for-profit institutions; state, local, or tribal government (coastal managers from the following programs or agencies: Coastal Zone Management Programs, National Estuarine Research Reserve Sites, National Marine Sanctuaries, Sea Grant Institutions, Natural Resource Management Agencies, and National Estuary Programs.

Estimated Number of Respondents: 240.

Estimated Time Per Response: 40 minutes.

Estimated Total Annual Burden Hours: 160.

Estimated Total Annual Cost to Public: $0 (no capital expendiures required).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be

collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: October 30, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of the Chief Information Officer.

[FR Doc. 98–29698 Filed 11–5–98; 8:45 am]

BILLING CODE 3510–08–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton, Man-Made Fiber, Silk Blend and Other Vegetable Fiber Textiles and Textile Products Produced or Manufactured in Bangladesh

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Bangladesh and exported during the period January 1, 1999 through December 31, 1999 are based on the limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the limits for the 1999 period. The 1999 limits for certain categories have been reduced for carryforward applied to the 1998 limits.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see 63 FR 53881, published on October 7, 1998). A visa will continue to be required for non integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton, man-made fiber, silk blend and other vegetable fiber textile products in the following categories, produced or manufactured in Bangladesh and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following levels of restraint:

Category	Twelve-month restraint limit
237	505,495 dozen.
331	1,354,428 dozen pairs.
334	154,215 dozen.
335	276,895 dozen.
336/636	495,508 dozen.
338/339	1,435,433 dozen.
340/640	3,244,886 dozen.
341	2,688,094 dozen.
342/642	479,015 dozen.
347/348	2,419,283 dozen.
351/651	738,646 dozen.
352/652	11,019,845 dozen.
363	27,532,454 numbers.
369–S [1]	1,845,520 kilograms.
634	539,527 dozen.
635	349,551 dozen.
638/639	1,820,392 dozen.
641	1,171,266 dozen.
645/646	427,498 dozen.
647/648	1,521,563 dozen.
847	854,436 dozen.

[1] Category 369–S: only HTS number 6307.10.2005.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated November 19, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see directive dated September 30, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Wool and Man-Made Fiber Textile Products Produced or Manufactured in Bulgaria

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Naomi Freeman, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Bulgaria and exported during the period January 1, 1999 through December 31, 1999 are based on limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the 1999 limits. The limit for Category 435 has been reduced for carryforward applied in 1998.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of wool and man-made fiber textile products in the following categories, produced or manufactured in Bulgaria and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following levels of restraint:

Category	Twelve-month limit
410/624	2,738,549 square meters of which not more than 850,058 square meters shall be in Category 410.
433	13,094 dozen.
435	21,975 dozen.
442	15,276 dozen.
444	71,496 numbers.
448	26,980 dozen.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated November 19, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton, Wool and Man-Made Fiber Textile Products Produced or Manufactured in Hungary

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Naomi Freeman, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Hungary and exported during the period January 1, 1999 through December 31, 1999 are based on the limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the limits for the 1999 period.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton, wool and man-made fiber textile products in the following categories, produced or manufactured in Hungary and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following levels of restraint:

Category	Twelve-month restraint limit
351/651	290,594 dozen.
410	950,751 square meters.
433	18,030 dozen.
434	15,298 dozen.
435	26,443 dozen.
443	169,371 numbers.

Category	Twelve-month restraint limit
444	54,637 numbers.
448	23,369 dozen.
604	1,438,282 kilograms.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated November 24, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton, Wool, Man-Made Fiber, Silk Blend and Other Vegetable Fiber Textiles and Textile Products Produced or Manufactured in Macau

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Janet Heinzen, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota reopenings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Macau and exported during the period January 1, 1999 through December 31, 1999 are based on limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the 1999 limits.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see 63 FR 53881, published on October 7, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton, wool, man-made fiber, silk blend and other vegetable fiber textiles and textile products in the following categories, produced or manufactured in Macau and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following levels of restraint:

Category	Twelve-month restraint limit
Levels in Group I	
219	3,142,347 square meters.
225	10,998,214 square meters.

359–V[2]	151,419 kilograms.
611	3,142,347 square meters.
625/626/627/628/629	7,855,867 square meters.
633/634/635	676,390 dozen.
638/639/838	2,106,297 dozen.
640	149,760 dozen.
641/840	257,398 dozen.
642/842	149,962 dozen.
645/646	351,051 dozen.
647/648	708,176 dozen.
659–S[3]	151,419 kilograms.
Group II	
400–431, 433–438, 440–448, 459pt.[4], 464 and 469pt.[5], as a group.	1,551,104 square meters equivalent.
Sublevel in Group II	
445/446	83,622 dozen.

[1] Category 359–C: only HTS numbers 6103.42.2025, 6103.49.8034, 6104.62.1020, 6104.69.8010, 6114.20.0048, 6114.20.0052, 6203.42.2010, 6203.42.2090, 6204.62.2010, 6211.32.0010, 6211.32.0025 and 6211.42.0010; Category 659–C: only HTS numbers 6103.23.0055, 6103.43.2020, 6103.43.2025, 6103.49.2000, 6103.49.8038, 6104.63.1020, 6104.63.1030, 6104.69.1000, 6104.69.8014, 6114.30.3044, 6114.30.3054, 6203.43.2010, 6203.43.2090, 6203.49.1010, 6203.49.1090, 6204.63.1510, 6204.69.1010, 6210.10.9010, 6211.33.0010, 6211.33.0017 and 6211.43.0010.

[2] Category 359–V: only HTS numbers 6103.19.2030, 6103.19.9030, 6104.12.0040, 6104.19.8040, 6110.20.1022, 6110.20.1024, 6110.20.2030, 6110.20.2035, 6110.90.9044, 6110.90.9046, 6201.92.2010, 6202.92.2020, 6203.19.1030, 6203.19.9030, 6204.12.0040, 6204.19.8040, 6211.32.0070 and 6211.42.0070.

[3] Category 659–S: only HTS numbers 6112.31.0010, 6112.31.0020, 6112.41.0010, 6112.41.0020, 6112.41.0030, 6112.41.0040, 6211.11.1010, 6211.11.1020, 6211.12.1010 and 6211.12.1020.

[4] Category 459pt.: all HTS numbers except 6405.20.6030, 6405.20.6060, 6405.20.6090, 6406.99.1505 and 6406.99.1560.

[5] Category 469pt.: all HTS numbers except 5601.29.0020, 5603.94.1010 and 6406.10.9020.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated December 9, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see directive dated September 30, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton, Wool and Man-Made Fiber Textiles and Textile Products and Silk Blend and Other Vegetable Fiber Apparel Produced or Manufactured in Malaysia

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota reopenings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Malaysia and exported during the period January 1, 1999 through December 31, 1999 are based on limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC). In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the 1999 limits. The 1999 limit for Categories 347/348 is being decreased for carryforward applied to the 1998 limit.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see 63 FR 53881, published on October 7, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton, wool and man-made fiber textiles and textile products and silk blend and other vegetable fiber apparel in the following categories, produced or manufactured in Malaysia and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following limits:

[2] Category 438–W: only HTS numbers 6104.21.0060, 6104.23.0020, 6104.29.2051, 6106.20.1010, 6106.20.1020, 6106.90.1010, 6106.90.1020, 6106.90.2520, 6106.90.3020, 6109.90.1540, 6109.90.8020, 6110.10.2080, 6110.30.1560, 6110.90.9074 and 6114.10.0040.

[3] Category 647–K: only HTS numbers 6103.23.0040, 6103.23.0045, 6103.29.1020, 6103.29.1030, 6103.43.1520, 6103.43.1540, 6103.43.1550, 6103.43.1570, 6103.49.1020, 6103.49.1060, 6103.49.8014, 6112.12.0050, 6112.19.1050, 6112.20,.1060 and 6113.00.9044.

[4] Category 648–K: only HTS numbers 6104.23.0032, 6104.23.0034, 6104.29.1030, 6104.29.1040, 6104.29.2038, 6104.63.2006, 6104.63.2011, 6104.63.2026, 6104.63.2028, 6104.63.2030, 6104.63.2060, 6104.69.2030, 6104.69.2060, 6104.69.8026, 6112.12.0060, 6112.19.1060, 6112.20.1070, 6113.00.9052 and 6117.90.9070.

[5] Category 239pt.: only HTS number 6209.20.5040 (diapers).

[6] Category 359pt.: all HTS numbers except 6406.99.1550.

[7] Category 369pt.: all HTS numbers except 5601.10.1000, 5601.21.0090, 5701.90.1020, 5701.90.2020, 5702.10.9020, 5702.39.2010, 5702.49.1020, 5702.49.1080, 5702.59.1000, 5702.99.1010, 5702.99.1090, 5705.00.2020 and 6406.10.7700.

[8] Category 438–O: only HTS numbers 6103.21.0050, 6103.23.0025, 6105.20.1000, 6105.90.1000, 6105.90.8020, 6109.90.1520, 6110.10.2070, 6110.30.1550, 6110.90.9072, 6114.10.0020 and 6117.90.9025.

[9] Category 459pt.: all HTS numbers except 6405.20.6030, 6405.20.6060, 6405.20.6090, 6405.99.1505 and 6406.99.1560.

[10] Category 469pt.: all HTS numbers except 5601.29.0020, 5603.94.1010 and 6406.10.9020.

[11] Category 659pt.: all HTS numbers except 6406.99.1510 and 6406.99.1540.

[12] Category 669pt.: all HTS numbers except 5601.10.2000, 5601.22.0090, 5607.49.3000, 5607.50.4000 and 6406.10.9040.

[13] Category 859pt.: only HTS numbers 6115.19.8040, 6117.10.6020, 6212.10.5030, 6212.10.9040, 6212.20.0030, 6212.30.0030, 6212.90.0090, 6214.10.2000 and 6214.90.0090.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see the December 22, 1997 directive) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see directive dated September 30, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

[FR Doc. 98–29832 Filed 11–5–98; 8:45 am]

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton and Man-Made Fiber Textile Products Produced or Manufactured in Pakistan

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Pakistan and exported during the period January 1, 1999 through December 31, 1999 are based on limits notified to the Textiles Monitoring Body pursuant to the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the 1999 limits.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see 63 FR 53881, published on October 7, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,

Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton and man-made fiber textile products in the following categories, produced or manufactured in Pakistan and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following limits:

Category	Twelve-month restraint limit
Specific limits	
219	9,024,717 square meters.
226/313	129,440,629 square meters.
237	438,929 dozen.
239pt. [1]	1,895,617 kilograms.
314	6,563,430 square meters.
315	85,003,997 square meters.
317/617	35,270,770 square meters.
331/631	2,688,116 dozen pairs.
334/634	259,256 dozen.
335/635	400,369 dozen.
336/636	526,715 dozen.
338	5,254,913 dozen.
339	1,492,003 dozen.
340/640	702,288 dozen of which not more than 263,357 dozen shall be in Categories 340–D/640–D [2].
341/641	790,073 dozen.
342/642	391,045 dozen.
347/348	873,067 dozen.
351/651	351,143 dozen.
352/652	877,858 dozen.
359–C/659–C [3]	1,580,146 kilograms.
360	5,640,837 numbers.
361	6,559,112 numbers.
363	48,878,391 numbers.
369–F/369–P [4]	2,633,576 kilograms.
369–R [5]	12,290,024 kilograms.
369–S [6]	804,050 kilograms.
613/614	25,630,432 square meters
615	27,266,412 square meters.
625/626/627/628/629	83,859,305 square meters of which not more than 41,929,654 square meters shall be in Category 625; not more than 41,929,654 square meters shall be in Category 626; not more than 41,929,654 square meters shall be in Category 627; not more than 8,675,101 square meters shall be in Category 628; and not more than 41,929,654 square meters shall be in Category 629.
638/639	487,367 dozen.
647/648	924,029 dozen.
666–P [7]	809,891 kilograms.
666–S [8]	4,287,658 kilograms.

[1] Category 239pt.: only HTS number 6209.20.5040 (diapers).

[2] Category 340–D: only HTS numbers 6205.20.2015, 6205.20.2020, 6205.20.2025 and 6205.20.2030; Category 640–D: only HTS numbers 6205.30.2010, 6205.30.2020, 6205.30.2030, 6205.30.2040, 6205.90.3030 and 6205.90.4030.

[3] Category 359–C: only HTS numbers 6103.42.2025, 6103.49.8034, 6104.62.1020, 6104.69.8010, 6114.20.0048, 6114.20.0052, 6203.42.2010, 6203.42.2090, 6204.62.2010, 6211.32.0010, 6211.32.0025 and 6211.42.0010; Category 659–C: only HTS numbers 6103.23.0055, 6103.43.2020, 6103.43.2025, 6103.49.2000, 6103.49.8038, 6104.63.1020, 6104.63.1030, 6104.69.1000, 6104.69.8014, 6114.30.3044, 6114.30.3054, 6203.43.2010, 6203.43.2090, 6203.49.1010, 6203.49.1090, 6204.63.1510, 6204.69.1010, 6210.10.9010, 6211.33.0010, 6211.33.0017 and 6211.43.0010.

[4] Category 369–F: only HTS number 6302.91.0045; Category 369–P: only HTS numbers 6302.60.0010 and 6302.91.0005.

[5] Category 369–R: only HTS number 6307.10.2020.

[6] Category 369–S: only HTS number 6307.10.2005.

[7] Category 666–P: only HTS numbers 6302.22.1010, 6302.22.1020, 6302.22.2010, 6302.32.1010, 6302.32.1020, 6302.32.2010 and 6302.32.2020.

[8] Category 666–S: only HTS numbers 6302.22.1030, 6302.22.1040, 6302.22.2020, 6302.32.1030, 6302.32.1040, 6302.32.2030 and 6302.32.2040.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated November 25, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

Effective on January 1, 1999, a visa will no longer be required for products integrated in the second stage of the integration of textiles and clothing into GATT 1994 from WTO member countries (see directive dated September 30, 1998). A visa will continue to be required for non-integrated products. For quota purposes only, products remaining in categories partially integrated will continue to be designated by the designator "pt."

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcement of Import Restraint Limits for Certain Cotton and Man-Made Fiber Textile Products Produced or Manufactured in Qatar

November 3, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs establishing limits.

EFFECTIVE DATE: January 1, 1999.

FOR FURTHER INFORMATION CONTACT: Roy Unger, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port, call (202) 927–5850, or refer to the U.S. Customs website at http://www.customs.ustreas.gov. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The import restraint limits for textile products, produced or manufactured in Qatar and exported during the period January 1, 1999 through December 31, 1999 are based on limits notified to the Textiles Monitoring Body pursuant to

the Uruguay Round Agreement on Textiles and Clothing (ATC).

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to establish the limits for the 1999 period. The 1999 limit for Categories 347/348 has been reduced for carryforward applied to the 1998 limit.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Information regarding the 1999 CORRELATION will be published in the **Federal Register** at a later date.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

November 3, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: Pursuant to section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended; and the Uruguay Round Agreement on Textiles and Clothing (ATC), you are directed to prohibit, effective on January 1, 1999, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton and man-made fiber textile products in the following categories, produced or manufactured in Qatar and exported during the twelve-month period beginning on January 1, 1999 and extending through December 31, 1999, in excess of the following levels of restraint:

Category	Twelve-month restraint limit
340/640	477,565 dozen.
341/641	220,415 dozen.
347/348	513,906 dozen.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated November 6, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

[10] Category 369–S: only HTS number 6307.10.2005.

The limits set forth above are subject to adjustment pursuant to the provisions of the ATC and administrative arrangements notified to the Textiles Monitoring Body.

Products in the above categories exported during 1998 shall be charged to the applicable category limits for that year (see directive dated December 22, 1997) to the extent of any unfilled balances. In the event the limits established for that period have been exhausted by previous entries, such products shall be charged to the limits set forth in this directive.

In carrying out the above directions, the Commissioner of Customs should construe entry into the United States for consumption to include entry for consumption into the Commonwealth of Puerto Rico.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

DEPARTMENT OF DEFENSE

[OMB Control Number 0704–0390]

Information Collection Requirements; Defense Federal Acquisition Regulation Supplement; Taxes

AGENCY: Department of Defense (DoD).

ACTION: Notice and request for comments regarding a proposed extension of an approved information collection requirement.

SUMMARY: In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), DoD announces the proposed extension of a public information collection requirement, and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. This information collection requirement is currently approved by the Office of Management and Budget (OMB) for use through August 31, 1999. DoD proposes that OMB extend its approval for use through August 31, 2002.

DATES: Consideration will be given to all comments received by January 4, 1999.

ADDRESSES: Written comments and recommendations on the proposed information collection requirement should be sent to: Defense Acquisition Regulations Council, Attn: Ms. Amy Williams, PDUSD(A&T)DP(DAR), IMD 3D139, 3062 Defense Pentagon, Washington, DC 20301–3062. Telefax (703) 602–0350.

E-mail comments submitted over the Internet should be addressed to: dfars@acq.osd.mil.

Please cite OMB Control Number 0704–0390 in all correspondence related to this issue. E-mail comments should

cite OMB Control Number 0704–0390 in the subject line.

FOR FURTHER INFORMATION CONTACT: Ms. Amy Williams, at (703) 602–0131. A copy of this information collection requirement is available electronically via the Internet at: http://www.acq.osd.mil/dp/dars/dfars/html

Paper copies may be obtained from Ms. Amy Williams, PDUSD(A&T)DP(DAR), IMD 3D139, 3062 Defense Pentagon, Washington, DC 20301–3062.

SUPPLEMENTARY INFORMATION:

Title, Associated Forms, and OMB Control Number: Taxes—Defense Federal Acquisition Regulation Supplement (DFARS) Part 229, and related clauses at 252.229, OMB Control Number 0704–0390.

Needs and Uses: This information collection is used by DoD to determine if DoD contractors in the United Kingdom have attempted to obtain relief from customs duty on vehicle fuels in accordance with contract requirements.

Affected Public: Businesses or other for-profit institutions.

Annual Burden Hours: 68.

Number of Respondents: 17.

Responses per Respondent: 1.

Number of Responses: 17.

Average Burden per Response: 4 hours.

Frequency: On occasion.

Summary of Information Collection

The clause at DFARS 252.229–7010, Relief from Customs Duty on Fuel (United Kingdom), is prescribed at DFARS 229.402–70(j), for use in solicitations issued and contracts awarded in the United Kingdom that require the use of fuels (gasoline or diesel) and lubricants in taxis or vehicles other than passenger vehicles. The clause requires the contractor to submit to the contracting officer evidence that an attempt to obtain relief from customs duty on fuels and lubricants has been initiated.

Michele P. Peterson,

Executive Editor, Defense Acquisition Regulations Council.

[FR Doc. 98–29775 Filed 11–5–98; 8:45 am]

BILLING CODE 5000–04–M

DEPARTMENT OF DEFENSE

General Services Administration

National Aeronautics and Space Administration

[OMB Control No. 9000–0141]

Proposed Collection; Comment Request for Buy American Act—Construction (Grimberg Decision)

AGENCIES: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance (9000–0141).

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement concerning Buy American Act—Construction (Grimberg Decision). The clearance currently expires on February 28, 1999.

DATES: Comments may be submitted on or before January 5, 1999.

FOR FURTHER INFORMATION CONTACT: Paul Linfield, Federal Acquisition Policy Division, GSA, (202) 501–1757.

ADDRESSES: Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: FAR Desk Officer, OMB, Room 10102, NEOB, Washington, DC 20503, and a copy to the General Services Administration, FAR Secretariat, 1800 F Street, NW, Room 4035, Washington, DC 20405.

SUPPLEMENTARY INFORMATION:

A. Purpose

The clauses at FAR 52.225–5, Buy American Act—Construction Materials, and FAR 52.225–15, Buy American Act—Construction Materials under Trade Agreements Act and North American Free Trade Agreement, provide that offerors/contractors requesting to use foreign construction material, other than construction material eligible under a trade agreement, shall provide adequate information for Government evaluation of the request. These regulations implement the Buy American Act for construction (41 U.S.C. 10a–10d).

B. Annual Reporting Burden

Public reporting burden for this collection of information is estimated to average *2.5* hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The annual reporting burden is estimated as follows: Respondents, *500;* responses per respondent, *2;* total annual responses, *1,000;* preparation hours per response, *2.5;* and total response burden hours, *2,500.*

OBTAINING COPIES OF PROPOSALS: Requester may obtain a copy of justification from the General Services Administration, FAR Secretariat (MVRS), Room 4035, Washington, DC 20405, telephone (202) 501–4755. Please cite OMB Control No. 9000–0141 regarding Buy American Act—Construction (Grimberg Decision) in all correspondence.

Dated: November 3, 1998.

Edward C. Loeb,

Director, Federal Acquisition Policy Division.

BILLING CODE 6820–34–U

DEPARTMENT OF DEFENSE

Department of the Army

Draft Legislative Environmental Impact Statement for the Withdrawal Renewal of Fort Wainwright Yukon Training Area and Fort Greely West Training Area and Fort Greely East Training Area, Alaska

AGENCY: Department of the Army, DoD.

ACTION: Notice of availability.

SUMMARY: This announces the availability of the Draft legislative Environmental Impact Statement (DLEIS) for the renewed withdrawal of Fort Wainwright Yukon Training Area (formerly known as the Fort Wainwright Maneuver Area) and Fort Greely West Training Area (formerly known as the Fort Greely Maneuver Area) and Fort Greely East Training Area (formerly known as the Fort Greely Air Drop Zone) from public use for military purposes. The lands are located near Fairbanks, Alaska.

The Military Lands Withdrawal Act (Pub. L. 99–606, enacted by Congress on November 6, 1986) identified Fort Wainwright Maneuver Area (now known as Fort Wainwright Yukon Training Area) and Fort Greely Maneuver Area (now known as the Fort Greely West Training Area) and Fort Greely Air Drop Zone (now known as Fort Greely East Training Area) as lands withdrawn from public use until November 6, 2001. If the Army intends to continue use beyond this time, the Act requires the Army to publish a Draft Environmental Impact Statement by November 6, 1998.

DATES: Comments should be received no later than February 7, 1999.

ADDRESSES: To obtain copies of the DLEIS, contact Mr. Doug Johnson, Directorate of Public Works, ATTN: APVR–RPW–EV, 730 Quartermaster Road, Fort Richardson, AK 99505–6500.

FOR FURTHER INFORMATION CONTACT: Mr. Doug Johnson at (907) 384–3090, fax: (907) 384–3047 or Ms. Cindy Herdrich, Center for Ecological Management of Military Lands (CEMML), Colorado State University, Vocational Education Building, Fort Collins, CO 80523; telephone: (970) 491–2728, fax: (970) 491–2713.

SUPPLEMENTARY INFORMATION: The Fort Wainwright Yukon Training Area comprises approximately 246,277 acres near Fairbanks, Alaska. The Fort Greely West and East Training Areas comprise approximately 623,585 acres near Delta Junction, Alaska. These areas were withdrawn from public use from the Bureau of Land Management (BLM) for military purposes with the enactment of the Military Lands Withdrawal Act on November 6, 1986. The Act specifies these lands are reserved for use by the Secretary of the Army for military maneuvering, training, artillery firing, aerial gunnery, infantry tactics, equipment development and testing, as well as other defense related purposes. The withdrawal renewal lands are used to train in an extremely cold environment, and to test the effect of this environment on military equipment. The Fort Wainwright Yukon Training Area and Fort Greely West and East Training Areas are used by the Army and Air Force. The Army and BLM jointly manage the natural resources on the withdrawal renewal lands recognizing their primary military role.

The Department of the Army has determined there is a continuing military requirement for the use of these withdrawal lands to train and maintain military units at the required state of readiness. The preferred alternative proposes to renew the existing military withdrawals for 50 years until November 6, 2051. The proposed 50-year withdrawal period is approximately the same length of time the military will have used these lands when the existing withdrawals expire in 2001.

Under the no action alternative considered in the DLEIS, Congress would not grant the requested withdrawal renewals. The lands would no longer be available for military use after November 5, 2001.

The Army conducted scoping on the DLEIS to inform the public of the proposed action, identify significant issues, and develop alternatives related to the proposed withdrawal renewal. Federal, State, local agencies, and the public were invited to participate in the scoping process. Public scoping meetings were held in Delta Junction, Fairbanks, and Anchorage in June and December 1997.

Significant issues identified during the scoping process and included in the impact analysis of the DLEIS are public access, air quality, military contamination of soils and surface water, noise, ownership of submerged lands, and wildlife and their habitat.

Public meetings are tentatively scheduled for January 1999 in Delta Junction, Fairbanks, and Anchorage to receive comments on the DLEIS. Notification of specific times and locations for the public meetings will be published in local newspapers. Written comments on the DLEIS will be accepted from publication of the Notice of Availability through 30 days following the public meetings. All comments will be addressed in the Final Legislative Environmental Impact Statement. All interested individuals, organizations, and governmental agencies are encouraged to comment on the DLEIS.

Written comments may be forwarded to Ms. Cindy Herdrich at the above address or at http://www.cemml.colostate.edu/alaskaeis.

Dated: November 2, 1998.

Raymond J. Fatz,

Deputy Assistant Secretary of the Army, (Environmental, Safety, and Occupational Health) OASA (I,L&E).

[FR Doc. 98–29747 Filed 11–5–98; 8:45 am]

BILLING CODE 3710–08–M

DEPARTMENT OF DEFENSE

Department of the Army

Record of Decision (ROD) for Environmental Impact Statement (EIS) for Projects and Activities Associated With Programs at White Sands Missile Range, New Mexico

AGENCY: Department of the Army, DoD.

ACTION: Notice of availability.

SUMMARY: This notice of availability announces the public release of a ROD resulting from a recently completed EIS for White Sands Missile Range, New Mexico. A summary of the ROD is provided in the supplementary information paragraph below.

ADDRESSES: To receive a copy of the ROD contact the Commander, White Sands Missile Range, ATTN: STEWS–NRES–C (Mr. Robert J. Andreoli), White Sands Missile Range, NM 88002–5048.

FOR FURTHER INFORMATION CONTACT: Mr. Robert J. Andreoli at (505) 678–7926.

SUPPLEMENTARY INFORMATION: White Sands Missile Range is an extensive and complex test range. It consists of launch sites, target areas, instrumentation, buildings, equipment, and personnel used by DoD, the National Aeronautics and Space Administration, and other Federal and commercial testing concerns to conduct safe, large-scale experiments on advanced weapons and space flight systems. In accordance with the National Environmental Policy Act, White Sands prepared an EIS to address environmental quality implications of implementing projects and activities on the missile range. The decision resulting from the findings of the EIS is to adopt specific mitigation measures for the continuation of existing White Sands Missile Range programs and future testing of scientific, military, and commercial systems.

Mitigation measures, in addition to those specifically identified in the EIS, will be developed by use of the White Sands Missile Range Decision Analysis System and Geographic Information System (DAS/GIS) during the planning stage and will assist in planning projects so as to minimize environmental impacts. White Sands has management practices for the conservation of sensitive natural resources, including wildlife, endangered species, and wetlands. Best management practices and common erosion control techniques will be used in ground disturbed activities.

These same mitigation measures will be integrated into the DAS/GIS and will provide project proponents with environmental information, site location decision support, and regulatory approval at significant cost savings and with improved efficiency. As a result, White Sands will be better able to protect, restore, and enhance the range environment as it more effectively supports its operational mission.

The White Sands EIS lacks some baseline documentation and impacts analysis information and is to be rectified by the preparation of Technical Support Documents (TSDs). TSDs are to be prepared for: water resources analysis; emissions analysis (including

analyses of noise, electromagnetic interference, lasers, light emissions and light pollution, radio astronomy interference, and Global Positioning System interference); an integrated natural resource management plan; chaff analysis; and cumulative impacts analysis. TSDs may be prioritized by immediate need, schedule, or availability of funding.

The entire text of the White Sands Missile Range ROD and the Executive Summary of the EIS can be found on the White Sands Missile Range home page at *http://www.wsmr.army.mil*. To find these documents access the Public Info part of the pager and then click on the Environmental button and choose the desired document.

Dated: November 3, 1998.

Raymond J. Fatz,

Deputy Assistant Secretary of the Army (Environment, Safety and Occupational Health), OASA(I,L&E).

BILLING CODE 3710–08–M

DEPARTMENT OF EDUCATION

Office of Postsecondary Education; Submission for OMB Review; Comment Request

AGENCY: Department of Education.

ACTION: Correction Notice.

SUMMARY: On October 26, 1998, a notice inviting comment from the public was published on page 57108 for the Federal Stafford Loan (Subsidized and Unsubsidized) Program Master Promissory Note. This notice corrects the title from "Federal Stafford Loan (Subsidized and Unsubsidized) Program Master Promissory Note" to "Federal Stafford Loan (Subsidized and Unsubsidized) Program Promissory Note".

FOR FURTHER INFORMATION CONTACT: Danny Werfel, Desk Officer: Department of Education, Office of Management and Budget, 725 17th Street, NW, Room 10235, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection request should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, SW, Room 5624, Regional Office Building 3, Washington, DC 20202–4651 or should be electronically mailed to the internet address Pat *Sherrill@ed.gov*, or should be faxed to 202–708–9346.

Dated: November 2, 1998.

Kent H. Hannaman,

Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer.

[FR Doc. 98–29731 Filed 11–5–98; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Submission for OMB Review; Comment Request

AGENCY: Department of Education.

SUMMARY: The Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before December 7, 1998.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Danny Werfel, Desk Officer, Department of Education, Office of Management and Budget, 725 17th Street, N.W., Room 10235, New Executive Office Building, Washington, D.C. 20503 or should be electronically mailed to the internet address *Werfeld@al.eop.gov*. Requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, SW, Room 5624, Regional Office Building 3, Washington, D.C. 20202–4651, or should be electronically mailed to the internet address *PatSherrill@ed.gov*, or should be faxed to 202–708–9346.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g. new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment at the address specified above. Copies of the requests are available from Patrick J. Sherrill at the address specified above.

Dated: November 2, 1998.

Kent H. Hannaman,

Leader, Information Management Group, Office of the Chief Financial and Chief Information Officer.

Office of Bilingual Education and Minority Languages Affairs

Type of Review: New.

Title: Application for Grants Under Bilingual Education: Career Ladder Program.

Frequency: Annually.

Affected Public: Not-for-profit institutions; State, local or Tribal Gov't; SEAs or LEAs.

Reporting and Recordkeeping Burden:

Responses: 200; *Burden hours:* 24,000.

Abstract: The Department needs and uses this information to make grants. The respondents are local educational agencies, State educational agencies and institutions of higher education and are required to provide this information in applying for grants.

This information collection is being submitted under the Streamlined Clearance Process for Discretionary Grant Information Collections (1890–0001). Therefore, this 30-day public comment period notice will be the only public comment notice published for this information collection.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Office of Nuclear Energy, Science and Technology (NE); Program Announcement LAB NE–99–1 Nuclear Energy Research Initiative

AGENCY: Oakland Operations Office, DOE.

ACTION: Notice of Nuclear Energy Research Initiative Program Announcement LAB NE–99–1.

SUMMARY: The Office of Nuclear Energy, Science and Technology, U.S. Department of Energy, is interested in receiving field work proposals for innovative scientific and engineering research and development in the field of nuclear energy as part of the Nuclear Energy Research Initiative (NERI). NERI is designed to support innovative research that can address the principal technical and scientific obstacles to future use of nuclear power in the U.S. NERI is also intended to reinvigorate the vital nuclear scientific and engineering infrastructure within U.S. universities, industry and DOE national laboratories.

This Program Announcement applies only to field work proposals from DOE National Laboratories that are the sole or lead performer organization of the proposed work. Where the laboratories are included in collaborative arrangements with other nonfederal organizations, but not as the lead performers, the proposals should be submitted in response to a separate Solicitation, DE–PS03–99SF21764, being issued simultaneously with this Program Announcement.

DATES: Potential applicants are encouraged to submit a Notice of Intent to Apply (Attachment A). Refer to the paragraph on the Designation of Field(s) of Proposed Work in this Program Announcement to identify the contemplated field of R&D in Attachment A. The notice should be faxed to Denise Berry, Department of Energy at (510) 637–2025 by November 13, 1998. This Notice of Intent in no way obligates an organization to submit a field work proposal, and failure to submit the Notice of Intent in no way prevents an organization from submitting a field work proposal.

Potential applicants are encouraged to submit a brief preproposal. All preproposals, responding to Program Announcement LAB NE–99–1 should be received by DOE by 4:30 P.M. P.S.T. November 20, 1998. A response encouraging or discouraging a formal field work proposal will be communicated to the applicant by December 11, 1998. Notification of a favorable preproposal is not an indication that an award will be made in response to the field work proposal.

The deadline for receipt of the formal field work proposal is 4:30 P.M. P.S.T. January 29, 1999.

ADDRESSES: All preproposals and field work proposals responding to Program Announcement LAB NE–99–1 should be sent to Denise Berry, U.S. Department of Energy, 1301 Clay Street, 700N, Oakland, California 94612–5208, Attn: Program Announcement LAB NE–99–1.

An original and five copies of the preproposal should be submitted by United States Postal Service including Express Mail or commercial mail delivery service, or should be hand carried by the applicant to the address stated above. Preproposals will not be accepted by fax or electronic mail.

An original and seven copies of the field work proposal should be submitted by United States Postal Service including Express Mail or commercial mail delivery service, or should be hand carried by the applicant to the address stated above. Field work proposals will not be accepted by fax or electronic mail.

SUPPLEMENTARY INFORMATION:

Eligibility

This program announcement invites field work proposals from DOE national laboratories acting as the sole or lead performer organization.

Awards

It is anticipated that awards will be made in Fiscal Year 1999. Field work proposals will be funded yearly, contingent upon the availability of funds. Up to a total of $19 million of Government Fiscal Year 1999 Federal funds are available for awards under this Program Announcement and the complementary grants and cooperative agreements Solicitation (to universities or other institutions of higher learning, industry, non-profit and R&D organizations, and DOE national laboratories that are not participating as the lead organization). Funding for individual research awards is expected to be up to $1 million per year with typical awards in the range of $100,000 to $400,000 per year. Collaborative research projects involving two or more organizations may receive larger awards, if merited. The period of performance for individual projects is expected to be up to 3 years.

DOE reserves the right to fund, in whole or in part, any, all, or none of the field work proposals submitted in response to this Program Announcement.

Background

In January 1997, the President requested his Committee of Advisors on Science and Technology (PCAST) to review the current national energy research and development (R&D) portfolio, and provide a strategy to insure the U.S. has a program to address the Nation's energy and environmental needs for the next century.

In its November 1997 report responding to this request, the PCAST Energy Research and Development Panel determined that assuring a viable nuclear energy option to help meet our future energy needs is important, and that a properly focused R&D effort should be implemented by the Department of Energy to address the principal obstacles to achieving this option. These obstacles include issues involving nuclear waste, proliferation, economics, and safety. The Panel recommended addressing technologies that include, but are not limited to, work on proliferation-resistant reactors or fuel cycles; new reactor designs for improved performance, reduced cost, and enhanced safety to compete in the global market; lower output power reactors for applications where larger reactors may not be advantageous; and nuclear waste. The PCAST report can be viewed on the NERI web page at http://neri.ne.doe.gov.

In response to these recommendations, the Department has proposed the Nuclear Energy Research Initiative (NERI), composed of projects selected from individual or collaborative applications or field work proposals from universities, DOE national laboratories, industry, R&D, and non-profit organizations. To assist in defining the NERI Program, a workshop was convened in Washington, D.C. on April 23–24, 1998, attended by over 120 researchers, scientists, and engineers representing these organizations. The workshop focused primarily on the nuclear R&D topics recommended by PCAST, and served to identify promising areas of R&D to implement these recommendations and related recommendations from the workshop. The workshop results, as reported on the NERI web page, http://neri.ne.doe.gov, have been of fundamental importance in developing the program defined in this Program Announcement. Respondents are encouraged to refer to the NERI Workshop Report prior to developing a field work proposal.

Objective

The NERI program is intended to conduct R&D to meet the following objectives:

- Address and help overcome the principal technical and scientific obstacles to expanded future use of nuclear energy in the U.S., including the issues involving resistance to proliferation, unfavorable economics and nuclear waste disposition;
- Advance the state of nuclear technology to maintain a competitive

position in overseas markets and a future domestic market.

• Promote and maintain a nuclear science and engineering to meet future technical challenges, and

• Improve the performance, efficiency, reliability, economics, and other attributes to enhance nuclear energy applications.

Scope of Work

The Department of Energy is seeking field work proposals for new and innovative science and engineering research, development, concepts, and/or experimental projects in the nuclear energy and supporting fields that will contribute significantly to meeting the NERI program objectives. The following paragraphs identify areas for which field work proposals are solicited. However, researchers may propose projects in other related areas that are consistent with the NERI objectives. In formulating proposed projects, the current state of development in the areas to be investigated should be recognized, such as by citing references, to avoid repeating work already accomplished.

Proliferation Resistant Reactors and Fuel Technology

Increased knowledge is required to enable incorporation of proliferation resistance in the design, development, and deployment of new reactor systems. Proposals are solicited in scientific and engineering research to improve the proliferation resistance of reactors and fuel systems. Possible research areas include, but are not limited to, investigation, and conceptual development to establish feasibility and attributes of reactor systems, fuel systems and/or alternative or modified reactor and fuel cycle concepts; material protection, and control; and techniques that minimize generation of plutonium and waste-by-products, restrict physical access to fuel materials while in the reactor, or increase the energy extraction from and utilization of plutonium and other actinides generated in the fuel.

There is an inherent need for an increase in the understanding of the basic behavior of irradiated materials; for science and engineering research that impacts fuel preparations and recycle or alternate means of spent fuel treatment; and for basic materials research to support understanding of fuel structure changes during irradiation, as it relates to the advancement of proliferation resistant reactors and fuel cycles.

New Reactor Designs

This program element involves scientific and engineering investigation and development, to the extent needed to establish feasibility and attributes, of promising reactor concepts in the following areas:

• Reactors to Achieve Improved Performance/Higher Efficiency and Reduced Costs

Advances in understanding of reactor systems and components are required to achieve a significant improvement in performance and economics for the next generation of reactors. Innovative reactor and power conversion concepts are needed which offer the prospects of higher efficiency, improved performance, design simplification, enhanced safety, and low cost. Increased knowledge is required to support enabling technologies. Research areas of interest include, but are not limited to development of reactor design advancements and alternative reactor core concepts, passive safe systems and components, development of innovative reactor concepts for electrical, non-electrical or co-generation purposes and advanced system or component design concepts, advanced instrumentation and controls, and work to evaluate direct energy conversion technologies such as thermoelectric conversion systems. Proposed projects should address, among other items, the characteristics, principal attributes, feasibility, safety features, proliferation resistance, economic competitiveness, and identification of other research that may be required.

• Low Output Power Reactors

New concepts and supporting knowledge are required to support development of small, possibly compact, and easily deployable reactors either for uses in developing countries or for specialized applications. Potential applications include electrical power generation, process heating, medical isotope production, or nuclear research. Research in science and engineering is expected to focus on concepts, characteristics, principal attributes, feasibility, safety features, proliferation resistance and underlying technologies rather than on full reactor systems design.

Science and engineering research of crucial importance to new reactor designs is dependent on the particular reactor application being explored. Examples include, but are not limited to, basic material degradation and corrosion sciences impacting both operation and applications; increased understanding of the behavior of fluid systems at elevated temperatures; modern high-temperature materials for reactor structural components; innovative non-destructive evaluation methods for system and component monitoring; development and application of risk-based design tools for pre-deployment predictions of performance and reliability; modern computational and modeling methods; incorporation of inherent safety features; automation of reactor system operation; radiation damage and metallurgy of long-lived fuels and other components; science and engineering effort to support alternative energy conversion methods.

Advanced Nuclear Fuels

Research and development is needed to provide measurable improvements in the understanding and performance of nuclear fuel with respect to safety, waste production, proliferation resistance, and economics to enhance the long-term viability of nuclear energy systems. Appropriate topics include, but are not limited to innovative concepts for material preparation and production of nuclear fuels; enhanced fuel design safety; innovation in fuel composition or other attributes that maximize energy production, optimize fissile material utilization, or reduce production costs.

Proposals are solicited in scientific and engineering research that encompass an evaluation over the entire nuclear fuel cycle utilizing knowledge gained over the past several decades on the technical characteristics of recycling systems, as well as in monitoring and controlling fissionable materials, but not being bound by technologies and facilities currently available. This work is basic to innovative reactor concepts, proliferation resistance, and advanced fuels. Results are expected to define gaps in current knowledge and hence identify areas requiring further work.

New Technologies for Management of Nuclear Waste

Paramount to public acceptance of nuclear technology is development of concepts and supporting knowledge required for reliable approaches to management and storage of spent fuels and associated wastes. Appropriate research topics include, but are not limited to, new concepts for on-site or interim surface storage; chemistry and materials science to develop understanding of the behavior of spent fuel for time periods consistent with on-site surface storage requirements; strategies for reduction in high level waste volume; research in surface chemistry and physics to understand and ameliorate corrosion processes at all pertinent interfaces; engineering research to support beneficial use of spent fuel and associated wastes.

Proposals in this area are expected to complement, and not duplicate, research activities supported by the Offices of Civilian Radioactive Waste and Environmental Management. Abstracts of work supported under the Environmental Management Science Program (EMSP) can be found at *http://www.doe.gov/em52/science-grants.html*, while information on the Civilian Radioactive Waste program and related efforts can be found at *http://www.rw.doe.gov/links.htm*.

Fundamental Science and Technology

This element features research and development in science and new technologies that support one or more applications in the nuclear energy field, including but not limited to those identified for the preceding program elements. The proposed work should be based in part on a consideration of the value or benefits of this work to potential future applications that satisfy the program objectives. Scientific and engineering research is solicited in pertinent areas of materials and chemical sciences, automation engineering and computational sciences, thermodynamics, health physics, systems engineering and safety, human factors research to improve the man/machine interface, and other areas which addresses problems common to the technology topics described above.

Field work proposals should identify the prospective applications associated with the proposed work, and the expected benefits from successful completion of this work.

Designation of Field(s) of Proposed Work

To facilitate the merit review, preproposals and field work proposals should identify the nuclear technology areas and the related engineering research and/or basic science field(s) that most closely apply to the proposed research work. The nuclear technology areas include proliferation resistant reactor and fuel, reactors with higher performance/efficiency, low output reactors, advanced nuclear fuels, and management of nuclear waste, and fundamental science and technology. The engineering research category would include such fields as reactors; system and component design development; fuel systems development; instrumentation and control system development; radioactive waste; and other nuclear engineering fields of research. The basic science categories would include such fields as materials science, chemical science, computational sciences (including development of algorithms and software technology), and engineering sciences (including basic research on instrumentation and control systems, and diagnostic and transport processes).

The requested identification of applicable fields of work is not intended to constrain or otherwise influence the proposed work in any way.

Collaborative Field Work Proposals

Collaboration between science and engineering researchers is encouraged. U.S. universities, DOE national laboratories, private industry and R&D and non-profit organizations are encouraged to submit collaborative field work proposals. Under this Program Announcement, collaborative field work proposals should identify the national laboratory as the lead organization, and should identify the work scope responsibilities and cost for each participating organization. The DOE national laboratory should submit a single field work proposal which integrates the portion of the overall project work scope assigned to each participant.

For successful field work proposals, the DOE laboratory will fund other non-federal participants by a subcontract arrangement. The DOE national laboratory will be funded directly by DOE. The private sector or academic organizations must include a Face Page and Budget Pages for its portion of the project in the field work proposal. Separate Budget Pages must be included for the DOE national laboratory portions. The collaborative field work proposal must be submitted as one package.

Collaboration with international organizations is acceptable provided the collaboration is mutually beneficial and all DOE and other domestic funding is used for work performed in the U.S. Such collaborative arrangements are subject to approval by DOE and must comply with any Federal restrictions on foreign participation, and with any current DOE memoranda of understanding or other general agreements between DOE and the participating foreign entity.

Preproposals

The submittal of preproposals prior to submission of field work proposals is encouraged to receive a preliminary DOE opinion regarding the significance of the proposed work in meeting program objectives. Preproposals should include a cover sheet and a brief (up to 3 pages) project description. The cover sheet should identify the name, telephone, fax and e-mail address for the project manager or principal investigator and for the organization(s) submitting the field work proposal, title of the project, and the field of R&D. A narrative project description should be included indicating the objectives, work to be accomplished and importance of successful completion, resources needed, and estimated cost. In the case of collaborative projects, the applicant should identify the work to be performed by each participating organization and the estimated cost to be borne by each party. The original and five copies of the preproposal should be submitted. DOE will review preproposals for technical and scientific merit and relevance of the proposed project to program objectives and respond to the applicants. This preliminary review neither prevents submittal of a full field work proposal nor indicates the likelihood of an award.

Format and Information To Be Included in the Field Work Proposal

(Reference DOE Order 5700.7C, "http://www.explorer.doe.gov:1776/htmls/regs/doe/seriestable.html")

The Field Work Proposal (FWP) is to be prepared and submitted consistent with policies of the investigator's laboratory and the local DOE Operations Office. Additional information is also requested to allow for scientific/technical merit review.

Applicants are expected to use the following format. Field work proposals must be written in English with all budgets in U.S. dollars. The field work proposals should clearly present the objectives, activities or tasks to be performed, schedule and costs, and the importance/significance of the proposed project. Where collaborative efforts are proposed, the individual responsibilities of participating organizations should be identified. As a minimum, the following information should be included:

• Field work proposal.

• Table of Contents.

• Project Abstract including identification of the field(s) of R&D for the proposed project (1 page).

• Project Description—narrative description of the proposed project including objectives, R&D plan including preliminary studies, research design and tasks, and the significance or benefits of the proposed project (no more than 20 pages; multi-investigator collaborative projects may use up to 40 pages).

• Project Schedule information.

• Organization & Qualifications—identification of the project organization, and qualifications and responsibilities of the participating organizations. Biographical sketches of project manager/principal investigator and other key project personnel (no more than 2 pages each).

• Collaborative R&D (if applicable)—description of the collaborative arrangements defining responsibilities and tasks assigned to each participating organization (up to 2 pages).

• Facilities & Resources—information on the experience of the applicant's organization and the adequacy of required facilities and resources (no more than 5 pages).

• Budget for each year and a summary budget page for the entire project period.

• Budget explanation for each participating organization.

• Budget and budget justification for each collaborative subproject, if any.

• Additional information the applicant deems relevant may be included, subject to the page limitation.

In addition to providing an original and seven copies of each proposal, applicants are required to also provide a 3.5-inch write protected diskette containing the field work proposal in electronic format. The label on the diskette must clearly identify the institution, principal investigator, title of field work proposal, and the computer system and program used to prepare the document. Unsuccessful field work proposals will not be returned to the applicant.

Field Work Proposal Evaluation

All valid field work proposals will be evaluated in accordance with the requirements of Title 10, Code of Federal Regulations, Part 600.13.

• DOE will perform an initial review for conformance with the technical and administrative requirements stated in this Program Announcement, for funding availability, and for general relevance to NERI program objectives.

• For those field work proposals that successfully complete the initial review, an objective merit review (peer review) will be performed to evaluate technical and/or scientific merit, and cost aspects of the field work proposals, exclusive of NE programmatic and policy factors. This review will be in accordance with the evaluation criteria stated below. For this purpose, a group comprised of three or more professionally and technically qualified persons will be selected in such a manner as to assure the highest degree of independence and objectivity. The reviewers may include any mix of federal and non-federal experts, except those persons involved in approving/disapproving the field work proposals. Reviewers must comply with the requirements for avoiding conflict of interest as stated in 10 CFR 600.14.

• Following the objective merit review, a relevance review will be performed by DOE on those field work proposals judged to be of the highest merit. The field work proposals will be evaluated with respect to NE programmatic and policy factors, including relevance of the proposed work to the NERI program objectives, and the balance among program elements to be supported.

The following evaluation criteria apply to the objective merit review:

• Technical quality of the field work proposal:

—Contribution to the state of knowledge in the scientific/technology fields;

—Importance of the proposed work in meeting program objectives;

—Completeness and clarity of the technical proposal;

—Appropriateness/adequacy of the proposed methodology or approach;

• Extent to which proposed work is new, unique or innovative;

• Reasonableness of project cost and schedule, including allocations among multiple participating organizations where applicable.

• Capabilities and qualifications of principal investigator/project manager and key personnel, adequacy of resources and facilities applied by participating organizations.

Intellectual Property Rights

With respect to intellectual property, the patent and data provisions set forth in the national laboratories M&O contract shall be used.

Statutory and Regulatory Authority

The Nuclear Energy Research Initiative will be conducted under the authority of the Energy and Water Development Appropriations Act of 1999, Public Law 105–245; the Catalog of Federal Domestic Assistance (CFDA) number 81.092; and the applicable DOE Financial Assistance Regulations at 10 CFR Part 600. The regulations and guidance documents can be accessed on the DOE Financial Assistance Home Page at "http://www.pr.doe.gov/fahome.html".

Program Announcement Questions & Answers

DOE does not intend to hold a preproposal conference. You may submit your written questions via e-mail to denise.berry@oak.doe.gov by November 13, 1998. Responses to questions will be placed on the Oakland Operations Office Website at "http://www.oak.doe.gov/financial/sol__page.html".

Information

Information about the development, submission of field work proposals, eligibility, limitations, the selection process, and other policies and procedures may be found on "http://www.oak.doe.gov/financial/sol__page.html".

DEPARTMENT OF ENERGY

Office of Nuclear Energy, Science and Technology (NE)

Financial Assistance Solicitation No. DE–PS03–99SF21764; Nuclear Energy Research Initiative

AGENCY: Oakland Operations Office, DOE.

ACTION: Notice of Solicitation inviting Grant and Cooperative Agreement applications.

SUMMARY: The Office of Nuclear Energy, Science and Technology, U.S. Department of Energy, is interested in receiving applications for financial assistance through the award of grants and cooperative agreements, as appropriate, for innovative scientific and engineering research and development in the field of nuclear energy as part of the Nuclear Energy Research Initiative (NERI). NERI is designed to support innovative research that can address the principal technical and scientific obstacles to future use of nuclear power in the U.S. NERI is also intended to reinvigorate the vital nuclear scientific and engineering infrastructure within U.S. universities, industry and DOE national laboratories.

This Solicitation applies to applications from universities or other institutions of higher learning, industry, non-profit and R&D organizations and collaborations among organizations, including those in which DOE national laboratories are participating, but not as the lead organization. A separate Program Announcement is being issued simultaneously for applications in which a DOE national laboratory is the sole or lead performing organization.

DATES: Potential applicants are encouraged to submit a Notice of Intent to Apply (Attachment A). Refer to the paragraph on the Designation of Field(s) of Proposed Work in this solicitation to identify the contemplated field of R&D in Attachment A. The notice should be faxed to Denise Berry, Department of Energy at (510) 637–2025 by November 13, 1998. This Notice of Intent in no way obligates an organization to submit an application, and failure to submit the Notice of Intent in no way prevents you from submitting an application.

Potential applicants are encouraged to submit a brief preapplication. All preapplications, responding to Solicitation No. DE–PS03–99SF21764, should be received by DOE by 4:30 p.m. P.S.T., November 20, 1998. A response encouraging or discouraging a formal application will be communicated to the applicant by December 11, 1998. Notification of a favorable preapplication is not an indication that an award will be made in response to the formal application.

The deadline for receipt of the formal applications is 4:30 p.m. P.S.T., January 29, 1999.

ADDRESSES: All preapplications and applications referencing Solicitation No. DE–PS03–99SF21764, should be sent to Denise Berry, U.S. Department of Energy, 1301 Clay Street, 700N, Oakland, California 94612–5208, Attn: Solicitation No. DE–PS03–99SF21764.

An original and five copies of the preapplication should be submitted by United States Postal Service including Express Mail or commercial mail delivery service, or should be hand carried by the applicant to the address stated above. Preapplications will not be accepted by fax, or electronic mail.

An original and seven copies of the application shall be submitted by United States Postal Service including Express Mail or commercial mail delivery service, or should be hand carried by the applicant to the address stated above. Applications will not be accepted by fax, or electronic mail.

SUPPLEMENTARY INFORMATION:

Eligibility

This solicitation invites applications from all segments of the U.S. private sector (non-federal). U.S. universities or other institutions of higher learning, industry, non-profit and R&D organizations are eligible for grant or cooperative agreement awards under this program. DOE national laboratories are eligible to participate, but not as the lead organization in the application. A separate Program Announcement is being issued for proposals in which a DOE national laboratory is the sole or lead performing organization. Non-citizens employed by U.S. institutions also are eligible.

Awards

It is anticipated that awards will be made in Fiscal Year 1999. One-year or multiple year funding of grants and cooperative agreements are anticipated, contingent upon the availability of funds. Up to a total of $19 million of Government Fiscal Year 1999 Federal funds are available for awards under this Solicitation and the complementary Program Announcement (to DOE national laboratories).

Funding for individual research awards is expected to be up to $1 million per year with typical awards in the range of $100,000 to $400,000 per year. Collaborative research projects involving two or more organizations may receive larger awards, if merited. The period of performance for individual projects is expected to be up to 3 years.

DOE reserves the right to fund, in whole or in part, any, all, or none of the applications submitted in response to this solicitation.

Background

In January 1997, the President requested his Committee of Advisors on Science and Technology (PCAST) to review the current national energy research and development (R&D) portfolio, and provide a strategy to insure the U.S. has a program to address the Nation's energy and environmental needs for the next century.

In its November 1997 report responding to this request, the PCAST Energy Research and Development Panel determined that assuring a viable nuclear energy option to help meet our future energy needs is important; and that a properly focused R&D effort should be implemented by the Department of Energy to address the principal obstacles to achieving this option. These obstacles include issues involving nuclear waste, proliferation, economics, and safety. The Panel recommended addressing technologies that include, but are not limited to, work on proliferation-resistant reactors or fuel cycles; new reactor designs for improved performance, reduced cost, and enhanced safety to compete in the global market; lower output power reactors for applications where larger reactors may not be advantageous; and nuclear waste. The PCAST report can be viewed on the NERI web page at http://neri.ne.doe.gov.

In response to these recommendations, the Department has proposed the Nuclear Energy Research Initiative (NERI), composed of projects selected from individual or collaborative applications from universities, DOE national laboratories, industry, R&D, and non-profit organizations. To assist in defining the NERI program, a workshop was convened in Washington, D.C. on April 23–24, 1998, attended by over 120 researchers, scientists, and engineers representing these organizations. The workshop focused primarily on the nuclear R&D topics recommended by PCAST, and served to identify promising areas of R&D to implement these recommendations and related recommendations from the workshop. The workshop results, as reported on the NERI web page, http://neri.ne.doe.gov, have been of fundamental importance in developing the program defined in this solicitation. Respondents are encouraged to refer to the NERI Workshop Report prior to developing an application.

Objective

The NERI program is intended to conduct R&D to meet the following objectives:

• Address and help overcome the principal technical and scientific obstacles to expanded future use of nuclear energy in the U.S., including the issues involving resistance to proliferation, unfavorable economics and nuclear waste disposition;

• Advance the state of nuclear technology to maintain a competitive position in overseas markets and a future domestic market;

• Promote and maintain a nuclear science and engineering infrastructure to meet future technical challenges, and

• Improve the performance, efficiency, reliability, economics, and other attributes to enhance nuclear energy applications.

Scope of Work

The Department of Energy is seeking applications for new and innovative science and engineering research, development, concepts, and/or

experimental projects in the nuclear energy and supporting fields that will contribute significantly to meeting the NERI program objectives. The following paragraphs identify areas for which proposals are solicited. However, researchers may propose projects in other related areas that are consistent with the NERI objectives. In formulating proposed projects, the current state of development in the areas to be investigated should be recognized such as by citing references, to avoid repeating work already accomplished.

Proliferation Resistant Reactors and Fuel Technology

Increased knowledge is required to enable incorporation of proliferation resistance in the design, development, and deployment of new reactor systems. Proposals are solicited in scientific and engineering research to improve the proliferation resistance of reactors and fuel systems. Possible research areas include, but are not limited to, investigation and conceptual development to establish feasibility and attributes of reactor systems, fuel systems and/or alternative or modified reactor and fuel cycle concepts; material protection, and control; and techniques that minimize generation of plutonium and waste-by-products, restrict physical access to fuel materials while in the reactor, or increase the energy extraction from and utilization of plutonium and other actinides generated in the fuel.

There is an inherent need for an increase in the understanding of the basic behavior of irradiated materials; for science and engineering research that impacts fuel preparations and recycle or alternate means of spent fuel treatment; and for basic materials research to support understanding of fuel structure changes during irradiation, as it relates to the advancement of proliferation resistant reactors and fuel cycles.

New Reactor Designs

This program element involves scientific and engineering investigation and development of promising new reactor concepts in the following areas:

• Reactors to Achieve Improved Performance/Higher Efficiency and Reduced Costs

Advances in understanding of reactor systems and components are required to achieve a significant improvement in performance and economics for the next generation of reactors. Innovative reactor and power conversion concepts are needed which offer the prospects of higher efficiency, improved performance, design simplification, enhanced safety, and low cost. Increased knowledge is required to support enabling technologies. Research areas of interest include, but are not limited to development of reactor design advancements and alternative reactor core concepts, passive safety systems and components, development of innovative reactor concepts for electrical, non-electrical or co-generation purposes and advanced system or component design concepts, advanced instrumentation and controls, and work to evaluate direct energy conversion technologies such as thermoelectric conversion systems. Proposed projects should address, among other items, the characteristics, principal attributes, feasibility, safety features, proliferation resistance, economic competitiveness, and identification of other research that may be required.

• Low Output Power Reactors

New concepts and supporting knowledge are required to support development of small, possibly compact, and easily deployable reactors either for use in developing countries or for specialized applications. Potential applications include electrical power generation, process heating, medical isotope production, or nuclear research. Research in science and engineering is expected to focus on concepts, characteristics, principal attributes, feasibility, safety features, proliferation resistance and underlying technologies rather than on full reactor systems design.
